The Week.

As we go to press on Wednesday, telegraphs announce light rains over a considerable area of the State, including the Southern Coast regions and portions of the San Joaquin valley. Enough rain has not yet fallen to materially injure the large amounts of raisins still exposed, but there is of course apprehension concerning the continuation of the rains and of the cool, foggy air which is noted in the grape valleys north of the bay. Prophets have for some time predicted early rains this fall, and they have come; but whether they will be in amount to work injury, prophets do not commit themselves. The producer has nothing to do but trust in Providence and keep his stuff dry.

The beet sugarie at Watsonville starts up this week and is crushing at the rate of 300 tons a day. It is thought there will be beets enough for over two months' run, and the output may be something like 4000 tons of crude sugar, or about twice as much as last year. The growth of this promising industry is slow, but we trust it may go forward more rapidly in the future.

Is is announced from Chicago that the World's Fair site muddle is satisfactorily settled by the selection of a single tract of land, which will give an undivided exhibition. This result will be received with general approval.

April Barley.

H. C. Stanton of Norman, Colusa county, exhibited at the recent State Fair a sample of a variety of barley which he originated and developed by selection, which seems to be worthy of a much wider trial than has been given it. We call attention to this variety in this prominent manner, not alone to suggest trial of a sort which apparently has peculiar characteristics which may make it very desirable in some localities, but also for the purpose of emphasizing the advantage which many an observing farmer can secure by keeping his eyes open and his hand ready to catch and preserve new forms or traits of vegetable growth as they appear. Chance seedlings, chance hybrids, bud variations and the like are of frequent occurrence, and to them our agriculture and horticulture owes much of its progress. Such things, however, appear in vain upon the land of the unobserving or indolent man. It takes a quick eye to detect a tendency to variation, a patient effort to differentiate and preserve it, and a complacent behavior when the supposed excellence is not found permanent. The story of Mr. Stanton's experience with his April barley, illustrates the method by which promising things are multiplied and perpetuated. He gives his experience as follows:

In the year 1885, in the last days of February, as I passed by a piece of my barley, which at that time was not more than six inches high, I discovered a few heads of barley fully headed out and standing two feet high. On looking more closely, I found scattered along for about three yards some 60 or 65 heads. Watched it, and on the 10th of April it was ripe, and I pulled it and put it away. I sowed that fall on summer-fallow land. It was out again in head in February, 1886, and ripe by the 10th of April, as before. I pulled it this year and got two quarts; I sowed it again in the fall on summer-fallow; it was ripe again by the 10th of April, 1887, and I pulled it again this year; I got one bag. I sowed it again on summer-fallow, and when it was ripe I harvested it on the 15th of April, 1888, and got 30 bags; this I sowed again on summer-fallow, and it was ripe by the 15th of April, 1889; this year I got 554 bags. Then I thought I would try winter sowing, intending to sow all my seed, but the winter was so very wet that I did not get in more than half of my seed, and what I did get in was put in the mud. I finished sowing the last of February, and the barley was ready to harvest by the 10th of May, 1890. I raised 2413 bags this year.

This barley sown in the fall will be ready for hay or feed by the 1st of April and ready for harvest by the 15th. This barley is a light-colored growth until it heads out, after that there is no perceivable difference between it and our ordinary barley; its yield is about the same. It is a good feed barley; as a brewing barley, has not been tried; it is from a month to six weeks earlier than ordinary barley.

It is true, of course, that all varieties thus secured do not prove of lasting value, but the presumption is that the extra earliness or short-season maturity of Mr. Stanton's will render his variety of much account. Such seems to be the opinion of his fellow-farmers in Colusa county, and much will be sown there this year. A good winter growth for feed is of vast importance in many places, and in others such a growth for plowing under green manuring of orchard land would be esteemed.

We shall be glad to hear next spring of the success of other growers of the April barley.

TULARE IRRIGATION DISTRICT.—We called on Mr. Flynn, the engineer, at the office of E. Oakford, at Tulare, last Saturday. From maps in the office, the latest route of reservoirs and canals adopted by the district was shown us. We found Mr. Mackie and others employed in the enterprise very active and full of faith that the work will be speedily and well accomplished. We consider this improvement the greatest and most important that has been undertaken in Tulare county since its first settlement. The entire body of citizens of the county, it seems to us, should use their best and unfaltering efforts to bring the plans to an early and successful completion.

A SYNDICATE has bought 100 acres near Corvallis, Or., which will be planted to prune trees.

Value of a Man.

What is the value of a man in money, financially, mathematically, as he stands in the world of commerce as a thing of value? Can we count it in dollars and cents? Even so; count it to a cent. Of course we leave out all the poetry, all the heart, all the man, except his money value.

Take what a man can earn in a year, say $500, $1000, $5000 or $10,000, as it may be. Let us take $1000. Then we deduct his necessary personal expenses to enable him to do his work, say $500. Then he produces $500 a year net. Now $10,000 at interest at five per cent will bring that sum, and is as valuable as the man. Yes, more so. The man will die, and the money will not. It will go on working forever. How will you fix that difference?

Easily. Insure the life of the man for about his value, so that when he dies the money will yet remain. Suppose this will cost $100 a year to insure for $8000. Then the $8000 is the true value of the man.

On this basis, what is a Chinaman worth in China and in the United States? In China, wages, one year, $60; personal expenses, $50; net product, $10. Then $200 is the value. It will earn the $10 in interest. When he is insured at the same rate as above, the premium will be $2 50 a year on $160, which is the value of John. When he comes to California and earns $300 a year and spends $75, he earns $225 net. Let him insure for $4000, on a premium of $50 a year, and John is worth about $6000. His savings will pay the insurance and the interest on that sum.

This shows the value of John in this State, and explains the eagerness to send him here and get him in on any terms. There is a clear gain of $6000 to his owner.

In this way, any man can reckon himself up and figure out his cash value to his wife, children, or heirs. And we may see at a glance that the capital of the United States is worth far more than all the people. It will bring more interest than they can earn wages, over expenses.

Rapid Propagation of Pears.

We have received a circular from the Huntsville, Alabama, nurseries, which contains an interesting statement of the rapidity with which a new variety can be multiplied by skillful propagators. They started with 100 trees of a new variety, which has been largely advertised. These trees were one year old from the bud, four to five feet high, more or less branched. They cut them down to near the bud, and preserved the wood in a dormant state until spring, when they were inserted as "spring buds" in strong pear stocks, one year transplanted. This wood produced 3251 buds, of which 3019 grew. They pinched back the growing buds to the hight of eight inches, which induced them to branch freely. From these young trees they cut and inserted over 65,000 buds, which are now well taken and promise to make handsome trees three to five feet high for the fall of 1891. This experience may be suggestive to some of our amateur propagators who desire to get a large stock quickly from a small start.

PORTLAND'S GREAT EXPOSITION.—We take pleasure in acknowledging an invitation from the Special Committee to be present in Portland on Friday of this week, 26th inst—set apart as "Press Day" of the North Pacific Industrial Exposition—and to attend the grand banquet tendered to the press by the citizens of Portland on that evening.

THE Madera *Mercury* says that a Colusa man named Reid has bought 17,000 acres of land from the Nevada Bank, six miles west of Berenda, which will be cut up into small farms.

SIXTY FOUR carloads of raisins, dried fruit and grapes, were shipped East by rail from Fresno last week. This shipment was three times larger than that for the same time last year.

SULTANAS A SHORT CROP.—The latest reports received in New York indicate that the crop of Sultana raisins will be only half that of last year.

THERE is a boom in ostrich feathers in New York, and prices have doubled since June.

Overland Fruit Shipments.

The daily papers are authority for the statement that Southern Pacific freight records show that East-bound fresh fruit shipments from May 1st to September 1st this year exceeded those of last season by over 8,500,000 pounds, or over 4000 tons. The aggregate for the four months, May to August, inclusive, was 28,483,580 lbs. in 1889, and 37,141,130 in 1890.

During the four months preceding September 1st, Sacramento shipped East, according to the railway records, 29,012,860 pounds of fresh fruit; San Jose, 4,402,770 pounds; Stockton, 2,331,060 pounds; Marysville, 819,000 pounds; San Francisco and Oakland, 555,340 pounds. Sacramento's best monthly record thus far was 14,848,120 pounds during August—over 5,000,000 pounds more than during the same month last year. The records of shipments by the Atchison system from the southern counties are not at hand. They are all kept at Albuquerque.

Dried fruit shipments began late this season, but have been going on steadily. Southern Pacific records show a gain in East-bound shipments for the two months of July and August of 2,445,800 pounds over the corresponding period of last year. During July this year shipments aggregated 2,959,140 pounds; during August, 5,410,850 pounds. The September records will doubtless show shipments double that amount, and raisin shipments also are now in progress and will go forward steadily during October.

California Peach Pits.

California peach pits are in about as sharp demand as California dried peaches, and the price at which they are being resold at the East and South will seem immense to the California grower who has used them for fuel or road-making. We find the following in a Southern nursery circular:

"A trip to California this summer resulted in arrangements with a responsible seed house to supply us with peach pits for our own planting. The peach trees of California are free from disease and we believe the seeds will produce healthy seedlings. We do not consider these pits equal in value with Southern Natural pits; but there are no Southern or Eastern pits to be had this year, and California pits are very scarce. We offer a limited surplus at $3 per bushel f. o. b., cash with the order."

Selling peach pits at such a price makes them two or three times as valuable as is the same weight of peaches in ordinary years. If our Eastern friends will only give us contracts for a term of years, we will bury them in peach pits for a fraction of the price at which Eastern re-handlers place them. However, we suppose this year they are cheap at any price.

FAIRS ARE PLENTIFUL nowadays on the Pacific Coast. The California and Oregon State Fairs, about which we will have more to say anon, are just over. This week, besides the Mechanics' Institute in this city, the Nevada State at Reno, and the N. P. I. at Portland, district fairs are in progress at Stockton, Rohnerville, Quincy, Lakeport, Nevada City, Independence, Concord and Redding, and next week are to come Salinas, Fresno, Escondido, Yreka and Watsonville, as well as the opening of the great Northwestern Show, which is to run all through October at Spokane Falls.

PEELED PEACHES AND NECTARINES.—We have seen a sample of about 10½ tons of these fruits prepared this year at the Buhach farm, near Atwater, Merced county. Lye-peeling was practiced, but it was done with abundance of running water and apparently in a most perfect manner. The fruit sold at a high price and was a very creditable product.

THE Hanford Vineyard Co. has incorporated, to deal in all kinds of farm products, with $125,000 capital stock, of which $25,000 has been subscribed. Directors—J. W. Barbour and E. E. Bush of Hanford, Wm. E. Bridge and Chas. T. Bridge of San Francisco and M. W. Upton of Oakland.

THE CHARLOTTE RAISIN VINEYARD CO. has incorporated to cultivate land in Tulare county, with $64,000 capital, all subscribed. Directors—Isaac H. Morse, Geo. A. Fisher, Wm. Drake, Henry L. Davis and Geo. W. Turner of S. F.

THE vineyards of Kern county have been damaged a great deal by jackrabbits.

FLORIST AND GARDENER.

Hardy Bulbs.

EDITORS PRESS:—Among all our brilliant cultivated flowers, the hardy bulbs are, perhaps, as satisfactory to the home florist as any. They claim attention at a season of the year when many others are faded or are dormant, and are, therefore, more welcomed and appreciated.

Of the old-fashioned sorts, we recognize the narcissus, hyacinth, crocus, the tulip and the tiny lily of the valley. Most of these are considered beautiful and showy flowers, and many of them are rich with perfume.

They are sometimes spoken of as Dutch bulbs on account of their being grown in quantities in Holland, where the climate is well suited to their development.

Perhaps one reason of their popularity is their easy culture, as are all bulbous plants, and their fitness for both indoor and outdoor growing.

Among cut flowers, the lily of the valley has been very popular in most Eastern cities during the last few winter seasons, and it has been said that in New York City alone over $75,000 have been spent for its delicate sprays in a single season.

The double hyacinth has always been a favorite for indoor culture, and the Chinese sacred lily, a variety of narcissus, is becoming better known for the same purpose.

The seedsmen's new catalogues of these hardy bulbs for fall planting and winter blooming are being sent out now. They tell about some brilliant novelties, and the anemones, the Arabian Star of Bethlehem, the giant snowdrop and the freesias. The gorgeous Bermuda Easter lily is spoken of as wonderfully beautiful and expressive, with its white trumpet flowers and delicious perfume; and among all these and many others, we find our own modest little wild calochortus and brodiaea.

WILL C. AIKEN.

St. Helena, Napa Co., Cal

An Orchid Collection in Massachusetts.

Mrs. Flora M. Kimball of National City gives the following description of a visit to the grounds of Fred Ames at North Easton, Mass.: One of the most interesting sights to be seen, if one delights in flowers, is Mr. Ames' collection of orchids and tropical plants. Entering the grounds by way of a broad drive shaded by trees of many varieties, and through an archway of masonry composed of huge bowlders and red sandstone, we were ushered into an opening of many acres covered with trees, lawns, shrubbery, lakes and the fine residences, stables and hothouses of Gov. and Fred Ames. The entrance to the hothouses is a reception-room of stone, 25 feet square and furnished with seats where visitors may rest if weary. The woodwork, seats, chairs and tables are of Georgia pine brightly polished; the floor of brown tiling, walls of blue tiling highly ornamented, a huge red sandstone fireplace with a chimney breast of carved granite, and plenty of odd-shaped windows that would please the eye of an artist. Whichever way we turn our eyes, the view is one of picturesque beauty. Broad lawns running down to the edge of shaded woods on one side, a lake rivaling in clearness Yosemite's Mirror lake, and fringed with trees and plants, their foliage reflected in its transparent surface on another; flowers of every hue singly and in clumps; and broad spreading trees scattered about in natural profusion are objects pleasant enough to reward the visitor for his pains in coming hither. But these outward attractions are eclipsed in rambling through the various buildings by 1400 kinds of orchids, a larger collection than that of Mrs. Morgan of New York and valued at $100,000. A little Madagascar plant, very rare and very scrubby-looking, was secured at a cost of $500. Fifteen hundred was paid for another. No description could convey to the mind of one not acquainted with orchids a faint idea of their singular beauty—a beauty that is enhanced by each new member of the prolific family. They have a strange fascination for those who love them, but only the rich can indulge in the luxury of an extensive collection.

Los Angeles Floral Society.

According to the *Express*, about 75 people interested in floral culture met in Los Angeles last week to adopt a constitution and elect permanent officers for a floral society. The first meeting, held some three weeks ago, was a very enthusiastic one and warranted the establishment of such a society. A constitution and by-laws have been adopted and the following officers elected: President, Eli Snyder; vice-president, C. E. Brydges; secretary, H. W. Kruckeberg; recording secretary, John Franklin; treasurer, J. C. Harvey. An Executive Committee, consisting of the following gentlemen, was also chosen: Messrs. J. H. Denham. J. H. Tomlinson and J. G. Mosley.

Wm. Heaver and wife were present. Mr. Heaver was the organizer of the first floral society in Cincinnati, and has been engaged in floriculture all his life. To-day, at the age of 87, he is just as enthusiastic as ever.

C. H. Hovey of Pasadena, a son of Mr. Hovey, the great florist in Boston, who for years had the most noted flower and seed establishment in the country, was also present and pledged his support to the organization. The Chamber of Commerce has generously offered the free use of a room for holding the monthly or semi-monthly meetings of the society.

It is proposed to give a magnificent flower show early in November, the favorite flower in the exhibit to be the chrysanthemum.

SCENE IN A CALIFORNIA FRUIT VALLEY SHOWING YOUNG ORCHARD AND VINEYARD.

In a Fruit Valley.

The engraving on this page presents features which may be seen in many of our smaller fruit valleys, and it may serve to enlighten the distant reader somewhat upon the characteristic topography of portions of our fruit regions. The valley is filled from side to side with well-cultivated orchard and vineyard, while the surrounding hills are still allowed to remain for pasture, or are employed for the growth of hay. In other valleys both the floor of the valley and the lower hills adjacent may be planted with trees and vines. Most of the growths shown are young, and the fruit wagon shown in the lower corner is probably little worn. But our tree and vine growth is so rapid that the features of the landscape change rapidly, and in a few years the camera would catch the yellow hills rising above a sea of foliage.

THE VETERINARIAN.

The Bureau of Animal Industry.

At the last meeting of the San Francisco Microscopical Society, Dr. Cooper Curtice of the Bureau of Animal Industry delivered, by invitation, an address upon the branch of the Government service in which he is employed. He said the first special work undertaken was in 1869, and the researches at that time into the diseases or plagues with which cattle were afflicted revealed some fungi, but little progress was made until 1878, when the Department of Agriculture employed several veterinarians to prepare reports, and the swine plague was pretty thoroughly investigated. In 1880 a similar report was made and the investigators reported the discovery of bacteria, which was supposed to cause the swine plague, or hog cholera, as it is more popularly known.

In 1883 the Bureau of Animal Industry was organized as a branch of the Department of Agriculture, with D. E. Salmon as chief and Dr. Theobald Smith as assistant. Dr. Curtice paid a very high compliment to these gentlemen, and said it should be a matter of congratulation to all persons interested in the work, however remotely, that such efficient and conscientious gentlemen had been called to the task.

The work of the Bureau, as its name implies, includes the study of all domestic animals, their maladies and the conditions under which they are contracted and developed. The economic feature of animal industry has not yet been touched on, so much work having been demanded by the physical conditions; but it is the intention of the Bureau to devote itself to the problems of production, transportation and consumption at an early day.

One of the principal objects of the Bureau is the protection of stock from infectious disease communicated by imported animals. When its work was first begun, pleuro pneumonia had been communicated from cattle imported from England or Holland into this country at Baltimore and Philadelphia and in Kentucky. A general Act of Congress, with the co-operation of the several States interested, enabled the representatives of the Bureau to stamp out the disease in these localities. This could only be accomplished by a rigid quarantine and immediate slaughter of cattle known to be infected. The Government has made an annual appropriation of $500,000 for the Bureau, and Dr. Curtice said the greater part of this sum was employed in attacking the disease where it had appeared, and only a very small portion remained for original investigation. Against this small appropriation it is reported that the disease has cost the English Government $10,000,000 each year for several years past.

The investigations of the Bureau into the Texas cattle fever were begun last year, and are now in progress. Mapping the country, and indicating the northern limit where this fever has been epidemic, a line through Virginia, Northern Tennessee and Missouri, corresponding to the 2000 foot level, would mark its course. From the western borders of Missouri the line bears to the southwest, passing through Indian Territory and into Texas. The infectious feature of the disease disappears with frost, although infected cattle may communicate it after a hard frost and during a warm season, which frequently occurs in the fall of the year.

During the progress of the investigation last year, Dr. Smith discovered what he believed to be the germ of the Texas fever. In examining fresh blood, he noted small masses of amœboid form moving in the red corpuscles. On examining the fresh blood from the infected animal from day to day, these amœba-like masses were found to have increased in number and the red corpuscles to have visibly diminished. Dr. Smith's investigations were arrested by the appearance of cold weather last fall, and consequent checking of the disease; but he is now pursuing it, and hopes to have results which will enable him to certainly diagnose the disease and experiment with remedies.

The work of the Bureau of Animal Industry, in the various diseases of cattle, swine and poultry, and the differentiations noted, have been accepted by European workers, and will stand. Besides the blood diseases, the Bureau is now investigating glanders and tuberculosis at Washington, and material has been abundant, as an Act of Congress permitted the killing of any animal in the District of Columbia afflicted with these diseases.

After the close of Dr. Curtice's address, general discussion and questions and answers followed, and many other points were elucidated. The doctor's special study has been animal parasites, concerning which he has made observations during his visit to California.

Dr. Curtice has recently prepared an excellent illustrated report on the parasites affecting sheep which should be in the hands of every flock-owner. It can be had free by applying to Hon. J. M. Rusk, Secretary of Agriculture, Washington, D. C.

Veterinary Morsels

Thrush.

EDITORS PRESS:—There are several horses in this place owned by readers of the RURAL PRESS which are troubled with thrush. Will Dr. Buzard please give us a treatment?—MANY READERS.

Thrush is ulceration of the sensitive frog. Remove the shoes, pare away all the rags and diseased frog so as to expose every part of the ulcerated surface to the air; then after cleaning all parts by scraping with a blunt knife, insert calomel freely into all clefts and crevices. Keep the feet dry, and repeat this next day, which will probably be sufficient; then dress with tar and oakum. Examine them after a month and see if they are all right; if not, repeat the whole process.

Lotion for Sprain.

EDITORS PRESS:—Please give me a recipe for a cooling lotion for a recent very bad sprain, and oblige—L. H. F., *Napa.*

Take of chloride of ammonium, in powder, and nitrate of potash, in powder, each 2½ ounces; add them to one pint of water, and, directly they are dissolved, apply to the leg with bandages.

Pulses, Equine and Canine.

EDITORS PRESS:—I would like Dr. Buzard to give me the number of beats of a healthy pulse in the horse and dog.—A. S., *Chico.*

Horse, 35 to 42, quickest in young animals. Dog, 80 to 100. A dog's pulse is intermittent.

A. E. BUZARD, M. R. C. V. S. L.
11 Seventh St. S. F.

Steam Plowing at the State Fair.

[Written for the PACIFIC RURAL PRESS.]

The exhibition of traction engines at the State Fair this year attracted great attention and was one of the leading features of the mechanical department. Two of them were shown each evening under steam in the pavilion, and were nearly always surrounded by a crowd of solid-looking men from all parts of the coast, who examined them with the closest scrutiny. An exhibition of their capacity for plowing was given at Coyle's ranch, about three miles from town, on the forenoons of Tuesday, Wednesday and Thursday of the last week of the fair. Notwithstanding the distance from town and the lack of public conveyance, there were hundreds present each day and the interest manifested showed a realization of the fact that steam is about to supplant animal-power to a large extent for farming and freighting on this coast in the near future.

The machines that took part in the exhibition of plowing were the following:

1st. The "Pathfinder," weight 13 tons, pulling 12 ten-inch plows divided into three gangs of four plows each, the gangs being attached to the machine by three chains supported by a sort of cart.

2d. The "Native Son," weight seven tons, pulling eight ten-inch plows (two gangs of four plows) attached to the engine by chains like those on the Pathfinder.

Both the above were made and exhibited by Daniel Best of San Leandro.

3d. The Jacob Price field locomotive, made by Jacob Price of San Leandro, Cal., and Racine, Wisconsin; weight, 8½ tons, pulling twelve 11 inch plows which were attached to a light triangular platform from which the gang levers were operated. The 12 plows were divided into four gangs of three plows each.

4th. The Baker & Hamilton engine made by the Benicia Agricultural Works; weight, 13 tons, carrying twelve 12-inch plows attached

to a very elaborate and powerful frame having a device for raising and lowering the plows by steam.

The ground selected was a sort of yellow cement very hard and dry, having had no rain or other moisture upon it for nearly four months. The universal opinion before operations commenced was that no plowing could be done because of the hardness of the ground; but all the machines set to work at once, and by putting men on the gangs, made them take hold, ripping the ground up in great lumpy billows instead of furrows. Each machine went a round or so in a sort of go-as-you-please manner, but doing the work successfully; and one o'clock having arrived, the crowd left for town, thus ending the first day.

The second day the machines were required by the committee to go three rounds each (about 2¼ miles) without stopping and to maintain, if possible, their steam pressure and to have as much water in the boiler at the end of the three rounds as when starting.

This was successfully done by the Best and Price machines, and would probably have been done by the Baker & Hamilton machine but for an accident that disabled it.

The third day was devoted to a further trial with the Baker & Hamilton machine, which again became disabled, and wound up with a sort of foot-race between the Pathfinder and the Price machines, the latter making a round of nearly a mile, with its 12 plows, in 10½ minutes. The Pathfinder tore away from the starting-point with a speed that would have taken it around in even less time had a plow not broken from its fastenings and plunged into the ground so deeply the whole outfit was brought to a standstill when about three-fourths of the trip was made.

This ended the exhibition, which was pronounced by all as being simply wonderful, one enthusiastic committeeman saying that if he could have his way he would give each machine a gold medal as big as a dinner plate, for showing so conclusively that steam plowing is practicable.

The farmers present estimated that it would have required from 50 to 75 good horses to have pulled, even slowly, either system of 12 plows that were so rapidly and easily drawn by the different engines. The contest between the Price machine and the larger one of Best's was very close, as will be seen from the following

Report of the Committee:

We, your Committee on Traction Engines, respectfully report as follows: After a careful examination of the several traction engines, we award the premium to the one called "The Pathfinder," manufactured by Daniel Best of San Leandro.

The engine manufactured and exhibited by Jacob Price of San Leandro deserves special mention, being a close rival to the Pathfinder. So nearly equal are the two engines that the committee had great difficulty in deciding which was the better. In evidence of which, the committee on the final ballot stood three for the Price and four for the Best ("The Pathfinder").

The Benicia Engine, manufactured by the Benicia Agricultural Works, is also entitled to great praise. It possesses many fine features, and for heavy work, simplicity of construction and economy of fuel, was the peer of any in the contest; but, unfortunately, it became disabled early in the contest, which virtually precluded it from further competition.

WM KELLY, S. B. ADAMS,
C. C. AGEE, Committee.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

VOLUNTEER HAY.—Livermore *Herald*, Sept. 16: Martin Mendenhall has a 26-acre field at the east end of his ranch, half a mile west of this place, which yielded this season 104 two-horse wagon-loads of volunteer hay—an average of four loads to the acre. Mr. Mendenhall says that the loads would average a ton each.

Butte.

ALMOND HARVEST.—Chico *Enterprise*, Sept 20: The almond crop on Rancho Chico is now being gathered and the yield is large, averaging about 300 pounds to the tree, and there are 40 acres of this fruit, with 2800 trees. The plan adopted for gathering the almonds is to place canvas sheets on the ground and shake the tree; then the sheets are emptied in boxes and the almonds are hulled by the Indians and made ready for the scorching process, after which they are sacked and ready for shipment.

FRUIT INDUSTRY.—Chico *Enterprise*, Sept. 18: Butte once stood in the foretront as an agricultural county. Now a vast change has come over it and we are climbing very near the top as a fruit-yielding county. There are millions of fruit trees and vines in the county, and the number is steadily increasing each year.

SUMMER FALLOWING.—Chico *Chronicle-Record*, Sept. 19: On all the summer-fallowed lands the teams are at work dragging immense harrows and preparing the soil for the seed. In all that vast grain country around Nelson, Biggs and Gridley, the fields are alive with six and eight-horse teams. The farmers of Butte are getting ready for the most extensive seeding ever known in the county, and there is every prospect that the crop of 1891 will be superabundant and command a good price.

Colusa.

LEVEE-BUILDING.—Butte City, Sept. 20: The farmers to the south are busy discussing and building levees for protection the coming winter.

Fresno.

WHEAT YIELD.—Fresno, Sept. 19: The yield of the county for the year is estimated at from 150,000 to 250,000 tons. Mr. Callahan places the product at 150 000 tons. Capt. Muller places it at from 200,000 to 220,000 tons. Mr. Burleigh thinks it will go to 250,000 tons.

BARLEY YIELD.—Fresno, Sept. 19: For the first time in many years, if not for the first time in the history of Fresno, barley is this year being shipped out, and singularly enough to the points from whence this section formerly drew its supply—Sacramento, Marysville and Stockton. The barley yield of the county will probably be about 20,000 tons. Mr. Callahan places it at 25,000 tons, Capt. Muller at from 20,000 to 25,000 tons, while Mr. Burleigh places it at hardly 20,000 tons.

DRIED-FRUIT INDUSTRY.—Fresno *Republican*, Sept. 19: Fresno is the undisputed center of the raisin industry of the United States. The value of the product this year will, it is estimated, be about $1 500,000. The value of dried grapes and dried fruits, including peaches, apricots, pears, figs and nectarines, is estimated by conservative fruit-buyers to be not less than $1,500,000, and may possibly reach $2 000,000. The raisin pack will probably reach 1,000,000 boxes. The number of cars of dried fruit shipped is not obtainable, but it is very large and will be largely increased. The industry is second only to the wheat product of the San Joaquin valley in bulk and value. The raisin business alone keeps seven large packing establishments busy, employing from 1500 to 2500 people and disbursing more than $2,000,000 annually.

RAISIN SHIPMENTS.—Fresno, Sept. 20: The first train of 20 cars of raisins left for the East this morning via the Central and Union Pacific railroads. The total shipments to date are about 60 carloads. The cool weather delays drying materially.

Humboldt.

BARBERRIES.—Arcata *Union*, Sept. 20: Barberries is a fruit almost unknown in Humboldt, but all New England people are acquainted with it, as it grows wild on the North Atlantic Coast. The berries grow on a bush somewhat resembling the crabapple, the berry being tart and used for preserves. It is larger than the cranberry and has a similar taste. D. D. Averell brought out some seed of the barberry from Massachusetts some years ago, from which he has grown trees that are now prolific producers.

Lassen.

CROP NOTES.—Taylorsville, Sept. 15: The grain crop on some of the farms will be excellent; others, in consequence of the high water during the spring, were not planted until very late, and on some of these ranches the yield will not be quite as large as usual. Hay seems to be plentiful, and is selling at $10 per ton. The quality of hay raised in this section is unexcelled anywhere.

Mendocino.

LARGE TOMATOES.—Mendocino *Beacon*, Sept. 20: A sample of the productiveness of the soil of Anderson valley was given to us on Thursday by Geo. Studebaker of Christine in the shape of beautiful large tomatoes, measuring 13½x11½ inches, known as the $1600 tomato. George imported the seed from Philadelphia, and is more than pleased with the result; and well he might be, for they are beauties. It is claimed that the seed originally cost $1600 per pound—hence their name.

Napa.

FINE STOCK FOR WASHINGTON.—Napa *Register*, Sept. 19: T. B. Elington of Rutherford ships to-day from Napa to Colfax, Wash., four stallions—Black Boy, Odd Fellow, Glaucus and another whose name we failed to get—with the expectation of finding ready purchasers for them in that new State. These horses are Hambletonian stock, being sons of Whippleton.

THE VINTAGE.—Napa, Sept. 19: The vintage is now well under way in this end of the valley. In the upper valley, where the grapes ripen a little earlier, crushing began a week ago. At all the cellars in town the usual large forces of men are on hand. Prices, generally speaking, range from $10 to $15 per ton. Mr Carpy is adhering to the prices already published for red grapes. For white grapes no positive figure has been fixed. Great difficulty is being experienced by vineyardists in getting help to pick grapes. More Chinamen are finding employment than ever before. In Sonoma valley, prices are ruling higher than here. A representative of one of the leading wine firms of San Francisco was through that valley Tuesday offering $16 per ton for Zinfandel wine grapes, but found no takers. Vineyardists are holding off for $20 per ton for common varieties.

Orange.

NO IRRIGATION BONDS SOLD.—Anaheim *Gazette*, Sept. 18: On Saturday afternoon the Board of Directors of the irrigation district proceeded to open bids for the purchase of their bonds. The bond issue is $600,000, half of which it was determined to sell. The response from capitalists, however, was not so favorable as had been expected. Only three bids for the purchase of bonds were received. The Bank of Anaheim offered 90.5 cents on the dollar for the first $10,000 issued, and 90 cents for the second $10,000. Mr. Zugo offered to buy $5000 of the issue, in bonds of $500 each, for 90 1 cents on the dollar. As the directors considered the proposals too low, the bids were rejected, and the sale will be readvertised.

FRUIT PRICES.—Placentia, Sept. 18: Agents for commission-houses are scouring the country for dried peaches, apricots and prunes, and are also buying winter and fall apples for the New York market at from 1¼ to 1½ cents per pound; also offering 9½ cents for hardshell English walnuts. Dried prunes, undipped, are bringing 9½ cents; apricots, 16 cents; and peaches, 16 to 18 cents a pound. Corn is $1.15 per cwt., and hay $11 50 a ton.

SECOND CROP VEGETABLES.—Placentia, Sept. 18: Quite a good many potatoes (second crop) have been planted, and acres of cabbage will be set out in October, all for the Eastern market.

CORN HARVESTING.—Fullerton, Sept. 18: This is a very busy time just at present in this vicinity, most of the farmers hereabout being engaged in husking corn and getting it ready for the market. Al Smith and Wm. Jenks shipped the first two carloads of corn from here last Saturday. It was bought by the Capitol Milling Co. of Los Angeles and delivered there for $1.10.

Los Angeles.

YOUNG ORANGE TREES DYING.—Pomona *Progress*, Sept. 18: The disease which has afflicted young orange trees in the seed-bed during the summer has very materially reduced the number of young seedling trees in the country. Throughout the Azusa valley, in this valley and in portions of San Bernardino valley, the loss has, in many cases, reached as high as 70 per cent. Messrs. Burritt and Lathrop, who had extensive beds on Mr. Burritt's place, lost heavily, and have not yet been able to ascertain the nature of the disease. They think now, however, that they have checked the further progress of the disease by the liberal use of a spray made of sulphur with a little lime dissolved. They inform us that since they began the use of this remedy the small trees have stopped dying and have put on a healthy, vigorous growth.

TWO CROPS.—Santa Monica *Outlook*, Sept. 17: Some of the farmers in the vicinity of Florence have harvested a fine crop of barley this season, and have now on the same land an immense crop of corn.

APPLE CROP.—Downey, Sept. 20: The apple crop in this neighborhood is said to be very fine. We hear of trees that have from 1000 to 1500 pounds each.

HOW TO CURE LEMONS.—Downey *Champion*, Sept. 20: C. E. Smith of Downey gives us his method of curing lemons, which he has practiced with success. He says: "Clip the lemons when maturing, leaving just a little of the stem—don't let them remain too long on the tree. Have plenty of dry sand; put a layer of sand in a box; then set in your lemons without touching, stem end down, fill in and cover with sand, then lemons and so on until the box is filled; store boxes in a dry place. The sand must be perfectly dry and the fruit picked when first matured, as they are then the size most desirable for market. Lemons cured this way are perfectly sound 12 months after packing."

Sacramento.

HIGH PRICE FOR TOKAY GRAPES.—Folsom, Sept. 20: It is stated that by reason of the superior coloring properties of the Flame Tokay grapes grown upon Orangevale soil, a leading firm of Sacramento has agreed to take the entire crop at $55 per ton, net—the purchasers doing their own packing and shipping. This is the highest price yet paid on the ground for grapes.

San Bernardino.

SAN BERNARDINO, Sept. 19: This city is erecting a large pavilion for fairs and public meetings. It will be the largest in Southern California, and will be completed in time for the Twenty-eighth District Fair, which opens Oct. 21st. The next State Citrus Fair for Southern California will probably be held in this pavilion.

San Diego.

RAISIN PICKING.—San Diego *Union*, Sept. 18: W. H. Somers, who was in the city yesterday from El Cajon, says that the weather is exceedingly favorable for raisins, the crop being about half dry. By another ten days they will be secured and in sweat-boxes, providing there is no rain. The pack will not only be better than last year, but very much larger, or about 125 carloads to 73 in 1889. The berries seem to be superior, and the fact that prices have advanced from 3½ and 4 to 5 and 5½ cents a pound makes ranchers correspondingly cheerful. The crop, too, has turned out heavier than was expected, many more trays than any one anticipated being needed, and in some instances more pickers are employed. There have been about 800 persons at the picking, and some are now leaving the valley. Packing will begin in about two weeks.

LARGE SWEET POTATOES.—Otay *Press*, Sept. 18: P. E. Cornet sent to the Chamber of Commerce, on Monday, a sweet potato that weighed 26½ pounds, dug from a hill yielding 54 pounds, on the ranch of H. G. Davis, near Oneonta.

San Joaquin.

IMPROVED BROODING-HOUSE.—Lodi *Review*, Sept. 18: Don Ray of Galt is having an immense brooding-house erected at his poultry-yards south of town. The new brooding establishment, intended particularly for winter use, will be heated by steam, pipes being introduced through the several compartments.

LARGE YIELD OF POTATOES.—Stockton *Independent*, Sept. 16: Councilman Clark has returned from Lockeford, where, in partnership with Frank Madden, he has 50 acres of land rented and planted in potatoes. The yield promises to be a big one, and the tubers are of the finest in quality. Mr. Clark expects that in some portions of the tract the yield will be 250 sacks to the acre.

San Luis Obispo.

BEAN CROP.—Arroyo Grande *Herald*, Sept. 13: The bean crop is maturing nicely and some big yields will be reported.

Santa Barbara.

EDITORS PRESS:—We are having considerable dark, foggy weather now; there is a dark cloud in the north, and I hear distant thunder at this moment; many are predicting early rains, but I must confess my skepticism as to all weather predictions for more than a few days in advance. Our knowledge of the laws which govern the currents of electricity, currents of magnetism, currents of air, hot and cold waves, humidity and dryness of the air, etc., is as yet too limited. There is so much moisture deep in the ground from last winter's rain, that a very light supply of rain—especially if continued well into the spring, and if we do well our part by keeping the surface well pulverized—will probably produce good crops next year. Corn is being cut, which is considerably earlier than usual.—S. P. SNOW, *Santa Barbara Co., Sept. 18th.*

ATTENTION TO FRUIT TREES PAYS.—Santa Maria *Times*, Sept. 20: There was on exhibition at the fair a small branch cut from an apple tree in Mr. Fugler's orchard. This branch contained over 200 apples, of course not very large—as they had not room to grow. Near by sat a plate of apples of the same variety, but plucked from a tree where the fruit had been thinned out when quite young. They were treble in size, and of flavor so widely different that one would not recognize them as the same variety of apples. This plainly illustrates that fruit when setting on trees too thick should be thinned out, which will add size and flavor to that remaining.

BEAN CROP.—Santa Maria, Sept. 20: The bean crop through the valley promises a heavy yield. Some that have been already cut and thrashed have run as high as 1400 pounds per acre.

PEACH PITS FOR THE EAST.—Lompoc *Record*, Sept. 20: An application for cars to take 60 tons of peach pits from Southern California East has been made to the general freight agent of the Southern Pacific Co. This is made necessary by reason of the total destruction of the peach orchards in many portions of the States east of the Rocky mountains. This being true, the present will not be the only good fruit season we may hope to have while the new trees are coming into bearing.

Solano.

A PROFITABLE ANIMAL.—Vacaville *Reporter*, Sept. 18: Most of the farmers keep hogs on their ranches. They have found that it pays. There is no kind of stock that multiplies so rapidly nor that matures for market so quickly as the hog. It eats up all the refuse and swill and picks up much in the fields that other animals would let go to waste. Therefore it is the most profitable of animals to keep, furnishing bacon for the year's consumption and occasional fresh meat for use, and bringing in a nice little sum for current expenses every fall. Many of the farmers are turning on to market from 10 to 60 head, and think the hog business pays.

Sonoma.

MULBERRIES.—D. B. Wier in Petaluma *Courier*, Sept. 17: On invitation we visited a neighbor's well-kept garden to see and sample some mulberries. He has twe fine trees loaded with choice fruit. The trees themselves are quite ornamental. Few handsomer trees for a lawn or garden can be found in this State; large, dark green, handsome leaves, and very dense. The fruit is the size of blackberries and very fine, raw or cooked, most excellent for pies, "short cake," dumplings and canning. The trees are loaded with fruit for fully three months. Like the fig, the fruit ripens from July to October and falls from the tree as soon as dead ripe. The trees here as yet have no insect enemies and are clean and handsome every way.

GRAPE YIELD.—Santa Rosa *Democrat*, Sept. 18: It is estimated that the grape crop of Sonoma county will amount to 50,000 tons, and at the estimate of $10 per ton will place $500,000 into the pockets of the grape-growers.

GRAPE PRICES.—Santa Rosa, Sept. 18: Lovaggi & Barbieni of San Francisco have bought the crop of several vineyards in the vicinity of Carriger station, and are paying $18 a ton delivered at that point. Boxes are also furnished and returned free of charge.

HOPS.—Santa Rosa, Sept. 18: Capt. Grosse, president of the Sonoma County Hop-Growers' Association, says that at least two-thirds of the hop crop in this county has already been sold, and that the present ruling price is between 35 and 40 cents.

MUST CONDENSER.—Healdsburg *Tribune*, Sept. 18: The must condenser of Geyserville will commence operations next Tuesday. The concern will consume about 1500 tons of grapes this year.

Stanislaus.

LARGE WHEAT FARM.—Modesto *Herald*, Sept. 18: The thrashing machine of Coffee & Wooten performed big work this month on the farm of H. Hugheon, east of Ceres. An aver-

LADIES' TOILETTE.

Ladies' Toilette.

This toilette is represented developed in plain and fancy-striped dress-goods and plain velvet. The foundation skirt, which is fashioned in the accepted four-gored style and may be worn with or without a bustle, is wholly concealed beneath a drapery that is straight at the center of the front and arranged with scanty fullness over the gores, thus producing the clinging effect so much admired; and over the hips a desirable fulness results from shallow, forward turning plaits at each side. At the back the edges of the drapery are bias and are prevented from sagging by a tape included in the seam; the seam is concealed by the gracefully rounding folds which result from gathers at the top, and the stylish adjustment of the folds is secured beyond possibility of disarrangement by tackings to an elastic strap. A full, box-plaited ruching of velvet trims the edge of the drapery at the front and may, if desired, be extended across the back.

The elegant adjustment of the basque is accomplished by the usual number of darts and gores, and a well curved center seam, which, with the side-back seams, is discontinued a trifle below the waist-line to form shapely tabs. The effect of contrasting fronts is achieved by bands of the fancy-striped goods applied diagonally to the left front. The lower outline of the basque curves high over the hips and describes a well defined point below the closing.

FOR INFORMATION, our readers are referred to H. A. Deming, No. 124 Post street, S. F., a leading and well-established house, for paper patterns of plates illustrated in our present issue.

Agricultural Notes.

(*Concluded from page 274.*)

age of 1430 sacks per day was made for ten days. This not only speaks well for the machine, but inasmuch as another outfit thrashed 3000 sacks on the same farm, it indicates that wheat-raising isn't a failure with Mr. Hughson. Seventeen thousand three hundred sacks of wheat are not to be sneezed at these dull times.

Sutter.

TOBACCO GROWING.—Sutter City *Enterprise*, Sept. 16: Tobacco is being successfully grown in considerable quantities by J. M. Hering of this town. Mr. Hering thoroughly understands the art of curing tobacco, and being an inveterate consumer, uses only the article which he grows himself. He has several acres planted out to tobacco and indigo, both of which have made a marvelous growth. A gardener employed at the residence of P. D. Gardemeyer also has a plat of ground planted to tobacco. He is an authority on such matters and claims that his plants equal the best he has ever seen grown, which proves conclusively that the soil of Sutter county, especially at the southern slope of the Buttes, will grow various kinds of semi-tropical products to the entire satisfaction of the experimenter.

BIG RETURNS FROM PEACHES.—Marysville *Appeal*, Sept. 18: From a gentleman prominently connected with the fruit interests of Sutter county, an *Appeal* reporter has received the following statement of the income of a small peach orchard of four acres in that county, which is six years old:

No. trees—4 acres	480
Peaches, green, pounds	59,590
Gross revenue at $65 per ton	$1,283 75
Expense—picking, hauling, cultivating, pruning and taxes	213 25
Net profit	$1,070 50
Net profit per acre	[illegible]

What can be more remunerative to the land owner than the raising of peaches? When four acres properly cultivated will support a family, what more could be desired? Ten acres cultivated in the same manner would at that rate make each year a very handsome income. Many will say it is the high price that has helped this year; and yet should the price drop off one-third, there would be a good round net income from ten acres.

LEVEE WORK.—Marysville *Democrat*, Sept. 18: The Commissioners of Levee District No. 1, Sutter county, have completed the work of putting in piling at the mouth of the Yuba river, and have a levee camp ten miles below Yuba City. Sixty teams were put to work this morning. It will take some time to complete the task, as the levee will have to be raised from 18 inches to 2 feet at this point, known as "Starrbend." Messrs. Kerns, Abbott, Ashford, Wilson, Kelly, Lask, Humphreys and the Widow Boston have large tracts of land in this district. There are no gopher-holes to be met along this levee.

Tu'are

HORSES AND FOXTAIL.—Porterville *Tidings*, Sept. 19: Lots of people consult a veterinary surgeon or some of their neighbors as to what they suppose is the matter with their horses. A farm hand who was riding on the stage with us a few days ago, where one of the horses was giving out (and which the stable hostler said had glanders), got out, and opening the horse's mouth, pulled out two or three great wads of foxtail. The matter with the horse was, he had not been able to eat in several days, was drooling at the mouth and swelling under the throat.

WHEAT GIVING PLACE TO DIVERSIFIED FARMING.—Traver *Advocate*, Sept. 18: The reign of King Wheat is nearly over in this locality, and the orchard and vineyard, apiary and poultry farm are swiftly and surely usurping his domain.

Yolo

WORK IN THE VINEYARD.—Woodland *Mail*, Sept. 20: Many of our readers are not aware of the amount of employment that is furnished in the vineyards and orchards of this county. The number now engaged in the harvesting and shipping of this season's fruit crop greatly exceeds that of previous years. In every vineyard of any importance, at least 10 or 20 men are employed, and it is estimated that to-day 1000 men, women and children are laboring in the fruit-fields of this county. Besides, about 500 Mongolians are also at work, making a total of 1500 hands, and one vineyardist remarked to a *Mail* reporter that 200 more men could secure work at once. One hundred are engaged alone in packing Tokay grapes, around Woodland.

NEVADA.

A GOOD MOVE.—Reno *Gazette*, Sept. 18: Between Lake Tahoe and Sierra valley there are summer dairies which keep about 4000 cows for five months in the year that are driven to Folsom as winter approaches. The Board of Trade has a committee consisting of L. D. Folsom, James Mayberry, W. H. Gould, T. V. Julien, C. H. Markham, A. G. Fletcher and Wm. Thompson at work on a proposition to erect a creamery in this valley, which will induce the dairymen to drive to Reno instead of to Folsom, thus making a market for the surplus hay, as well as furnishing employment for several hundred men at a time when it is very much needed.

California's Stallions.

I beg to announce that, with a view of perpetuating the forms and characteristics of the leading stallions of California, I am issuing a series of lithographic likenesses. Each portrait issued will be an acknowledged likeness, the result of a close study of the horse and an artistic treatment of the subject. In order to secure for the series an immense advertising value, from a breeder's point of view, 4000 copies, at least, of each portrait will be issued.

Terms, $100 for first issue of 100 copies. In quantity, for advertising purposes, copies will be furnished at low rates.

H. BOYD, Artist.

208 Golden Gate Ave., San Francisco.

Dewey & Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most *reliable* advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

ALMOND HULLERS FOR SALE
By A. O. RIX,
IRVINGTON, ALAMEDA COUNTY, CAL.

The Whole Country Needs Fertilization

ADMONITION TO FARMERS!

GUAYMAS, MEXICO, September 9, 1890.

R. B. CUNNINGHAM, ESQ., Agent Mexican Phosphate and Sulphur Company—DEAR SIR: In answer to your inquiries as to the value of phosphates for worn-out lands, I will state that it is my opinion the lands of the older settled portions of California afford a good field for the use of phosphates. These lands have been cropped for years without any restoration of the chemical constituents necessary for an abundant crop. They therefore show plainly that they need assistance artificially to produce crops good in quantity and quality, let the crop be whatever it may.

Take, for instance, San Joaquin and Santa Clara valleys, and what do you see? Many crops that are so imperfect in quantity and quality that the eye at once detects the defect. The only relief that can be resorted to must be infused into the soil to replace the chemical properties that have been extracted by previous crops, and the writer is of the opinion that a liberal supply of phosphates will accomplish this.

The attention of the cultivators of the soil is sharply turned to rotation of crops, hoping thereby to get wealth out of their lands without fertilization. Some have turned their attention to beet cultivation in soil worn out by other crops. Beet or other seeds will not grow successfully unless the soil will nourish them.

This summer I saw several crops of beets on excessively cropped lands, the majority of which showed that there was something wanting to complete the plants to ample size and in quantity that should be expected of sugar beets under favorable circumstances. If a good crop is not obtained, there is deficiency in profit. It costs as much to cultivate soil deficient in chemical properties as it does if ample nutrition was in the soil. Under the former condition a deficient crop is certain, while under the latter condition he may reasonably expect an ample crop with profit.

Fields often are allowed to go to weeds, supposing thereby to enrich the soil. This is an uncertain method and not profitable. Your weeds have grown up and seeded; the dead stems can only add a limited addition to fertilize the soil, while the seeds of the same will cause much expense to exterminate them from the future crops. Besides, while thus only weeds as a crop, no profit was realized, while if a supply of phosphates had been applied to the soil, a profitable crop of beets or corn would be had. Besides, the weeds would have been exterminated during the cultivation of the said crop. I am, Sir, your obedient servant,

EDWARD PALMER, M. D.

State Fair Notes.

[Written for the RURAL PRESS by F. S. C.]

Starting Right with Jerseys.

Mr. L. F. Eaton of Florin showed a young herd of Jerseys carefully selected from the best families of the breed. The individuals were fine specimens of the breed and show the personal care of an owner with whom every one is a pet. Bob Mercury 24202 stands at the head of the herd. He is descended from Alphadran 16460 and Alphea Pearl 33523. In this family the famous Eurotas made a record of 778 lbs. 1 oz. in 11 months, to be beaten in her own family by the wonderful Eurotissima with 945 lbs. 9 oz. in 1 year. The four heifers are from the Coomassie and Frankie 17th families. They are Flossie Baker 58390, her full sister Frankie Baker 64057, Xariffa Baker 64056, and Lily Carson 64513.

In the Coomassie family, the founder herself took first prize over all Jerseys for five successive years. Her descendant, Princess Second, made a record of 46 lbs. 12 oz. butter in one week, Oxford Kate a record of 39 lbs. 12 oz. in same time, and Ethel Second another of 30 lbs. 15 oz.

In the Frankie Seventeenth family, Lady Nel Second made 183 pounds in 61 days, and Jersey Cream made 77 pounds in 30 days. Couche's Lily made 70 pounds in 31 days.

From acquaintance with Mr. Eaton, I am convinced that he will use the care necessary to put his cows upon record and do something substantial toward building up the now depressed Jersey interest in California.

We think other breeders would do well to emulate his care and zeal and see that reliable tests are made of quality as well as quantity of milk, and such tests of butter production as are entitled to go upon record. The test is the life of the Jersey interest. It must be demonstrated that they are the cattle for butter, or the buyer will seek larger cattle.

Mineral Waters at the State Fair.

In the pavilion were several very attractive exhibits of mineral waters. These were liberally dispensed to the thirsty visitors. They were there for advertising, not expecting premiums, but the authorities thought such attractions deserved premiums and so appointed a committee of award. Bartlett and Shasta were in the lead, so the gentlemen of the committee secured a bottle of each, and after carefully tasting concluded that Shasta water tasted a little the sharpest and so gave it the premium. Now the value of a mineral water consists in its medicinal qualities, and this method of testing had no possible bearing upon the question. In such matters a committee should consist of competent chemists or physicians, who should deal with the main question at issue.

BURBANK'S GLADIOLUSES.—We have had the pleasure of growing a small collection of Mr. Burbank's new gladioluses on our lawn this summer, and they have been the admiration of all visitors for their size, hues and delicate markings. We understand that Mr. Burbank is proceeding with his development of this grand flower, and that some of the newer lot of seedlings are very much finer than any in the old set; but it will take four years yet to get a stock of them. Every seedling lot shows very much improvement over the last before, but the seed of any variety never produces any like its parent. They vary surprisingly when grown from seed. Mr. Burbank has gone East on a flying trip, but will be back again at his work in Santa Rosa by the middle of October.

POULTRY.—We desire to call special attention to the advertisement made in this issue by the Clover Valley Poultry Farm of Whitewater, Wis. As will be seen, the proprietors of this farm breed all the leading varieties of land and water fowls.

Booming Bellamy—Co-operative Canvassing.

The Pacific Bellamy Club wants to circulate upon this coast 150,000 copies of Bellamy's famous book, "Looking Backward," the prophetic gospel of the Nationalists, 350,000 copies of which have been sold already, including 20,000 in California.

The club has made arrangements whereby the book can be bought for about half-price. There are thousands of people in this State who have not yet read "Looking Backward," and will not do so for a long time, unless it be brought to their notice by some acquaintance who can say: "Here, take this book and give me 30 cents to buy another for some one who wants something good to read."

Their plan is to give every one willing to aid in the work a card bearing his or her name, and certifying: "You are hereby appointed Solicitor of Funds from your *personal acquaintances only*, for Bellamy Club, No. —, of —. Said funds, together with the dues of five cents per month from each member, shall be used in the purchase of the book, 'Looking Backward,' which is to be given away or loaned by your club free of charge. Membership to exist six months." No one is expected to "make a business" of this good work, but merely to cooperate in it according to leisure and opportunity. Canvassing cards and further information will be furnished free of charge on application to S. Stetson, 1024 Capp street, S. F.

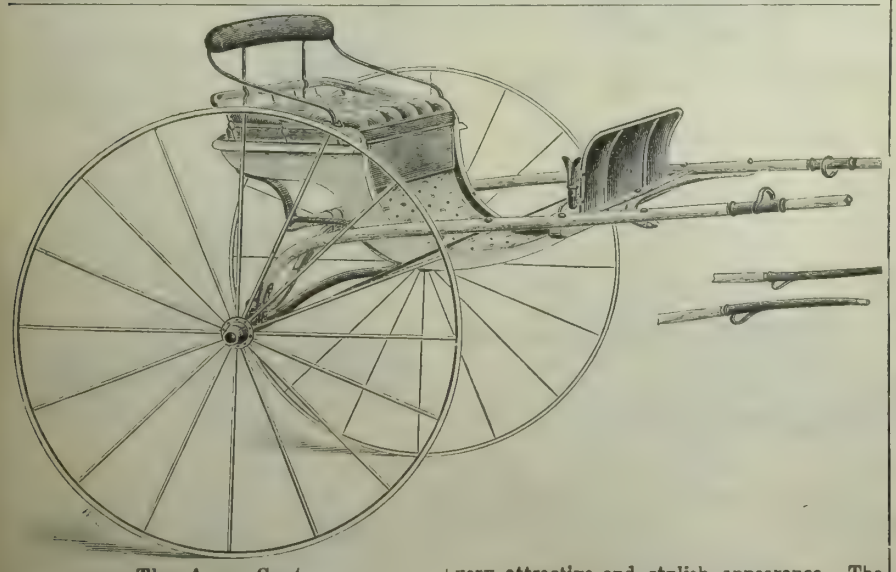
Parties ordering books should address—"Cooper's bookstore, 746 Market street, S. F., Cal." The Bellamy Club has made arrangements to have them furnished at 30 cents each—postage extra.

As to Carisa.

EDITORS PRESS:—I notice an item in Sept. 13th PRESS from Livermore, Alameda county, advising farmers to plant carisa in wet places. I have been wishing to get a forage plant which will grow in a wet, sandy river-bottom, and would like to know the nature of the carisa, where it may be obtained, the best time to plant, whether it will stand heavy pasturing, etc. H. M. PETERS.

Full Brook, Cal., Sept. 18, 1890.

An Echo from the Hills.



The Downieville *Mountain Messenger* says: "The State Fair edition—32 pages—of the PACIFIC RURAL PRESS, published by Dewey & Co., San Francisco, is most valuable for the farmers, and highly creditable to the energetic and wide-awake publishers who always keep abreast of the times. Every farmer should subscribe for this instructive and popular organ of the Grangers."

Simple, Substantial, Satisfactory.

The College City Steam Pump exhibited at the State Fair, has long held its own as one of the most simple and economically working premium pumps ever invented. It is manufactured by its proprietors, Root, Neilson & Co., at their own establishment, the Union Iron Works, Sacramento. Parties interested in steam-pumping apparatus should send for their circular.

ROOTED VINES.—The Fruto Land and Improvement Co. have a large lot of rooted grape vines for sale at Rancho Fruto. They were grown 800 feet above sea level and are stocky vines, free from insects and not waterlogged. Send in your orders early. See advertisement in another column.

GLENWOOD NURSERIES.—The Wm. H. Moon Co., Morrisville, Bucks county, Pa., have issued their semi-annual trade-list for the autumn of 1890. It embraces fruit and ornamental trees, both deciduous and evergreen, shrubs, vines, bulbs, etc., making a *brochure* of 14 pages.

The Acme Cart.

The demand for something new in the way of Road Carts has brought out another candidate for public favor in the Acme, an illustration of which is given above. Its patent-leather dash, stick seat and graceful body certainly give it a very attractive and stylish appearance. The seat has a lazy-back and corduroy cushion, and the cart is finished in either natural wood, Brewster green, red or black. The wheels are Sarven patent and the body is securely braced and ironed. The Acme is meeting with a ready demand and is handled by Frank Bros., San Francisco.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

FOR WEEK ENDING SEPT. 16, 1890.

436,623.—APPARATUS FOR MAKING EXTRACTS—Geo. S. Andres, S. F.

436,624.—APPARATUS FOR MAKING EXTRACTS—Geo. S. Andres, S. F.

The following brief list by telegraph, for Sept. 23, will appear more complete on receipt of mail advices:

California—Daniel Best, San Leandro, traction engine; Daniel Best, San Leandro, injector; Daniel Best, San Leandro, boiler; John Dihrberg, Visalia, water-closet indicator; John W. Eisenhuth, assignor to Electric Vapor Engine Company, San Francisco, explosive engine; Silas Harris, San Francisco, axle machine; John F. Kirby, San Francisco, governor; Nicholas Kramer, Sacramento, car-coupling; John A. Rueger, San Francisco, block puzzle; Thomas Scheen, St. Helena, lawn-sprinkler; Andrew T. Sherwood, San Francisco, uterine supporter; Wm. Shipley, San Luis Obispo, door check; Matthew S. Tarkington, Tulare, wire-fence stay; Auguste Wagniere, Los Angeles, electric arc lamp; John H. Watson, Selina, hame hook; Hugh Wilson, Duncan's Mills, lifting-jack. Oregon—John B. Kelly, Pleasant Home, pneumatic railway; William A. Miller, Wapinitaia, circular saw; Zatique Penard, Portland, sash-fastener. Washington—Jasper Howe, Tacoma, shipping-receipt books; William W. Shearer, Port Angeles, wire-drawing drum.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

The Stockton Fair.

As we go to press the San Joaquin Valley Fair at Stockton is opening well, and promises to surpass earlier efforts of this leading District Association of the State. During the closing days of this week the pavilion display will get into good shape, and all next week both at pavilion and park the exhibition will be in full blast with a full list of interesting features. All who desire to study the resources and adaptations of that vast empire, the San Joaquin valley, should begin with the Stockton Fair, and then proceed southward through the varied agricultural regions and flourishing towns from tide-water in the San Joaquin to the head of the valley at Tehachipi. Stockton will be a good place to visit from Sept. 23d to Oct. 4th.

THE overland fruit shipments from San Jose last week amounted to 4,100,790 pounds.

S. F. Market Report

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Sept. 24, 1890.

Trading the past week in farm products has been fairly active outside of cereals, which have ruled dull, owing to buyers' offishness. To the decline in silver (falling from $1.20¾ an ounce to $1.12¾ an ounce) is largely due the weak and lower markets abroad for wheat. The following is to-day's London cable:

LIVERPOOL, Sept. 24.—Wheat weaker. California spot lots, 7s 1½d to 7s 4d; cargoes off coast, 37s 3d@37s 6d; just shipped, 37s 6d; nearly due, 37s 6d; cargoes off coast, not much demand; on passage, inactive; Mark Lane wheat, quiet; English country markets, turn dearer; wheat and flour in Paris, steady.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	Sept.	Oct.	Nov.	Dec.	Jan.
Thursday	7s4½d	7s4½d	7s5½d	7s6d	7s5½d
Friday	7s3½d	7s4d	7s5d	7s5½d	7s5d
Saturday	7s3½d	7s4d	7s5d	7s5½d	7s5½d
Monday	7s3½d	7s4½d	7s5½d	7s5½d	7s5½d
Tuesday	7s4d	7s4½d	7s5½d	7s6d	7s6d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	37s3d	37s6d	37s6d	Quiet.
Friday	37s3d	37s6d	37s6d	Quieter.
Saturday	37s3d	37s6d	37s6d	Slow.
Monday	37s3d	37s6d	37s6d	Quiet.
Tuesday	37s3d	37s6d	37s6d	Quiet.

Eastern Grain Markets.

The following shows the closing prices of wheat New York for the past week:

Day.	Sept.	Oct.	Nov.	Dec.	May.	June.
Thursday	102½	103½	105½	106½	111	...
Friday	101½	102	....	105½	109¾	...
Saturday	101¾	102	....	104¾	109¼	...
Monday	102½	103½	104½	105½	110¼	...
Tuesday	101¾	102¼	....	104¾	109½	...

The closing prices for wheat have been as follows at Chicago for the past week:

Day.	Oct.	Dec.	May.	June.
Thursday	....	102¾	107¾	....
Friday	98¼	101½	106	....
Saturday	98¼	101	105¾	....
Monday	99¼	102	106½	....
Tuesday	98½	100½	105	....

NEW YORK, Sept. 24.—$1.02¾ for cash, $1.01¾ for October, $1.03¾ for December and $1.07⅞ for May.

CHICAGO, Sept. 24.—Wheat—99⅝c for December and $1.04⅜ for May.

Eastern Wool Markets.

PHILADELPHIA, Sept. 19.—Wool is firm; Montana, 16@24c; Territory, 15@20c.

BOSTON, Sept. 19.—Territory wools are most active and large lines are being sold on a scoured basis at 58@60c; fine medium, 55@58c; medium, 52@55c. California and Oregon wools are comparatively quiet.

NEW YORK, Sept. 19.—*Bradstreet's* says: The wool market continues to improve. Reports from all large centers are very encouraging. Manufacturers are inclined to buy more heavy, especially Territory wools. The market for Australian wool is comparatively quiet. Dealers are firm in their demands and prices are well held. There is but light demand for Carpet wools. Pulled wools are stronger and sales in this line are increasing. Ohio and Michigan are meeting with only a light demand. While dealers refuse to urge sales in the presence of the strong demands which are being made by worsted mills, it is a clear indication that higher prices are expected and that they will be received. The London sales have opened with a large attendance of buyers and animated bidding. Prices rule as high as at the end of the last series. Comparatively little wool suitable for this country is included in the offerings.

Hops.

CHICAGO, Sept. 21.—The hop market is unusually steady. A few hops are being received, but the quantity is yet small; trade is light. Brewers are holding back on account of the high prices, but holders are firm. The feeling in the hop-growing sections, both in the East and all the western coast, is firm. Old hops are about all gone. Pacific Coast, 40@44c ₱ lb.

NEW YORK, Sept. 21.—No animation in hops; operators await the collections of the crop. New Pacific stands well. Quotations compared with the best State. Rates for all this season's growth are the same as last week.

Beans.

CHICAGO, Sept. 21.—Beans are dull and buyers holding off. Ideas of value differ considerably and the tendency is downward. The quality of the beans left varies a good deal, with little or no straight hand-picked stock left. Prices just now are uncertain, for there is very little doing and no one cares to operate; the feeling is certainly heavy. Hand-picked, but the variety not named, are bought at $2 laid down here. California Lima beans, choice, 5c ₱ lb, common, 2@3c.

Honey.

NEW YORK, Sept. 21.—California honey is higher. Light Amber, 7¼c; Standard White, 7½c; Druggist's pure white, 8c; ordinary Amber, 7c; Dark, 6½c.

Canadian Wheat.

OTTAWA (Ontario), Sept. 19.—Advices here by the Government to-day state that, notwithstanding contradictory reports, the damage to the wheat of the Northwest is much more serious than is generally known. The crop has not only been injured by frost, but rain and snow have damaged it to a very considerable extent. Where it was believed a short time ago that 10,000,000 bushels would rank No. 1 hard wheat it is now calculated that only 1,000,000 bushels will reach that grade. The yield will be large, but the bulk of it will only grade 3 and 4.

Local Markets.

BAGS—The market is dull and heavy at 6½@7½c for standard sizes.

BARLEY—The sample market has held weak throughout the week. The weakness is due more to strong bear influences than to any other cause. The crop is short, while the demand is active. In futures, trading has been quiet. The following are the reported sales made on to-day's Call:

Morning Session: No sales. Afternoon Session: Buyer 1890—200 tons, $1.37½; 100, $1.37¾; 100, $1.37⅞ ₱ ctl.

BARLEY

	Buyer Season. H.	Buyer Season. L.	Seller 1890. H.	Seller 1890. L.	Buyer 1890. H.	Buyer 1890. L.
Thursday	148	147½	...	...	139½	138⅞
Friday	143⅝	142⅛	...	...	138	138⅛
Saturday	146	145⅝	...	...	137⅝	137⅛
Monday	145	142½	...	...	138⅜	137⅝
Tuesday	144⅜	144½	...	...	139	138½

BUTTER—The market has a weaker tone under free receipts and fears of an early winter. Fair to good grades are being shaded, but gilt-edge holds its own. Pickled is moving off fairly free, as is solid.

CHEESE—The market is reported barely steady. Stocks do not show any increase, but reported free supplies are against the selling interests.

EGGS—The market is not quite so firm. This is due to more liberal offerings of Eastern, with not so many poor received.

FLOUR—The market has a weaker tone, with concessions obtained.

WHEAT—Exporters are still bearing the market, but farmers are not offering freely, which keeps the market from dropping too low. The fall in silver is against the market. In futures, trading has been light. The following are the reported sales made on to-day's Call:

Morning Session: Buyer 1890—400 tons, $1.37½; 100, $1.37⅜; 300, $1.37¾. Buyer season—100 tons, $1.45⅝; 100, $1.45⅞; 100. $1.46 ₱ ctl. Afternoon Session: Buyer 1890—800 tons, $1.37¼; 300, $1.37⅝. Buyer season—200 tons, $1.45⅜; 200, $1.45⅝ ₱ ctl.

WHEAT.

Buckwheat, sks	36		

*Overland 90 ctls. †Overland 223 ctls.

Cereals.

In the local wheat market, trading the past week was extremely dull with buyers bidding down. Owing to fears of the rainy season setting in early, farmers are warehousing their grain, and while this is going on buyers never bid up, but, on the contrary, are after bargains. After the grain is warehoused, then sellers are more independent. The foreign and Eastern markets have ruled weak under liberal sales by European farmers and also free imports of Russian wheat contracted for previous to the advance in roubles. The exports of wheat and flour since July 1, 1890, are only about 15,000 tons less than for the like time in 1889, while the tonnage in port and to arrive is about 60,000 registered tons (nearly 100,000 tons capacity) in excess of the like date in 1889. As the surplus wheat, including carryover, is considerably less than last season, it is quite reasonable to look for lower charters before the end of the year. The tonnage on the way to northern ports and available for Oregon and Washington wheat, has a carrying capacity of nearly 26,000 tons in excess of the tonnage on the way at the like time in 1889. It will be seen by this that Oregon and Washington will be quite well provided with tonnage.

Barley held to weak prices up to Monday afternoon, when a steadier, firmer tone set in. There is no question but the crop is light; this is confirmed by the Department of Agriculture report of August 18, which is as follows: "Respecting barley, the average condition in California has declined during the past month. The quality of the grain was good, but the yield was inferior."

Oats continue to come to hand quite freely, causing a weaker market. Sellers are not forcing the market. Sales are only made at buyers' lower views to save expenses. The demand is quite fair.

Corn has a weaker tone under advices of a good yield where harvesting is under way. It is thought that present prices will draw in more sellers, and it is to this that the weaker tone is due.

Rye is reported unchanged. The general tone is reported barely steady.

The New York *Mail and Express* of Sept. 17th says: There was a good deal of surprise expressed at the foreign buying on account of the French estimate of 119,500,000 hectolitres or 338,100,000 bushels for the crop, but Beerbohm cabled that this estimate was much too high and the *Bulletin des Halles* estimates the French crop at 286,000,000 bushels. The official estimate looked like the bid of a buyer who wanted to make out that he was really well supplied. In the face of this estimate the foreign buying was fair, and the reports from Russia by private cable were that there was a good deal of damage to the crop. In regard to the wheat situation the London *Financial Times* in an exhaustive review of the world's wheat crops comes to the conclusion that, compared with 1889, Europe and Egypt will give an increased yield of 80,000,000 bushels. From this it proceeds as follows: "To this 80,000,000 bushels may be added 5,000,000 bushels to cover any possible increased production in Canada, Australasia and the Plate, making a total of 85,000,000 bushels more wheat harvested in 1890 than in 1889, outside of the United States and India. In these two countries the crop is at least 95,000,000 bushels less than last year (the last official report of the Department of Agriculture places the United States crop at 91,000,000 bushels less than in 1889, which added to India's shortage gives a lessened yield by these two countries of over 110,000,000 bushels. Besides this, the United States corn crop is about 400,000,000 bushels less than in 1889.—Commercial Editor RURAL PRESS.) so that the wheat crop of the world is this year 10,000,000 bushels below the production of 1889. But in 1889 the production was not equal to the demand, and reserves throughout the world were seriously reduced.

Feedstuff.

Ground feed has an easier tone, due largely to the threatening character of the weather. The Hawaiian islands are taking large quantities of rolled barley.

The receipts of hay are quite large, and so is the demand. Choice grades are relatively scarce, which causes the market to retain its strength for those kinds. Poor to fair grades are in oversupply, and to make quick sales it is, at times, necessary to make concessions.

Fruits.

The berry crop is fast going out, which causes quotations to be more or less nominal.

Apples are in better demand, but as receipts are large the market for the time is kept steady. The quantity being dried is largely in excess of former seasons. So far as we are able to learn, the crop is freer from worms than reported for years past. The Oregon crop is reported as being larger than in 1889.

Peaches are going out, or at least valley peaches are getting scarce. There is still a good showing of mountain peaches. The market is firm. Quotations for Bartlett pears are withdrawn. Good-keeping varieties are firm. Plums are going out.

Cool weather and heavy receipts are against the market tor melons.

Table grapes under heavy supplies have ruled in buyers' favor. The cool weather is against liberal consumptive demand. Some dealers have suggested to consignors to keep consignments back, that is, not to ship too heavily. At the close, choice good keeping are doing slightly better. A daily paper truthfully remarks as follows: The wine men made an onslaught on the market yesterday. It appeared to dealers as if they were making an agreed-upon effort to smash prices. Of course, if the San Francisco wine-grape market can be beaten down two or three dollars a ton, the city newspapers will scatter the quotations all over the State, and the country markets may be thus weakened just so much. Some of the wheat operators have played this game successfully for a number of years. However, the California grape-growers are more independent of the wine men than heretofore, and if they choose to dry their grapes instead of sacrificing them on a cheap and demoralized San Francisco market, the wine men may have to pay even high prices yet.

Heavy shipments of dried fruits overland are still in order. The offerings from first hands are light, a large majority of driers being out of stock. The local market shows a slight increase in the demand.

Raisins are beginning to be shipped quite freely to Eastern points. The drift of opinion is that choice selected will command better prices, yet large packers do not appear disposed to hold, but are meeting the market.

Live-stock.

The market for bullocks and mutton sheep does not show any material change. As the weather grows cooler the consumption increases. Some dealers look for better prices in the former at an early date. Hogs are easier under liberal offering. Milch cows are firm. Medium-sized work horses are easier under freer selling.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4@4½c ₱ lb; dressed, 7@8c ₱ lb.; heavy, 3½@3¾c ₱ lb.; dressed, 6@7c ₱ lb. Stock hogs, 3¼@3½c ₱ lb.

BEEF—Stall fed, 6½@—c ₱ lb.; grass fed, extra, 6@—c ₱ lb.; first quality, 5¼@5½c ₱ lb.; second quality 4¼@5c ₱ lb.; third quality, 4c@— ₱ lb.; bulls and thin cows, 2@3c ₱ lb.

VEAL—Small, 6@8c ₱ lb.; large, 4@6c.

MUTTON—Wethers, 7½@8c ₱ lb.; ewes, 7@7½c ₱ lb.; lamb, spring, 9@10c.

Vegetables.

Garden truck does not show any material change.

Root vegetables and cabbage are fairly firm.

Onions have held to firm prices. Receipts are freer, but this is measurably offset by a freer local and shipping inquiry.

Potatoes have an easier tone. The crop of the State is quite large, as is that of Oregon, but the overland demand keeps prices from shading off. Nevada is sending its liberal surplus largely to the East. Digging is very general. Last year's early rains caused heavy losses, which creates among potato-growers more caution this year.

Miscellaneous.

Poultry is in liberal receipt, but prices do not shade off owing to a free consumptive demand.

Wild ducks are in better supply. Quails are in free receipt.

Honey is coming in quite freely, but it is moving off with equal freedom, which causes a firm tone.

Colored beans are easy, but white varieties are firm.

Hops are reported easy. Fully nine-tenths of the Pacific Coast 1890 crop has been placed.

Wool shows increasing firmness under a freer demand from the East. For the more desirable grades a slight advance has been established. Fine grades of merino are in better demand.

Exports by sea the past week aggregate as follows: Wheat, ctls, Sharpness, 123,642; Cork, 53,567; Plymouth, 65,765. Flour, bbls, Honolulu, 200; Belfast, 20,579; Guayquil, 3250; Central America, 4131; Panama, 500; South America, 580; China, 11,226; Japan, 2187. Dried fruits, lbs, Sydney, 10,310; Auckland, 500; Dunedin, 500; Central America, 2156; China, 1150. Wine, gals, New York, 61,481; Pennsylvania, 5070; Hamburg, 7486; Japan, 4560; Central America, 1313; Mexico, 500. Honey, cs, Sydney, 45; Hamburg, 1181. Barley, rolled, Honolulu, 1025 sks and 60,897 lbs. Mustard seed, lbs, Hamburg, 197,049. Beans, lbs, Honolulu, 4720; Central America, 21,366; China, 5546. Broomcorn, bbls, Auckland, 4435. Canned fruits, cs, Auckland, 140; Brisbane, 200; Wellington, 156; Bremen, 385. Hay, bls, Honolulu, 444. Hops, lbs, Brisbane, 3000; Japan, 1142. Potatoes, sks, Honolulu, 246. Onions, lbs, Honolulu, 103.

From the *Commercial News* of Sept. 22d the following summary of tonnage movement is compiled:

	1890.	1889.
On the way to this port	290,762	237,047
On the way to neighboring ports	23,624	16,622
In port, disengaged	7,136	17,286
In port, engaged for wheat	42,794	63,648
Totals	364,316	334,603

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to Sept. 17, 1890, the following are the exports from this port:

	1890.	1889.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

California Fruits East.

CHICAGO, Sept. 20.—The market for California dried fruit ruled quiet with only moderate offerings. Stocks are very steadily held, but buyers are not disposed to purchase beyond their immediate requirements; dealers do not feel like stocking up at present prices, and yet holders are firm, for it does not look as though there would be any surplus. Apricots, ₰ lb, 16½@17c; peaches, unpeeled, 18½@20c; peeled, 30@32c; nectarines, red, 17@18½c; white, 19@20c; dried grapes, 5½@5¾c; prunes, 50 to 60 to the pound, 12½c; 60 to 70, 12@12¾c; 70 to 80, 11½@11¾c; 80 to 100, 10½@11c.

CHICAGO, Sept. 22.—The Porter Bros. Co. sold eight carloads of California fruit to-day at the following prices: Cling peaches, $1.50@1.75; Salway peaches, $1.25@1.60; Tokay grapes, $2.80@3.40 per full crate; $1.25@2.60 per half-crate; Cornichon grapes; $1.50; Muscat grapes, $3 55 per full crate; $1.45@1.70 per half-crate; German prunes, $2.50 per half-crate; $1.50 per box; Golden Drop plums, $1.50@1.55; Beurre Hardy pears, $3 85@3 90; Beurre Clairgeau pears, $3.10; Comice pears, $3.80 @4; Duchess pears, $2.75@2.90; Vicar pears, $2.25; White Doyenne pears, $2.65@2.95; Beurre Bosc pears, $4; Beurre d'Anjou pears, $3@3.10; Sheldon pears, $3@3.70.

The Earl Fruit Co. sold to-day California fruit as follows: Ripe Bartlett pears, $3.50; Winter Nelis pears, $2.25@2.50; Keifer pears, $3.50@3.60; Seckel pears, $3.50; Howell pears, $2.55; Easter Beurre pears, $2.25; Duchess pears, $2.25; Strawberry peaches, $1.35@1.40; Salway peaches, $1.40@1.50; Cling peaches, $1.35@1.45; White Malaga grapes, $2.10. The weather is fine and cool.

CHICAGO, Sept. 18.—Porter Bros. sold six carloads of California fruit to-day as follows: Pears, White Doyenne, $2.75; Beurre Bosc, $4; Bell, $3.20; Block's Acme, $3.85; Onondaga, $3.25@3.30; Comice, $3.40@3.7 ; Beurre Clairgeau, $2.90@3.05; Duchess, $2.80@3 05; Vicar, $2.40; Beurre Diel, $2.75@2.85; Beurre d'Anjou, $2.85@3; Quinces, $1.85; Golden Drop plums, $1.40; German prunes, $1.40; Kelsey Japan plums, hf crates, $2.05; grapes, Tokay, full crates, $2.50@2.70; hf crates, $1.10@1.35; Cornichon, double crates, $2.45; single crates, $1.25; Lawrence pears, $2.95; Beurre Gris, $3 25; peaches, $1.35@$1.55.

CHICAGO, Sept. 18.—The Earl Fruit Co. sold California fruit to-day as follows: Pears, Duchess, $3.25; White Doyenne, $3.20; Glout Morceau, $2.90; Vicar, $2.40; Comice, $3.20; Quinces, $1.90. Weather fine and cool.

NEW YORK, Sept. 18.—Sgobel & Day, agents of the California Fruit Uuion, auctioned one carload of California fruit to-day at the following prices: Grapes, Tokay, $1.55@2.80; Morocco, $2@2.05; Malvoise, $1.30@1.35; Rose de Peru, 90c@$1.20; Muscat, 95c@$1.50. Fruit is generally in good condition. The receipts of grapes in New York are rather free.

CHICAGO, Sept. 19.—The Earl Fruit Co. sold California fruit to-day as follows: Winter Nelis pears, $2.50@2.70; Salway peaches, $1.40@1.45; Strawberry peaches, $1.50; Cling peaches, $1.45; Seckel pears, $3.70.

CHICAGO, Sept. 19.—Porter Bros. sold seven carloads of California fruits to-day as follows: Grapes, full crates, Tokay, $2.95@3.50; hf crates, $1.25@1.45; Muscat, full crates, $2.80@3.10; hf crates, $1.05@1.40; Blue Malvoise, $1.45; Purple Damascus, $1.75; Cornichon, full crates, $2.95; hf crates $1.40; German prunes, $2; Silver $1.55; Livey Cling peaches, $1.75; peaches, $1.45@1.55; Quinces, $1.95. The weather is fine and cool and the markets are improving.

NEW YORK, Sept. 19.—The second lot of the new crop of imported raisins has arrived here from Denia; the amount is 98,000 boxes. Another cargo of 71,000 boxes is on the way. Private cables say French prunes continue to be sold at the old figure at Bordeaux. Turkish prunes on the spot are held steadily.

The total receipts from June 1 to date for California fruit in this city are estimated by the *Commercial Bulletin* at $650,000. Of this amount $200,000 had to come out for freight charges.

CHICAGO, Sept. 20.—The Earl Fruit Co. sold California fruit to-day as follows: Grapes, hf crates, Tokay, $1.35@1.50; Muscat, $1.20@1.30; Cornichon, $1.45; Emperor, $1.45; full crates, Tokay, $2.90; Muscat, $2.60@2.80; Emperor, $2.95; Salway peaches, small, $1.25@1.40; Heath, $1.30. The weather is fine and cool.

CHICAGO, Sept. 20.—Porter Bros. sold three carloads of California fruit to-day as follows: Cling peaches, $1.60@2; Salway $1.50@1.55; Cornichon grapes, $1.45; full crates, $2 95; White Cornichons, hf crates, $3.05; Tokay, full crates, $3; hf crates, $1.40@1.50; Muscat, full crates, $3; hf crates $1.45; pears—Beurre Hardy, $3.85@3.90; Beurre Bosc, 3.90@4.15; Block's Superb, $3.25@3.30; Howell, $3.90; Beurre Clairgeau, $3 30; Duchess, $3.90; Onondaga, $3.25; Silver prunes, $1.50; Golden Drop plums, $1.60; Kelsey Japan plums, $2.30@2.40.

NEW YORK, Sept. 20.—Rossiter & Skidmore, dealers in California products, report an arrival of Lion brand raisins, new crop, yesterday. They also say the trade is taking no interest in Malagas. There have been no arrivals of Malagas yet. California has now the field for Muscatel raisins.

CHICAGO, Sept. 24.—California green fruits are ruling steady. There is a fair demand with offerings moderate, with prices ranging as below: Peaches, 20-lb boxes—Crawford, $2; Orange Cling, $1.75@2; Strawberry Clings, $1.75@2; pears—Duchess, $3 25@3.50; Beurre Clairgeau, $3@3.25; Beurre Hardy, $4@4.25; Howell, $3.75@4.25; Beurre Bosc, $3.25@3.50; Beurre Diel, $3.25@3.50; quinces, $1.80 @1.90; plums, Fellenburg, $1.50; Egg, $1.75; grapes—Muscat, hf cases of 4 baskets, $1.50@1.75.

CHICAGO, Sept. 24.—The Earl Fruit Co. sold California fruit to-day as follows: Pears—Beurre Bosc, $3.95; Comice, $3.85; Beurre Diel, $2.40; Beurre d'Anjou, $2.60; Vicar, $2.15; Winter Nelis, $2.15@2.25; quinces, $1.70@1.85; peaches—Salway, $1.35@1.55; Strawberry, $1.65@1.70; grapes, Tokay hf crates, $1.25@1.55; Muscat, $1.35. About 15 cars of fruit are sold here daily.

NEW YORK, Sept. 24.—According to the *Commercial Bulletin*, which is closely watching the raisin market, the sales of California raisins for future delivery have been larger thus far than during the corresponding period last year. In the East, orders are scattered over a wide territory. The Western trade has ordered very liberally. Jobbers have resold to a considerable extent, thus the early receipts will pass almost directly into the retailers' hands.

Dried Fruits, Etc.

The quotations given below are for average prices paid. Choice to extra choice fetch an advance on the highest quotations while poor sells slightly below the lowest quotations

Prices named, unless otherwise specified, are for fruit in sacks. Add for 50-lb. boxes ¼c per lb., and for 25-lb boxes ½c to 1c per lb.

SPECIAL AUCTION SALE
— OF —
High-Bred Standard Trotting Stallions,
Fillies and Brood Mares,
— BY DIRECTION OF —
WILFRED PAGE, ESQ., Cotate Ranch, Penn's Grove, Sonoma County,
— At 10 A. M. on —
THURSDAY, OCT. 17 and FRIDAY, OCT. 18
(During Meeting of Trotting Breeders' Association),
At FAIR GROUNDS, NAPA CITY.

The offering will consist of over 40 head. There are Stallions by Alexander 490, Le Grande 2868, Admont 5349, and Stallion Colts by Mortimer 5346 and Eclectic 11,321, standard sons of Electioneer. The Mares offered are by Elector, Arthurton, Mohawk Chief, Satellite, Alexander, Ethan Clay, Sportsmen, &c., &c. The Fillies are out of these Mares by Admont (son of Piedmont), Mortimer and Eclectic. The mares have been bred this year to these horses and are believed to be with foal. We have Mr. Page's assurance that every animal offered will be sold absolutely, without limit or reserve, thus placing the sale entirely in the hands of purchasers.

Catalogues are being prepared giving full description and pedigrees, together with details regarding each animal. They will be sent only on application.

KILLIP & CO., Live Stock Auctioneers,

Railway Employes in the United States and in England.

There have been many and varying estimates as to the number of persons employed in the railway service in the United States, and some of them have been very wide of the mark; Poor's Manual, for instance, in 1889 estimating the number at more than 936,000, or an average of six persons per mile. The census of 1880 made the average 4 8 men to the mile, and from an examination of the various State railroad reports and numerous company reports the *Railway Age* some years later came to the conclusion that the railway employes in this country average in number about five to the mile, an estimate which is pretty well supported by a table by the statistician of the Interstate Commerce Commission, just published, showing the number of employes by classes. From this it appears that the average at the date of report, June 30, 1889, was 4.59 per mile of road, and that the number of workers aggregated 704,743. To this estimate it is added that "the railway industry of the United States provides a living for 3,000,000 persons, or about one in 22 of the total population of the country," this of course not including railway stockholders, who in many cases obtain their support largely from the earnings of the roads.

The document quoted from proceeds to compare the number of employes on American and on English railways, showing a very much greater number of men to the mile on English roads than on ours; a fact which seems to furnish some presumptive evidence of the superior efficiency of American railway men, although the vastly greater traffic to the mile on English roads than on our own must be considered in making a just estimate. English railways in 1888 employed 346,426 men on 19,820 miles of railway, or 1748 men per 100 miles of lines; that is, nearly four times as many to the mile as on our roads. The fact that while with eight times as many miles of main line our railways employ only 2½ times as many engine-drivers as those of Great Britain is of itself an indication that the traffic of English lines is so much greater per mile than that of ours as to prevent satisfactory comparison from the data here given. The very rapid construction of railways in thinly settled portions of this country has reduced the average number of men employed per mile, but the tendency now is constantly toward an increase of the average working force as a result of the increase of traffic on new and old lines also, so that at the present time five men per mile of road is probably not far from a correct basis for estimate; and as the railway mileage of the United States is fully 164,000 miles, we may say that in round numbers the railway employes of the United States now aggregate about 800,000 persons.

THE PELTON WATER MOTOR

Affords the cheapest and most convenient power for Ranch, Vineyard or Dairy purposes, as well as for running dynamos for electric lights, pumps and every other variety of machinery.

It possesses in the same degree the wonderful energy and power that has made the Pelton Wheel famous in all parts of the world.

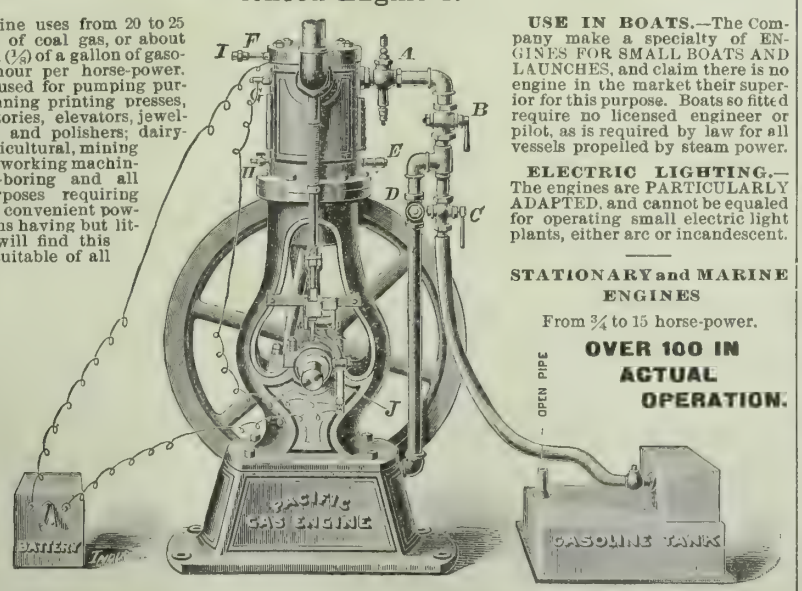
These motors are made of varying sizes, with capacities ranging from the fraction of one up to 15 and 20 H. P., enclosed in iron cases, all ready for pipe connections, and are warranted to develop a given amount of power with one-half the water required by any other wheel.

The cost, considering capacity and efficiency, is fully 50 per cent less.

Circular, giving full information, sent on application.

Parties writing for information should give full particulars as to power wanted, source of water, supply, with head or pressure. Address

THE PELTON WATER WHEEL CO.,
121 Main Street, San Francisco, Cal.



THE

PACIFIC GAS OR GASOLINE ENGINE.

PATENTED JUNE 17, 1890—NOS. 430,504, 430,505, 430,506.
Also in Great Britain and other foreign countries.

Starts Instantly Without the Necessity of Boiler, Fire or Experienced Engineer.

The engine uses from 20 to 25 cubic feet of coal gas, or about one-eighth (⅛) of a gallon of gasoline per hour per horse-power. It can be used for pumping purposes, running printing presses, small factories, elevators, jewelers' lathes and polishers; dairymen's, agricultural, mining and wood-working machinery; well-boring and all other purposes requiring cheap and convenient power. Persons having but little space will find this the most suitable of all motors.

USE IN BOATS.—The Company make a specialty of ENGINES FOR SMALL BOATS AND LAUNCHES, and claim there is no engine in the market their superior for this purpose. Boats so fitted require no licensed engineer or pilot, as is required by law for all vessels propelled by steam power.

ELECTRIC LIGHTING.—The engines are PARTICULARLY ADAPTED, and cannot be equaled for operating small electric light plants, either arc or incandescent.

STATIONARY and MARINE ENGINES

From ¾ to 15 horse-power.

OVER 100 IN ACTUAL OPERATION.

READ THESE TESTIMONIALS.

ALAMEDA, April 3, 1890.

PACIFIC GAS ENGINE CO.—GENTLEMEN: Permit me to add my testimonial to the many you have received indorsing your engine. As you are aware, mine was a Regan engine which gave me considerable trouble. I had to remove the head and raise the tappet valve every time I wanted to start the engine. I sent you the engine; you removed all the Regan appliance except the cylinder and stand. You put in your appliances, head, sparking device, inlet valve, and, in fact, changed it to the Pacific Gas Engine, which now works splendidly. I have not had to remove the head for any cause since you made the change (over two months). It gives me no trouble; my boy, 14 years old, attends to it.

The change from the Regan to the Pacific is a decided improvement. I can also get a third more power since the change, and I cheerfully recommend your engine as being simple, effective, and cheap. Respectfully yours,

B. S. HILL, S. W. Cor. Encinal Ave. and Morton St.

MAYFIELD, March 26, 1890.

PACIFIC GAS ENGINE CO.—We have given your little 1-H. P. engine a splendid advertisement. A fire broke out at 2:30 o'clock this morning, in a tenement house on my premises. I started the engine, connected the hose, and by its use saved at least $3000 worth of my property. I saved my blacksmith shop, lying 12 feet from the burning building, my barn and my dwelling. Three times the fire started in these buildings, and I extinguished it every time. The engine never faltered, and threw water between 50 and 60 feet high. The whole town was astonished, and they acknowledged that I saved at least $20,000 worth of property.

A fire department is being organized here, and I think they will have one of the engines on a truck for fire purposes. *They cannot be beaten.*

Hoping that all of your customers will be as well pleased with the engine as I am, I remain, Yours truly,

JOS. P. PONCE.

THE HUFFER & NYE
Steam Vacuum Pumps.

These powerful Irrigating Pumps are operated by Steam Boilers and are without Pistons or any parts to wear out.

Will pump from 50 to 2000 gallons per minute. With live steam will raise 60,000 gallons of water 20 feet high with one bushel of coal.

NO STEAM PRESSURE REQUIRED, except on a lift above that made by the atmosphere, which is about 30 feet at sea level.

Will pump dirty or gritty water equally well, or 40 to 60 per cent sand or gravel.

They can be bought and put in position ready for work cheaper than any other pumps of the same water-lifting capacity. There is no loss of atmospheric pressure produced by condensing the steam. No skilled labor required to run them. Any ranch man can operate them. They cost no more than water right and can be operated at a nominal expense.

Address PACIFIC MANUFACTURING COMPANY, 575 Mission Street, San Francisco, Cal., for particulars and illustrated circulars regarding these wonderful irrigating pumps.

NEW ERA DITCHERS.

Guaranteed capable of placing in embankment *1,000 to 1,500 cubic yards of earth in 10 hours* with 6 teams and 3 men, or of loading 600 to 800 wagons of 1½ yard each in the same time, at a cost of *2 cents per cubic yard*. F. C. AUSTIN MANUFACTURING CO., CHICAGO, ILL.

H. P. GREGORY & CO., Agents,
SAN FRANCISCO, CALIFORNIA.

Truman, Hooker & Co's Vineyard Cart.

FARMER'S VINEYARD CART.

Side boards can be taken off. Wheels high. Tires wide. Strong, serviceable and extremely low in price. Tires 3 to 4 inches wide. Hollow iron axles and solid iron axles. Especially adapted to vineyard and farm work, *with wide tires, narrow track*. Light, strong, and made of the best material. Measures 4 feet 6 inches from point of hub to point of hub, which enables it to be used in any place on a vineyard or farm where an ordinary cart or wagon cannot; and the side-boards being high, it carries a larger load than a cart. Write for prices.

Patrons and Trees.

To many of our readers the engraving on this page will suggest an appropriate connection or association involved. It represents two sections—a section of the National Grange, the grandest farmers' association in existence, and a section of a big tree, the grandest known specimen of vegetable growth. It is fitting, too, that these two sections should come together in California—a country of big things and proper appreciation of them. The connection of these two great bodies may suggest many telling periods to our orators and many stirring lines to our poets. The Grange progress in the United States may be likened to the growth of a tree, starting in both cases from small seed and proceeding, both with firm rootings and magnificent ærial extension, until one stands among our social and industrial organizations as the other does among our forest growths. There may be also a prophecy involved in the picture, for as the Grange section is composed of living active beings while the big tree section is but a hollow ruin, it does not need a seer to draw the conclusion that long after the big trees have fallen and gone to decay the Grange will be a power among mankind.

But the narrow columns on this page do not give room for oration, epic or prophecy. Each reader must construct these for himself from the suggestive material which the engraving affords. The most we can do under the circumstances is to drop gracefully down to facts. It will be remembered that the National Grange, after its formal session in Sacramento last November, swung around the circle of California town and country, receiving a cordial welcome everywhere. One of the towns visited was Visalia, and during the stay of the visitors there a section of a big tree which was on exhibition naturally attracted much attention. The ubiquitous camera man was on hand, and our engraving is a photoplate from a photograph taken by E. M. Davidson. The irregular circle on which some are standing, and beneath which others are grouped, is formed by sections of the bark of a sequoia, so taken off that they could be fitted together, thus showing the periphery of the giant of the forest in vertical position rather than horizontal. The photograph shows also some of the framework employed to sustain the great ring of bark. The strip of bark was about four feet in width, and judging by the hight of the men standing on the ground close to it, the tree from which it was taken must have been about 20 feet by 23 feet in its diameters. Of course there are much larger trees; one which has been prepared this year for exhibition at the Chicago World's Fair is reported to be almost 100 feet in circumference.

The picture presents recognizable portraits of many of the visiting and California Grangers, and the use of a magnifier will bring out the features of others so that they can be recognized by friends. The central figure of lofty stature under the arch is Worthy Master J. H. Brigham of the National Grange, and on his right is Past Worthy Master J. J. Woodman. Young America, from Connecticut and other States, appears as usual "on top." The picture it seems to us is suggestive in many ways and is therefore specially appropriate for this issue of the RURAL, which is largely devoted to the occasion of the assembling of California Patrons in annual session in Watsonville, of which full particulars are given on other pages.

NATIONAL GRANGE VISITORS IN SECTION OF BIG TREE AT VISALIA.

PREPARING FOR SNOW.—A new steam rotary snowplow has just arrived from the East and will be used on the railroad between Blue Canyon and Truckee. There are two of these rotaries on the C. P., two steam plows of another class and ten push plows. The cyclone snowplow has been put on the Shasta division.

CORRESPONDENCE

Correspondents are alone responsible for their opinions.

From Humboldt County.

NUMBER II.

EDITORS PRESS:—My last left us at Mr. F. H. McKee's place, at the junction of the coast route and Garberville wagon-roads.

Mr. McKee has a very productive orchard and vineyard which furnish a very excellent quality of fruit, and it may not be uninteresting that he never prunes nor cultivates his grapevines, his theory in defense of this seeming negligence being that the soil contains much moisture, and by allowing the vines to grow they absorb the excess of water and produce better grapes than if pruned. Mr. McKee says also that the better grapes grow near the ground. Almond trees grow finely here, but do not produce well every season, sometimes failing entirely, which may be due to isolation, as he has but few trees.

Leaving Mr. McKee's by the Garberville road, we wind our way "this way and that" up a well-kept and easy grade, passing numerous heaps of tanbark and through a forest of spruce, madrone and tanbark, which bears evidence of the bark man's industry by fallen and peeled timber, sled roads, etc., and one mile finds us at the summit of a ridge higher than the ridge beyond Mr. McKee's, over which we catch glimpses of "old ocean" and before us to the eastward and north and south of us we behold an "ocean of mountains," here covered by a heavy growth of spruce tanbark, madrone and laurel, with occasional bodies of redwood of greater or less extent. There the fine sheep ranges of Elk Ridge, Bear Buttes, Spruce Grove, Center Station, Belle Springs, Blue Rock and the Blocksburg section of country; beyond these the high mountain ranges of Trinity county and to the southeast the high ranges of Mendocino county—all apparently as wild and tenantless as though civilization had never set foot therein.

The Tanbark Industry

Here is fast assuming gigantic proportions. There is a very large area of tanbark forest extending far into Mendocino county. Only that portion adjacent to wagon-roads or shipping-points has been located, and thousands of acres of the best tanbark lands on earth are yet owned by "Uncle Sam." The tanbark of this coast is far superior to the product of any other country, and a large portion of these lands, after they are denuded of timber, cannot be excelled in the production of fruit. There is some excellent *unsurveyed* tanbark and redwood lands in Township 5 South, Range 4 East, Humboldt Meridian, and in Township 24 North, Range 17 West, Mount Diablo Meridian. These lands are partly in Humboldt and partly in Mendocino counties. Mr. James E. Weedman and Turner Bros. have some fine timber-lands adjoining the unsurveyed land, and Mr. Weedman's and Percy's orchards and vineyards bear testimony to the excellence of the land in the production of fruit. These lands are only nine miles (direct) from a shipping port at Bear Harbor. Several localities present great natural inducements for the construction of plants for the purpose of extracting the tannin from the bark, and I understand that a company proposes to construct one for that purpose near Briceland, 18 miles east of Shelter Cove.

From the summit of the range, near F. H. McKee's, we have a five-mile down-grade journey through a continuous body of tanbark, etc., to D. A. McKee's place in White Thorn valley at the junction of the White Thorn and Garberville and Shelter Cove roads. White Thorn valley is a succession of valleys, here on one side of the Upper Mattole river and there on the other, and is owned by D. A. McKee, Cruickshank Bros., C. B. James, Geo. Gibson and Michael Stienbaum. These gentlemen are extensively engaged in the tanbark business, and the farm land is especially noted for the production of excellent potatoes. Small grain and fruits do well.

We continue our journey via the Garberville road, and seven miles more of heavily timbered country finds us at Briceland, where we find a store and postoffice, hotel, feed-stable (by Briceland & Wood) and quite an area of open range owned by J. C. Briceland, T. B. L. Sieur, T. B. Marshall, Ferdinand Grothe and others. Mr. Grothe and Mr. Briceland are engaged principally in wool-growing; others turn their attention to hogs and cattle. Here we find fat hogs all the year round without being fed. During the winter season hogs are killed from the range and converted into excellent bacon, being fatted on acorns. Mr. Grothe has the only vineyard here and ships grapes via stage to the Mendocino coast.

Leaving Briceland and the wagon-road, we mount our mustang and spend a few days to the northward with the sheep ranchers of Elk Ridge and Bear Buttes, who produce some of the best wools afforded by California producers. We spend a very pleasant evening with J. W. Hill, just under the brow of the Buttes, from whose door is afforded a view of the surrounding country to the westward, the north and south, covering an area of perhaps 1000 square miles of as picturesque and wild scenery as the country affords.

From there we pass through one of the very best ranges in the county, belonging to Mr. Jos. Smithenbank, whose farm, orchard and vineyard adjoining on the west bank of the South Fork of Eel river cannot be excelled for productiveness in this portion of the county. Nightfall finds us in Garberville, situated on a plateau on the east bank of the South Fork and in the midst of extensive sheep ranges, and a section of country which cannot be excelled in fruit production or in the production of small grain. There are several fine farms in this vicinity, some on the west side of the river and some on the east side.

The town has about 100 inhabitants, has two general merchandise stores, two hotels, two stables, two saloons, one blacksmith shop and one variety and confectionery store.

Briceland, Cal., Sept. 17, 1890. T. B. L.

Minnesota State Fair.

[From Our Special Representative.]

The annual exhibition of Minnesota products was opened to the public Sept. 8th and continued throughout the week. The grounds are advantageously located at Hamline, midway between the twin cities, Minneapolis and St. Paul, and the arrangements are such as to invite exhibitors from all over the United States. In the live-stock department, many of the most extensive and prominent studs and herds were well represented. Messrs. Springer & Willard of Oskaloosa, Iowa, made a very fine showing of French draft horses and were fortunate in carrying off a goodly number of first prizes. This firm is one of the largest importers of French draft horses in the United States, and they have gained a wide reputation for fair and liberal dealing with their patrons. They now can show as fine a lot as one would wish to see. Mr. Springer has recently returned with a large, as well as a select, importation. From personal acquaintance, we can assure RURAL PRESS readers that, should they require anything in French draft or coach horses, Messrs. Springer & Willard will cheerfully give any information wanted and will royally entertain any one desiring to inspect their establishment.

The importing firm of Wm. M. Field & Bro., Cedar Falls, Iowa, was represented by a superb lot of English Shires and Cleveland Bays. Messrs. Field never lack in prizes when in the show-yard, and they have won many first ribbons already this season. They are showing an unusually fine lot this year.

Mr. N. P. Clarke, St. Cloud, Minn, made a fine showing of Clydesdales, as well as a good show of the reds and roans.

All the various breeds of both beef and dairy cattle were well represented. The implement dealers were out in full force, and the agricultural hall was virtually filled with the fruits of the land.

The dairy hall was something truly marvelous. Besides the fine display of goods, almost every modern invention was in order for operation—the De Laval separator; the U. S. butter-extracting machine, into which the warm milk is poured, and in a short time the butter is extracted and ready for the worker. In all, this was one of the best displays of dairy goods and products that I have ever seen.

In the poultry department, Messrs. Warner, Fero & Co. made a very creditable showing of nearly a carload of all the leading varieties. These gentlemen own Clover Valley Poultry Farm, Whitewater, Wis.

A vast deal of practical information was gained by those who attended the "Farmers' Institute's" meetings. Lectures were delivered upon timely topics by specialists, and the sessions were indeed a school for the general farmer. L. C. B.

From Sierra Valley.

EDITORS PRESS:—If there is any suggestiveness in the haze which pervades our mountain world these many days, it would seem to indicate quiet and restfulness; but such is not the state of farm-life with us. Yet notwithstanding the unusual activity and bustle of our late harvest season, we cannot do other than recognize the softened beauty of the landscape. We no longer see the sharp angles and hard outlines of objects; the haziness of the air permeates everything to the farthest line of our vision. The golden stacks are piled higher and higher with the days; mountain and meadow assume new tints "from the misty kindness that dwells in the magic air." We find ourselves thinking of winter bouquets, of the bright berries of the wild rose and Virginia creeper. The fruit is fast ripening on the trees, for this is one of the years when even this valley, perched high in the Sierras, finds her few orchards well laden. Some of our door-yard plants and mountain shrubs are taking on bright colorings, reminding us that "leaves would be counted flowers if earth had none."

It seems right and proper that our lives should have both a practical and an ideal side; that while we are working (and worrying, if needs must be,) we should see the delicate tints and bright colorings around us. The practical side of our natures make us in great haste to be ready for thrashing and marketing our grain before another Alpine winter is upon us; but the artistic in Nature makes us conscious in the midst of our work, and plannings and depression, of the landscape beauties around us, and it is right that we should take note of these things; yes, and make mention of them, too, in the same breath in which we speak of the outlook for crops. There are a good many things in life which it is well to sandwich in together besides bread and boiled ham.

As for the matter of the outlook in Sierra valley, our grain will not be equal to that of average years. A heavy hailstorm occurring about a month ago, injured the grain on some ranches exceedingly, while in others the late-sown grain suffered serious injury from unusual summer frosts, much of that sown in some cases having to be cut for hay, while the lack of summer showers has been a serious drawback to our grain crop. Fine crops of hay are usually the result of our heavy winters, but the great snowfall of the winter months is almost invariably followed by a scarcity of summer showers and a light yield of grain.

The hay crop this season was remarkably fine on most ranches, as well-filled barns and many large stacks testify. The covering of the latter will make a good home market for common lumber, which market has been greatly reduced lately, owing to the extensive use of barbed wire in fencing.

The Fairs

In this section are attracting the usual crowds, while Plumas Grange Fair, which will take place Oct. 1st, 2d and 3d, causes the Patrons of Husbandry in this part of Sierra valley to feel more than usual interest in its success—it being the only fair in all this region in which horse-racing is not the principal feature. A successful fair continued from year to year, or every succeeding year, for so long a period and in so small a village as Beckwith, in the midst of so thinly settled a community, is something we, as a Grange, may well be proud of. Only twice in all these years since our fair started has it been held elsewhere than at Beckwith. On those two occasions, Plumas Grange, out of courtesy, gave way to Sierra Valley Grange, and the fair was held at Sierraville; but the entire interest there seemed to center on horse-racing, and the name of agricultural fair was a misnomer. MARY P. ARMS.

Beckwith, Cal., Sept 24, 1890.

HORTICULTURE.

Remove the Labels.

EDITORS PRESS:—In Prof. Wickson's treatise on "California Fruits and How to Grow Them" (a book, by the way, that every California orchardist ought to possess and study and profit by), on page 145 he cautions the fruit-grower, when setting out a young orchard, not to use labels attached to the trees by a wire. I read the paragraph, but when setting out a small assorted fruit orchard this spring neglected to profit by it. Small credit to me. I left such labels on the trees, but left the wires—as I thought—loose enough to accommodate two years' growth. Then after the trees began to leaf out, the foliage hid the labels from view, and the result proved the truth of the old adage, "Out of sight, out of mind." Though all through the summer I have been working around the trees and with them, time and time again, I never noticed the concealed labels and of course never thought of them. To-day, however, my attention was accidentally called to one when I found the wire completely bedded in the bark which had grown over it. On examination I found this the case with most of the trees, so much greater had been their growth than I supposed it would be.

In one or two cases the tree was *more than half* cut through. The consequences I have yet to learn, but it seems certain that the growth would have been much greater if I had not been gradually strangling the trees.

So from my experience as a beginner I can surely offer the safe advice, *Don't label your trees at all*, but make such a map or chart as Prof. Wickson recommends and describes on page 145 of the book referred to. Don't even leave the labels on an hour with the intention of removing them later (as was my intention), or you will probably make the same serious blunder that I made. MIRAMONTE.

Miramonte, Kern Co.

Mr. Denicke's Figs Again.

EDITORS PRESS:—I read your opinion in your issue of September 6th concerning my sulphured figs with great pleasure. Now you will see my reason for not sulphuring my figs in 1888–9 nor 1890. Sulphur detracts flavor from *anybody's* fruit, unless used to a *very slight* degree, and *no sulphur at all* is still better *unless* fruit is to be prepared for the sake of its light color only.

I send you two more drums. Will you also do me the great favor to give me your opinion on them in your next issue? M. DENICKE.

Fresno.

[We find both these samples better flavored than the one of which we complained in our issue of September 6th. We must, however, do better than either of these to compete with the imported Smyrna fig. The lighter-colored sample (of the two mentioned by Mr. Denicke) is too tough in the skin and too hard in the pulp to be pleasant eating, and the dark-colored sample, although softer and more readily masticated, has a heavy sweetness or syrupy character which obscures the characteristic fig flavor. How much of this is due to variety or locality or to method of preparation, we cannot say. To compete with the best imported we must have a tender fruit with delightful flavor and with a delicate sweetness which does not cloy the taste. Who will produce such?—EDS. PRESS.]

EASTERN STRAWBERRY GROWING.—We have received from A. I. Root, Medina, Ohio, a copy of his neat 150 page publication in pliable covers entitled "A B C of Strawberry Culture." The little treatise is written by T. B. Terry and A. I. Root and is well illustrated. It gives a most interesting account of strawberry growing on large and small scale, with the smallest details of practice. It gives, of course, Eastern practice and will not serve as a direct guide for California practice, but its methods are suggestive and many of them can be readily adapted to our conditions. Every strawberry grower will read it from end to end with much interest.

FRUIT PRESERVATION.

Sulphuring Fruit a Mistake

EDITORS PRESS:—A recent number of the PACIFIC RURAL PRESS kindly sent me, shows how general is the sulphuring of even most of the sun-dried fruits of California. The practice at the East has been like some diseases, "catching," but here only with the evaporator men, and it is now hoped that investigation and good sense have already prepared the way for a reaction of public sentiment. So our Pacific Slope friends had better go slow in trying to please us at the East by practically spoiling if not in actually poisoning what would otherwise prove such a blessing to California and the world, its varied and abundant fruits, and which in that climate can be so easily dried.

I think I was the first or among the first to object through the press to the bleaching of fruit, as "sulphuring" was first called; the use of such fruit in the family convincing us that at least the natural fruit flavor was thereby seriously impaired, and also probably its food value. Neither could the difference between that from good and inferior fruit be distinguished as it could be with unsulphured fruit.

At that time it was not known that all evaporated fruits dried on zinc-covered trays, as most of it was, were poisonous, owing to the presence of sulphate of zinc, white vitriol, though I then strongly suspected the presence of some injurious substance by the lack of flavor and the instinctive aversion to dried fruits which soon took place with many intelligent consumers of bleached fruits. Since that experience I have persistently though rather ineffectually opposed the sulphuring craze and all other sophistications of fruit for foods as the true and only safe course for the people.

Fruit can be sulphured without zinc-poisoning. I hope California evaporators do not use zinc trays to hold the fruit, but is not even sulphuring objectionable by the loss of flavor? If it keeps insects away, as it does to some extent, so would the addition of a minute quantity of most poisons and even other objectionable substances. Wholesome fruit is what is wanted. It is far safer and better to go back to natural-colored and honestly prepared fruit. That will doubtless be the verdict of all intelligent people who prefer health and safety to looks. Any other course will be a permanent injury to the fruit interest.

The yellowish-brown color of fruit dried in the sun or by artificial heat is no objection. It is rather an evidence of ripeness, good quality and honest drying. The color is lighter when dried rapidly. High temperature, at least for a time at the finish of drying, tends to prevent fermentation. Sun-dried fruit so treated, if at once closely packed or excluded from the air, will keep well for years in most climates, as known by experience and observation.

When sulphured fruits sell for 20 to 50 per cent higher prices than other fruit, it is a strong temptation to do it. A lie may travel its thousand miles while Truth is putting on her boots, but this is an age of enlightenment. Public health associations are numerous and increasing in numbers and influence. The tampering with any article of food will be more strictly dealt with in future by National and State legislation.

In some climates fruits are best dried rapidly in evaporators. This may not be so in California atmosphere, but the fruit interest should be encouraged and guarded as one of the great interests of that great State. To do that on a permanent basis, all tricks of trade and temporary yielding to dangerous fashions, like sulphuring fruits, must be avoided.

JOEL W. SMITH, M. D.

Charles City, Iowa.

POPULATION OF CHINA.—Recent very trustworthy calculations of the population of the Chinese Empire by Russian authorities reckon it at 382 000,000, and the annual increase at 4,000,000. Not one in 10,000 ever heard of the religion of Jesus Christ.

Entomological

The Hop Louse of Oregon.

F. L. Washburn, Entomologist of the Oregon Experiment Station, furnishes the following important statement:

It is a fact beyond dispute that the hop louse, the genuine *Phorodon*, is present in some parts of Oregon. With figures of *Phorodon humuli* before one and a strong pocket lens, or, better still, a dissecting microscope, a careful observer can and will decide for himself that the insect which is now injuring the hop crop in parts of Lane county is *not* any one of the different aphidæ, or green plant lice, found on apple, plum, etc. As further proof of its presence, Stephen Smeed, himself a careful observer and a man who has worked here and in England among hops for nearly 60 years, declares it identical in appearance and work with the hop louse. Mr. Hubbard, a prominent hop-buyer and a former grower of hops in the East, says: "No man who has seen the insect in the East can deny its presence here. I recognized it at once."

The question which now arises is: How shall we combat this pest, which seriously threatens one of the leading industries of Lane, Marion, Polk, Linn and other counties, and the revenue from which amounts yearly in Lane county alone to nearly $500,000?

In connection with this fact it is interesting to review the results of some work done by Prof. C. V. Riley, United States Entomologist. I will briefly describe the life history of *Phorodon humuli*, published by him as the result of work done a few years since, and then respectfully summarize a few observed facts in Lane county, which apparently, to some extent, though they may not wholly, contradict his statement.

Prof. Riley's Account of Life History.

In the late autumn, the glossy small eggs of *Phorodon humuli* are found attached to terminal twigs and round buds in protected crevices of different varieties of prunus, both wild and cultivated. They remain in these branches during the winter and in the spring hatch, producing what is called the "stem mother." This generation produces three generations on prunus, the third being winged and flying to neighboring hop plants. A number of generations are produced on the hop until early autumn, when winged females are again produced and fly back to the plum or other species of prunus. These are soon followed by winged males, which invariably leave the hop plant after the female, and the fertilized eggs are again deposited on the trees of the genus prunus.

This being the case, according to his observations, Prof. Riley recommends the destruction, by burning or otherwise, of all the hop plants immediately after the hops are gathered, thus killing males and a large per cent of the females before migration to plum. (This, by the way, will be an excellent measure here in Oregon, wherever the insect may pass the winter.—F. L. W.)

Prof. Riley advises the spraying of the dormant cultivated species of prunus with strong caustic washes to kill the egg, and also counsels the killing of all wild plum trees in the vicinity of the hop yards. And further to carefully guard against the introduction of eggs on prune or plum scions.

An Apparently Different State of Affairs in Oregon.

Mr. Smeed's hopyard was most carefully examined, and it was found in very many instances that hop plants immediately adjoining plum and prune trees were not touched, while across the yard, and separated from these trees by many intervening untouched hop plants, the hops were badly infected. Now, if there were a migration from the plums, why did not the nearest hops receive the unwelcome guests? These plants were the same size and age and variety as those farther away. Mr. Smeed says, and he is a very careful observer, that he has never seen the insect on the prunes and plums, though he is among these trees almost daily.

What Is to Be Done?

In England, spraying the hop plants with a mixture of strong soapsuds and tobacco-water in summer is resorted to. Another season, in extreme cases it may be well to adopt that measure here. But what is better, let every hop grower make an entomologist of himself during the coming winter, and examine his hopyard and its surroundings most carefully for the eggs of the insects. These once found, it will not be a difficult matter and far less trouble than summer spraying to kill the same by some strong caustic wash or similar means. Let no man interested leave a stone unturned to solve what appears to be, in this State, an unsolved riddle. Call upon a professional entomologist and upon each other for assistance and co-operation, and before next spring be able to take intelligent action.

Identification of the Pest, Its Work, Etc.

The insect is about one-twenty-fifth of an inch long, and its characteristics too small to be seen with the naked eye. With a good lens it is found that they are yellowish-green, with somewhat elongated body (while the apple louse, *Aphis mali*, has a dumpy body). Each of the long antennæ, or "horns," projecting from the front of the head has a prominent bulging joint at its base, and between these two "horns," antennæ or "feelers," projecting from the head and pointing forward are two short prominences. These two prominences or horns between the antennæ are very characteristic, and not seen upon the green louse of the apple. Further, in Phorodon the honey tubes (two horns growing from the posterior part of the back and pointing upward and backward) in most specimens, but not in all, are seen to incline toward each other somewhat.

Lastly, the biblical adage, "By their works shall ye know them," is peculiarly exemplified here. As one stands at or near the end of a row of hops and looks down the line, a plant which looks dark and blighted, or that has an unnatural shimmer or shine on its leaves, merits a closer examination, for the shimmer is caused by the exudation of "honey dew" caused by the attack of hundreds of hop lice, and on the under side of these leaves are found hosts of little green lice sucking away the life-blood of the plant.

General Observations.

One female louse will produce an average of three young a day during the summer. These young at this season are all females, and they, in their turn, begin to reproduce parthenogenitically during the summer when they are about eight days old, and their young do the same. There are several such generations during the summer, so that the progeny from one female during the season will reach the trillions and will work tremendous havoc in a hop-field.

Mr. Hubbard says: "You are always more apt to find the lice in hop-fields which are shut in by woods, where the bright sun and purifying breeze are not allowed sufficient play. Clear away the surrounding wood, let the sun and breeze in, keep the yard clean; and the lice will grow wonderfully less."

The hop louse does not readily migrate from one yard to another.

The early English variety, Mr. Smeed says he finds exempt from their attacks, but of course the market for that early variety is limited.

Mr. S. used a row of willows last season for a windbreak. Where there were gaps in the willows he placed hop poles close together to make the windbreak complete. He subsequently found that the hops next the willows became badly infested, while those next the poles were untouched. He therefore intends this winter to examine neighboring willows carefully for the eggs.

In pruning hopvines this season, after the crop is gathered, it would be well to cut the vines as close to the ground as can be done with safety, thus insuring the killing of more of the lice. A very close observer of insects suggests the use of smudges in the yard on still summer nights. Sawdust and straw impregnated with a mixture of coal-tar and sulphur, and placed in small bushel heaps through the yard, will fill the yard so full of heavy smoke, he thinks, that very many of the insects will perish.

Do not try to make hop-buyers believe you have not got the louse, when you are convinced that you have. Finally, the entomological department of the experiment station will do all in its power in the matter; it must of necessity have the co-operation of the hop-growers. As was said above, the place of hibernation of the Oregon hop louse once found, that is, the place where the winter eggs are laid, we have a most powerful handle by which we can lessen its numbers.

I shall be glad to receive the addresses of hop-growers in this State and in Washington, that any new and advantageous discoveries may be communicated to them. But I also want all intelligent hop-growers to observe and experiment for themselves.

F. L. Washburn,
Entomologist State Experiment Station, Corvallis, Ogn.

The Musical Sense in Animals. — The higher animals can also enjoy themselves, as my house cat shows when she comes at the playing of the piano to sit by the player and sometimes jumps into her lap or on the keyboard of the instrument. I know of a dog, too, in a family in Berlin, which comes in like manner when there is music, often from distant rooms, opening the doors with his paw. I knew of another dog, usually thoroughly domestic, which occasionally played the vagabond for love of music. Whenever the semi-annual mass was celebrated in the city he could not be kept at the house. As soon as the so-called Bergknappen, which was accustomed to play at this time in the streets, appeared, he would run away and follow them from morning till evening. Evidently neither cats nor dogs, nor other animals that listen to human music, were constituted for the appreciation of it, for it is not of the slightest use to them in the struggle for existence. Moreover, they and their organs of hearing were much older than man and his music. Their power of appreciating music is, therefore, an uncontemplated side faculty of a hearing apparatus which has become on other grounds what we find it to be. So it is, I believe, with man. He has not acquired his musical hearing as such, but has received a highly developed organ of hearing by a process of selection, because it was necessary to him in the selective process, and this organ of hearing happens also to be adapted to listening to music.—*Popular Science Monthly.*

Agricultural Science.

Additional Funds for Agricultural Colleges.

President Harrison has approved the following measure, which *Farm and Home* prints verbatim from an official copy. It will be observed that the first appropriation of $15,000 is in the nature of back pay, for the year ended June 30, 1890, while the $16,000 due for the year ending June 30, 1891, is also now due. Thus each agricultural college will receive $31,000 from this source this fall. But unless the Legislature is in session to assent to the Act and prescribe as to what institution the money shall be paid, the Governor has that power. Sec. 3 provides that this money shall be used only for additional instruction in agriculture and the mechanic arts, etc., and shall not be spent for buildings or repairs. It is also to be noted that Section 4 provides a further safeguard for the proper use of this generous appropriation. But the fact remains that the first two appropriations, amounting to $31,000, will in very many of our States and Territories be payable to such institutions as are designated by the Governor of each State.

A bill (S. 3714) to apply a portion of the proceeds of the public lands to the more complete endowment and support of the colleges for the benefit of agriculture and the mechanic arts established under the provisions of an Act of Congress approved July 2, 1862.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there shall be, and hereby is, annually appropriated out of any money in the treasury not otherwise appropriated, arising from the sale of public lands, to be paid as hereinafter provided, to each State and Territory for the more complete endowment and maintenance of colleges for the benefit of agriculture and the mechanic arts now established, or which may be hereafter established, in accordance with an Act of Congress approved July 2, 1862, the sum of $15,000 for the year ending June 30, 1890, and an annual increase of the amount of such appropriation thereafter for ten years by an additional sum of $1000 over the preceding year, and the annual amount to be paid thereafter to each State and Territory shall be $25,000, to be applied only to instruction in agriculture, the mechanic arts, the English language, and the various branches of mathematical, physical, natural and economic science, with special reference to their applications in the industries of life, and to the facilities for such instruction.

Provided, That no money shall be paid out under this Act to any State or Territory for the support and maintenance of a college where a distinction of race or color is made in the admission of students, but the establishment and maintenance of such colleges separately for white and colored students shall be held to be a compliance with the provisions of this Act if the funds received in such State or Territory be equitably divided as hereinafter set forth.

Provided, That in any State in which there has been one college established in pursuance of the Act of July 2, 1862, and also in which an educational institution of like character has been established, or may be hereafter established, and is now aided by such State from its own revenue, for the education of colored students in agriculture and the mechanic arts, however named or styled, or whether or not it has received money heretofore under the Act to which this Act is an amendment, the Legislature of such State may propose and report to the Secretary of the Interior a just and equitable division of the fund to be received under this Act between one college for white students and one institution for colored students established as aforesaid, which shall be divided into two parts and paid accordingly, and thereupon such institution for colored students shall be entitled to the benefits of this Act and subject to its provisions as much as it would have been if it had been included under the Act of 1862, and the fulfillment of the foregoing provisions shall be taken as a compliance with the provision in reference to separate colleges for white and colored students.

Sec. 2. That the sums hereby appropriated to the States and Territories for the further endowment and support of colleges shall be annually paid on or before the 31st day of July of each year, by the Secretary of the Treasury, upon the warrant of the Secretary of the Interior, out of the treasury of the United States, to the State or Territorial treasurer, or to such officer as shall be designated by the laws of such State or Territory to receive the same, who shall, upon the order of the trustees of the college or the institution for colored students, immediately pay over said sums to the treasurers of the respective colleges or other institutions entitled to receive the same, and such treasurers shall be required to report to the Secretary of Agriculture and to the Secretary of the Interior, on or before the 1st day of September of each year, a detailed statement of the amount so received and of its disbursement. The grants of moneys authorized by this Act are made subject to the legislative assent of the several States and Territories to the purpose of said grants: *Provided*, That payments of such installments of the appropriation herein made as shall become due to any State before the adjournment of the regular session of the Legislature meeting next after the passage of this Act shall be made upon the assent of the Governor thereof duly certified to the Secretary of the Treasury.

Sec. 3. That if any portion of the moneys received by the designated officer of the State or Territory for the further and more complete endowment, support and maintenance of colleges or of institutions for colored students, as provided in this Act, shall, by any action or contingency, be diminished or lost, or be misapplied, it shall be replaced by the State or Territory to which it belongs, and until so replaced no subsequent appropriation shall be apportioned or paid to such State or Territory; and no portion of said moneys shall be applied directly or indirectly, under any pretense whatever, to the purchase, erection, preservation, or repair of any building or buildings. An annual report by the President of each of said colleges shall be made to the Secretary of Agriculture, as well as to the Secretary of the Interior, regarding the condition and progress of each college, including statistical information in relation to its receipts and expenditures, its library, the number of its students and professors, and also as to any improvements and experiments made under the direction of any experiment stations attached to said colleges, with their cost and results, and such other industrial and economical statistics as may be regarded as useful, one copy of which shall be transmitted by mail free to all other colleges further endowed under this Act.

Sec. 4. That on or before the 1st day of July in each year after the passage of this Act, the Secretary of the Interior shall ascertain and certify to the Secretary of the Treasury as to each State and Territory whether it is entitled to receive its share of the annual appropriation for colleges, or of institutions for colored students, under this Act, and the amount which thereupon each is entitled, respectively, to receive. If the Secretary of the Interior shall withhold a certificate from any State or Territory of its appropriation the facts and reasons therefor shall be reported to the President, and the amount involved shall be kept separate in the treasury until the close of the next Congress, in order that the State or Territory may, if it should so desire, appeal to Congress from the determination of the Secretary of the Interior. If the next Congress shall not direct such sum to be paid, it shall be covered into the treasury. And the Secretary of the Interior is hereby charged with the proper administration of this law.

Sec. 5. That the Secretary of the Interior shall annually report to Congress the disbursements which have been made in all the States and Territories and also whether the appropriation of any State or Territory has been withheld, and if so the reasons therefor.

Sec. 6. Congress may at any time amend, suspend or repeal any or all of the provisions of this Act.

The Irrigator.

Canals Crossing Public Lands.

Legislation to facilitate construction of irrigation ditches or canals in regions where the territory includes Government lands is now in progress at Washington. Following is the text of the bill passed by the Senate Sept. 17:

Section 1. The right of way through the public lands of the United States is hereby granted to any canal or ditch company formed for the purpose of irrigation, duly organized under the laws of any State or Territory, which shall have filed with the Secretary of the Interior a copy of its articles of incorporation and due proofs of its organization under the same, to the extent of the ground occupied by the water of the canal and its laterals and fifty feet on each side of the original limits thereof; also the right to take from public lands adjacent to the line of the canal or ditch the material consisting of earth and stone necessary for the construction of such canal or ditch.

Sec. 2. Any canal or ditch company desiring to secure the benefits of this Act shall, within twelve months after the location of ten miles of its canal, if the same be upon surveyed lands, and if upon unsurveyed land within twelve months after the survey thereof by the United States, file with the Register of the Land Office for the district where such land is located a map of its canal or ditch, and upon approval thereof by the Secretary of the Interior, the same shall be noted on the plats in said office, and thereafter all such lands over which such right of way shall pass shall be disposed of subject to such right of way. Whenever any person or corporation, in the construction of any canal or ditch, injures or damages the possession of any settler on the public domain, the party committing such injury or damage shall be liable to the party injured for such injury or damage.

Sec. 3. The provisions of this Act shall apply to all canals and ditches heretofore or hereafter constructed, whether constructed by corporations, individuals or association of individuals, on the filing of the certificates and maps herein provided for. If such ditch or canal has been or shall be constructed by an individual or association of individuals, it shall be sufficient for such individual or association of individuals to file with the Secretary of the Interior, and Register of the Land Office where said land is located, a map of the line of such canal or ditch, as in the case of a corporation, with the name of the individual owner or owners thereof, together with the articles of association if any there be. Places heretofore filed upon shall have the benefit of this Act from the date of their filing, as though filing after it, provided that if any section of said canal shall be completed within five years after the location of said section, the rights herein granted shall be forfeited as to any uncompleted section of said canal or ditch to the extent that the same is not completed at the date of forfeiture.

Sec. 4. Nothing in this Act shall authorize such canal or ditch company to occupy such right of way except for the purpose of said canal or ditch, and then only so far as may be necessary for the construction and maintenance of such canal or ditch.

The Eyes of Insects are immovable, and many of them seem cut into a multitude of facets, like the facets of a diamond. Each of these facets is supposed to possess the powers of a true eye. Lenentœok counted 3181 of them in the cornea of a beetle, and over 8000 in that of a common horsefly.

PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

How to Secure Desirable Legislation.

Let us talk as we may against combinations, they frame our laws, control our institutions, nominate and elect our rulers, and govern our country. It is the organized few who sway the unorganized many, and the lion, knowing not his strength, is bound with a thread. When forbearance ceases to be a virtue, or oppression to be endurable, he throws off the yoke, asserts his power, and often, like Samson, pulls the house down over his own head, and through his inconsiderate rashness is placed upon losing ground to be again bound as unfit to be at large. Mushroom reforms, like flashy resolutions, treading as they do on the toes of many good people and noble institutions, are of short duration. True, extraordinary evils sometimes require special efforts, but without organization the remedy is unstable and fleeting. The people are the source of power in our Republic, but, contrary to Nature's laws, the political streams rise above their sources and impart to us food, drink and raiment at their will, absolutely controlling the springs of life and hope.

Apathy and inattention to public duties on the part of the great middle classes throughout the land have resulted in the enormous demands of the tax-collector and unnumbered other abuses; to inquire into and if possible to correct the evil the people are organizing and consulting together as Patrons of Husbandry, as Farmers' Alliances, as Federated Trades, as labor organizations under various names, all seeking redress for grievances, real or imaginary. How shall our numbers and resolutions be made effective? is the question of the hour. Who will lead so as to insure a following? and who will follow the leaders until our wrongs are redressed? The first movement should be on the next Legislature. No man should be placed there who is not a tax-payer, and all should be pledged to economy and reform. Candidates before election should be asked, "Will you, if elected, combine with the advocates of retrenchment?"

After elections, the successful ones, who are known to be true, should be invited to a conference with other members on the assembling of the Legislature, and these should organize themselves into a "Committee on Retrenchment," or a "Taxpayers' Delegation," but no matter by what name so their objects were the same and they stood by each other until those objects were attained.

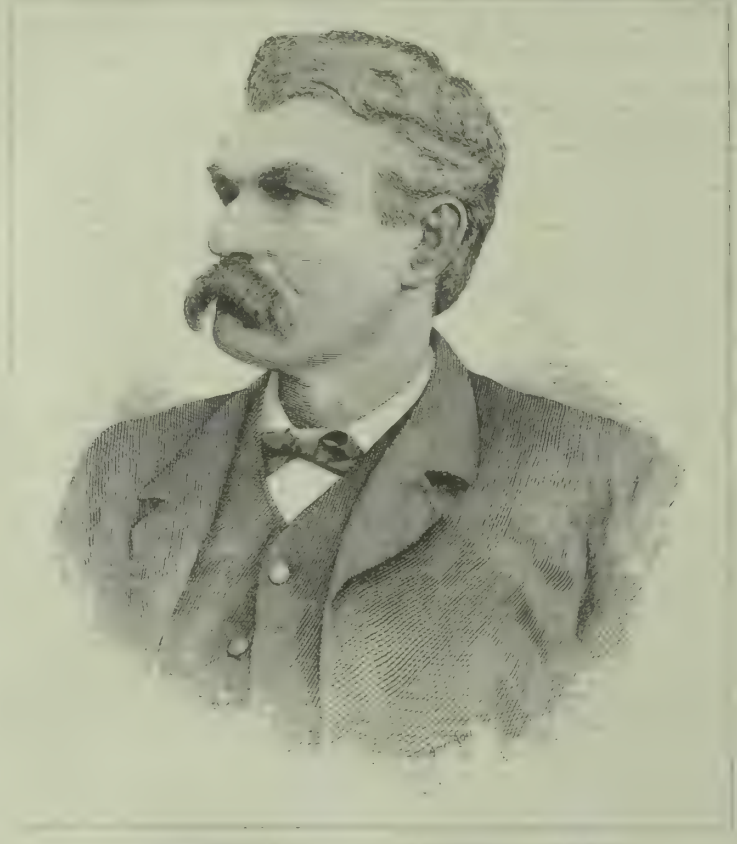
To accomplish great good a majority is not necessary—a well-organized minority can nearly always control legislation; a few even in a close compact *may*, and often do, hold the balance of power, and can thus defeat bad laws if they cannot enact good ones. Political issues and questions must be eschewed by such a body because of our love for political freedom and our dislike to dictation. But on all economic questions we may and ought to unite, and being united, present a solid front on all good and friendly legislation, as well as to put down all dangerous and doubtful measures.

The honest and reliable element is always in the Legislature in numbers to be effective were it organized; but going there unorganized and unacquainted, it awaits the orders of the schemers and plotters. They must come together, talk together, reason together, plan together, stand together, and then act together. Such a body, composed only of 10, 20 or 30, would be courted for their votes and influence, and could secure wholesome and friendly legislation for honorable concessions to other interests, which (deny or decry it as we may) remains the moving cause of legislative progress. It is through such representatives that we must act as well as resolve. They must be assisted by advice and counsel; they are nearly always too busy to confer with each other without the aid of third parties. It is for this reason that we hear of the third house and its influence, which is often more potent than are the chief bodies.

Where shall the aid come from? is a question for us to consider. It may come from the Patrons of Husbandry, the Farmers' Alliance, the Knights of Labor, or other Orders; it *ought* to come from all combined, as all are heading in the same direction. Each should have a committee present, or all should unite in one grand movement toward a common object, when success would crown their efforts beyond a doubt.

The plan here outlined is but the method adopted by other interests seeking favors at the hands of legislators, and serves to point the way how to influence legislation for the public good. Above all, let this caution be observed. Let us be temperate in eating, drinking and language. Demanding ultra measures through intemperate zeal and speech, we lose the respect we require and the measures we wish to promote. Good intentions are often destroyed by injurious amendments; so intemperate zeal drives away support. Let us take the little with thanks, and a little more the next time with a bow. We must be welcome to call on those in authority, be welcome to depart, and welcome to return.

It is by deserving consideration that we get it, by granting favors that we are given concessions. Thus equipped, we may in reason and confidence request and receive all the consideration and favors that we have a right to, consistently with the rights of others. G. O.



Our Worthy Masters.

The faces which adorn these pages are not unknown to California Patrons, but are portraits of men whom both State and National Granges have delighted to honor.

Bro. James H. Brigham of Delta, Ohio, W. M. of the National Grange, P. of H., became personally known to many of our readers when he visited the Pacific Slope last autumn, and won

Golden opinions from all sorts of people,

By his manliness, eloquence and ability. Himself a practical farmer, he knows what farmers need. He has been chosen Master of the Ohio State Grange, repeatedly, and has also served on the State Board of Agriculture and the Board of Control of the State Experiment Station. His faithful work at Washington, this

J. H. BRIGHAM, W. M. NATIONAL GRANGE.

last year, as Chairman of the Legislative Committee, has often been spoken of in these columns.

Bro. E. W. Davis, W. M. of California State Grange and W. Steward of the National Grange, P. of H., has not only gained the respect and affection of the many who enjoy his personal acquaintance, but endeared himself to many more, who have learned to admire and love him through his regular contributions from "The Master's Desk."

Pomona, No. 3, Will Visit Lockeford.

EDITORS PRESS:—While others abroad among the subordinate Granges are giving you glowing accounts of their stewardship and the large increase of membership occasioned by their visits (which, by the way, I am pleased to hear of), let me also assure you of the augmented membership in San Joaquin county and that her Pomona Grange is a live one.

At the last meeting of this Grange, Sept. 25th, there were 18 new applications for membership and all were accepted.

It was resolved that all the members make Lockeford Grange, in this county, a fraternal visit on Saturday, Oct. 18th, commencing at 10 o'clock A. M. All the members will take due notice. In F. H. and C., with F., fraternally, J D HUFFMAN, Sec'y.

Lodi Cal, Sept 23 1890.

Legislative Bills.

Judge J. H. McKune of the State Grange Legislative Committee, author of one of the bills providing for the organization of a mutual fire insurance company submitted to the last Legislature, has prepared a new bill for the same purpose to submit to the committee and the State Grange. We regret that it is now doubtful if he will be able to attend the State Grange next week. Past Master S. T. Coulter has also prepared a bill on the same subject.

The Grange and the Greasers.

Worthy Master Davis says in the PRESS of Sept. 20th: "There is a whole lot of politics in this State just now." Decidedly so; and sorrow comes to the hindmost in the race. "Attend the primaries; go to your county conventions, and see that proper men are nominated for important offices." This is Grange doctrine, but the trouble is that these doctors disagree, or don't appear at the right time.

The farmer makes but a sorry show at the average primary. He can't spare the time to go to the primary or the county convention; and if he *does* go, the slate is made up before he gets there, consequently he has nothing to do but stand around with his hands in his pockets, voting for the manipulators to grease and start the machine, and at every turn of the monstrosity there pops up a politician or place-seeker, where a farmer should have stood.

Viewing these things as they actually exist, the primary and the county convention are a snare and a delusion, so far as the influence of the farmer is concerned.

There is one remedy for this burlesque of the machine-greasers. Occasionally, by mistake or design, a farmer happens to get an important nomination. In the event of such uncommon occurrences, is it not the duty of all farmers to support such nominee, irrespective of party lines? If farmers generally would come to this understanding, there would be no difficulty in electing all such nominees. A few successes of this kind would set "the powers that be" to thinking. They would soon learn that each farmer represents one independent vote, who is disposed to stand and act unitedly with others for the promotion of his class. While one shrewd political manipulator could accomplish more than a dozen farmers in the work of a convention, it would take just 12 votes of the shrewdest wire-pullers to offset a dozen farmers' votes on election day.

Conscious of this fact, the weaker party would lead in nominating largely of the Granger element because of the certainty of their election. Discovering the inevitable, the drift of all parties would soon be in this direction, when the farmer who hasn't time to do anything but work for somebody else could stay at home and dictate to the manipulators who the party nominees should be.

There are, by accident or design, a number of farmers who have received nominations, intermingled with the prides of the Boss make-ups. Now can we not, for once, stand and vote together for our *own people, irrespective of party predilections?* If even a majority of the farmers will stand up to this "racket," the vocation of the convention-manipulator will be gone. Is it not about time we were trying on a new political suit? It may 'bag' in places, to start with, but it will grow to a fit in a few years! The absurdity of "standing by the grand old party's principles" in voting for county officers is about as ridiculous as the action of the dutiful son, who allowed a lot of hungry curs to eat himself and family out of house and home simply because his father once dined their grandmother. J. V. WEBSTER.

PASO ROBLES GRANGE has unanimously adopted the amendment to the Constitution of the State Grange in regard to demit cards.

The Master's Desk.

E W DAVIS, W M S G OF CALIFORNIA.

The sand of the seashore is composed of many minute particles, yet those tiny little grains, when properly prepared, bind our strongest buildings, unite the brick of the highest walls and furnaces, defy the restless waves of mighty oceans and teach us the flight of Time.

So the Grange, composed of coherent though tiny particles they may seem to be, is uniting in solid phalanx the farmers of the land, is arraying the intelligent and thoughtful agriculturists against their oppressors and is presenting an immovable barrier to fraud, corruption, deception, ignorance, intemperance and vice. Can you, as a loyal citizen, as a helpful husband, as a motherly matron, as a progressive citizen, refuse to lend your aid, presence and influence to such an Order? Will you longer refuse to help a fraternity that stands for Home, for Country and for God? You have a solemn and imperative *duty* to perform in this matter, fellow-farmer! Your neighbor cannot, if he would, do it for you. It is *your* duty to help the Grange and that at once, not next month, not next year, but right away, *now.*

The autumnal harvest is about finished. The dry corn, the parched leaf, the ripened fruit, the full sheaf and groaning granary, the shortened days and lengthened nights, all remind us of another year gone. How well have we improved its passing moments? How many sheaves have *you* garnered, fair reader? How many tears have you dried? How much left undone that you might have done? Ah yes, these are fitting, yet perhaps unwelcome, questions for this season of the year. Verily may we ask ourselves: "What will the harvest be?"

We may soon expect to hear the patter of the rain upon the roof, for autumn will soon be gone and winter is almost here. This reminds us of the seed-time; but not alone of the seeds of wheat, barley, oats or corn, or of the varieties of grass and garden seeds. It suggests that other thought, of seeds of kindness and fraternal amity. These are the seeds the Grange ought also to plant. Let us sow for the coming as well as for the present generation.

Patrons are appreciative people, but from what our Watsonville Patrons are doing, I am afraid they will have so much for us that we won't fully comprehend all they offer. However, Worthy Patrons, go on and we will stay in Watsonville till we are sure you will admit our appreciation.

The Executive Committee will meet at the Mansion House, Watsonville, at 9 A. M. Monday, October 6, 1890. If you have any special matter to bring before that body, be sure to have it in apple-pie order and come along. There is much to be done, and it is hoped that each one having business will be fully prepared to state it in the shortest possible time so that all may be heard.

Can the State Grange devise some plan whereby the standard of our Order may be planted in all sections of California? Where is the man who can lead us on to the highest success with the least amount of money? We want to double our membership during the year ending October 1, 1891. If each member now in good standing will bring but *one* new member to our altar, that will do the work. How easy to find one new member!

Where is the next session of the State Grange to be held? There are a whole lot of fine cities in this State. Which one wants the State Grange?

Reap for the mind as well as for the body. A right healthy mind can hardly be found in a diseased body. Health is wealth, more valuable than gold and much more to be desired.

Stand by your old-time friends. The friend in need is the true one.

Be gentle, be sincere, be true, and though others may oppose, you will always have friends.

Grange Trading.

Referring to this subject in a letter some weeks ago, Bro. Brainard, Sec'y of San Jose Grange, said that they had discussed it considerably, without reaching any definite conclusion. "I think," he remarks, "if there could be a little more positive and direct statements as to the advantages expected, and whether or not the trading-houses would be confined to San Francisco or located at different places, and also some clearer notion given of the amount of reduction which would be made to Grangers, the matter would be more cordially received."

The question will no doubt be largely discussed at the State Grange. We wish all interested to be present and prepared to give as full and reliable data as possible, for the matter is one of great importance.

OUR PORTRAITS.—The several engravings of popular Patrons which appear in this issue, have been thus published without their "knowledge or consent." We have assumed the responsibility of presenting these honored faces at this time, well knowing that many would wish to see the real likenesses of those who are doing so much to promote so worthy a cause.

Exercises Suggested for State Grange,

Eighteenth Session, Opening at Watsonville, Oct. 7, 1890.

TUESDAY.

FORENOON.—Songs of welcome and personal greetings; opening State Grange by E. W. Davis, W. M. at 10 A. M. appointment of committees; report of progress of Committees on Credentials and Order of Business; music, recitations, etc.

AFTERNOON.—Report of Committee on Credentials; Worthy Master's annual address; reports of other officers and Deputies, interspersed with music, recitations and readings; welcome address to Masters of new Granges.

EVENING.—Public reception; address of welcome by Mr. Tinscott, County Supt. of Public Schools, on behalf of citizens of Watsonville. Response by the Senior Past Master, I. C. Steele; short addresses by citizens, brothers and sisters; music, songs, recitations, etc.

WEDNESDAY.

FORENOON —Roll-call of Granges for presenting business; yearly reports of subordinate Granges; reports of Committee on Woman's Work in the Grange and of Legislative and other committees.

AFTERNOON.—Discussion of legislative matters, including Australian Reform Ballot System, Mutual Insurance Companies, Payment of Taxes Semi annually, Re-assessment and Payment of Delinquent R. R. Taxes, and Good of the Order.

AFTERNOON.—Considering reports of officers and committees. Short literary exercises and music. Memorial exercises in fraternal regard and respect for the honored dead. Addresses and songs appropriate to the occasion.

EVENING.—Conference on the best plans for organizing and reorganizing Granges and forwarding the work of the Order in California during the coming year.

THURSDAY.

FORENOON.—Regular order of business.

AFTERNOON.—Roll-call of unfinished business. Addresses on practical agricultural subjects by experienced Patrons and farmers. Literary and musical exercises.

EVENING.—Conferring of fifth degree on representatives and fourth-degree members. Pomona's Feast.

FRIDAY.

MORNING.—Excursion to beet-sugar farm near Salinas. Practical field observations in farm and orchard.

AFTERNOON.—Discussion on Grange co-operation, including the Pennsylvania Trade-Card and other systems. Best plans to secure needed legislation for preventing official and political frauds and abuses by trusts and combinations.

EVENING. — Conferring the sixth degree, Flora, and literary and musical exercises.

SATURDAY.

MORNING.—Address on Education, Home Culture, and Farm and Household Economy.

AFTERNOON. — Roll-call of all unfinished business. Visit to the beet-sugar factory and other places.

EVENING.—Fraternal, social and literary festival, or Grange Love Feast.

On Sunday and Monday, excursion parties can be made up for visiting Hotel Del Monte and Pacific Grove, Monterey, Santa Cruz, or San Jose and the Lick Observatory at Mt. Hamilton.

Drives About Watsonville.

We quote the following information, which may prove interesting to many who will attend State Grange next week.

The drives in and about Watsonville are among the prettiest and most attractive in the State, many of which are lined with ornamental shade trees and sprinkled and kept in excellent order during the months in which no rain descends. The distances from Watsonville are as follows:

To College Lake and Orphan Asylum, by way of Lake avenue, 3 miles. To Green Valley, by Lake avenue, 5 miles. To Pajaro, 1½ miles. To Old Glass House in Monterey county, 4 miles, where may be had a lovely view of Pajaro Valley. To Hudson Landing, 4½ miles. To Vega, 5 miles. To Sand Cut, 7½ miles. To Paper Mills, 6 miles. To Beach and Camp Goodall, 4½ miles. To Corners, 5 miles. To Hill Cemetery, 2 miles. To Corralitos, 6 miles. To Aptos, 13 miles. To Spreckels' Ranch, 12 miles. To Santa Cruz, 20 miles. To Monterey, 40 miles. To Salinas, 20 miles. To San Juan Mission, 15 miles. To Corralitos creek, 6½ miles, where there is some fine trouting. To San Andreas, by Beach road, 6 miles. To Big Trees, 25 miles. To Loma Prieta, 18 miles. To Rider's Mills, 8 miles. To Rathbone Lake, 2½ miles.

Worthy of the Honor.

To Sister E. Z. Roache, well seconded by her noble and patriotic husband, in her efficient work for years in the Grange cause, are we indebted for the location of the present session of the State Grange at Watsonville, with so much promise of profit and pleasure to all concerned.

MORE GOING TO STATE GRANGE.—We are advised that Two Rock will send five representatives to Watsonville next week, Temescal 12, and Hollister probably 25 or 30.

Temescal's Meeting.

EDITORS PRESS:—Not seeing any account last week of Temescal Grange's pleasant time, enjoyed by members and sisters and brothers from Eden Grange at the Harvest Feast held Sept. 20th, I thought, though a week behind time, I would send you a line about it.

Owing to sickness and absence from home, Temescal Grange was not as well represented as it is usually; but the few who were there tried to have a good time for the rest. The first and second degrees were conferred on one candidate, and the third and fourth on two others. Eden Grangers manifested their kind, fraternal feeling by a large attendance.

After refreshments the real feast began in the large hall, where an open meeting was held. Bro. Amos Adams spoke at some length on the objects for which we should strive, particularly on the equalization of assessments. His remarks were good and well received. Sister Adams, after some preliminary words, gave a recitation entitled "Scatter Seeds of Kindness." We are sorry that this worthy couple have decided to make their home in San Jose, as I fear we shall not see them in Temescal Grange as often as we should like.

Sister Chatterton of Maine made a good speech on what the Grange has done for woman of the farm, stating that the knowledge gained in the Grange is fitting her better to fill the high positions of trust which are being placed at her disposal and making her the legal equal of man. She advocated the claims of the positive woman who, though not so politic as her negative sister, is much more to be relied upon.

Sister Anway's reply to Sister Stephens' inquiry, "Why will not farmers organize for self-protection?" that farmers work too much and think too little, is without doubt true and gives food for much reflection.

Bro. Blackwood of Eden Grange, after paying an eloquent and touching tribute to the memory of "Grandma Brooks," spoke earnestly and well on the many evils that encompass the farmer.

Bro. Perkins, in his usual clear and eloquent manner, replied to Sister Chatterton's "what has the Grange done for woman?" He recognized the benefit the Order is to the sisters, who, a few years ago, would scarcely have been able to speak so fearlessly as they have done today.

Bro. Goodenough, the W. M., was, as we have ever found him, "the right man in the right place," full of witty sayings and apt illustrations that enlivened the whole session.

Altogether, we feel that the day was well spent and wish such reunions could be more frequent, as they serve to cement the friendly fraternal feeling with sister Granges.

After Grange had again convened, Bro. A. T. Dewey was elected Alternate to the S. G. Those expecting to attend the S. G. were requested to rise, and the Secretary was instructed to inform the State Grange Overseer that in all probability a round dozen would go from this Grange. Let all go who can, and let us have a rousing good time that will be felt all over the State and result in the reorganizing of dormant and the establishment of many new Granges. Then, sisters and brothers, leave the household and farm cares and hie away to Watsonville. You will do all the better on your return for a week or ten days' recreation.

Fraternally, N. G. B.

MARCH ON!—Bro. W. T. Lam, W. M. of March Grange, writes: We had a pleasant meeting Saturday, and instructed one in the first and second degrees, and have two for the next meeting. I cannot see why March Grange should not prosper. We will confer the third and fourth degrees in the near future, have a Harvest Feast and expect to have a good speaker on that occasion.

E. W. DAVIS, W. M. OF CALIFORNIA STATE GRANGE.

EASILY VICTIMIZED.—It is amazing how people are still caught by "chestnut" swindles. The other day a wealthy Quaker farmer living near Smithfield, Ohio, was tricked out of $5000 by two sharpers. They went to his house and offered to buy his farm. They left with him a satchel filled, as he supposed, with money—about $13,000 they said. A few days later they met the farmer at Smithfield and asked a loan of $5000. Thinking the money in the satchel was ample security, he made the loan and the sharpers disappeared. The satchel was filled with paper and pieces of wood.

A PECULIAR CENSUS.—It is said that for some weeks past the agents of the Society for the Suppression of Vice in this city have been closely watching those who frequent the pool-rooms. A systematic tally is kept which shows the name, age, habits, business, etc., of pool-room patrons. Facts have been gathered from reliable sources showing how young men have stolen money to buy pools, and have been led into dishonest lives by the pernicious effects of betting on horse-races.

The Visit to Tulare Grange.

[Written for the PRESS by J. W. MACKIE.]

Tulare Grange felt honored and was delighted to meet Bros. Cressey and Dewey, and we are all thankful for their cheering words and presence.

Bro. Cressey will long remember this Grange for its criticising manners and queer questions; but if he had had a complete diagnosis of its condition, he would have been, no doubt, better prepared to meet the exigencies of the case.

There is something the matter with the farmer here, and he knows it; but he does not know what ails him nor the remedy needed. One thing he is sure of—he needs more money. What he is not sure of is how it is to be got. Somehow, the Grange looks to the officers of the State Grange to give them a little light in that direction. No doubt this is expecting too much from any quarter, but as the State Grange exists for the purpose of assisting the members of subordinate Granges in their difficulties by advice and suggestions, it is reasonable to expect something. The farmers feel very keenly that while nearly everything they produce is consumed at very high figures, they get a very low figure when they dispose of it, the difference being absorbed in freights, commissions and profits before it can reach the consumer. Some central organization like the State Grange should devise a plan of salvation from this ruinous style of business, such as our Declaration of Purposes proposes.

Bros. Cressey and Dewey are intimately acquainted with the efforts made in the past by the Grange to do away with middlemen and the disastrous consequences. "Burnt bairns dread the fire," and it is not surprising that the same body is somewhat sensitive regarding more attempts; nevertheless, such attempts stand as the plain duty of the State Grange, if the Declaration of Purposes has any meaning. This may explain to Bro. Cressey the peculiar irritation manifest in our Grange. We like visits from State officers, and the open, manly face of Bro. Cressey will haunt us for a long time and his persevering spirit will inspire us when confronting difficulties and will enable us to surmount them as we think of him. At the same time we feel bound hand and foot in our farming transactions, always buying at the dearest and selling at the cheapest in the most ruinous manner, and we did look to his riper experience to suggest a remedy.

The farming business has no method in it nor system; it is all haphazard, or it is gambling with an opponent who throws loaded dice so as to turn sixes while ours is loaded to turn ones: "Heads I win, tails you lose," every pop!

The Louisiana Lottery is deemed infamous and the artillery of law will no doubt suppress it; but great as its evil may be and is, it is insignificant beside the systematic plundering of the farmer, permitted and sanctioned by law.

Now, Bro. Cressey, you will know the secret of our disappointment. We did expect an invasion of the country around, in the interests of the Grange, and an appeal made to the farmers to so unite that our dealings with consumers shall be more direct. Our fetters so cling to us that we are not prepared to undertake this invasion ourselves, though one of these days we may do it in spite of our fetters.

You are old, Father Cressey, as you often said, and the few locks that are left you are gray, and a few years, oh! how few! will place you and me on the shores of the land you are looking forward to, where I hope more satisfactory work will be found us than trying to unite incorrigible farmers. May the interval between now and then be a long one, and that time so loaded with satisfactory work that we will hear then with pleasure that welcome plaudit: "Well done, good and faithful servant." And during that interval I sincerely hope for many meetings with that genial face which so lately graced and lighted up the hall of Tulare Grange.

Farmers for Legislators.

In addressing the great concourse at Williams' Grove last August, Hon. Leonard Rhone, W. M. Pennsylvania S. G., observed:

Well, parties are, after all, what we make them. If farmers have clean-cut ideas on public questions, and go into their political conventions and offer their resolutions, they will go into the party platform and commit the party; then put men in nomination that will carry out your ideas. You have competent farmers enough to send to the Legislature and to Congress to secure what legislation you need. Don't be afraid of the man in your community that has built up the Grange; being true to the Grange he will be true to your interests, no matter how often you elect him, if he is the man to serve you best. Cities and corporations keep men that serve them best in the Legislature and in Congress a lifetime.

Patrons must stand united in the interests of their class if they wish to bring about the same honors and remunerations that other classes acquire through associated effort. To be successful we must carry out our motto, "In essentials, unity, and in non-essentials, liberty." Therefore, for the sake of unity, we must give up detailed differences so as to bring about general results in the interests of agricultural people.

The Highway Cow.

The hue of her hide was dusky brown,
Her body was lean and her neck was slim,
One horn was turned up and the other turned down,
She was keen of vision and long of limb.
With a Roman nose and a short stump tail,
And ribs like the hoops of a home-made pail.

Many a mark did her body bear;
She had been a target for all things known.
On many a scar the dusky hair
Would grow no more where it once had grown;
Many a passionate, parting shot
Had left on her a lasting spot.

Many and many a well-aimed stone,
Many a brickbat of good size,
And many a cudgel swiftly thrown
Had brought the tears to her loving eyes,
Or had bounded off from her bony back
With a noise like the sound of a rifle crack.

Many a day she had passed in the pound
For helping herself to her neighbor's corn;
Many a cowardly cur and hound
Had been transfixed on her crumpled horn;
Many a teapot and old tin pail
Had the farmer boys tied to her time-worn tail.

Old Deacon Gray was a good old man,
Though somewhat tempted to be profane
When many a weary mile he ran
To drive her out of his growing grain;
Sharp were the pranks she used to play
To get her fill and get away.

She knew when the deacon went to town;
She watched him wisely as he went by;
He never passed her without a frown
And an angry gleam in each angry eye;
He would crack his whip in a surly way,
And drive along in his one-horse shay.

Then at his homestead she loved to call,
Lifting his bars with crumpled horn,
Nimbly scaling the garden-wall,
Helping herself to his standing corn,
Eating his cabbages one by one,
Hurrying home when her work was done.

His human passions were quick to rise,
And striding forth with a savage cry,
With fury blazing from both his eyes,
As lightnings flash from the Summer's sky;
Redder and redder his face would grow,
And after the creature he would go.

Over the garden, round and round,
Breaking his pear and apple trees,
Tramping his melons into the ground,
Overturning his hive of bees,
Leaving him angry and badly stung,
Wishing the old cow's neck was wrung.

The mosses grew on the garden-wall,
The years went by with their work and play,
The boys in the village grew strong and tall,
And the gray-haired farmers passed away,
One by one, as the red leaves fall;
But the highway cow outlived them all.

—*Chicago Ledger.*

A Breath from the Redwoods.

[Written for the RURAL PRESS by LIPPA.]

Dear Mrs. Hilton "and others who feel as you do," now that the dishes are washed, the children at school and the men at work in the fields, give me your hand and let me lead you inside this cluster of redwoods that seems to shut out the vast area of little things and inclose us within an emerald tower reaching from earth to the heavenly spaces.

We will rest awhile, for we are tired of a life-long succession of trifles. That bit of peaceful blue overhead that looks so far away is just as near to us here as there, only we cannot quite realize it; and, with a sigh, we nestle down into these great, protecting arms, feeling the touch of tender, pale-green fingers that seem dripping with little seed-cones which hold the concentrated life of future generations of forms like these.

When and how was wrought this wonderful fairy-ring, this circle of existences transfixed and grown to giants? In their presence, childhood's ideality returns, and we, the seeking ones, long to wrest from their joined hands the hidden treasure, the secret of life; but unconscious of us and our wishes, they work on year by year, reaching outward and upward, but only by means of little things. How slowly each baby leaf crept forth from the encircling bud, and how delicately each one of the many millions is marked with spreading veins! We came to escape from trifles, but the smallness and the greatness of this eternal work rebuke us for our complaining. There is no murmuring here except the low murmur of growth and use. Not a discordant note rasps across the music that is silence and the silence that is music. No strained wire or echoing metal has ever reproduced this song of creation, as no brush, however delicate, has ever traced such pictures as freely tint themselves before our eyes and never twice the same.

Grand, wonderful tree! With all the stateliness of the pine and more than the pine's delicacy, it clusters on the hilltop or stands sedately beside a mountain stream that darts down the deepening canyon toward the sea. Such a thirsty tree it is! Silently it draws to itself the mist veils and wraps them about its tossing plumes. It sends its eager rootlets to the sources of mountain springs and seeks the northern slopes that the sun avoids, while the more commonplace and less exacting oaks trail up the southern hills in dust and heat. What a firm hold it has on life, bidding defiance to slow decay, almost to time itself, and in that security offering free hospitality to other forest growths. The great brakes crawl into its shadow to unroll themselves, huckleberry bushes push their independent little branches covered with stubby, saw-like leaves, in and out among the lower boughs, wild blackberry vines peep from the dense greenness, and even the venomous poison-oak is not repulsed, so we shall be welcome.

Yes, let us read while we refresh ourselves, but, if possible, we will read from this illustrated book that is always open and never wearisome when we have learned the meaning of its many characters. You are right in part. "There *are* times and times," and "a thing of beauty" might more often be "a joy" if the needed effort was made by all; but let us apportion the burdens of life more equally. Others are wronged as well as ourselves when we assume more, even of care, than rightfully belongs to us, and they are deprived of the discipline needed for the strengthening of their powers.

If we have learned anything in this season of rest which has been rest indeed, let us carry with us to the world outside this whispering gallery a reminder, a spicy branch of greenness; let us take from the generous roots a slice bearing growing stems to set again though it must be in less congenial soil, and let us come once more when the hue of ripeness has turned the little seed globes to brown, gather, plant and water near our homes, transforming the desolate, lonely spots into resting-places.

We had almost forgotten the questions of "what shall we eat, and what shall we drink, and wherewithal shall we be clothed?" but they cannot irritate us while we hold close to our souls this life-giving talisman, the gift of this wonderful tree.

As we carefully and artistically arrange kindling and fuel ready for the match in the kitchen stove, we will soften the hard facts with a pinch of philosophy, as we soften obstinately tough vegetables with a pinch of saleratus. If the blaze of ambition only smolders, we will feed it with seeds from the tree of knowledge, that has been grafted with cions of wisdom, as we stimulate the hesitating kitchen fire with seeds of the pitted apricots that consumed so many hours of our time. We will dream of the time when a co-operative cook-wagon shall stop at each farmhouse on its tri-daily rounds, bringing, prepared, the articles ordered the day before. We will believe that in the blessed "Twentieth Century" city people are not to monopolize all the conveniences while we drag our weary selves along in the same old way. In that "good time coming" farms will grow smaller and neighbors closer together, so that the few who are born cooks may perform the mysterious processes for those whose bread will be heavy and whose canned fruit will burst its bonds in spite of all their efforts to prevent such a result; but in this transition time, this trying present, that is neither past nor future, we must expect to suffer from the battling forces of both. Each bewildered housekeeper who has but lately learned to heed the many voices from without and from within clamoring for her notice, whose eyes have but lately opened to new sights and whose mind is expanding with thoughts that before were unknown, must still light her little fire on her little domestic altar, sacrificing her wishes, her health or her life to this deity called alimentiveness. The morning hours, glorious in sound, fragrance and color, must be filled with wearisome answers to persistent wants, and often and often Peace must go down before armed and mounted Hurry.

It is easy to understand why so many women and children hate the farm: they are kept always in the atmosphere of the workshop. Men without money and without a trade undertake a struggle for life with natural, industrial and commercial forces; each arm, great or small, is needed and continually, and from thoughtlessness as well as from poverty, the weapons are often out of proportion to the strength, the tools unsuited to the one who is to use them.

Is it any wonder that the fun-loving boy lingers on his way home from school or is unnaturally quiet afterward if, in the instant of his appearance, he is impatiently told to do some hard or disagreeable thing which has been left for him because he is younger? How can the members of a family care to come together around the table if the talk (not conversation) is all of the farm work, the unpaid mortgage, the danger of going to the poorhouse or the cost of what they are swallowing? In these times so favorable to the development of individuality, each is apt to be most interested in some subject that is different, it may be, from the pet study of all the others, so no one has a right to monopolize the whole time and keep up an unceasing chatter or moan, even on that precious theme—money.

As I write, the question, "Which was that—useful or necessary?" flashes its inquisitive little face out from behind the piles of stored things in memory's attic, and the misty garments of an old story seem forming behind it. I think it was one of the Rosamond series, and related the efforts of an elder sister to correct the habit of incessant talking by binding her with a promise to say nothing which was not useful or necessary for an hour. If all should try that experiment, how quiet the world would suddenly become and how much better we could listen, in that hush, to nature's voices that are never useless or unnecessary. The "still, small voice" of the spirit could then interpret the lessons whispered from mountain, valley and ocean, and we should no more pass indifferently by this wonderful specimen of use, strength, endurance and beauty, this king of the Pacific Coast that softly rebukes our murmurings and calls to us to come up higher.

Comfortable People.

Do you know any? Are they few or scarce among us? What are comfortable people? If I questioned what are uncomfortable people, everybody would have an answer ready. But the few of a kind we are looking for—do you know them? Why are they so few? Said a friend one day: "My grandmother was such a comfortable soul! You loved to be where she was. We children would do anything for her and always knew where to find "quarter" in any disaster. And the fun of it was, if two of us quarreled, we always brought up together at grandmother's door. She never seemed to have an ache or pain, never asked for your sympathy because she was old, and yet we always gave it, and were always bringing bits of comfort to her. She used to say: 'My day is past, dearie; I'm not of much account now.' But she always said it with such a cheerful smile, as though it were all a happiness just the same to be with us. She was a comfortable old lady, and we missed her sadly for many a long day."

There is a comfortable mother we wot of, where the children come in from school with a jolly little laugh as she opens wide the door in welcome. There is something about her that comes down to the little ones and is in sympathy with them always. There is a cake (not over-rich) on the shelf, just to save butter and crumbs, when school is out, that they may divide and digest after their own fashion. Somehow there is never any "strapping." It's—"Johnny, mamma said not to, and you know how good she is to us." Or it is—"I'm going in to ask mamma. She'll have time to help me." And after awhile it is—"Let's go in and help mamma." Longing to be with somebody who loves them; longing to be where they are not in the way—why? Because mamma isn't nervous; hasn't got a headache; doesn't think children such a bother; isn't "running the sewing machine and can't be hindered;" or in other words, is a comfortable woman.

Here comes "our John." Oh, he is just the best fellow in the world. If it rains to-day he doesn't growl, but guesses it will be clear to-morrow, and in any case he doesn't believe it will make much difference to the clerk of the weather whether he is pleased or not. He doesn't sit down and want you to "keep still" or wonder "what on earth you do so much trotting about for." He doesn't sit down and with one eye on the paper and one on you, wonder what you are going to do next. He doesn't take up all the room in the kitchen with his long legs and his boots, and wonder "what you want to putter around the stove so much for." Not he. He is a comfortable fellow and keeps out of your way. He goes "a-mending" and you don't know he is in the house so far as annoyance to you is concerned; or he comes in with a joke or something new for you to think about. Maybe he gives you a "lift" on some big job you've been thinking about for a good while—in fact he makes you wish there were more rainy days than there are, because he is such a comfortable fellow.

How many of us have comfortable children? Yet why should they not be? Don't uncomfortable people make children uncomfortable? "Mamma," says my boy, "somehow that woman makes me feel uncomfortable when she's here; she seems so snappy all the time. I want to say just what she says just to see if it won't hurt something or somebody. I want to pull the cat's tail or kick the dog." So do you not think her own children want to kick something, too?

Good people! cultivate comfort—the comfort that has time to live, to be happy, to be cheerful, to make people wish to be where you are, because you are not eternally fretting and fuming about what you can't help. If you can help things, why don't you? If you *cannot*, why be uncomfortable about them? Is it your duty to borrow trouble, to magnify every ache or pain by talking about it? Stop a moment and read a thought or two of somebody's from a paper and so get a thought outside of yourself. There are lots of good times and fun in the world—a great deal more than would balance the misery; and though you may not be "in 'em," they are good to think about. Think of somebody whose troubles are infinitely worse than yours, and you have no idea how much more fortunate you will think you are. Just in proportion to your personal comfort will the comfort around you be increased; and if each and all would endeavor to be comfortable, we should all of us be a great deal happier.—*E. S. Titus.*

You may find hens in a hennery, but don't look for bats in a battery, nor lots in a lottery.

A Lighthouse Heroine.

A paragraph has been floating around in the newspapers to the effect that "Mrs. Grant has had charge of the Matinicus Light, north of the Penobscot river, for 28 years—at first as assistant, but was given full charge in 1866." *The Woman's Column* says this is a mistake, and then gives a correct account of Mrs. Grant's remarkable career, condensed from an article which appeared some years ago in the Rockland, Me., *Free Press*, as follows:

Matinicus Rock is small, rugged, and, except in favorable weather, inaccessible. In 1846 the old lighthouse with wooden towers was replaced by two stone towers 80 feet high and 40 feet apart, and the former dwelling was converted into an outhouse. In 1853 Samuel Burgess was the keeper. His family consisted of an invalid wife, four small daughters and a son, who was much of the time away fishing at the Bay Chaleur and elsewhere.

The eldest daughter, Abbie E, then 14 years of age, was his chief, if not his only, assistant. She was expected to care for the principal part of the domestic affairs and also to aid in the lighthouse work. She modestly says: "I took a great deal of pride in doing the lighthouse work, and tried to do my duty." In the occasional absence of Mr. Burgess, the whole care of the lights devolved upon Abbie. She soon became very skillful and entirely equal to the task, as after-events proved.

On Jan. 19, 1856, when Abbie was 17, there came the memorable gale which swept away the Minot's Ledge Lighthouse. A letter written by Abbie to a friend soon after the storm thus describes it:

"DEAR ——: You have often expressed a desire to view the ocean when angry. Had you been here on the 19th of January, I surmise you would have been fully satisfied. Father was away. Early in the day, as the tide arose, the sea made a complete breach over the rock, washing every movable thing away, and of the old dwelling, not one stone was left upon another. The new dwelling was flooded, and the windows had to be secured to prevent the violence of the spray from breaking them in. As the tide came, the sea rose higher and higher, till the only endurable places were the light-towers. If they stood, we were saved; otherwise, our fate was only too certain. But for some reason, I know not why, I had no misgiving, and went on with my daily work as usual. For four weeks, owing to rough weather, no landing could be effected on the rock. During this time we were without the assistance of any male member of our family. Though at times greatly exhausted with my labors, not once did the lights fail. Under God, I was able to perform all my accustomed duties, as well as my father's.

"You know the hens were our only companions. Becoming convinced, as the gale increased, that unless they were brought into the house they would be lost, I said to mother: 'I must try and save them.' She advised me not to attempt it. The thought, however, of parting with them without an effort was not to be endured; so seizing a basket, I ran out a few yards after the 'rollers' had passed and the sea fell off a little, with the water knee-deep, to the coop, and rescued all but one. It was the work of a moment, and I was back in the house with the door fastened; but I was none too quick, for at that instant my little sister, standing at the window, exclaimed: 'Oh, look! look there! the worst sea is coming.' That wave destroyed the old dwelling and swept the rock. I cannot think you would enjoy remaining here any great length of time, for the sea is never still, and when agitated its roar shuts out every other sound, even drowning our voices."

In the spring of 1857, Mr. Burgess left the rock to obtain his salary and to lay in provisions and fuel. He was prevented by the weather from returning, and his family ran short of food. After waiting till famine stared them in the face, the son started in a little skiff equipped with a sail made by the aid of his sister, for succor. The sea was so rough it was very doubtful whether he could reach the shore; and he was seen no more for 21 days. During the whole of this time, the mother and four girls were reduced to a cup of cornmeal gruel and one egg each per day. To isolation and famine in mid-ocean was added suspense as to the fate of father and son. During all these days, it was Abbie who labored and cheered, kept the lights burning, and cared for a sick mother and sister.

In 1861, Mr. Burgess was, in the change of administration, superseded by Capt. John Grant and son, of Rockland. When they took charge, the services of Abbie were secured to instruct them in their duties and teach them the manipulation of the lamps; for the appointments were of the most approved character, requiring no little skill to run them. In that year she married Capt. Isaac H. Grant, the assistant keeper; so again the rock became her home. In 1865, Mrs. Grant, the principal keeper's wife, died during a gale; and it was not until the fourth day after that her remains could be removed from the rock. The steam blast was established in 1869, and in 1871 Abbie was appointed assistant. The year 1875 found her still on the rock, the mother of four children. In the spring of that year a vacancy occurred at White Headlight, in the town of St. George. The situation of keeper was offered to her husband, and was accepted, and Abbie was appointed assistant. It was only after 22

years of unconscious heroism, during which she had seldom left the rock, that she found a home on the main land.

Mrs. Grant's children are now young men and women. The eldest son is an engineer, and the only surviving daughter has studied at the New England Conservatory of Music. The courageous mother is still living at Spruce Head, Maine.

The Art of Sweeping.

In sweeping, take long, light strokes, and do not use too heavy a broom.

"Alice," said Lois, "do you honestly think sweeping is harder exercise than playing tennis?"

I hesitated. "I really don't know. One never thinks of hard or easy in tennis, the game is so interesting; and then it's outdoor exercise, and there's no danger of inhaling dust."

"Well, for my part," said Marjorie, "I like doing work that tells. There is so much satisfaction in seeing the figures in the carpet come out brightly under my broom! Alice, what did you do to make your reception-room so perfectly splendiferous? Girls, look here! You'd think this carpet had just come out of the warehouse."

"Mother often tells Aunt Hetty," said I, "to dip the end of the broom in a pail of water in which she has poured a little ammonia, a teaspoonful to a gallon. The ammonia takes off the dust and refreshes the colors wonderfully. We couldn't keep house without it," I finished, rather proudly.

"Did you bring some from home?" asked Marjorie, looking hurt.

"Why, of course not! I asked your mother, and she gave me the bottle and told me to take what I wanted."

"A little coarse salt or some damp tea leaves strewed over a carpet before sweeping adds ease to the cleansing process," said Mrs. Downing, appearing on the scene and praising us for our thoroughness. "The reason is that both the salt and the tea leaves being moist, keep down the light, floating dust, which gives more trouble than the heavier dirt. But now you will all be better for a short rest; so come into my little snuggery and have a gossip and a lunch, and then you may attack the enemy again."—*"Mother's Way," in Harper's Young People.*

Chaff.

Now that every one is wiping his feet on Mr. Quay, we begin to see why he is named Matt. —*Puck.*

"O MAMMA," said little Lord Fauntleroy, fresh from the city, pointing to some sun-flowers, "just see those pen-wipers growing over there!"

SOMEHOW a man feels much worse the day after he has lost an hour's sleep on account of the baby than he does the day after he has lost five hours' sleep at the club.—*Atchison Globe.*

A NEW YORK court has awarded Charles Myers $5000 damages caused by a bite from Mr. Vanderbilt's dog. People who are bitten should be careful to pick out dogs with good financial backing.—*Washington Post.*

BILLINGS: I'll take a little more of that railroad soup, please. Mrs. Hashcroft: Railroad soup? Billings: Yes; more water than stock, you know.—*Terre Haute Express*

"HAY FEVER," said the moderator, at the influenza convention, "may be likened to a tie vote." "Hear, hear!" cried the audience. "The eyes and nose both appear to have it."

THE owner of that carload of eggs that went through a bridge in Pennsylvania, the other day, is trying to make the railroad shell out. —*Nebraska State Journal.*

"I TELL YOU Sunday was a red-letter day at Chautauqua," exclaimed a returned visitor to those classic shades. "Impossible!" "Why impossible?" "Because no mail is distributed there on Sunday."—*Pittsburg Chronicle-Telegraph.*

SHE STOOD ON ICE.—At the Portland Fair they had a stuffed cow which they milked (?) whenever a person called for a glass of milk, fresh from the fountain-head. The whole thing looked so natural that many who drank of the milk, believe that the cow was a genuine Durham. The *Journal* editor himself pressed forward to invest a nickel, and after drinking the milk, right from the cow, as he supposed, he looked at the maid with her rosy cheeks, and in a sort of a doubtful way asked: "What makes this milk so cold?" "Oh," said the little vixen, with a roguish twinkle in her eye, "don't you see the cow stands on ice?" We saw the joke and pulled out to make room for another greeny, for they were quite abundant and most of them came from the bunchgrass country.—*Walla Walla Journal.*

THE GAS GAVE OUT.—T. K. Beecher lately told the following: "Some years ago, a young man named Plympton came to Elmira to take charge of a paper. I was in the habit of publishing my church notices in the paper, and one Saturday night the gas gave out and gave promise of staying out for a day or two. So I ran over to Plympton and said: 'Just say, "Services as usual excepting the gas."' 'Shall I publish it just that way?' said Plympton. 'Certainly,' said I, and left him. He did publish it that way, and on the following day narrowly escaped being tarred and feathered at the hands of a committee of my deacons, who thought he was ridiculing me."

YOUNG FOLKS' COLUMN.

The Crimson Flower.

[Written for the RURAL PRESS by MARTHA T. TYLER.]

Little Rudie lived with his father, the old wood-carver, in a small brown hut in the woods. It was the Black Forest, where, you know, many remarkable things are said to have occurred, but during the twelve years of his life, the whole of which had been spent in the great, dim woods, Rudie had looked everywhere for the fairies and goblins in vain. Frequently, when his father was obliged to be absent from home all day, and Rudie could be as idle and fanciful as he pleased, the boy would make an early start, armed with a stout stick only, and wander until sunset through the long green isles of the mysterious forest in search of some extraordinary adventure or discovery; but although he poked into the heart of every hollow tree with his pilgrim's staff and under every heap of leaves, and tapped the bottom of every pool, he could never succeed in arousing the sleeping elves.

One evening, however, in late autumn, when the frost had begun to blight the few remaining flowers, and the birds had nearly all flown to warmer latitudes, Rudie was hastening home from one of his long tramps, watching with the glad heart of a child as he approached the cabin, the glow of the firelight through the one small window, knowing it to be a sign of his father's return, and of the quiet, cosy evening they should have together. Suddenly he observed, as if it had but that moment sprung into existence, a tall, strange-looking plant bearing a lovely crimson flower which nodded its proud head in the wind a few yards in front of him.

"Oh!" said the boy, "what a beautiful flower," and ran eagerly forward to snatch it from its stalk.

He thought it even more wonderful upon careful examination. It was in the bud as yet, so that Rudie could see the outer petals only, which were as red as blood and as large as those of a water lily.

Quite delighted with his prize, the lad hurried on that his father, too, might have a look at the wonderful thing which had blossomed for the first time so near their home.

"In this cold air," said Rudie, "and when all the other flowers are dead or dying! What kind of bloom can it be?"

Breathless with excitement, his blue eyes dancing, and his cheeks glowing from the sharp touch of the wind, Rudie pushed open the door of the hut, and then paused in dismay.

The fire which promised so much was indeed burning brightly, and the table was spread for their simple meal; but his father crouched on a stool near the rude hearth, with his head buried in his hands, as if some trouble had come to him.

"What ails thee, father?" asked the startled boy.

"Thou knowest, my son," answered the old man, as he raised his head and shook his gray locks sadly and hopelessly, "that in an evil hour I became indebted to Hans Brinckermann, the meanest man in the village yonder, and the richest. It was when thou wert so ill, my boy, and I sorely needed the silver for thy sake. To-day I should have paid the last rouble of the borrowed sum, and so have been a free man again; but as I was moving through town with my bundle of wares my foot slipped and I fell, breaking into a thousand fragments those beautifully carven things which have cost me so much time and labor, the sale of which would have relieved me from debt. To-morrow, then, I shall be thrown into prison, for Hans does not love a debtor and will not delay an hour beyond the time specified for the settlement of our account. There, there, child, eat thy supper of porridge and black bread, while thy poor old father wends his way again to the village, to see if aught can be done in the matter before another day dawns."

Rudie forgot to mention his beautiful flower. It fell unheeded on the table, and he sat down to his lonely meal with a heavy heart.

The logs on the hearth crackled merrily, but as time passed Rudie could hear an owl hooting in a tree near by. The frogs, too, that had assembled round a pond across the road, croaked dismally, and although the lad was too much accustomed to melancholy sounds and solitude to be usually affected by either, he felt the influence of both to-night and sighed when he thought of the morrow.

He was still sitting as his father had left him at the pine-board table, his porridge almost untasted, when his attention was attracted by some movement in the heart of the crimson flower. Slowly, leaf by leaf, the petals unclosed, and from the midst of them crept a tiny figure in green with a red cap on its head. The little man doffed his hat very politely to Rudie, but the boy stared stupidly at his new acquaintance as if in a dream.

"Where are your manners, friend?" asked the elfin creature with a dry little laugh. "However, you have brought me across your threshold, and your fire has warmed me, so that I am bound to do you a good turn. You are a pretty fellow to look at, too," he continued, "and the fairies cannot but wish you well. Follow me into the woods and do exactly as I bid you," and the manikin jumped lightly to the floor and ran out into the dark green woods.

Rudie followed, scarce realizing where, and when they had reached a clearing the fairy pointed to a certain bush, which, like the crimson flower, was an entirely new species to Rudie.

"Break off a bit of it and eat it," commanded the elf.

Rudie obeyed.

"Now go back to the pond near the cabin," said the little man, "and the frogs will tell you what to do next, for by virtue of what you have tasted you will understand all that they say."

With these words the fairy vanished, and the astounded Rudie prepared to follow the advice he had received.

"Croak! croak!" said a big frog sententiously, as the boy approached the charmed circle, "Extraordinary! Extraordinary!"

Rudie wondered why he had never before comprehended the language, it all seemed so easy, and was really very much like the German.

"What is so extraordinary?" piped a small frog in answer to the first speaker, hopping a little nearer to the latter in his eagerness to hear the latest gossip.

"At the root of the oak in which the owl lives, there is a bag of gold," said the large frog, "and it shall belong to him that looks for it at sunrise."

"Indeed!" cried a host of frogs in chorus, "and who put the gold at the foot of the owl's oak?"

"The fairy of the crimson flower," said the big frog, and then Rudie knew that it was a free gift which he might not hesitate to accept.

With joyful heart he hurried homeward again, and having said his evening prayer, stretched his bearskin out before the fire and was soon dreaming of the fortune that awaited him.

Hours passed, but the old man did not return, and with the first gleam of daylight Rudie arose and sought the owl's oak armed with a shovel and his stick. As the early rays of the rising sun glimmered in the east the boy began to dig for the hidden treasure, which he found buried many feet deep in the earth.

Seizing the bag with both hands, he ran with it all the way to the village in search of his father.

Once there, he had not far to go. A constable had the old man in custody and was leading him off to prison, when Rudie appeared.

"Stop!" cried Rudie, "I want Hans Brinckermann."

"What is it, Flibbertigibbet?" said the miser with a scowl, stepping out from a crowd of spectators.

"Here is thy gold, old Skinflint," laughed the boy, "and here and here. What's more, my father is to-day a richer man than thou, and in future when thou meetest him, by chance, thou mayest doff thy hat to him."

It was indeed so, for the fairy gift was a munificent one.

GOOD HEALTH

THE EAR.—No oily substance, poultice or liniment should be put into the ear, because great injury is liable to be done. Warm water is the best possible and about the only safe "wash." Do not scratch the ears with any metal; pin-heads, hair-pins or ear-picks should be tabooed. Do not scream if an insect enters the ear; warm water will drown it and wash out the "remains." The ear is not nearly so liable to injury from the intruder as from frantic efforts to dislodge it. Do not put anything cold into the ear; even cold water should be avoided, especially if there is any affection of the hearing. Do not put cotton in the ears if there is any discharge of pus from them. Use warm water as frequently as may be necessary to keep them clean, but do not force the foul matter back into the delicate machinery. If any small hard substance falls into the ear, do not attempt to "dig it out." If not readily removable, allow it to remain in quiet, and have a physician take care of it when convenient; it is not likely to do any serious harm unless tampered with. Anything which is soluble may be washed out, with a little patience, by the use of a syringe and warm water; if not soluble it is harmless. Deafness may sometimes be caused by an excess of ear-wax, which has become hardened and obstructs the action of the membrane. Either have a careful hand apply warm water through a proper syringe, or a piece of cotton wadding wet with essence of peppermint may be introduced, which will dissolve and absorb the hardened wax in a few hours.—*Hall's Journal of Health.*

FACTS ABOUT THE BRAIN.—In an article in the *Popular Science Monthly*, Dr. M. A. Starr says that there are many interesting facts which make one believe that the greater the extent of brain surface in a man, or, to put it a little differently, the more the folds and deeper the creases between them, the greater is the man's mental power; and just here it becomes apparent that to judge of the extent of the entire brain surface by the size of the head, or by the extent of the superficial irregular surface which is covered by the skull, without any regard to the number of folds or their depth, is to fall into an absurd error; and here we begin to see how baseless the old phrenology really is; for a little brain with many deep folds may really, when spread out, have a larger surface than a large brain with a few shallow folds, and a so-called bump or elevation on the apparent surface of the organ, even if it produces a corresponding elevation on the head which it frequently fails to do, will indicate nothing regarding the number of folds or the depth of the creases which lie about it; so that it may be stated without hesitation that from the size or shape of the head no conclusion whatever can be made as to the extent of surface of the brain, and consequently no conclusion can be reached regarding the mental capacity.

DIPHTHERIA is as old as civilization. Homer mentions it as attacking the armies of Ulysses. Hippocrates, the father of medicine, Celsus, Sydenham and others, from the dawn of medical history, have described it under many different names. In the Middle Ages it was known as the Malum Egypticum. The earliest medical records of this country describe it as the putrid sore throat of New England. Yet during all these ages that it has prevailed, no one has known its cause. Why diphtheria attacks the tonsils and mucous membrane of the pharynx is easily understood. Diphtheritic germs have the power to live wherever filth is found. Winter's cold does not destroy them. They float around in the air, are breathed in, and lodge on the tongue, with its heat and moisture to revive them. The saliva furnishes the alkaline medium they require to propagate in, and washes them into the little orifices and crypts or pockets in the tonsils, where they receive warmth, moisture and food at our expense, and the absorbents in the tonsils are royal highways, through which they send their poison to the citadel of life.—*Ex.*

WHERE THE YELLOW FEVER CAME FROM.—At the Medical Congress of Cuba, Dr. Lyada read a paper on yellow fever, which disease he affirms not to have existed in Cuba before the African immigration.

DOMESTIC ECONOMY.

CREOLE PUDDING.—Beat eight eggs with half a pound of sugar, half a pound of butter and the juice of one lemon. Line a deep dish with puff paste, cover with quince preserves, pour over a little of the mixture, lay on more preserves, then more of the mixture and preserves. Bake and eat with sauce.

SPONGE CAKE.—Three eggs, beat two minutes, add 1½ cups of sugar, beat five minutes, add one cup of flour, beat one minute, add half a cup of cold water, beat one minute, add one cup of flour, containing 1½ teaspoonfuls of baking powder, and beat one minute.

FLOUR DUMPLINGS.—One-half cup of sweet milk, one heaping teaspoonful of baking powder; mix stiff enough to form in cakes with the hands. This makes about seven. Drop in the kettle where chicken or meat is boiling (do not let them sink beneath the water), cover tight and cook 15 or 20 minutes.

CRULLERS.—One cupful of sugar, a piece of butter the size of an egg, rubbed well into the flour, two eggs beaten into the sugar and butter, one cup of milk, three teaspoonfuls of baking powder mixed into a cupful of flour. Add a little salt, unless the butter is very salt. Flavor with 1½ teaspoonfuls of lemon extract. Mix very soft.

A NICE DESSERT.—No more wholesome dessert can be made than "pop-overs," if they are light and well baked, and it is one that is almost universally liked. A good proportion for these is four eggs, two cups of milk, two cups of flour and salt. They should be baked in small earthenware cups, which are sold for the purpose, and the oven must be of moderate temperature.

BAKED OMELET.—Five eggs, half cup milk, quarter cup fine breadcrumbs, tablespoonful melted butter; pepper and salt to taste. Soak the crumbs in the milk ten minutes; beat the eggs very light, the whites and yolks separately; stir the soaked crumbs, the milk, the butter and seasoning into the yolks, and mix the whites in lightly. Pour into a well-greased pudding dish and bake in a quick oven.

SCOTCH PUDDING.—One quart of stale breadcrumbs, grated, and seasoned with salt, pepper and powdered sage. Add one pint of minced boiled mutton, one well-beaten egg, one chopped onion and one pint of mutton broth. Bake in a hot oven until firm and browned upon the top. When cold, slice in thin slices. Beef or chicken soup may be used instead of the mutton, but the Scotch receipt calls for mutton.

BIRD'S NEST PUDDING.—Core and peel enough tart, well flavored apples to cover the bottom of a round porcelain pudding dish. Put about half an inch of boiling water in the dish with the apples, cover them with a plate and set them in a hot oven to cook for 20 minutes. At the end of this time the apples should be tender and nearly cooked, and the water entirely absorbed. If any water remains it should be gently turned off, but so as not to break the apples. Prepare an unsweetened custard of five eggs and a quart of milk which has been brought to the boiling point. Add the eggs to the hot milk, carefully beating them in. Season the mixture with a saltspoonful of salt and pour it over the apples; it should cover them. Replace the pudding dish in the oven without a cover, and bake the custard and apples till the custard is firm in the center. The oven should not be too hot.

Low Priced Racers.—At the sale of George Shults' racing stable at New York, 30th ult., Pancoast, a California horse, which Shults bought for $28,000 four years ago, was sold for $3750. The bay gelding Arrow, for which Shults gave $15,000, was knocked down for $725.

The Week.

The most important event of the week has been the extension of the rain area throughout the State. Before actual precipitation occurred there was a percentage of atmospheric humidity unusual for September, and ill effects were feared upon late ripening and drying fruits and curing raisins. The rain has increased the danger, and in some cases has occasioned loss. The rainfall has been unusually heavy for September, but October seems to be opening well as we write on Wednesday, and a few drying days, if they ensue, will remove much apprehension. The situation is, however, quite serious in some localities, and we trust the losses from the early rains of last year may not be repeated.

Congress is near its adjournment, having held, in point of actual working days, the longest session since the foundation of the Government. It is perhaps fortunate, however, that only about one-twelfth of all the measures introduced secured enactment. The new tariff measure has finally been decided upon, and of its provisions as affecting agricultural producers we hope soon to give information.

Trade in Produce, Not Promises.

We have several times alluded to the Butterworth bill now before Congress, which has for a purpose the demolition of the great produce-gambling trade which is prevalent in all large markets in this country. We trust that Congress will not fail of time to advance this measure speedily, for delay is a detriment to the legitimate production and commerce of the country.

We have so many times proclaimed the injury which such fictitious trade accomplishes that there is little need to enlarge upon it, but there comes to hand occasionally a re-statement of old points so forcible as to give them new significance. Such we find in the following paragraph in the Wichita, Kansas, *Eagle* of recent date, as follows:

The Federal and State courts have unwillingly recognized deals in futures in certain cases because there was no law against it. The Butterworth bill proposes to make a law that will govern deals of this kind, and if passed the courts will cheerfully aid in its enforcement.

The Butterworth bill does not interfere in any way with legitimate future contracts by actual owners or their agents. No one who is about building a house or block goes into the option pit to make his contract; he wants a house or block, not the difference, and he looks for the actual owners and laborers with whom to make his contract. Merchants who wish to contract for a future supply of an article go to the manufacturer and engage with him to supply the article when needed in the future. They do not contract for it with people who do not have it. Why should farm products be on a different basis? If one wishes to contract for these to be delivered in the future, let him contract with those who have them or have the appliances for making them. The Butterworth bill does not touch such contracts. The farmer can contract to deliver his crops in the future, just as the manufacturer can contract to deliver his products when manufactured. It is only the party who contracts to deliver in the future farm products he neither owns nor has the appliances to sow or reap who is required under the bill to pay the tax therein prescribed.

Naturally there is great effort being made against the Butterworth bill by the whole produce-gambling fraternity and their organizations, but the legislators should not be blinded by the dust which they are stirring up. They toil not, neither do they reap nor gather into barns, but they are making desperate efforts to make their wretched business appear a part of the great producing and commercial interests of the country.

Acknowledgments.—For the use of the cuts of Watsonville and Pajaro valley products, that adorn our pages this week, we are indebted to the courtesy of E. S. Harrison, whose recent pamphlet on Santa Cruz county has also been drawn upon for descriptive matter. Mr. Harrison is preparing an elaborate history of the county, which will make a quarto volume of 500 or 600 pages with many illustrations.

One of the strongest dams in Oregon is being erected at the new town of Winchester on the North Umpqua. It will furnish a magnificent water-power.

H. E. N. L.—If the writer claiming these initials will send full address, we will answer inquiries by mail.

California's Growth.

As most of the arable land of California is adapted to raisin grapes, the greater profitableness of this industry will hereafter prevent California from competing largely in producing wheat and barley. The population of the State is increasing mainly in the cities, and what agricultural development the State is making is being more and more turned toward the production of fruit. Within a few years the State is quite likely to be an importer of wheat and flour for its own use.—*American Cultivator.*

At the close of a very kindly paragraph on the growth of our raisin industry, our Boston cotemporary falls into the unfortunate errors contained in the above quotation. Each sentence contains a serious misstatement of facts. It is not true that most of the arable lands of the State are adapted to raisin grapes. It is true that large areas are thus adapted and the production is increasing at a gratifying rate. It is also true that California can easily produce all the raisins needed in the United States, and more, too, but still there will be plenty of land left for wheat and barley so long as they can be profitably grown.

It is not true that the population of California is "increasing mainly in the cities." The country is filling up notably and this will be shown when census figures are available. Besides, the two statements that we are making chiefly a city growth and at the same time developing rapidly in the production of fruit, do not hang together. We grow our fruit in the country, and though of course the advance of this interest stimulates manufactures, trade and other specialties of towns, the great gain of population is near the trees or vines. It could not be otherwise. Grain-growing does not require a large rural population; fruit-growing contributes directly to such population.

There is no probability whatever that California will soon be an importer of wheat or flour. Our Eastern friends forget how large California is. Such products as we are now sending out might squeeze out other branches if we had a small New England State to work in; but with California, with two and a half times as much land as all the New England States together, it is possible to do much without crowding.

From Vine to Basket.

An Alameda county grape-grower has an interesting experiment in progress in the line of an effort to establish direct trade between producer and consumer. He had a crop of Black Malvoise grapes, which, if sold through San Francisco commission merchants, would hardly pay even as much as local wine-makers would pay for such low-quality grapes—say $15 per ton. Knowing what is done in the large Eastern cities in the way of "basket fruit trade," he has begun the effort to establish such a trade in this city, under the name "Home Basket Fruit Co." He secured a small stand at the lower part of Market street and gave out several thousand small circulars making the following offer:

BLACK MALVOISE GRAPES.

FRESH FROM THE RANCH.

The grapes you buy to-day
Were on the vines yesterday.

FIVE POUNDS FOR 10 CENTS.
TWO POUNDS FOR 5 CENTS.

Five lbs. for 25 cts., including a 15c. lunch-basket, and if you will bring the basket back, will fill it again for ten cents every day as long as the crop holds out.

This announcement proved attractive and sales were considerable from the start, and the trade was so economically and ingeniously conducted that the grapes netted two cents per pound, or $40 per ton. The experience with the first stand has led to the establishment of two others at points higher up on Market St.

The experiment is still in progress, and whether the sale of fruit on such a low scale of prices at retail can be made permanently profitable remains to be seen. The experiment has within it the testing of the general proposition to extend the sale of fresh, wholesome fruit in large quantities at rates which are low and yet yield the producer more than he can get through existing channels. To attempt such an enterprise as is now being tried requires personal qualifications for driving close trade and causes the producer to put in his own time possibly at rather low wages. Consequently many producers are not personally qualified for such an undertaking and others can make better use of their time, perhaps. Thus, while the experiment now under trial does not offer a field to all producers, it may possibly lead to a reduction of the retailer's extortions and open the way for a much larger consumption of fruit, at prices which will pay producers something better than they now usually get. For this reason, we have alluded to the subject and noted the progress of the experiment thus far.

Fruit for Eastern Shipment.

P. E. Platt, the well-known fruit-shipper, recently spoke appreciatively to a reporter of the *Record-Union* concerning the progress being made in handling fruit for Eastern sale both before shipment and en route. He also gave utterance to some conservative statements which we think it very desirable to give wider audience through the Rural:

This fruit-growing and fruit-shipping industry is growing into mammoth proportions, and all that it requires is intelligent and judicious treatment at the hands of those engaged in it to make it all that the most sanguine believers in California's future have dared to prophesy. People who read and hear of the excellent prices our fruit had brought, are apt to rush into the business of fruit-growing, thinking that all they have to do is to plant a vineyard or orchard anywhere, and then sit down and receipt for the proceeds of their sales as the money rolls in. Men jump at the conclusion that as Tokay grapes sell well in the Eastern market, they can plant vines and grow a good shipping article on any ground. But this is not true. Much depends upon the character of the soil, the manner of cultivation, care in selecting the best fruit for shipping, and equally as much attention to the packing. Some men have made great successes with their Tokay grapes, but it is because they have conducted the business of growing and shipping with intelligence and care. The same may be said of other fruits. Some are especially adapted to shipping and others are not. Hence some growers will get rich while others will remain poor.

It is very important to emphasize the fact that fruit-growing is skillful business, and as the time has gone by when "any fool would do for a farmer," it is also out of date to make a fruit-grower out of a man who cannot bring plenty of brains, and time to use them, to the fruit-producing enterprise. The higher the prices go the more valuable become the real-estate agents, and they often forget to mention the fact that fruit-growing must be well conducted to prove satisfactory or profitable. Hence we desire to guard some, perhaps, from loss and disappointment by the publication of Mr. Platt's statements. At the same time, to a man who is ready and willing to give thought and attention to the effort and is not too old, conceited or too thick-headed to learn something new every day he lives, the production of fruit and the investment of time and capital therein offers perhaps the best field for effort at present in this State.

There is also much being learned in the shipment of our fruits. Referring to the method of handling fruit, and of its shipment, Mr. Platt said there had been almost a complete transformation in the past year or two. Instead of the old style of ventilated cars, shippers are now using refrigerator cars made expressly for this trade. Shipments made by these cars generally arrive in good condition, and there has been much less complaint this year than formerly from Eastern handlers. The railroad company has just completed a two-story ice-house alongside one of the tracks in Sacramento, where the refrigerator cars are supplied with ice. The first supply of ice cools the fruit throughout the car, and when it is renewed before leaving the Sierra Nevada mountains, comparatively little melting of ice follows, as the fruit and the interior of the car are then thoroughly chilled.

Telegraphed reports from Eastern cities continue to speak well of California fruit. The New York market, as has been previously hinted in at our columns, is proving a vast outlet for our fruit; in fact, all the prophecies which far-seeing Californians indulged in a few years ago about the results of much wider distribution of our fruit than the Chicago trade afforded, are being more than realized. They may have better local fruit crops at the East next year, but the advantage gained this year by California fruit will not be lost. The East can easily eat all they can grow themselves and all we can furnish also.

Irrigation.—The Senate resolution continuing the Select Committee on Irrigation and the Reclamation of Arid Lands during the present Congress has been agreed to.

Friction in Water Traffic.

It is not alone the railroad which grieves producers by exactions. The genius of transportation seems to be continually at war with the genius of production, there being an unceasing effort to get all the traffic will bear by all who take a hand in moving the product from the farm to the market. The river farmers have often enjoyed considerable advantage because of their ability to employ water transportation, but sometimes they have evils to complain of which should be speedily reduced by some competent power.

There is just now a point at issue between the producers, the Harbor Commissioners, the steamship-owners and the city receivers, each against the other perhaps, and the farmer underneath the whole conflict, because whatever the nature of the exaction, it is finally charged against the receipts for the produce and the farmer loses it. The matter came to public notice first through statements by captains of the river steamers to this effect:

Farmers are indignant over the manner in which the new system of collecting tolls robs them. In the days when the State had collectors on each dock, tolls were paid by the consignees through the drivers of the wagons that carted the produce away. Now that the credit system is in vogue, the tolls are charged up to the commission house receiving the shipments, and they come back on the farmers for the amount. The toll thus charged the farmers is largely increased, presumably to the profit of the commission men.

For instance, if the wagon of one commission house makes a load of the consignments of ten farmers, amounting to two tons, the commission house is charged 10 cents for the use of the wharf in hauling that load away, although the steamer which brings the produce down is already paying dockage. The commission merchant may promptly convert the tax on him into a source of profit by charging each of the ten farmers the price of the use of the dock, or a total of $1 for what costs him but ten cents.

The farmers' protest is that they pay freight on their produce to the steamer, which pays dockage, and that they also pay State taxes for the maintenance of the wharves. After all this, to compel them to pay wharf tolls on their shipments is unjust and extortionate. The bills are an annoyance and in the cases of heavy producers they amount to a large sum. Alex. Brown, the wholesale potato-grower of Walnut Grove, is probably the biggest victim. An estimate of his crop at five cents a ton will make his wharfage tolls several thousand dollars for the year 1890, and when it is considered that up to a few years ago there were no tolls imposed on the farmers, it will be seen that this cuts a tremendous slice off the meager profits of the produce-raisers, while the State obtains no benefit from it.

It was hardly to be expected that the commission merchants would rest under this soft impeachment made public by the steamboat men, but they in turn set about showing that the steamboat men were really doubling up the toll charges. A few days ago a statement was printed, signed by many of the large receivers of produce from the riverside farms. These navigation companies have been, according to the statements of the merchants, charging two and three cents a ton more than the five cents a ton allowed by the law. Their frequent demurrers to the rates producing no beneficial results, a meeting of the dealers was called, and after a thorough discussion of the matter, a communication in the form of a petition was agreed upon and addressed to the California Navigation and Improvement Company, complaining of the excessive State tolls charged by that company, the grievance complained of in the same being set forth as follows:

By comparing weights of freight, we find that toll is not charged by the ton, as provided by law, but by the amount of freight bill, and in many instances you charge two and three times the proper amount.

The California Navigation Company, in response to the petition, stated that "the practice of charging toll by amount of freight bill instead of by exact weight is due to the fact that it is next to impossible to ascertain exact weights, and to the further fact that the freight clerks save themselves a great amount of labor by so doing."

On inquiry as to why the rates fixed by law were changed, it is stated that the changes now made are in accordance with a resolution of the Board of Harbor Commissioners, which regulated and established the present system of tolls. Thus the Board of Harbor Commissioners come into the issue and they are promised an opportunity to show by what right they change tolls established by law.

On the whole, the matter seems to be in a great tangle and possibly will need an investigation by a legislative committee to straighten it out. This should be demanded this winter by the farmers, for dark as the problem may be, there is one plain fact, that the producer is losing in a "game he does not understand."

AGRICULTURAL PROGRESS.—The census returns show that like the Indian and the buffalo, range cattle are becoming a thing of the past. With the constant encroachments of the homesteader and the farm, the mining towns and cities that are springing up all over what was once the almost boundless "range," the days of the vast herds, and to a great extent of the cowboy, are numbered. Thus the evolution goes on; first the savage and the native buffalo, then the half-wild cattle with their half-civilized attendants; and then the farm, the city, and civilization. Where the vast territory in its wild condition supported the few, millions under civilization will lead peaceful and happy lives. "Ring out the old, ring in the new."

THE SEQUOIA PARK.—Secretary Noble has promulgated rules and regulations for the government of the park in Tulare county, containing the mammoth sequoias trees, created by Act of Congress and approved Sept. 25, 1890. The secretary christens it "The Sequoia National Park." The rules for its regulation are substantially the same as those covering the Yellowstone Park. The secretary said that if he found it practicable he would procure from a tract adjoining the park a section of one of the mammoth trees for exhibition at the World's Fair at Chicago.

THE LONG-DISTANCE TELEPHONE SERVICE has been made so efficient that the roar of Niagara Falls can be heard in New York over the lines.

Mrs Edith Z. Roache.

The picture upon this page is an accurate and pleasing likeness of Mrs. Edith Z. Roache, now Worthy Master of Watsonville Grange, as she appeared in the garb of Pomona at State Grange at Santa Rosa in 1887. Those who had the pleasure of seeing her thus arrayed will recollect how her beautiful sash, head-dress and bouquet, composed mostly of fresh, many-hued natural grapes, and the queenly air with which she wore them, won the admiration of all beholders.

She was born in 1853 at Aurora, Ill., and there attended the public school. At the age of 13 years she organized and taught a private school, and by teaching from time to time earned money enough to obtain a musical education. Entering the State Normal school at Bloomington, she took the full course and graduated well up in a large class. After nine years' successful teaching in Elgin, Chicago and other places, she felt a pressing need of rest and change; so in 1876 she visited the Centennial Exposition at Philadelphia, and after making the tour of Washington, New York, Boston and other Eastern cities, courageously set out for California. February, 1877, found her in San Jose, alone and an utter stranger. By the 24th of that month she had secured a school and commenced teaching at Watsonville. A year later she received a life-diploma, and on Feb. 22, 1878, married A. P. Roache of Watsonville, where they still reside, working unitedly with noble purpose.

MRS. E. Z. ROACHE AS POMONA OF THE STATE GRANGE.

Soon joining the local Grange, she was successively chosen Lecturer, Overseer and Master, besides being (as above mentioned) Pomona of the State Grange from 1885 to 1887. She has also been on the Board of the Grangers' Union Co-operative store, and the Vice presidency of the Pajaro Valley Fair Association.

With tongue and pen Sister Roache has served the Grange cause heartily, faithfully, and effectively. Her original and select recitals have always been such as to move us with the love of humanity, animating our hearts with nobler purposes and nerving our hands to better deeds. Those who have listened to her eloquent appeals can never cease to admire her for her devoted and able efforts, in which, it hardly need be said, she has always enjoyed the full sympathy and support of her husband, the present W. O. of the State Grange of California.

POULTRY YARD.

Dr. Gally's Hen Disaster.

EDITORS PRESS:—Since you published my letter in which I related the sudden and unaccountable death of my 60 hens, I have received several advices, oral and written, upon that subject.

One letter received by me tells me that the cause is poisoned wheat, but as I cannot find that any such wheat was put out this year within several miles of my place, I find it not easy to agree with the poison idea. In this neighborhood we never have cause to use poisoned grain for other than gophers, and this year, owing to the big wet last winter and spring, we have no gophers worth mention.

Several letters and persons inform me that the hen deaths came from rotten potatoes, but there has been no such potatoes on my place or the place of my nearest neighbor this year. Last spring I bought 40 sacks of seed potatoes direct from San Francisco and they were all immediately planted. Besides that, Mr. John Trafton of this valley, out of 500 hens and chickens, saved only 60 by using carbolic acid and other remedies industriously. Mr. Trafton has raised chickens and potatoes constantly and extensively together on his place, and he says that potatoes will not cause hen death. He says he thinks it is cholera—chicken cholera. But if it is that, and it being contagious, why did it not affect the nearest neighbors?

Other persons say that the cause of my hen disaster is the eating of a beetle found upon the growing potato-vines. Well, that, though not proven, may be, because there was a thrifty growing field of potatoes within a few yards of my barn-yard; another field about 75 yards away; and another across the county-road about the same distance. I give it up.

Hereunto I append an intelligent letter on the hen subject:

FILLMORE, Ventura Co., Cal., Sept. 22, 1890.

Mr. Gally: I see in the RURAL PRESS that you have had your poultry-yard cleaned out with some unknown disease. Had you any unsound potatoes lying around at the time? If so I would suggest that as the cause of your hens dying.

I had a lot die once and did not know what was the matter for a long time after; and now I would not let my chickens get one potato, but burn or bury them out of the way of the hens. I know more cases than my own, and I may say your hens acted just as mine did. Sun-burned potatoes will kill cows. We also had a fine lot of poultry poisoned by fermented fruit. JAMES SHIELLS.

Filmore, Ventura Co.

I would incline to the cholera theory; but I have seen chicken cholera, and my trouble but very slightly resembled that disease.

J. W. GALLY.

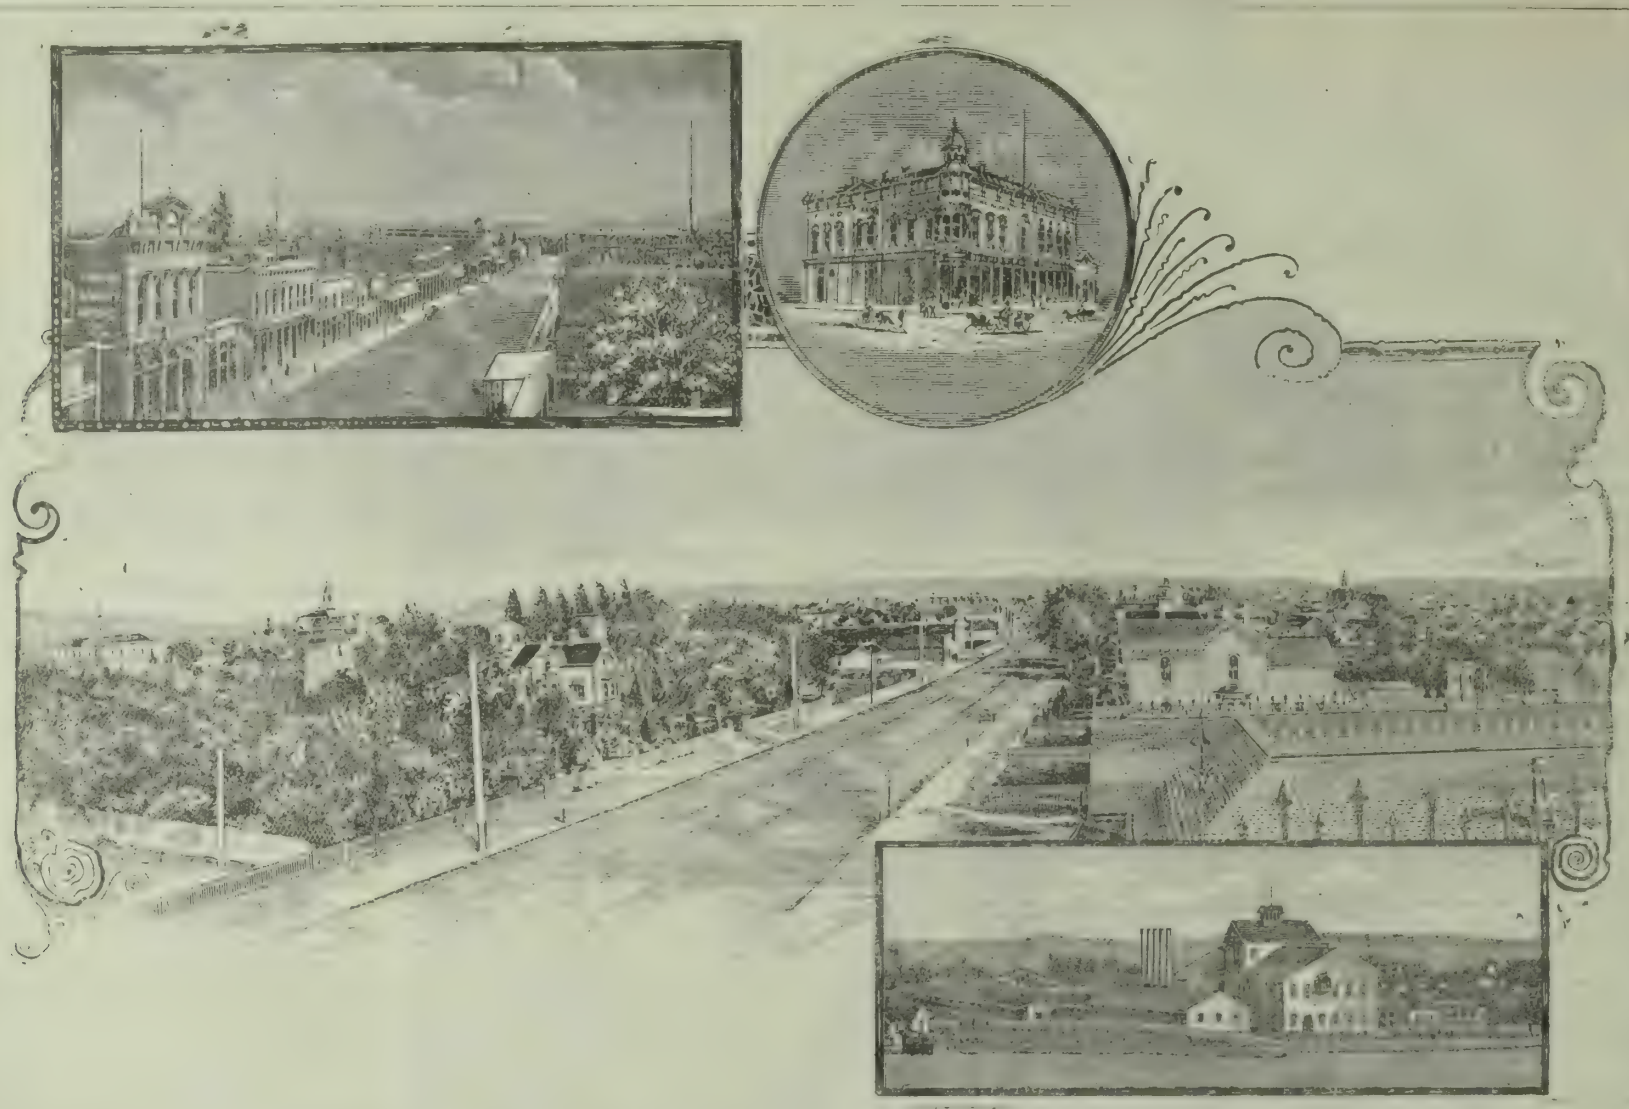
Watsonville, Sept. 28, 1890.

From Another Correspondent.

EDITORS PRESS:—In relation to the loss of Mr. Gally's poultry, it is to my mind a clear case of poisoning, as all died. In what way they obtained it is for Mr. Gally to find out. They might have found squirrel poison brought to the top of his wheat field, put out in previous years, or perhaps to spraying fruit trees the trouble could be traced.

Mr. Smith, too, will, by giving close attention, discover a cause of the great loss in his poultry other than a disease. We have never heard a case like Mr. Gally's, and yet we keep about the same number of fowls and precisely the same kinds, but buy roosters annually from breeders of choice fowls. J. T. HOYT.

San Mateo.



Eggs for Sitters.

EDITORS PRESS:—How many eggs shall we place under a sitting hen? My numbers are 12, 14 or 16; my neighbor's, 13 or 15. Which is right?—A. L., *San Jacinto.*

The number should be what the hen will cover well, and this depends upon the size of the eggs and upon the size of the hen. That the number should be odd and not even is little more than a matter of taste. Probably the prevailing number used is 13 to a setting, but some breeders use a smaller number, say 9 to 11. We have set six hens during the last week, and have used all the way from 9 to 13, as the hen seemed to show her covering quality.—EDS. PRESS.

THE coming winter, according to John McKinney of Lake Tahoe, is liable to be as heavy as the last, and perhaps a little worse. The Carson *Appeal* says he bases his calculations on the fact that the pine cones grow in the tops of the trees, also the prevailing winds of this summer at the lake. Mac says he has won every bet he has made on the weather at the lake, and hasn't had to buy a hat for 20 years.

THE MAN who is trying to climb up finds lots of heels above him and lots of fists behind him.

CITY OF WATSONVILLE—WESTERN BEET SUGAR FACTORY.

Watsonville and the Pajaro Valley.

As peculiarly appropriate to the issue of the RURAL PRESS just preceding the session of the California State Grange at Watsonville, we present herewith some views of that thriving little city and the products of the fertile valley of which it is the commercial center.

The Pajaro (pronounced Pah-har-o) valley lies mostly in Santa Cruz and partly in Monterey county, embracing, with adjacent foothill and mountain valley land, about 50,000 acres. In form it is nearly circular, having the Bay of Monterey to the westward, the foothills of Aptos to the northwest, Loma Prieta looming up darkly to the north, the Santa Cruz mountains to the east, and the Gabilan range and the foothills of Monterey county to the south.

To view the Pajaro valley in all its beauty, one should take a stand upon the Santa Cruz mountains and look off toward the horizon, where the heavens seem to meet the Pacific ocean. Near the foothills is a chain of beautiful lakes that furnish water for irrigating berry-fields and gardens. Beyond them one sees the vari-colored fields of wheat, barley, corn, hops, beets, potatoes and beans, orchards and vineyards, presenting a wonderful mosaic. To the left the Pajaro river, with its wide bed of shining sand, pursues its winding course to the bay. In the distance is Watsonville, coolly shaded by many trees, above whose green foliage the white church spires glisten in the sunlight. In the background a dense volume of smoke pours from the numerous chimneys of the largest beet-sugar factory in the United States; and a little farther breaks the white surf-line of the Bay of Monterey.

The valley is traversed by excellent roads, making every part of it, and contiguous foothills and mountains, accessible to Watsonville, the commercial center and shipping-point. Stock-raising is carried on to a limited extent in the mountains adjacent.

Some additional facts might be given about the marvelous products of the valley, such as pumpkins weighing 275 pounds each, 35 tons of sugar beets from one acre, 300 sacks of potatoes from one acre, 57 tons of hops from 42 acres, 10 tons of strawberries from one acre, etc., but they are misleading because they represent exceptional yields. But they also show what the valley is capable of doing when it tries to make a record.

Watsonville.

Watsonville has a population of about 2200 people, excellent public schools and a high school, the usual quota of religious organizations and churches, substantial business houses, two banks, first-class hotels, and numerous pretty residences. There are a number of fruit-packing establishments and commission-houses, which do an extensive business.

The town is situated on a branch of the Coast Division of the Southern Pacific railroad, connecting Santa Cruz with the main line at Pajaro, two miles southeast of Watsonville. It has direct railway shipping facilities to San Francisco, 100 miles distant, and is only a few miles from the Bay of Monterey, where the coast steamers touch.

The Western Beet-Sugar Factory is located here, and the company have lately constructed a narrow-gauge railroad from Watsonville to their extensive sugar-beet plantation on the Moro Cojo Rancho, 13 miles distant, and near the town of Castroville, in Monterey county. In addition to transporting the products of their plantation to the factory, this road will carry the products of that section of the country to the Watsonville market, and thus create a new source of wealth for the town and increase its prosperity.

Three newspapers devoted to the interests of the town and valley are published here. The *Pajaronian* is owned and conducted by W. R. Radcliff. It is Republican in politics, consistent in its course relative to all local matters, and fearless and independent in the expression of opinions on all subjects. The *Transcript*, published by Geo. W. Peckham, is Democratic in politics, and, like its contemporary, devoted to the upbuilding of the town and the valley. The *Rustler*, established by Joe Hetherington, and now owned and published by Hetherington & Anderson, is the latest born of Watsonville papers. It is independent, with Democratic proclivities, and is very appropriately named, as the business which it has built up in a comparatively short time entitles it to the appellation which it displays at the head of its columns. The papers are all published weekly and have done much for this section of the county.

A pleasant seaside resort near Watsonville bears the name Camp Goodall, in honor of Capt. Goodall, of Goodall, Perkins & Co., owners of the coast line of steamers. It possesses the natural features in common with other resorts upon the shores of the Bay of Monterey, with the added advantage of extensive clam-beds in the immediate vicinity, and, as a natural result, one of the fashionable features of this place has been clam-bakes. There is good surf-bathing at Camp Goodall, and it is a comfortable place to spend the hot days of summer.

The Pajaro valley is not only picturesquely beautiful, but wonderfully fertile and productive. In the days of wheat and barley, the yield of those cereals in this valley was equal to the crops on the islands of the Sacramento river, where more than 100 bushels to the acre have been harvested. But the period of cereal growing is passing away, owing to the greater profits to be obtained from the culture of fruit, vines and various vegetable products. Fields of beans, potatoes, sugar beets and corn, with orchards and vineyards, have to a great extent taken the place of the grain fields. From potatoes, beans or beets a net annual return of $50 per acre, and from strawberries and orchard fruits, notably apples and prunes, $100 per acre, are low estimates of the actual results. The yield of strawberries in this valley is about three tons to the acre, the season lasting from eight to nine months.

The Pajaro valley is a country of small farms and of wealthy and well-to-do people. The records show that there are fewer mortgages on the property of the Pajaro valley than upon any other property in the county. The people are industrious, but their prosperity is due in a great measure to the wonderful fertility of the soil, small land-holdings, and the consequent thorough cultivation. The people of the valley have a common interest, and the free exchange of ideas and opinions relative to the common good has no doubt been a valuable

(Continued on page 298.)

THE CELEBRATED

CLIMAX SPRAY PUMP

Is now manufactured only by R. S. CHAPMAN, he having purchased all rights for same. These pumps have been greatly improved in material and workmanship, and are the best and most economical machines in the market to-day. The Climax No. 1 (represented by this cut) is the cheapest reliable sprayer made, and is especially adapted for effective work in the average orchard.

THE IMPROVED CLIMAX NO. 2

Is a double pump mounted on a 50-gallon barrel and equipped complete with two lines of hose, spray tips, extensions, shut-off valves, etc. This outfit has just been improved and perfected for the season of 1890-91, and is especially desirable in large orchards where economy in material and labor is necessary. Send for descriptive catalogue and testimonials. Address all communications to

R. S. CHAPMAN,

PRODUCTS OF THE PAJARO VALLEY—EXHIBITS AT DISTRICT FAIR AND THREE-YEAR-OLD APPLE TREE.

Watsonville and the Pajaro Valley.

(*Concluded from page 294.*)

auxiliary to the prosperity-producing conditions before noted.

Among other things, and a paradox in California, is an annual fair without a horse-race or any kind of gambling, given under the auspices of the Pajaro Valley Agricultural Fair Association. This association was organized in 1886, and possesses, besides omitting the horse-racing program, these distinctive features: They receive no State appropriation; encourage the young by having a juvenile department with one-half the premiums that all other departments get, including public-school work; give entertainments every evening during Fair week, each year introducing numerous novelties. But the most conspicuous cause of the great success of this organization is the fact that eight of the directors are ladies, viz.: Mesdames E. Z. Roache, A. E. Osborn, A. A. Libby, L. V. Willits, N. A. Uren, G. B. Card, M. E. Tuttle, and H. S. Stipp. The remaining directors are James Waters, A. P. Roache, G. W. Sill, N. A. Uren, A. N. Judd, and H. S. Stipp.

The engraving above, which illustrates some of the principal products of this valley, is from a photograph, by Clark of Watsonville, of exhibits at the Fair of 1889.

The Pajaro Valley Agricultural Association, District No. 24, is composed of the following directors: James Waters, A. N. Judd, G. W. Sill, H. S. Jessen, A. P. Roache, T. J. Horgan, James A. Linscott, and Daniel Tuttle. The officers are: James Waters, president; J. A. Hall, secretary; and J. J. Morey, treasurer.

The Beet-Sugar Factory.

The largest beet-sugar factory in the State, and the one containing the latest and best machinery, is located at Watsonville. It belongs to the Western Sugar-Beet Co., of which Claus Spreckels is the most active representative and largest stockholder. The location could not be excelled, if indeed it could be equaled, elsewhere. The rich alluvial soil of the Pajaro valley produces the largest crop of beets, and these beets contain the highest percentage of sugar and are superior to similar products in Germany, the native home of the beet-sugar industry. The factory at Watsonville represents an investment of over $500,000. It has an average capacity of 350 tons of beets each day, or 45 tons of sugar. It runs from three to five months during the year, or from the time beets ripen until they are all harvested. When the factory is running, 150 men are employed, $12,000 are expended monthly in wages, and $40,000 per month paid to farmers for beets, and 1300 tons of lime-rock are imported annually from Santa Cruz for the lime used in the process of making the sugar.

The culture of sugar beets has proved profitable to farmers of Pajaro valley. The farmer knows just what he is going to receive for the products of his land, as the company pays a uniform price of $4 per ton for beets showing 14 per cent of sugar, and 50 cents additional per ton for each percentage or degree of polarization above 14. As some of the beets run as high as 22 per cent, resulting from being planted upon the right kind of soil and properly cultivated, the intelligent farmer is more likely to receive from $6 to $8 than $4 a ton. As a yield of 15 tons to an acre is considered only an average, the gross revenue of a beet-field is, at $5 per ton, $75 per acre. In a little pamphlet on beet culture, supplied by the company, the total cost of an acre of beets delivered at the factory, including rent of land, $12 50, is estimated at $50. This leaves a net revenue of $25 per acre; but if the farmer does his own work, and does not include rental, the net revenue will be figured at $40 or $50 per acre. Instances might be given showing profits up to $70 per acre, and indeed 35 tons of sugar beets have been raised upon one acre of land.

Heretofore the factory has run but about three months of the year, owing to the insufficient supply of beets. This year, to obviate a short run and consequent curtailment of profits, besides 2000 acres of beets planted by the farmers of the valley, the company has rented a part of the Moro Cojo Rancho, near Castroville, and planted thereon 1200 acres of beets. They have constructed a narrow-gauge railroad from the factory to the plantation, a distance of 13 miles, which doubtless will stimulate the industry of beet culture in the vicinity of its terminus, as there are not less than 10,000 acres here of the finest beet land the sun ever shone upon. The Moro Cojo Sugar-Beet Plantation is under the immediate supervision of W. V. Gaffey, one of Watsonville's prominent and enterprising citizens. The general management of the factory and its contingent interests is intrusted to W. C. Waters, whose experience and ability pre eminently qualify him for the responsible position which he successfully fills.

Another feature of the factory is an artesian well 16 feet in diameter, yielding 700 gallons per minute. This, with another well on the premises, will furnish a daily supply of 2,000,000 gallons of water, the quantity used by the factory when in active operation.

Pajaro Valley Products.

In addition to the general remarks in previous pages, upon the fertility and varied products of this valley, the special instances adduced below will interest the agricultural visitor:

A. N. Judd has a three-year-old orchard of 52 acres. In this orchard last year he had 21 acres of beets, from which he obtained a revenue of $1496; 19 acres of beans, representing a revenue of $1239; 12 acres of potatoes, which brought returns of $3008. The expense account reads as follows: By beets, $650; by beans, $460; by potatoes, $700; leaving $3952 as the total net receipts. To this must be added $1125, net worth of fruit sold from the orchard, making a total net revenue of $5078 from 52 acres. Now this is a fact, and not an extraordinary exhibit, and is misleading only to this extent: Last year there was a splendid yield of potatoes in the Pajaro valley, and the price of this product was unusually high. The data in regard to sugar-beets and beans represent average yields and average prices; but a fact in this connection worthy of remark is that such a quantity of produce was obtained from land on which was a thrifty orchard two and three years old, and from which was obtained a net revenue of more than $1000.

As a practical illustration of the results to be obtained from an apple orchard, and of the judgment of apple dealers, Mr. J. S. Menasco of Watsonville has sold the fruit of a young apple orchard, just coming into bearing, for the next eight years for 85 cents per 100 pounds. He has sold his prunes for $15 a ton. The purchaser is Marco Rabasa, a reliable fruit dealer of Watsonville. He contracts to take all the sound apples, large and small, grown in the orchard, to pick them and to prop the trees when they are liable to break from being overladen with fruit. He has also placed $1000 of forfeit money in the bank, and each has executed a bond of $5000 for the faithful performance of the contract. Mr. Menasco estimates the yield of his orchard, when in full bearing, at seven boxes of apples to the tree. He has 3000 trees, or 39 acres, as there are 77 trees to the acre. This orchard will produce 21,000 boxes of apples, which, at 42½ cents a box, will bring $8925. This estimate is made upon very low figures, as apple trees in full bearing frequently yield 1000 pounds, or 20 boxes, and failures in the fruit crop of the Pajaro valley are "conspicuous by their absence." George H. Brewington has sold his fruit upon the same terms, except that he lives nearer Watsonville, which means less expense in hauling. He is to receive 45 cents a box or 90 cents per 100 pounds.

Certain sections are specially adapted to the growth of hops, the soil being a sandy sediment, possessing a rare combination of qualities, which bring this plant to a state of comparative perfection. There are about 115 acres of hops in the Pajaro valley. The principal grower is Mr. O. Tuttle, who has 42 acres under cultivation. A part of this field is from 20 to 23 years old. The yield will average about one ton to the acre, although Mr. Tuttle has gathered 57 tons from these 42 acres. While it is difficult to estimate the average price of hops, about 15 cents a pound may be regarded as a fair estimate. In 1881 hops sold in this State for $1.15 a pound. That year Mr. Tuttle sold his hops for 55 cents a pound, and cleared $25,000 from a 20 acre field.

Butte.

Points About Angora Goats. — Oroville *Register*, Sept. 25: G. C. Marquis of Concow has engaged in an occupation something out of the common run. He is raising a large number of Angora goats. These animals, as most of our readers are well aware, live upon the hills and mountain-sides, and do not require the pasture, care and constant watching that sheep do. The fleece brings from 30 to 50 cents a pound, and each goat will average about five pounds of wool. Mr. Marquis has 170 full-blooded Angoras and is keeping them at his home at Concow. He turns them out on the hills in the morning and they return of their own accord about 4 in the afternoon. He thus does not have to provide them with pasture nor seek for them at night. The milk of the Angora goat is rich and sweet, while the meat is more juicy and has less of a strong flavor than mutton.

Colusa.

Sheep.—Orland *News*, Sept. 27: Hon. John Boggs has had 15,000 sheep sheared a few miles northwest of here, and has sold 5000 for mutton.

Contra Costa.

Grape Crop. — Martinez, Sept. 24: The grapes in this vicinity have been slow in ripening this season, owing in great measure to the rather unseasonably cool weather. In many vineyards the practice of staking the vines is not followed, and grapes lying low and being constantly shaded are slow in coming to maturity. When raised up and exposed to the warmth of the sun and the free circulation of air, their ripening is materially hastened. Good prices are being realized from the crop.

Fresno.

Alta Irrigation District. — Selma *Irrigator*, Sept. 22: The Alta irrigation district, in spite of the injunction that was filed by O. L. Abbott, is now at work surveying ditches for the purpose of completing the entire system of irrigation for the district. There has been considerable talk abroad about district bonds; some say they can't be sold. There have been several $500 bonds sold here for cash, and several parties have offered to complete the entire system of irrigation for the district and take their pay all in bonds at par.

Kern.

Peach Items.—Bakersfield *Gazette*, Sept. 27: Peach-packing at the Maul orchard was completed on Wednesday afternoon. From 20 acres, 160 tons of George's Late Cling peaches were obtained; and there will still be realized two or three tons of dried fruit, for which Mr. Maul has already been offered 18 cents per pound. The fruit has been shipped East by the Earl Packing Co. of Sacramento, and high rates are being obtained for it.

Large Sale.—Bakersfield *Echo*, Sept. 25: The Cuyama rancho, consisting of 27,000 acres, is sold to Ex-Gov. Geo. C. Perkins. This rancho lies in the Coast Range mountains, and is used as a stock range. The consideration is said to have been $3 per acre. About 2000 head of stock cattle were sold at the same time to Gov. Perkins.

Lake.

Drying Grapes.—Lower Lake *Press*, Sept. 27: Mr. H. W. Green of Konocksti vineyard has adopted a novel and practical method of drying grapes. The grapes are picked and placed on pieces of sacking about four feet square and in this manner are allowed to dry in the vineyard. The advantage claimed for this method is that it requires less boxes, and very little time is occupied gathering up the grapes when dried, while it prevents dirt getting among the drying grapes.

Los Angeles.

Pomona Dried Fruit Industry.—Los Angeles *Herald*, Sept. 27: Very little wine is being made this year at the winery, as nearly all the grapes are being dried for shipment to New York. The driers are making pots full of money out of the crop. They paid the growers $9 to $12 a ton, or about half a cent a pound for the green grapes, and sell them dried for $70 a ton. Three pounds of the green fruit will make rather more than one of dried, so that a profit is a good deal more than 100 per cent. Last Monday five cars of about 75 tons were sent East, and it is estimated that in all there will be between 500 and 600 tons to go. One firm has dried, at Pomona, 925 tons of apricots and 340 of prunes. The same establishment will can 550 tons of peaches. These figures do not represent, probably, more than a third of the total crop of the place. The whole area of territory contributing to this industry at Pomona is not more than four or five miles square, yet the fruit crop will run up to nearly 5000 tons, all prepared for market.

Cheese.—L. A. *Herald*, Sept. 27: The new cheese factory that has been started at Downey is sending in a very superior quality of cheese. They are pronounced by the trade as the best yet manufactured in this section of the State. The dairy lands in the vicinity of Downey are very extensive and there is no reason why this industry should not become one of the most successful and important industries in connection with the farms that have as yet been started at this end of the State.

Monterey.

Glanders Discovered.—Salinas *Democrat*, Sept. 27: Dr. A. E. Buzard, the veterinary surgeon, who is making an inspection of the horses of the county, writes to Supervisor Samuels that he found the country free from glanders until he reached the old Soledad Mission, where he says: "I find the disease terribly bad. I condemned and had killed six horses yesterday (Wednesday) afternoon." The doctor is going to the Arroyo Seco district, where he is informed that glanders are prevalent. After examining the stock in the Arroyo Seco country, he will go to San Lucas, where he is credibly informed many horses are affected. Dr. Buzard writes that he has met with no trouble, as every one seems anxious to have the matter investigated. They declare that they have had the disease among their stock for three or four years and did not know what it was. He says: "The owners themselves have had many infected animals destroyed."

Nevada.

Irrigation District.—Grass Valley *Tidings*, Sept. 26: D. O. Daggett of Brown's Valley, Yuba county, is the prime mover in a big irrigation enterprise. A stock company has been organized and between $30,000 and $35,000 already secured. It is proposed to take water from the Yuba at a point nearly opposite Deer creek and carry it along a route that will enable the irrigation of all the tillable land in the northern part of Yuba county between the Yuba and Feather rivers. The main ditch will be 16 miles in length.

Silkworms and Hazel nut Leaves.—Nevada *Herald*, Sept. 24: Prof. Ed Muller and Felix Gillet, the well-known nurseryman of this city, have made what may prove a very valuable discovery. A short time since Mr. Gillet found on the leaves of a hazel-nut bush in his nursery a large and perfect silk cocoon, which he gave to Prof. Muller to preserve. Last Sunday Muller went to the nursery and the two commenced to search for more, and they succeeded in finding two. They are equal in size to the largest French cocoon, and contain about as much silk. The color is light straw, and the fiber seems very fine and strong. Under this brush, on the ground, one of the worms was found. It is of a greenish color, and resembles other silkworms with the exception of the horn. Prof. Muller has now three of these cocoons in his possession, which will be closely watched. He feels quite certain that the butterfly or moth will hatch inside of 20 days. If there chances to be male and female, he will preserve the egg till spring, when they will hatch in time to feed upon the young hazel-nut leaves, which are the worms' natural food. He will experiment with and try to domesticate them. If successful in raising a crop, there is no doubt but it will create a new and valuable industry, viz: silk-raising of a pure California product. This species of silkworm would not be subjected to failure of food, as the Chinese and other varieties are which feed on mulberry leaves only, which are subject to destruction by late frosts. The gentlemen have been looking for some species of this kind for the past ten years, they at that time being quite extensively engaged in the silkworm business in this city.

Sacramento.

Improved Method of Shipping Fruit.—Sacramento *Bee*, Sept. 27: Readers of the *Bee* have probably missed this season the daily notices of special fruit trains such as used to go out every day during the fruit season last year. Then it was no uncommon thing for one or even two full trains of ten or more cars each to leave for Chicago of an evening, all loaded with California fruits of every description. The fact is that there has been a complete revolution in the manner of shipping fresh fruit within a year, and special fruit trains of the old car style are practically a thing of the past. The ventilated car through which the air passes by means of holes bored in each end, is no longer the favorite with shippers. It has been found that the surer way is to use refrigerator cars in which the springs are padded with cotton batting, thus excluding the air as nearly as may be entirely. The fruit is so loaded that the air in the car at the start may reach every box or crate, just as was done in the ventilated car. This air is kept cold by means of ice loaded into the top of the car. In the case of the regular refrigerator cars, the ice which is first put in at Sacramento, has to be replaced at Truckee, and if the car goes east of Chicago, at that place also. Another kind of refrigerator car has to take ice at Sacramento, Truckee, Ogden, Cheyenne, Council Bluffs and at Chicago, if its destination is farther east. Of course, the new way costs more than the old, but shippers prefer it, as it is claimed that the fruit reaches its destination in better order and without risk, although the time required is longer, being seven or eight to Chicago, ten or eleven to New York, and about thirteen days to Boston. For each refrigerator car a charge is made of $125 to Chicago, and $50 more to New York.

San Benito.

Grain Crop. — Watsonville *Pajaronian*, Sept. 25: Grain sacks were so scarce in Hollister last week that several machines had to shut down until a supply could be procured from San Francisco. The grain crop in San Benito is much larger than was estimated, and thrashing is not yet finished.

San Diego.

Honey.—San Jacinto *Register*, Sept. 25: The honey market is way above the average this season. Prices are good, and the demand greater than the supply. Kauffman & Haas have shipped this week two carloads of honey to Chicago. Yesterday they received a telegram from New York asking for three carloads. They will be shipped next week.

Potato Crop.—San Jacinto *Register*, Sept. 19: Since the announcement by the Eastern papers of the almost total failure of the potato crop in most of the States, quite a number of our citizens have deemed it a prudential measure to put in a much larger crop than they otherwise would. Our neighbors of the little town of Florida have in over 25 acres. On the Hemet tract in South San Jacinto one man has in 20 acres in a body. In Hewitt's addition to San Jacinto are some ten acres more.

Cabbage Crop.—San Diego, Sept. 19: The prospects are good for a large acreage of cabbage. Some fear that the supply will be greater than the demand. However, the Producers' Union expects to be able to handle an almost unlimited quantity in carload lots, having already found a ready market for winter cabbage.

San Joaquin.

Australian Wheat.—Stockton *Independent*, Sept. 20: The Crown Mills have received 56 tons of Australian wheat, which is being taken by the farmers of this and Stanislaus counties to renew their seed. The growing of Australian wheat has proved so successful in these counties that those who have tried it are extending the area devoted to it and caused the importation of this lot to sow new areas and refresh the seed for the old.

Santa Barbara.

Walnuts.—Santa Maria *Times*, Sept. 27: We were shown some walnuts grown on the ranch of J. H. Rice. They are of the soft-shell variety, of fair size, and pronounced by good judges to be a fine article. There will be several hundred acres put out in walnuts in the valley this winter. Our people are finding by actual experiment, no guesswork, what is best adapted to our soil and climate, consequently we are making haste slowly but surely.

Santa Cruz.

Sugar Beet.—Santa Cruz *Sentinel*, Sept. 27: So far this season, only beets raised on the Spreckels Moro Cojo ranch, leased property near Castroville, have been crushed. There are nearly 20,000 tons of beets from this 1200-acre ranch. This amount of beets will make about 2000 tons of crude sugar. Farmers in the vicinity have about as large an acreage, although they have not yet begun hauling to the factory. Last season the factory turned out something over 2000 tons of sugar; the season before, about 1600 tons.

Shasta.

Large Orchard. — Anderson *Enterprise*, Sept. 25: We are informed by Mr. Wm. Owens that Mr. Hatch, who will take possession of the farm he purchased of him on Oct. 1st, will plant, during the coming winter, to choice fruit trees, 500 acres. This will be the largest orchard in Tehama or Shasta counties, and one of the largest in Northern California. During subsequent winters hundreds of acres more will be added to the orchard, swelling it in the course of a few years to one of the largest and finest orchards on the coast.

Sonoma.

Dewberries.—Healdsburg *Enterprise*, Sept. 27: G. Hunziker of Cloverdale raises the Lucretia dewberry with much success. From less than an acre of vines (in their first bearing) he sold this year over $90 worth of the berries. He regards them as much more profitable than blackberries, with which he has experimented carefully.

Relative Land Values.—Santa Rosa *Democrat*, Sept. 27: As an instance showing the relative values of lands in this State and Kansas, the following is worthy of consideration: A gentleman of this city, Saturday, through the agency of a local real estate firm, traded 12 acres of land, with two acres in orchard and five acres in bearing, incumbered by a $1000 mortgage, for 160 acres of bottom-land, partially covered with walnut timber, in Kansas. More than half of the 160 acres is under cultivation.

Good Prices.—Petaluma *Argus*, Sept. 27: On last Wednesday one of the Santa Rosa canneries paid $80 per ton for a good quality of canning peaches. A San Francisco firm is contracting for grapes in the upper part of the county, paying $18 per ton, the purchaser furnishing the boxes.

Sutter.

A Band of Prize Angoras.—Williams *Farmer*, Sept. 27: Tuesday forenoon T. H. Harlan's band of goats passed through Williams on their return to the range from Sacramento, where they had been on exhibition in the Agricultural Park during the State Fair. This beautiful, proud family returned home adorned with blue ribbons, having secured for their master first award in every instance and for the county of Colusa the credit of being the home of the finest goats in the whole State of California. While in Sacramento Mr. Harlan sold 25 head of Angoras to Federico Mora, agent for the Costa Rica Government experimental stations, with headquarters at San Jose, Costa Rica. The animals will be shipped from this place in the course of two weeks. The sum realized by Mr. Harlan was $20 per head.

Levee-Work.—*Sutter Independent:* Under the supervision of Levee Director Brophy for the protection of the Feather bank, near the residence of W. H. Lee, on Wednesday, the piles were driven closer together than heretofore, and heavy timbers securely bolted to each pile so that each one strengthens the others. Heavy wire cables, doubled and twisted, run from the piles to strong posts in the bank, and these cables are drawn taut with block and tackle. Anchors will also be put in, which will aid in holding the piles firmly in place. The piles are sheathed with boards on the land side, and the space between these and the bank is being filled in with brush and sandbags. This is considered the most dangerous point on the whole river front in this district, and it is hoped the work now under way will make it reasonably safe. Work on No. 70 levee is moving along satisfactorily. The directors have at present about 160 four-horse teams and 24 two-horse teams at work. It is the intention to expend about $30,000 on the levee this year, which it is thought will put it in better condition than ever before. The work is expected to be completed by the first of November.

Vacant Land.—*Farmer*, Sept. 26: Statements from the Marysville land office give 1,280,000 acres of Government land not taken up in that district.

Tulare.

Banner Wheat County.—Visalia *Times*, Sept. 27: Tulare and Fresno counties raised more than one-half of the grain grown in this State this year. Tulare is yet the banner wheat-producing county in the State, notwithstanding the fact that many of her acres have been cultivated to trees and vines within the last year or two.

Organizing Against Grain Thieves.—Visalia, Sept. 27: There has been so much grain stolen from farmers this season, while it was stacked in the field, that an organized effort to catch the thieves has been made in some of the communities. Where this organization exists, farmers take their turn in watching the thoroughfares leading to a market, and every team traveling at night is halted and examined. It is the only manner farmers have for protecting their exposed grain, and some of these mornings a thief will be found hanging to an elevated wagon-tongue, and while the death may be a mystery, the universal verdict will be "served him right."

Dried Fruits.—Traver, Sept. 25: A drive through the colonies north of Traver reveals a busy scene during week days. The drying of raisins is in full blast, and there are also some late peaches still on the trays. Late pears are still ungathered, but nearly all other fruits, except raisins, are dried, sacked or boxed.

Wheat Sold.—Traver, Sept. 25: At this time last year, wheat was worth only $1.07½ per cental, and the warehouses were full of it on storage, as the price offered was not satisfactory to farmers. Now wheat is worth $1.10, has brought as high as $1.16½ this year, and there is very little, considering the heavy yield, that has not already been sold.

Hard Work Did it.—The Clough farm is one which most people who saw it in its uncultivated state considered to be worthless for anything but pasture, but hard work and plenty of water has shown what the soil is capable of, and the young orchard and vineyard now growing there can't be beat for a healthy, thrifty growth of trees and vines, and they are bearing well in their second year. Besides doing a great deal of work herself on the place, Mrs. Clough has raised 700 turkeys this year for the market.

Sugar-Cane on Alkali Lands.—Porterville, Sept. 19: It may not be generally known that sugar-cane can be grown successfully on land so strongly impregnated with alkali as to be generally considered worthless, but such is a fact, as has been proven by Mr. Swayze, who lives on the Harper place, a few miles west of town. He has about an acre of sugar-cane on such land, that it is estimated will make about 800 gallons of sorghum. Several stalks, which he brought to town week before last, measure 13 feet in length.

Ventura.

Bean Crop.—San Buenaventura, Sept. 26: The Santa Clara valley has been especially favored during the past season. The bean crop will not be as large as last year, but the quality is fine and prices are high, so that fully as much money will be brought into the valley from this source as in former seasons.

Barley Notes.—San Buenaventura, Sept. 26: Barley-raising has been successful, and prices have ruled more than double what they were last year; so that barley-growers who came out even last year will have a balance on the right side of the ledger this year. It is estimated that it costs about 45 cents per sack to raise and market barley, and this was about what it sold for last season. This year it is worth something like $1.25, which leaves a splendid margin to the producer, and no wonder the barley-men smile a very broad smile.

Yolo.

Olives.—Woodland *Mail*, Sept. 27: On Mr. Newton Cox's place, just south of town, there are 100 olive trees of the Picholine variety. They are between six and seven years old, and this year they bear their third paying crop. Two years ago Mr. Cox gathered 50 pounds of olives per tree and sold the crop for four cents per pound, or $2 per tree. Last year they bore 70 pounds to the tree, and the olives brought three cents, or $2.10 per tree. This year these same trees will produce $3 to the tree. As they are planted outside of the vineyard and in the avenues, they occupy soil otherwise lost. These trees are still young. Ordinarily, the olive is not expected to bear much before it is six or seven years old, but these trees began to pay well the fourth year. The olive, like the fig, never gets through growing, and for a hundred years will grow and increase its yield.

PAJARO VALLEY BANK,

WATSONVILLE, CAL.

INCORPORATED - - - - - - - MAY, 1888.

CAPITAL SUBSCRIBED, $100,000.

Angora-Goat Breeders' Meeting.

Editors Press:—The sixth annual meeting of the Angora-Goat Breeders' Association of California was called to order on Thursday, Sept. 18, 1890, at 8 o'clock P. M., at Pioneer hall, Sacramento, Vice-President T. H. Harlan in the chair, Julius Weyand secretary.

After calling roll of members, the last minutes were read and approved; Willard Bailey, Jr., representing his father C. P. Bailey, absent. The members present paid expenses incurred to date.

On motion, the old board—C. P. Bailey president, T. H. Harlan vice-president, and Julius Weyand treasurer and secretary—were declared re-elected to serve until the next annual meeting.

The report of the secretary was presented, stating that the Government expert for examination of mohair had been requested to forward instructions to determine factory standards of mohair fiber for the guidance of examiners of goats for registration, but no information had been received to date. On motion, the report was received and ordered that the subject be laid over until the next meeting of the board or the association.

In the absence of the president, the secretary read his report on the mohair industry, and on motion it was resolved that the same be printed in connection with and appending the minutes of this meeting, and that a copy be sent by the secretary to each member of this association. On motion, adjourned.

T. H. Harlan, Vice-President.
Julius Weyand, Sec'y.

The Mohair Industry.

From the first two Angora bucks imported by W. M. Landrum, in the year 1861, we gained a sample of the white silky fleece on several thousand of the native goats. These two animals were from the flock of Col. Peters of Atlanta, and were the progeny of the Dr. Davis first importation from Turkey. No doubt they were the best from Asia Minor, because they were the present of the Sultan to Dr. Davis when he returned from his mission as Consul to his native land.

In 1867, Mr. Landrum imported eight head males and females from Chenery in Boston. In the same year, and up to 1875, the number imported from Peters and of Chenery and Diehl & Brown importations and those by Thomas & Shirland, imported from Entychide, made a total of 56 head pure breeds, so called; they were mostly bucks.

In 1876, John S. Harris of Hollister arrived with 12 head bucks and does, brought direct from Asia Minor. It has been admitted that the Harris goats were the best fleeced, most valuable animals ever imported into California. Harris distributed his goats very extensively, but not finding the trade as profitable as expected, he neglected his stock and now has lost his prestige as a breeder.

All the first breeders drew large premiums at the fairs. In 1878 the State Board of Agriculture paid $670 premiums to encourage further importations, but no further movements being made to improve the stock, the premiums were reduced, and the beneficiaries of this industry withdrew from the contest to advance or to exhibit their stock.

In 1881 the laws prohibiting the exportation of Angoras from Turkey made it impossible to get new blood from that source. The mixture of descendants of really only three strains of noted stock, from Davis, Chenery and Harris, had to build up a new race of Angoras in California. The Brown & Diehl and Entychide importations were never held to be of select quality. Col. Peters imported only one buck, Mohammed, in 1881, the last one coming from Asia Minor; but California only received one of his offspring, as far as known, and since that time this State received no new additions of pure-bloods from the East or elsewhere.

Fink & Co. of Texas imported several goats from Evans Bros. in Cape Colony. Nothing has been learned of their value as breeding stock.

How to Reach the Highest Type of an Angora Goat

Has been and now is a question of great importance to this State. For four years we have met as members of the Angora-Goat Breeders' Association, we determined to establish an Angora Goat Register, coming one step nearer to it every year, and had we received instructions or guides from the Government expert for classifying mohair on a factory standard, we would have made appointments of examiners of Angora goats offered for registry this time, but the secretary failed to receive the information to this day. Therefore another meeting of the association will be required to attain a Register, provided our instructions come to hand. It cannot be denied that only about 20 imported bucks were of good breeding quality, and did improve the crosses of pure breeds in this State; the balance gave but ordinary results.

We would not have the array of fine horses, cattle and sheep in California, if we had only imported a few head of each class. As this State begins to excel many older States in live-stock of every other kind, we should aim to excel in goats also. Our climate in many localities is similar to that of Asia Minor; in many it is superior. We are not visited with extreme changes of temperature, especially with deep snow, as in Asia Minor. We have higher percentages of kids in this State generally, proving the climate superior, and our mohair is more lustrous and silky than the Turkish or Cape Colony product, as we are informed by manufacturers.

In the wool reports of the United States, printed in 1886, we find that samples sent to Philadelphia by C. Strenzel of mohair raised in this State, were tested and found stronger and of better quality than the product from any other State or foreign country.

From 1885 to 1889 the prices of mohair were low, the industry was neglected, many herds were reduced, and others entirely killed off; breeders considered the stock unprofitable to handle.

In 1885 California had nearly 100 goats, and in 1889, only 55, being a loss of 45 per cent in four years, which was principally caused by reckless slaughter of the animals. Last winter's storm reduced again our flocks, but not more in proportion than other stock was lost.

The principal cause of low prices for mohair in those four years was the easy way laid out to help the manufacturers, who were permitted to invoice foreign mohair as carpet wool, and to pass the same through the custom-house, paying 2½ cents per pound instead of 12 cents per pound, import duty thereon.

The manufacturers made a profit, and the breeders stood a loss of 9½ cts. per pound on their clips. The present Secretary of the Treasury, being advised of this state of affairs, instructed the appraisers of the custom-house to do their duty and appraise every invoice at its real value, and the 9½ cts. per pound are now turned into the pockets of the breeders to the extent of their clips, encouraging them to foster and develop this industry and to increase the number of flocks in our State.

It is not an illusion to say that the guarantee for pure-blooded stock is only secured by honest registration, and this assurance becomes a stimulant to many breeders who would join us in this industry, but without registered stock they would not invest their money in the stock. Therefore we must be prepared to furnish and supply the very best males of strong powers of reproduction, bearing heavy silky fleeces, and in general improve the quality of our goats to a standard equal to the best in the world, producing clips of mohair paying handsome returns for investments.

It appears that many breeders are dissatisfied with the present condition of the business. They have sent orders to some breeders for pure-blood males, expecting to improve their stock by new blood. They paid fair prices for said stock, besides the cost of transportation, and the progeny of these high priced males did not prove satisfactory. When quantity and quality of mohair is not improved, the expense of shearing, packing, marketing being the same, there is no hope left to the grade-breeder to reach a higher standard and make his business more profitable.

The Flesh of the Goat

Is undeniably the healthiest meat, it is first on the list of easily digested meat for dyspeptic patients, it is juicy, free from the strong mutton taste of the sheep; properly prepared it is pronounced by the best informed to be excellent.

Butchers generally prefer sheep mutton for their trade, because their customers are not acquainted with this meat, and frequently have a prejudice against the name of goat.

There is a good opportunity at present to change this, as sheep mutton is the highest-priced meat in our markets, being very scarce. Every goat-breeder should make it a point in his business to induce his nearest butcher to give this goat mutton a fair trial among his customers, and it is certain that the demand for this meat will be increased to the benefit of the breeders.

Good pelts, long, full-haired, fine and lustrous, are quoted $1.50 to $3 per skin in New York; other pelts are quoted from 25c down to 18c per pound to be stretched, dried and undressed. This shows that breeders should experiment with a shipment East of Angora pelts, and publish results. The tanners in this State will hardly pay for value of the fleece on a pelt, and shorn hides they allow only a pitiful price. Dressing of a fleece hide is worth $1, but when you wish to buy a dressed skin you have to pay $2 50 to $3 50 for the same. Smooth Angora glove and lacing leather costs us to-day as much as at the time we received $1 per skin for smooth skins. It appears there is a tanners' combination against us, instead of a competition among tanners for our benefit. May be the New York trade will help us out of this dilemma, and realize good values for us.

The Improvement of Stock.

Returning to this subject, let us investigate what breeders of other stock have done and accomplished in this State since importations and registrations of blooded stock began. In horses for the turf and general work, we have as fine an assortment as any State. The imported registered cattle are furnishing the dairy and the range with continuously improved stock. The imported and registered sheep have driven inferior breeds out of existence, and the same can be said of hogs. And now although this State is an exporter of fine stock, our most intelligent breeders are constantly searching the world for better points to be added to our live-stock; new importations follow each other,

(Continued on page 301.)

The Whole Country Needs Fertilization

ADMONITION TO FARMERS!

Guaymas, Mexico, September 9, 1890.

R. B. CUNNINGHAM, ESQ., Agent Mexican Phosphate and Sulphur Company—Dear Sir: In answer to your inquiries as to the value of phosphates for worn-out lands, I will state that it is my opinion the lands of the older settled portions of California afford a good field for the use of phosphates. These lands have been cropped for years without any restoration of the chemical constituents necessary for an abundant crop. They therefore show plainly that they need assistance artificially to produce crops good in quantity and quality, let the crop be whatever it may.

Take, for instance, San Joaquin and Santa Clara valleys, and what do you see? Many crops that are so imperfect in quantity and quality that the eye at once detects the defect. The only relief that can be resorted to must be infused into the soil to replace the chemical properties that have been extracted by previous crops, and the writer is of the opinion that a liberal supply of phosphates will accomplish this.

The attention of the cultivators of the soil is sharply turned to rotation of crops, hoping thereby to get wealth out of their lands without fertilization. Some have turned their attention to beet cultivation in soil worn out by other crops. Beet or other seeds will not grow successfully unless the soil will nourish them.

This summer I saw several crops of beets on excessively cropped lands, the majority of which showed that there was something wanting to complete the plants to ample size and in quantity that should be expected of sugar beets under favorable circumstances. If a good crop is not obtained, there is deficiency in profit. It costs as much to cultivate soil deficient in chemical properties as it does if ample nutrition was in the soil. Under the former condition a deficient crop is certain, while under the latter condition he may reasonably expect an ample crop with profit.

Fields often are allowed to go to weeds, supposing thereby to enrich the soil. This is an uncertain method and not profitable. Your weeds have grown up and seeded; the dead stems can only add a limited addition to fertilize the soil, while the seeds of the same will cause much expense to exterminate them from the future crops. Besides, while thus only weeds as a crop, no profit was realized, while if a supply of phosphates had been applied to the soil, a profitable crop of beets or corn would be had. Besides, the weeds would have been exterminated during the cultivation of the said crop. I am, Sir, your obedient servant,

EDWARD PALMER, M. D.

THE MEXICAN PHOSPHATE AND SULPHUR CO.

Manufacture three grades of this Superior Fertilizer of the following analyses:

GUARANTEED ANALYSIS.	Brand A for Sugar Cane, Sugar Beets, Etc	Brand B for Grain, Gardens, Lawns, etc.	Brand C for Fruits, Vineyards, Etc.
Phosphoric Acid	10 to 11 per cent.	15 per cent	12 per cent.
Potash	9 to 10 "	2 "	5 to 6 "
Ammonia	3 to 4 "	2 "	3 to 4 "

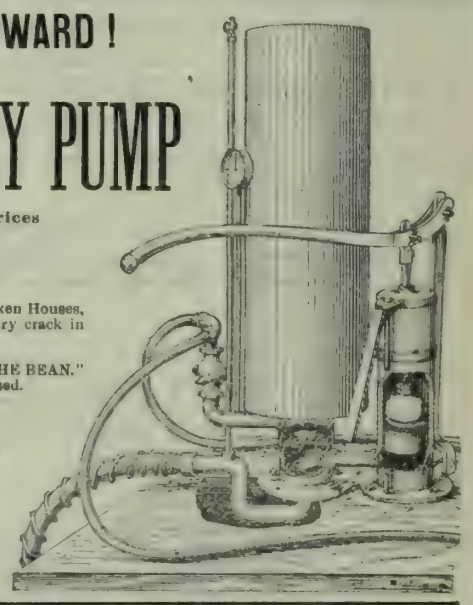
And will sell in lots to suit.

PARTICULARS AND CIRCULARS MAY BE HAD OF THE UNDERSIGNED.

H. M. NEWHALL & CO.,

AGENTS.

309 & 311 SANSOME STREET, SAN FRANCISCO, CAL.



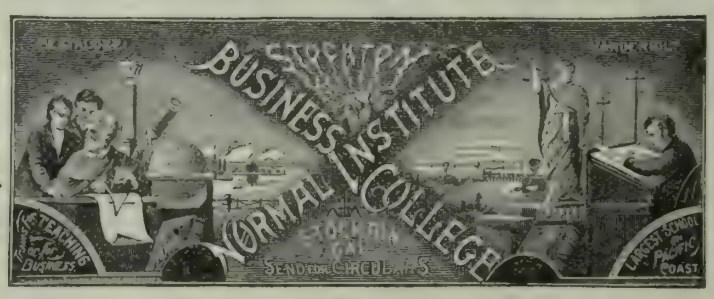
ANOTHER STEP UPWARD!

THE BEAN SPRAY PUMP

Is now made in FIVE SIZES with Prices that will Suit.

You can Whitewash your GRAIN HOUSES, Chicken Houses, Barns and Fences at a great saving of time, and every crack in the ceiling will get a dose.

Tree spraying is made easy and cheap by using "THE BEAN." With our LARGE pump four strong sprays can be used.



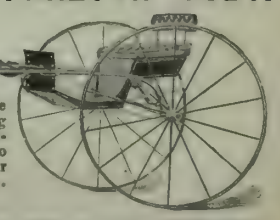
Go to the Pavilion at the State Fair and see them, or send for circulars and testimonials to

BEAN SPRAY PUMP CO.,

LOS GATOS, CAL.

EXCELLENT BOARD, $10 per Month.

FURNISHED ROOM, $3 per Month.



Occupies two elegant buildings, containing over 70 rooms. Employs the ablest teachers, has the largest attendance and is the most highly recommended of any private school on the Pacific Coast. Board, Room and Tuition for six months, $128. Board, Room and Tuition for fifty-two weeks, $244.

☞Circulars containing Rules, Rates of Tuition and Board, and Courses of Study sent free to any address; also, beautiful specimens of Penmanship. Address,

TRASK & RAMSEY, Stockton, Cal.

THE BLUE RIBBON CART, WITH PHAETON BODY.

$35

Has a seat wide enough for two, with box underneath for parcels. The body has been lengthened, is securely framed and strengthened by making the panels in one piece. Sarven wheels, steel axles, and curved dash. Finished in scarlet lake or brewster green. The "Blue Ribbon" has proved to be the best built, most popular and best selling low-priced Phaeton Cart ever brought to this market. With Patent Spiral Spring Lazy Back. Shipped securely crated. Weight, 175 pounds.

FRANK BROTHERS, 33 & 35 MAIN STREET, SAN FRANCISCO.

THE TWENTY-FIFTH
INDUSTRIAL EXPOSITION
— OF THE —
MECHANICS' INSTITUTE, 1890,
Opens Sept. 18th, Closes Oct. 25th,

With a grand display of Inventions, Manufactures and Art. The Latest Novelties and Improvements in Electricity will be made a special feature, including the celebrated Edison "Tower of Light." The Music will consist of a band of 42 talented musicians, supplemented by the best Vocal Talent obtainable. Miss Mathilde Lennon, a noted Contralto singer from London, and late from Boston, has been engaged, as also Miss Pearl Noble, the accomplished young Californian Cornetist. The Art Gallery, 300 feet long and 50 feet wide, will be filled with rare and beautiful works by local and foreign artists, in oil and water colors. Photography will be shown in the most attractive form by Professionals and Amateurs. Machinery of all kinds will be in operation, and many novelties exhibited for the first time.

Admission:
Double Season Tickets, $5.00 | Single Adult Admission, 50c
Single Season Tickets, 3 00 | Children.....25c
Season Tickets to Members of the Institute, Half-Rates.

THE "TRIUMPH"
— ALL METAL —
SPADING HARROW!
The Best Pulverizer in the World.

JUST THE THING
— FOR WORKING —
Summer Fallow Land.

Specially Adapted
— FOR —
ORCHARDS AND VINEYARDS.

FOR TWO HORSES. Works the soil about six feet wide. Angle of teeth adjustable to work the soil at desired depth. THIS HARROW is something entirely new. IT IS THE GRANDEST ACHIEVEMENT of its inventor, C. LA DOW, who is the recognized authority on Harrows, there being but few leading harrows at the present time not built under his patents. We have made exclusive arrangements for its sale and it can be obtained only through us or our agents.

THE NAME "SPADING" refers to its action on the soil. The action of each cutter is like that of a small spade, lifting and turning the soil from a depth of four to six inches, doing more perfect work than is possible with any other Harrow in the world. THE BLADES are made from spring steel, in operation vibrating and shaking off sticky soil. IT NEEDS NO SCRAPERS to clean the revolving cutters.

Considering the immense amount of labor done, the draft is very light, as the pulverized soil passes through the gangs of revolving cutters, being left smooth. THE GANGS are so arranged that the most uneven ground is thoroughly harrowed and left level. IT LEAVES NO FURROW or ridge; when the field is harrowed it is all left smooth.

Oregon State Fair.

NUMBER II.

[Written for the PRESS by MRS. I. L. HILLEARY.]

The Cattle.

Among the exhibits in the cattle yards we note:

THE RED POLLS [illegible] by J. L. Parrish, Salem—[illegible] and takes 3 first prizes and 1 second. L. K. Cogswell, Chehalis, Wash., has 27 head of Red Polls, among them Martha Washington, the first Red Poll dropped on the Pacific Coast. Mr. Cogswell takes 8 first and 4 second prizes and first prize on herd.

HEREFORDS.—A. H. Johnson, Portland, exhibits 7 head, taking first prize on herd and several other prizes; J. W. McKinney, Turner, shows 13 head and takes 4 second prizes; E. E. McKinney, Turner, with 5 head, is awarded 2 first and 1 second.

JERSEYS.—Charles Miller, Jefferson, exhibits nine head, all A. J. C. C., and takes second on herd. R. N. Snell shows one and takes sweepstakes; L. F. Mascher, Silverton, has eight head of fine animals; D. H. Looney, president of the board, shows 17 head and is awarded first prize on herd, 6 first and 3 second prizes; R. Cary has three head and takes 1 first and 1 second; Ex-Governor Moody exhibits a fine yearling.

HOLSTEINS.—H. W. Cottle & Son, Salem, have a fine herd of nine head; F. W. Durbin, Howell, exhibits 10 head and takes 5 first and 3 second prizes, and first on herd; Smith & Skiff, Salem, five head, get 1 first and 2 second prizes; Gray Bros., Salem, exhibit one and get second prize.

SHORTHORNS. — Wm. Chalmes, Cornelius, shows the finest animal of his class on the ground; weight 2300 pounds, takes sweepstakes. R. A. Witzel of Turner, S. Condit, Aumsville, and J. N. Davis, Silverton, each show specimens worthy of mention. Jas. Richards, Oakland, 10 head; takes 5 first and 4 second prizes, and second on herd. C. Davis exhibits 6 head; P. Feeley, 1; H. G. Eldridge, Gervais, 1; J. H. McCormack 1, and takes second prize; G. W. Dimmick, Hubbard (who advertises in the RURAL PRESS), shows 5 head and carries off several prizes, including first on herd. A. Kirschheiner, Mayville, exhibits 3 head and is awarded a second prize.

GUERNSEYS.—Hon. A. Bush, Salem, has the only herd on the ground—5 head—and takes 4 first and 1 second prize.

POLLED ANGUS, OR ABERDEEN.— R. Cary shows 12 head; takes 7 first and 3 second, and first prize on herd. G. W. Dimmick (a RURAL advertiser) has 9 head; takes 2 first and 3 second prizes and second on herd.

DEVONS.—J. Trippeer, Wapinitia, exhibits 10 head, the only ones on the ground, and takes several prizes.

Poultry.

In this department we find J. M. Garrison, Forest Grove, and in his coops 14 varieties or breeds, embracing Silver Wyandotte, Light Brahma, Plymouth Rock, Partridge Cochin, Rose, single comb, Brown and White Leghorn, Langshan, Houdan, S. S. Hamburg and Black Minorca, the largest exhibit of poultry on the ground, in fact as large as all others combined. He has been in the business 14 years, and his trade extends over the entire Pacific Slope, and to British Columbia. His advertisement appears in the RURAL PRESS of Sept. 13th.

Next comes E. J. Ladd, Portland, with Wyandottes, White Plymouth Rocks, P. Cochins, L. Brahmas, Langshans, G. S. B. Bantams, Pekin ducks, lop-ear rabbits, taking 10 first and 4 second prizes.

Christian Kocher, Aurora, exhibits fine birds, embracing L. Brahmas, Barred P. Rocks, White-faced Black Spanish, W. and Brown Leghorn, S. L. Wyandotte, P. Cochin and a cote of pigeons.

Mrs. Gov. Moody exhibits some fine birds and turkeys; also a coop of Chinese pheasants.

Stock Parades.

The parade of fine cattle was pronounced by those who have attended the State Fair for years to be the finest ever seen on these grounds, and the parade of premium horses drew out many remarks of surprise from visitors from other States. One fine animal in the draft class tipped the beam at 2300 pounds. Messrs. Galbraith exhibited a number of horses and of the usual high standard of their importations.

The racing and trotting on the track was very fine, but your reporter is not a horseman and cannot give you many items.

Machinery.

The aermotor shown by Fuller, Martin & Co. attracted a crowd on account of the novelty of its tilting tower.

The chop-feed mill on roller principle (W. E. Wood, manufacturer, Portland) had a crowd of farmers and stock-feeders around it all the time, and is certainly next to a French burr-mill in excellence.

Staver & Walker take the lead, as usual, in the magnitude of their display of machinery, including a power hay-press, the first ever exhibited on this fair-ground. They showed a stump-puller with which one has pulled up an oak-tree a foot in diameter. This machine is equal to a large herd of Chinamen among grubs. A number of farm-gates were shown, but did not have that merit which attracts a crowd. Only two binders were on exhibition—Woods and Osborne. A novelty in the pump line, on elevator principle, was shown by Staver & Walker.

Pomona Exhibit.

The Marion County Pomona Committee to make exhibit at State Fair received congratulations from all sides and justly feel proud of the success of their first effort in such work. When your reporter looked in upon the scene on Monday at 9 A. M., it was chaos and confusion—cereal and vegetable mixed apparently in a hopeless tangle. But Sister E. Bagley was installed as manager, and assisted by Mesdames Minto, Boise, Hilleary, Clara Smith, Pettyjohn and other ladies, with Bro. Stamp (a whole tree in this kind of work) and your reporter as carpenters, before noon of the first day the display of Pomona became a thing of beauty.

The committee received contributions from the following named members of the Granges of Marion county: John Minto, R. P. Boise, N. Cawood, A. M. Lafollett, T. L. Davidson, M. A. McCorkle, G. F. McCorkle, B. Weisner, T. H. McIntire, Asa Simmons, W. M. Hilleary, Mrs. M. A. Minto, Mrs. E. A. Boise, J. E. Kirkland, J. W. Batcheller, Mrs. I. L. Hilleary, Mrs. E. Bagley, J. B. Stump, Wm. Wright, Clara Smith, Mrs. I. C. Needham, G. W. Weeks, F. R. Smith and others whom I cannot recall.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

FOR WEEK ENDING SEPT. 23, 1890.

436,931.—TRACTION ENGINE—Daniel Best, San Leandro, Cal.

436,932.—INJECTOR—Daniel Best, San Leandro, Cal.

436,933.—BOILER—Daniel Best, San Leandro, Cal.

437,101.—WATER-CLOSET INDICATOR—J. Dihrberg, Visalia, Cal.

436,936.—EXPLOSIVE ENGINE — J. W. Eisenhuth, S. F.

437,029.—AXLE MACHINE—Silas Harris, S. F.

436,786.—SHIPPING RECEIPT BOOK — J. Howe, Tacoma, Wash.

436,946.—PNEUMATIC RAILWAY—J. B. Kelly, Pleasant Home, Or.

436,938.—GOVERNOR—J. F. Kirby, S. F.

436,859.—CAR COUPLING—N. Kramer, Sacramento, Cal.

437,128.—CIRCULAR SAW—W. A. Miller, Wapinitia, Or.

436,841.—SASH FASTENER—Z. Pinard, Portland, Or.

437,002.—BLOCK PUZZLE—J. A. Rueger, S. F.

436,942.—LAWN SPRINKLER—Thos. Scheen, St. Helena, Cal.

437,135.—WIRE-DRAWING DRUM—W. W. Shearer, Port Angeles, Wash.

436,861.—UTERINE SUPPORTER — A. T. Sherwood, S. F.

436,809.—DOOR CHECK—Wm. Shipsey, San Luis Obispo, Cal.

436,950.—WIRE FENCE STAY—M. S. Turkington, Tulare, Cal.

436,814.—ELECTRIC ARC-LAMP — A. Wagniere, Los Angeles, Cal.

437,064.—HAME HOOK—J. H. Watson, Selma, Cal.

436,943. — LIFTING-JACK—Hugh Wilson, Duncan's Mill, Cal.

The following brief list by telegraph for Sept. 30 will appear more complete on receipt of mail advices:

California—Robert Addison, assignor of one-half to A. F. Mills, Pasadena, portable centrifugal lawn sprinkler; William H. Anderson, Riverside, package tie; Howard W. Brown, Oakland, copying-sheet; Harris G. Cox, San Jose, check-bit; Herbert F. Dugan, S. F., coin-operated telephone attachment; Leonidas Guillmet, S. F., air-brake; Charles Ireden and D. Callahan, Riverside, remedy for asthma; William Jones, S. F., lime-kiln; Benjamin F. Levett, assignor of one-half to F. W. Stewart, San Diego, hose-coupling; Demitry Niddlekauf, S. F., explosive compound; Arthur F. Purley, Lawrence, telegraph-key; Carl Strathmeyer and W. G. Gutenberger, Sacramento, car-coupling; Edgar Thompson, S. F., dental engine. Oregon—Alex H. Quain and G. P. Warner, Albany, high-grade water-power.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos, $1; 10 mos., $2; 15 mos., $3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

"Battle of Gettysburg."

The celebrated Panorama of the Battle of Gettysburg and Museum, corner Market and Tenth Streets, San Francisco, is a wonderful production. It has captured the entire State, doing a great deal of good. There is no better way of passing an hour or so, and in studying American history, than by visiting this Grand War Panorama. If any of our readers have not seen it, it will pay them well to do so.

SUCCESS TO THE PRESS.—"By the way, your paper is our paper, and its success means success to the farmers and P. of H. Then success to the PRESS! Fraternally, "J. C."

Buggies, Bike Boards, Spring Wagons, Surreys and Road Carts. Write for our new catalogue. Baker & Hamilton, San Francisco and Sacramento.

Angora-Goat Breeders' Meeting.

(*Concluded from page 300.*)

and there is a continuous improvement reached in the progeny of this stock selected by the best experts in the State. All of the importations made are allowed by our own Government and permitted by foreign Governments. It it quite different with the obtaining of Angora goats from Turkey or Asia Minor; we cannot do it. In 1881 the Turkish Government prohibited the exportation of Angora goats; heavy fines and imprisonment are imposed upon the person who will attempt to export this kind of stock. No goats can be removed from one district to another in Asia Minor without permission and under supervision of Government officials.

It being essentially necessary to make the goat and mohair industry a permanent branch of business for those localities in the United States suitable for this animal, and being mostly unfit for any other domesticated animal, therefore we should solicit the assistance of our Government to obtain permission from the Turkish Government to allow exportation of a number of pure-blood goats of both sexes to this country.

To have the importation accomplished and have the stock passed into private hands, would, however, have the effect of a system of charging exorbitant prices for any of this stock to breeders who were not fortunate enough to become interested in this lot imported, and such sales would be similar to an auction sale at Cape Colony, where, as reported by U. S. Consul-General G. H. Heap: "$447.50 was paid, average price per head for 31 bucks, and $267 per head for 13 does." Only one importation being contracted for, it is utterly impossible that through private ownership of this new flock, an average goat-breeder could ever be benefited by this importation, as the offspring would not be sold except at fabulous prices.

After careful study of this subject and its workings, the writer suggests that the Government be appealed to by every goat-breeder in the United States, and that Congress pass resolutions, laws, and make suitable appropriations for our relief and for the industry in general, and more particularly conforming hereto.

First, to negotiate with the Government of Turkey for the permit to select and purchase a flock of at least 100 does or ewes and 25 bucks in Asia Minor, and to permit their exportation.

Second, to instruct the Secretary of Agriculture to engage some suitable person or persons to proceed to Turkey to examine goats of different localities, to select the very best obtainable, to purchase animals selected and to accompany this shipment to this country as directed.

Third, that the Secretary of Agriculture select a proper locality and appoint proper persons to remove the flock and keep them separate from any private property of this class, to attend to them, and also take charge of the propagation and care of the flock and increase.

Fourth, that the Secretary of Agriculture may set aside a suitable number of males and females, young or old, not diminishing the original number in the flock, selling them under a rule giving the different States, where these animals are successfully raised, equal chances, and at a price to cover expense and outlay for importation, and for keeping this stock, but no more.

It appears there cannot be a valid reason why this enterprise could not be added to one of the Government Experimental Stations, especially if a suitable locality can be determined upon.

By the system just named and suggested, each State now engaged in the goat industry would acquire a nucleus to draw from for the general improvement of this stock.

The Government purchasing a flock large enough to supply the whole country for a period of eight or ten years would be well paid for its beneficent act by the increase in wealth in the roughest parts of our country. If the goat-breeders will unite in presenting this matter to members of the House and the U. S. Senate, also as far as possible make an effort to have some suitable person specially authorized to look after their interests, and each breeder to work for the common good of all, we will be successful beyond doubt. JULIUS WEYAND

Colusa, Cal.

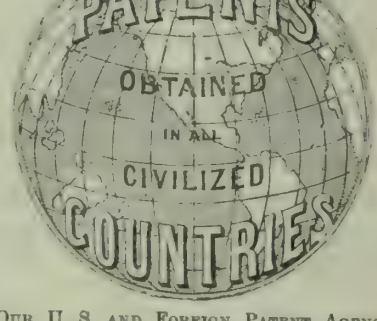
California's Stallions.

I beg to announce that, with a view of perpetuating the forms and characteristics of the leading stallions of California, I am issuing a series of lithographic likenesses. Each portrait issued will be an acknowledged likeness, the result of a close study of the horse and an artistic treatment of the subject. In order to secure for the series an immense advertising value, from a breeder's point of view, 4000 copies, at least, of each portrait will be issued.

Terms, $100 for first issue of 100 copies. In quantity, for advertising purposes, copies will be furnished at low rates.

H. BOYD, Artist.

268 Golden Gate Ave., San Francisco.



Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card costing one cent only) will suffice. We will not knowingly send the paper to any one who does not want it if it is continued, through the failure of the subscriber to notify us to discontinue it, or some responsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

The Great Chautauqua Circle.

Founded in 1878, this Home-Reading Circle has grown to marvelous size. It has met with eager welcome from thousands who aspire to a broader life. The daily routine of cares and labor may be lightened by systematic reading of good books—a little every day. A Michigan farmer's wife writes: "Living on a farm too far from town to join a circle, I have so far read alone. Into my busy life the daily time allotted to my reading comes like a benediction." Should you not like to join this great company of readers? You may read alone or with a group of friends. Write to John H. Vincent, Drawer 194, Buffalo, N. Y., for full details and membership blanks.

Dewey & Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most *reliable* advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

San Francisco, Cal.

Santa Barbara County Fair.

EDITORS PRESS:—Our county fair was not conspicuous for being overcrowded in any direction. Indeed, I fear the display might justly be characterized as somewhat meager. This was owing partly to the general depression in all business circles—to be cured now soon, as the railroad is to be built, connecting us with San Francisco—partly to our rather unfavorable season. Even the babies, God bless them! at the baby show were fewer than usual, although what there were, were as chubby and kicking and smiling as ever. Some of the little angels, as the judges passed in review before them, would thrust out their fat little fists and seize the judges by the hand, as much as to say: "Now see here, old fellow (or my fine lady, as the case might be), I would like one of those nice gilt cups amazingly. Do you see anything green in my eye?"

What few things we had at the fair were mostly good, indeed excellent, showing plainly that we could (and should) have done better. Beets, onions, beans, potatoes, mangolds, corn, etc., were all of superior quality, and if not of monstrous size, were large enough. Melons I noticed of 60 and 70 lbs.; one squash of 163 lbs. and others nearly or quite as large. I think I never saw nicer apples, grapes, peaches and blackberries. As much could be said also of several other varieties of fruits and vegetables.

A highly interesting feature of the fair was the grain exhibit of the Agricultural station at Paso Robles.

There was quite an exhibit of poultry, pigeons, guinea pigs, a family of white rats, and a huge Maltese cat. There were some excellent hogs, well fattened, over-fattened, a few fine Jerseys, and that was about all in that line. There were some good horses, and this brings me to the races. We had them, of course. At least I saw everybody except myself and about two dozen others trudging out to the race-course. When are we going to become sufficiently civilized to have fairs without horse-races? I do not object to horse-racing in its proper place, but who ever heard of a horse-race unless there was betting, and betting is just as good as gambling? There was a balloon ascension; a person let himself down with a parachute; he did not get killed, I believe; there is to be another today.

S. P. SNOW.

Santa Barbara, Sept 26, 1890.

Ventura Jottings.

EDITORS PRESS:—It began raining here Thursday night, Sept. 25th. Only a small amount of rain fell, probably less than an inch, but owing to the warm weather the beans are considerably damaged. The air has been sultry and the sky did not clear until the 29th. The Pacific Coast has evidently imported a genuine old-fashioned thunder-storm.

But a small part of the beans have been threshed. The weather has been so unfavorable for this operation that some of the machines refused to do more work until the beans were drier.

In different portions of the county there have been 11 Farmers' Alliances organized. The latest one is at Montalvo, about five miles from Ventura.

A lumber company has been recently organized here in opposition to the consolidated lumber firms of Ventura county, which will open business about the 7th of October. The stockholders are mostly farmers, and it is hoped lumber will be reduced to a fair price. Heretofore, as Bardette remarked, it has taken a fortune to build a woodshed.

MAX.

Ventura, Sept 30, 1890.

DEATH IN THE WINE VAT.—Are deaths through entrance to wine-casks and other receptacles which contain carbonic acid gas never to cease? It would seem that enough have lost their lives in this way to put all workers in wineries and cellars on their guard, and yet only this week two workmen were killed by carelessness in entering a foul vat. They were on their guard to a certain extent, for they applied the lighted-candle test, but they did it so carelessly that one was led to descend into the death-trap and the other perished in trying to help him. Possibly a few thousand more lives lost may make men more careful or may bring to light some other way of preserving human life. Evidently cellar-men are not to be trusted even with their own lives. Probably the lives lost from this cause are more numerous than those incurred in the handling of high explosives, and yet there should be no such comparison possible. The subject is certainly worthy of consideration. If any of our wine-producers have any systematic method of preventing such disasters, we would be glad to hear from them.

A PEPPERY PONY.—Out at the Folsom prison, says the *Telegraph*, there is a horse that has developed an earnest desire to eat all the red and green peppers he can get hold of. The animal behaves just like any other horse, except in the particular matter above. He is a good worker, tame and manageable. How he acquired the love for peppers is a matter of conjecture.

AN Alameda family was poisoned last Saturday by eating pressed corned beef, and some of the members were in danger of their lives for two days, but are now recovering.

California Fruits East.

CHICAGO, Sept. 25.—The Earl Fruit Co. sold California fruits to-day as follows: Winter Nelis pears, $2.30@2.35; Strawberry peaches, $1.70; Honey Cling, $1.55; Salway peaches, $1.35@1.55; Picquets, late, $1.40@1.45; hf-crates Tokay grapes, $1.35@1.45; hf-crates Muscats, $1.55@1.65. A large quantity of peaches was sold to-day.

Porter Bros. Co. sold to-day five cars of California fruit. Full crates of Tokay grapes, $2.85@3.10; hf-crates, Tokays, $1.35@1.50; full crates Muscat grapes, $3.60; hf-crates Muscats, $1.85; full crates Emperor grapes, $3; hf-crates, $1.55; full crates Verdelle grapes, $2.25; hf-crates Verdelle, $1.85; Cornichon grapes, $3.45; hf-crates, $1.55@1.70; peaches, $1.25@1.75; Beurre hard pears, $3.80; Beurre Diel, $2.50@3.05; Beure Clairgeau pears, $3.25.

CHICAGO, Sept. 26.—The Earl Fruit Co. sold at auction to-day, Salway peaches at $1.35; Tokay grapes, hf-crates, $1.35@1.50; Muscats, hf-crates, $1.70. Fruit in fair condition; weather fine and cool.

CHICAGO, Sept. 27.—The Porter Bros. Co. sold to-day four cases of California fruit. Full crates Muscat grapes, $3.60; full crates Tokay grapes, $2.85@3.35; hf-crates Tokays, $1.50; Cornichon grapes, $3.05; Cling peaches, $1.40@2; German prunes, full crates, $3.70; boxes, $2; Golden Drop plums, $2.05; Ickwith, $2; Duchess pears, $3.70; Vicar pears, $2.35; stock, $1.80@2 10.

NEW YORK, Sept. 28.—The *Sun* this morning says: Less than six years ago the multifarious delicacies of the glorious climate of California were almost unknown in the New York market. To-day they adorn nearly every big and little fruit-stand in town. They excel the finest native products in beauty and size, vie with them in flavor, and are not so dear that a workingman cannot afford to buy some for his wife or sweetheart. Only a few years ago Tokays from the Golden Gate brought 50 cents a pound. Now they may be had for 10 and 15 cents. This is because California has awakened to the fact that New York is the great fruit center of the world, and pays the highest price for the best products. At the end of this season California will have poured from her marvelous cornucopia into this and neighboring States 10,000,000 pounds of grapes, pears, peaches, prunes and plums. That will be just half of what she will unload at Chicago this year, and ten times as much as she sent to us only three years ago She has got a grip on the affections of fruit-lovers hereabout by offering them only her best products, and she is going to try to keep it. Our native fruit is not holding its own against the Western invader. This is especially true of pears, which are much inferior to the luscious, clear-skinned California Bartletts that may be seen on hundreds of stands in tempting picturesque pyramids of gold and rose. The peaches from across the continent don't come up to the best from near-by orchards, but they are big and juicy and fair to look upon.

NEW YORK, Sept. 28.—Raisins, 3-Crown, $2@2.20; London, $2.10@2.35. Raisins are not arriving fast enough for trade wants. One and two-pound cartons will be popular. California evaporated apples, 16½c. They are not popular, being too sweet. Apricots weakened early in the week, but recovered to full prices. The best pie-baking trade here use them largely. Dried peaches are neglected at the ruling rates. Prunes are held at 12½c. Four sizes of selected forties, 14c.

NEW YORK, Sept. 28.—There is a fine display of pears. The Bartletts went out high. A large offering of peaches was made at easy prices. Grapes are in good order and active. One firm sold 50 cars at auction as follows: Bartlett pears, boxes, $2.70@4.40; Seckel, fancy, $7.20; Beurre Clairgeau, $3.10@4.30; Duchess, $2.35@4.30; various brands, $1.65@4 20; quinces, $2.20@2.75; peaches, 65c@$2.35; almonds, $1.25@1.40; nectarines, $3.25@4.20; Japan plums, $4.10@6 90; others, $1.55@1.85; prunes, $1.50@3; Tokay grapes, double, $2.35@6.10; single, 90c@$3.35; Muscat, double, $1.05@2.50; single, 75c@$1.60; Malaga, double, $2.10@3.10; various, 80c@$3.15. The California Fruit Union sold eight cars at auction: Peaches, 75c@$1.80; quinces, $3.75; Winter Nelis pears, $2.75@3.50; Beurre Clairgeau, $3.07@4.50; others, $3.10@3.30; prunes, $1.40@2.10; Tokay grapes, single, $1.10@1.40; others, 65c@$2.85.

CHICAGO, Sept. 29.—Porter Bros. Co. sold to-day five cars of California fruit: Full crates Muscat grapes, $3.80; full crates Tokay grapes, $3.25@3.40; half crates Tokays, $1.40@1.60; Cling peaches, $1.40@1.75; Salway, $1.35@1.50; pomegranates, $1.75; French prunes, $1.90; quinces, $1.85.

The Earl Fruit Co. sold to-day: Tokay grapes, half crates, $1.25@1.50; full crates, $2.25@3.35; Muscats, half crates, $1.75@1.85; full crates, $3.65; German prunes, $2.40; French prunes, $2; Salway peaches, $1.35@1.40; Winter Nelis pears, $2.40@2.45; Beurre-Clairgeau, $3 35; Vicar, $2.25; Beurre Gris, $2.50; quinces, $1.90. Fourteen carloads of fruit were sold this morning.

CHICAGO, Sept. 30.—Porter Bros. Co. sold to-day seven cars of California fruits. Full crates of Tokays brought $3.50@3.65; full crates of Muscat, $1; Beurre Diel pears, $2.85@3.25; Cling peaches, $1.40@1.60; Salway peaches $1.25@1.50; quinces, $1.75.

The Earl Fruit Co. sold California fruit at auction to-day, realizing the following prices: Four cars California fruit, full crates, Muscat grapes, $4; full crates Tokays, $3.30; half crates Muscat grapes, $2; half crates Tokay grapes, $1.55; Salway peaches, $1.40; Strawberry peaches, $1.40@1.60; Honey Cling, $1.40@1.45; White Nelis pears, $2.55. Twelve carloads were sold here this morning.

NEW YORK, Oct. 1.—Sgobel & Day, agents of the California Fruit Co., sold two carloads of grapes, all hf crates. Tokay, $1.40@2.20; Muscat, $1.10@1.40; Morroco, $1.65@2,20; Cornichon, $1.80; Rose of Peru, $1.05; Emperor, $2.10. The market is steady, but high-colored Tokays are wanted. Peaches sell at $1 30@1.50 ₱ box and receipts are equal to the demand.

CHICAGO, Oct. 1.—The Earl Fruit Co. sold California fruit to-day at the following prices: Pears—Glout Morceau, $3.15; Duchess, $3.15; Winter Nelis, $2.30@2.50; Vicar, $2.20; Strawberry peaches, $1.40.

CHICAGO, Oct. 1.—Porter Bros. sold five cars of California fruit to-day at the following prices: Peaches, $1.05@1.30; grapes, hf crates, Tokay, $1.55@1,95; Muscat, $1.85@2; full crates, Tokay, $3.40@4; Muscat, $3.90@4 05; Cornichon, $1.85. Pears—Vicar, $2.50; Beurre Clairgeau, $3.05; Beurre Bosc, $3.45, Beurre de Tonga, $3.10.

JAMES LINFORTH, 37 Market St., San Francisco.

Sorghum Syrup.

James Linforth of San Francisco, agent for the Blymyer sorghum machinery, shows us a letter received from T. J. Henderson of Moore's Station, Butte county, and a sample of some excellent sorghum syrup which he is making from orange sorghum cane. Mr. Henderson writes that he is having good success and is selling all the syrup he can make at 85 cents per gallon, including can, 75 cents in the buyer's receptacle or 65 cents per gallon by the barrel. He believes the demand for this syrup in the mountains is going to be immense. The interest in the crop is large, as he has 15 to 40 visitors a day. He proposes to put in 250 or 300 acres next year, and take in a partner with capital. The syrup he makes weighs 11½ or 12 pounds per gallon, and has a flavor which is popular with buyers.

A Moving Appeal.

"Lives of poor men oft remind us
Honest toil won't stand a chance,
The more we work, there grow behind us
Bigger patches on our pants;
On our pants once new and glossy,
Now are stripes of different hue,
All because subscribers linger,
And won't pay us what is due.
Then let all be up and doing,
Send your mite, however small,
Or, when snows of winter strike us,
We shall have no pants at all."

FOR ILLEGAL TIMBER CUTTING.—A dispatch from Tucson states that Daniel Ross, a millman of the Copper Queen Mining Co., has been arrested by U. S. Marshal Paul for cutting Government timber. His bail is fixed at $10,000. A civil suit will be commenced against Ross and the Copper Queen Co. for $90,000. It is alleged they have cut 3,000,000 feet of lumber.

GROUND was broken at Sacramento Sept. 30th for the new Government building, to cost $300,000.

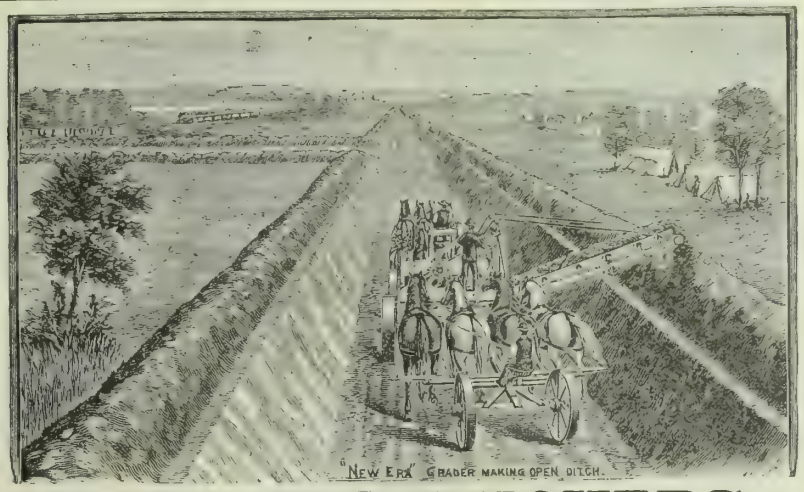
THE PELTON WATER MOTOR

Affords the cheapest and most convenient power for Ranch, Vineyard or Dairy purposes, as well as for running dynamos for electric lights, pumps and every other variety of machinery.

It possesses in the same degree the wonderful energy and power that has made the Pelton Wheel famous in all parts of the world.



These motors are made of varying sizes, with capacities ranging from the fraction of one up to 15 and 20 H. P., enclosed in iron cases, all ready for pipe connections, and are warranted to develop a given amount of power with one-half the water required by any other wheel.

The cost, considering capacity and efficiency, is fully 50 per cent less.

Circular, giving full information, sent on application.

Parties writing for information should give full particulars as to power wanted, source of water, supply, with head or pressure. Address

S. F. Market Report

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Oct. 1, 1890.

Trade in farm products was interrupted the past week by rains, but at this writing the weather is clear, and with its continuance for the next fortnight no severe damage to exposed farm products will be met. Money is generally easy, and obtainable on first-class security at low rates, but for advances on country realty many capitalists are offish. The decline in silver to $1.09 an ounce had a bad effect on wheat, but with the price advancing again, wheat shows more strength. The following is to-day's cablegram:

LIVERPOOL, Oct. 1.—Wheat—Firmly held. California spot lots, 7s to 7s 2½d; cargoes off coast, 37s 3d; just shipped, 37s 3d; nearly due, 37s 3d; cargoes off coast and on passage, steadier; Mark Lane wheat, quiet but steady; French country markets, quiet.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	Sept.	Oct.	Nov.	Dec.	Jan.
Thursday	7s8d	7s8½d	7s8½d	7s8½d	7s8½d
Friday	7s8½d	7s8½d	7s8½d	7s8½d	7s8d
Saturday	7s8½d	7s8½d	7s8½d	7s8½d	7s8½d
Monday	7s8½d	7s8½d	7s8½d	7s8½d	7s8½d
Tuesday	7s8½d	7s8½d	7s8d	7s8½d	7s8½d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	37s3d	37s8d	37s8d	Inactive.
Friday	37s3d	37s8d	37s8d	Quiet.
Saturday	37s8d	37s8d	37s8d	Dull.
Monday	37s8d	37s8d	37s8d	Easy.
Tuesday	37s8d	37s8d	37s8d	Heavy.

Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week:

Day.	Sept.	Oct.	Nov.	Dec.	May.	June
Thursday	100⅝	101⅛	....	103⅝	108⅝	....
Friday	101½	101⅝	....	104	109⅝	....
Saturday	101	101½	....	103⅝	108⅝	....
Monday	100	100½	....	102⅝	107½	....
Tuesday	....	101⅝	....	104½	108⅝	....

The closing prices for wheat have been as follows at Chicago for the past week:

Day.	Oct	Dec.	May.	June.
Thursday	97	100	105	....
Friday	97	99⅞	104⅝	....
Saturday	96⅛	99⅛	104⅛	....
Monday	95⅛	98⅛	103⅝	....
Tuesday	97	100⅛	104⅝	....

NEW YORK, Oct. 1.—Wheat—$1.03 for cash, $1.01½ for October, $1.03 for November, $1.04⅜@1.04¾ for December and $1.08¾ for May.

CHICAGO, Oct. 1.—Wheat—$1.00⅛ for December and $1.05¾ for May.

Foreign Grain Review.

LONDON, Sept. 29.—The *Mark Lane Express*, in its review of the British grain trade for the past week, says: English wheats are in plentiful supply and prices have fallen 6d. There has been a general drop of 6d in foreign wheats. At Liverpool, California futures fell 1d ₩ ctl. At to-day's market there were increased supplies of English wheat; good White was offered at 35s; California and Australian at 38s. Foreign flour was 6d lower. Corn was in buyers' favor.

The Hop Crop.

MIDDLETOWN (N. Y.), Sept. 26.—It is about certain that the hop crop will not be over two-thirds the usual yield. A report is afloat that Clarg, the biggest hop-grower in the State, has refused 50c per lb. for his crop.

LONDON, Sept. 26.—Hops advanced 30@40 marks in the German market the past week.

Eastern Wool Markets

NEW YORK, Sept. 26.—*Bradstreet's* says: The wool market shows a decided increase in activity. The worsted mills have been heavy; buyers and prices have strengthened in consequence. In Boston the sales have been the largest for any week during the year. There is a strong tendency upward and prices are slowly rising. The strongest demand seems to be for fine Territory wools, though business in all classes is fairly brisk. Pulled wools are strong and the call for them is very good. There is more activity shown in Australian wools than a week ago. Texas wools are comparatively quiet, though a good movement in them is expected to occur soon. Dealers are making no concessions. The Philadelphia market is strong with an upward tendency. Boston sold 5,989 500 pounds domestic and 385,000 pounds foreign. The sales were largely Texas and Territory. Spring California, 17@25c; fall, 16@19c. There is no speculation, though a large attendance of manufacturers. The prices are 1 cent better in instances, all firm.

Local Markets.

BARLEY.

	Buyer Season. H.	L.	Seller 1890. H.	L.	Buyer 1890. H.	L.
Thursday	144⅛	143⅜	...	...	...	...

Tuesday	h.	137	....	136½	143⅞	....
	l.	137	....	136⅛	143⅝	....

BAGS — The market for standard-sized grain bags is dull at 6¼@7c. A local authority figures out the cost of laying down Calcuttas here for 1891 at 6c, as follows: Cost at f. o. b. at Calcutta at £8 ₩ bale, $40; duty, 2c ₩ lb, $16; freight at $8 ₩ ton, $4; total, $60 ₩ bale of 1000. There have been further purchases of 4,000,000 at Calcutta, making a visible supply for the season of 1891 of 37,000,000 bags.

BARLEY—The market has held dull at easy prices, although at the close there appears to be a stronger tone. In futures, trading has been light, barely enough to make quotations. The following are to-day's reported sales:

Morning Session: Buyer 1890—400 tons, $1.36. Buyer season—100 tons, $1.43⅜; 300, $1.44 ₩ ctl. Afternoon Session: Buyer 1890—400 tons, $1.35⅝. Buyer season—100 tons, $1.43¾; 900, $1.43⅜ ₩ ctl.

BUTTER—Heavy offerings of pickled, with concessions obtainable, are affecting the market for fresh rolls. California creamery is gaining in reputation and consequently is having better sales. The market for all kinds is barely steady. The early rains had a bad effect.

CHEESE—The market is heavy. While it is not quotable lower, yet to place consignments, concessions would probably have to be made.

EGGS—Choice fresh laid meet with a good inquiry, particularly if they are of good size. Eastern eggs are reported to average better, and as they are coming in fairly free, the market for Californian is kept down.

FLOUR—The market is barely steady. The demand is not urgent.

WHEAT—The sample market is dull. At the close there appears to be a stronger undertone. In futures, trading has been light, with no fluctuations calculated to draw in operators. The following are the reported sales made on to-day's Call:

Morning Session: Buyer 1890—200 tons, $1.38¾; 500, $1.39. Buyer season—200 tons, $1.46 ₩ ctl. Afternoon Session: Buyer 1890—100 tons, $1.39½. Buyer season—100 tons, $1.46⅜; 200, $1.47. No. 1 Brewing, buyer season—400 tons, $1.50; 100, $1.52½ ₩ ctl.

[COMMUNICATED.]

Market Information.

Produce Receipts.

Receipts of produce at this port for the week ending Sept. 30th, were as follows:

Flour, qr. sks	204,442	Middlings, sks	3,048

Cereals.

In regard to the foreign situation, a London authority has made up the following figures of estimates of wheat supply and requirements this year compared with actual figures last year:

Countries.	Probable supplies in 1890–1. Qrs.	Actual exports last season Qrs.
United States of America	9,000,000	13,600,000
Russia and Roumania	15,000,000	16,000,000
India	3 250,000	3,350,000
Austria-Hungary	4,000,000	1,250,009
Australasia, Chili, Argentine	2 250,000	1,500,000
Bulgaria, Egypt, Canada and other countries	2,750,000	1,500,000
Total	36,250,000	37,100,000
Equal, bu hels	290,000,000	296 800,000

Countries.	Probable requirements. Qrs.	Actual imports last season. Qrs.
United Kingdom	19,000,000	18,750,000
France	6 000,000	4,300,000
Belgium, Holland, Germany	5,000,000	5 000,000
Switzerland	1 000 000	1,000,000
Italy	3,000,000	3,000,000
Spain and Portugal	2 000,000	1,000,000
Greece, Norway and Sweden	1,000,000	800,000
West Indies, China, Brazil, etc.	2,500,000	2,250,000
Total	39 500,000	37,100,000
Equal, bushels	316,000,000	296,800,000

The *Mark Lane Express* of Sept. 8th says: It becomes necessary to remind the trade that the crops of the season will not be augmented by a single sack as the result of these market crises, that the balance of supply and demand for the next twelvemonth is likely to be a tight fit, and that the short yield in the United States being coincident with a rise in the rouble and the rupee, the chances of English produce being undersold in 1890–1 are less than they have been at any date within the last decade. [With a decline in the price of silver since the above date, both the rouble and the rupee have fallen. What farmers must have is free coinage in the United States.—Commercial Editor RURAL PRESS.]

The European wheat-producing area is divided, for the sake of convenience, into ten divisions. Of these the first is France, which in the present season is credited with from 35,000,000 to 36,000,000 qrs.; Russia comes next with 28,000,000; Austria-Hungary with 24,000,000 to 27,000,000; the Danubian provinces and Turkey with 14,000,000 to 16,000,000; Italy with 14,000,000 to 15,000,000; Germany with 12,000,000 to 13,000,000; and Spain and Portugal with 12,000,000 qrs. The United Kingdom comes seventh with 9,500,000 qrs., while Belgium and Holland with 3,250,000 and all other countries with 2,750,000 complete the list. Thus the yield of the European wheat crops may be taken at not less than 154,500,000 qrs., or more than 162,500,000. The requirements for food and seed of the ten regions may be put as follows: France, 14,000,000; Russia, 20,000,000; Austria-Hungary and Switzerland, 22,000,000; Southeastern Europe, 10,000,000; Italy, 18,000,000; Germany, 14,000,000; Spain and Portugal, 13,000,000; United Kingdom, 26,000,000; and all other countries 10,000,000 qrs. Total, 174,000,000. Thus Europe will need to import 11,500,000, and may need 19,500,000 qrs. of North and South American, of Indian and of Australasian grain. It is not as yet by any means certain that the quantity required will be secured, and the situation of the trade may be very definitely asserted to be one in which price abatement is neither called for nor desirable.

The local wheat market ruled inactive throughout the past week in sympathy with lower prices abroad and light tonnage here. The decline abroad is largely due to the fall in the price of silver, English farmers marketing their grain and heavy importation of Indian and Russian wheats bought before silver was advanced over $1 an ounce. (Silver went up to $1.20 an ounce, but is now down to $1.10 an ounce.) It is claimed that silver will make another advance as soon as the Government commences to buy, which will be on to-day (Wednesday), but when the 4,500,000 ounces are purchased, then the price will set off again. Free coinage will bring the price up to $1.29¾ an ounce and keep it there, which will cause farm products to fetch better prices. Farmers in many localities in this State have housed their grain, so that there will be less selling pressure. The present rains are causing farmers in other localities to rush their grain to cover as soon as possible, and when once warehoused it is virtually out of the market, except at higher prices. The early rains cause many to look for last year's experience, which, if proven correct, will cause another short crop. The number of ships putting in an appearance the past few days will call for more wheat later on for their loading.

Barley has ruled fairly steady. Receipts are light, and as the demand is still good, stocks are being decreased. The rain, it is claimed, will cause a lessened inquiry for barley. There can be no doubt but in the country feeding will be lighter while it lasts, but it will start up again with a renewal in outdoor work. Some barley is being loaded for New York and also for England.

Oats, under free receipts, are weaker, with concessions necessary to induce free purchasing. The crop up North is said to be larger than before estimated.

Corn is firm for yellow varieties and barely steady for white kinds. Receipts are only fair. The rains, it is claimed, have caught considerable not harvested. The East reports a fairly active market.

Rye and buckwheat are barely steady at quotations.

Feedstuff.

Both bran and middlings are lower, the rains causing a shading in the price. Rolled barley is fairly firm.

Hay has a stronger tone, owing largely to the rains creating fears of lessened receipts. Farmers who have not housed their holdings are putting their crop under shelter as fast as possible. The available surplus is now claimed to be considerably short of last year's in this month, while the consumption is much larger.

Wool.

H. Kains Jackson in London *Farmer*, Sept. 15, says: Business is readily done at last Monday's rates, or even a trifling advance. The upward tendency is even now marked in colonial wool. Botanies dearer, and cross-breds show hardening tendency. Rather more business in worsted yarns, but the rates obtained are unsatisfactory. In piece goods some small orders are placed for home trade. At Leicester also on Wednesday a better tone prevailed, and a growing confidence in the full maintenance of values. Saturday's market was characterized by an increasingly firm tone, and a slightly improved business was transacted at firmer quotations. The inquiries are very numerous, particularly for choice growths of luster and demi-luster fleeces, and users are prepared to buy larger quantities to cover existing requirements and to protect themselves against any further increase in values. Heavy speculation, however, is still avoided, and the business done is sound, regular and healthy in character. The above indicates that luster goods are still fashionable, and therefore wools from which they are manufactured will fetch the best prices. In our local market quotations are reported unchanged, but the general tone is healthy, with a fair demand ruling.

Fruits.

Two or three days of more or less rain are a disturbing element. Large dealers claim that prices for berries and grapes will be irregular for the next few days, after which, if the weather is fair, there will be more satisfactory returns to shippers. Several consignments of grapes received this (Wednesday) morning are more or less moldy, and in consequence trucksters got bargains. Good-keeping grapes for shipment fetched an advance. If rains set in again at an early date, the unpicked grapes will be ruined; the same can be said if the weather turns off hot. Wine grapes are dull; the outside quotation is $16 a ton in this city. About all received so far have been too green.

Peaches are firmer. Canners are paying from 4c to 5c a pound, with now and then a slight advance paid for something very choice. Plums are about out of market. It takes a very choice pear to fetch over $1 a box. There is loud complaint of wormy and otherwise defective apples. To sell off apples, no reasonable offer is refused. Sales are made as low as 25c a box. The free supply of wormy apples is against choice good keepers. The latter are only bought in a small way, which makes it difficult to get over $1 a box. Quinces are in good supply.

The dried fruit market is very dull, with buyers offish—only concessions tempt them. Apricots are well cleaned up. There are several parcels of ungraded prunes on the market, but sellers' views are above buyers. The time to sell is when buyers are in the market for their largest Eastern supplies, and this is passed for this year. Peaches are off, under liberal supplies and a lighter inquiry. The high prices caused buyers to hesitate. Plums and nectarines are well cleaned up.

The raisin market is in a waiting mood. Dealers are rather bullish, still they appear disposed to await further advices regarding the rainstorm. The prevailing opinion is that under the most favorable circumstances, considerable loss will be met through the last rains, and if they are followed within a week or ten days with other rainstorms the effect will in some sections be quite disastrous.

Vegetables.

Rains the past week will stimulate gardening, particularly so with last year's experience fresh in mind.

The market is well supplied with seasonable garden truck. Prices run along at about previous quotations.

Onions are firmer under lighter receipts and a good demand for the more choice keepers.

With the rains, receipts have fallen off, causing a stronger tone to prevail. Buyers are a little offish, claiming that with clear weather receipts will be increased and prices shade off. The shipping demand is fair.

Live-stock.

Bullocks are offering very freely, causing prices to rule in buyers' favor. Mutton sheep are easier, with the tendency to lower figures. Hogs are coming in quite freely. It is difficult to get an advance on quotations. Fresh milch cows are inquired for; buyers are reported to be quite particular. Horses are unchanged.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4@4½c ₩ lb; dressed, 7@8c ₩ lb.; heavy, 3½@3¾c ₩ lb.; dressed, 6@7c ₩ lb. Stock hogs, 3½@3½c ₩ lb.

BEEF—Stall fed, 6½@—c ₩ lb.; grass fed, extra, 6@—c ₩ lb.; first quality, 5¼@5½c ₩ lb.; second quality 4¾@5c ₩ lb.; third quality, 4c@— ₩ lb.; bulls and thin cows, 2@3c ₩ lb.

VEAL—Small, 6@8c ₩ lb.; large, 4@6c.

MUTTON—Wethers, 7½@8c ₩ lb.; ewes, 7@7½c ₩ lb.; lamb, spring, 9@10c.

Miscellaneous.

Poultry continues steady, with a firm tone.

Wild game comes in generally in poor condition, owing to sultry, close weather.

Beans are stronger. The strength of the market is due to fears of rain damage to the outstanding crop.

Hops show continued strength, but it would take something very fancy to fetch outside quotations.

New crop nuts are coming in more freely. The market shows considerable strength under a good demand for the winter trade.

Grass seeds are being inquired for.

Mustard seed is meeting with a good demand from the East.

The following are the exports by sea the past week: Flour, bbls, Guayquil, 4288; Honolulu, 175. Wheat, ctls, Cork, 48,898; Liverpool, 59,977. Mustard seed, lbs, New York, 216,902. Barley, ctls, New York, 7534. Bran, sks, Honolulu, 2990. Dried fruits, lbs, Victoria, 2700. Wool, lbs, New York, 135,674. Wine, gals, New York, 146 982. Brandy, gals, New York, 7128, Canned fruits, cs, New York, 1019.

From the *Commercial News* of Sept. 30th the following summary of tonnage movement is compiled:

	1890.	1889.
On the way to this port	277,243	232,981
On the way to neighboring ports	21,561	16,619
In port, disengaged	8 273	15,676
In port, engaged for wheat	57,720	68,129
Totals	364 797	333,405

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to Sept. 24, 1890, the following are the exports from this port:

	1890.	1889.
Wheat, ctls	2,383 701	2,512.032
Flour, bbls	238.321	240 334
Barley	58,601	316,248

Dried Fruits, Etc.

The quotations given below are for average prices paid. Something very fancy fetch an advance on the highest quotations while poor sells slightly below the lowest quotations. Prices named, unless otherwise specified, are for fruit in sacks. Add for 50-lb. boxes 3c per lb., and for 25-lb boxes 1c to 1c per lb.

THE

PACIFIC RURAL PRESS.

Truly a Farm and Home Journal of the highest class, pure in tone and well informed on all matters of industrial interest.

All branches of Farming, including the keeping and breeding of Horses, Cattle, Sheep, Swine, Bees, Poultry, etc.; Garden, Fruit, Vine, Grain, and Hop Culture; Reliable Market Reports, with other important departments devoted to the Grange, Home Circle, News, etc.

It is the Leading Agricultural Home Newspaper and standard authority on all branches of California Agriculture.

Its illustrations are probably the most practical, original and helpful of any agricultural journal in the world.

It also contains more fresh and useful agricultural information for the readers of this coast, by far, than can be obtained through any other publication issued here or elsewhere.

Established by its present proprietors in 1870, with rare facilities for leading in its position, and securing the combined patronage of the most intelligent and thrifty husbandmen of this coast, where the soil, climate, and many other conditions, imperatively demanded a new agricultural literature.

These natural advantages, combined with liberal enterprise, strict and long-continued fidelity to the welfare of the farmers and their households, has given the RURAL an aggregation of patronage which places it far in advance of all competitors and which enables us to give much better issues at decidedly lower living rates, (to the advantage of both subscribers and publishers,) than would otherwise be possible.

A steady and leading advocate of the Grange cause from its first introduction on this coast, in 1873, the Grange edition of the RURAL has been endorsed as the OFFICAL WEEKLY ORGAN OF THE STATE GRANGE OF CALIFORNIA, and as successor to the weekly issues of the *California Patron* it is the leading Grange advocate for OREGON, WASHINGTON, IDAHO AND MONTANA TERRITORIES.

It has the fullest and most accurate REPORTS OF HORTICULTURAL MEETINGS, and is the best record of the EXPERIENCE OF INDIVIDUAL FARMERS AND FRUIT-GROWERS in all parts of the State.

Its market reports are prepared with care and the greatest reliability possible for the benefit of the producer.

THE PACIFIC RURAL PRESS has more circulation and influence in the Pacific States and Territories than all the other agricultural weeklies in the United States combined. Advertisers can reach nearly all the leading reading farmers through its columns.

A well-known horticulturist who was in attendance upon the meetings of fruit-growers, writes; "The greatest praise that could be bestowed on the RURAL PRESS at the late Fruit-Growers' Convention and, which shows, undoubtedly, the well-deserved popularity of that paper, is the fact that almost all the members of that Convention were subscribers to the Press."

Yearly subscription $3. [Fifteen months are allowed new subscribers and old subscribers paying $3, ten months for $2, five months for $1 and three months for 60 cents, paid strictly in advance.]

Rope.

With $6.75,

For subscription and book, A. J. B., of Dunuba, Cal., sends these good words:

"Your paper is almost invaluable to me, and every farmer, if he consults his own interest, will take the PACIFIC RURAL PRESS and pay for it promptly."

JAMES LINFORTH,

37 MARKET ST., SAN FRANCISCO.

SORGHUM MILLS & EVAPORATORS,

A Mine of Beeswax.—Beeswax is an article of commerce which it is generally supposed is furnished only by the "busy bee," but one of our Oregon exchanges gives the following account of a beeswax mine in that country: No one has ever been able to give an authentic account of how such enormous quantities of beeswax came to be deposited on the beach near Nehalem. Specimens are found along the beach in various places, but it is most plentiful near the mouth of the Nehalem. As the sea shifts the bars, pieces of it are washed ashore, and large quantities are found by plowing in some of the low land near the beach. There are spots where the sea has never reached in the memory of the oldest settlers, and which are covered with a good-sized growth of spruce, where deposits of wax may be found by digging. Specimens of the wax may be found at the house of any settler on the beach, and to all appearances it is genuine beeswax. Several tons have been unearthed, and one man shipped a large amount to San Francisco once, for which he received $500. In quality it is as good as any in the market, and has retained its familiar odor through all its rough usage and age. It is supposed by some, and so stated, that it came from a wreck of a Spanish vessel over a century ago. Others say it came from a wrecked Chinese junk. These traditions in regard to the wrecks come from the Indians and are not reliable. It is most probable that this beeswax is really "lost treasure," which people are digging for on the Nehalem.

Tie-Ups on Railroads are unknown in Europe. However much workmen may incline to annoy other enterprises in order to secure what they think are their rights, railroad employes seek other methods to right their wrongs. This immunity of railroads from labor disturbances, whether they are Government roads or the property of corporations, is due to the fact that such roads are considered a part of the public domain, and their regular operation must not under any circumstances be interfered with. Any disturbance of railroad traffic leads to such a widespread injury to the entire public that any such interference would be regarded as so great a public disaster that no organization would presume to precipitate it. The only remedy which railroad employes in Europe ever resort to is an appeal to some public functionary, such as a minister of public works or the nearest approach thereto, which officer always gives the complainants a careful hearing, and if he thinks the complaints are just, acts at once as a mediator between the employes and the Government or corporation. In the light of the frequent difficulties of this kind which occur in this country, it has become almost imperative that some such system should be adopted here.

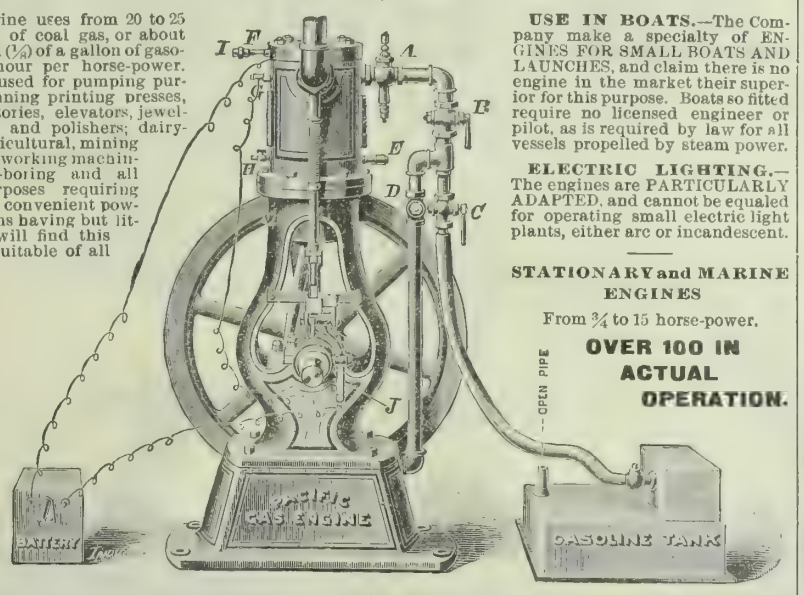
CHILES & GODFREY,
Davisville, Cal.



THE

PACIFIC GAS OR GASOLINE ENGINE.

PATENTED JUNE 17, 1890—NOS. 430,504, 430,505, 430,506.
Also in Great Britain and other foreign countries.

Starts Instantly Without the Necessity of Boiler, Fire or Experienced Engineer.

The engine uses from 20 to 25 cubic feet of coal gas, or about one-eighth (⅛) of a gallon of gasoline per hour per horse-power. It can be used for pumping purposes, running printing presses, small factories, elevators, jewelers' lathes and polishers; dairymen's, agricultural, mining and wood-working machinery; well-boring and all other purposes requiring cheap and convenient power. Persons having but little space will find this the most suitable of all motors.

USE IN BOATS.—The Company make a specialty of ENGINES FOR SMALL BOATS AND LAUNCHES, and claim there is no engine in the market their superior for this purpose. Boats so fitted require no licensed engineer or pilot, as is required by law for all vessels propelled by steam power.

ELECTRIC LIGHTING.—The engines are PARTICULARLY ADAPTED, and cannot be equaled for operating small electric light plants, either arc or incandescent.

STATIONARY and MARINE ENGINES

From ¾ to 15 horse-power.

OVER 100 IN ACTUAL OPERATION.

READ THESE TESTIMONIALS.

ALAMEDA, April 8, 1890.

PACIFIC GAS ENGINE CO.—GENTLEMEN: Permit me to add my testimonial to the many you have received indorsing your engine. As you are aware, mine was a Regan engine which gave me considerable trouble. I had to remove the head and raise the tappet valve every time I wanted to start the engine. I sent you the engine; you removed all the Regan appliance except the cylinder and stand. You put in your appliances, head, sparking device, inlet valve, and, in fact, changed it to the Pacific Gas Engine, which now works splendidly. I have not had to remove the head for any cause since you made the change (over two months). It gives me no trouble; my boy, 14 years old, attends to it.

The change from the Regan to the Pacific is a decided improvement. I can also get a third more power since the change, and I cheerfully recommend your engine as being simple, effective, and cheap. Respectfully yours,
B. S. HILL, S. W. Cor. Encinal Ave. and Morton St.

MAYFIELD, March 26, 1890.

PACIFIC GAS ENGINE CO.—We have given your little 1-H. P. engine a splendid advertisement. A fire broke out at 2:30 o'clock this morning, in a tenement house on my premises. I started the engine, connected the hose, and by its use saved at least $3000 worth of my property. I saved my blacksmith shop, lying 12 feet from the burning building, my barn and my dwelling. Three times the fire started in these buildings, and I extinguished it every time. The engine never faltered, and threw water between 50 and 60 feet high. The whole town was astonished, and they acknowledged that I saved at least $20,000 worth of property.

A fire department is being organized here, and I think they will have one of the engines on a truck for fire purposes. *They cannot be beaten.*

Hoping that all of your customers will be as well pleased with the engine as I am, I remain, Yours truly,
JOS. P. PONCE.

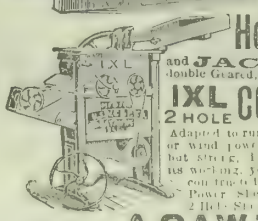
Windmills, Pumps, Etc.



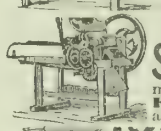
EVERY FARMER HIS OWN MILLER

Do your own Shelling and Grinding at Home, saving tolls and teaming to and from the Grist Mill. This work can be done rainy, windy days, when out-door work is suspended on the farm. The same Mill will cut corn stalks, saw wood, run churn, grindstone, pump water, etc. We make the

HALLADAY GEARED WIND MILL

in 11 sizes, 1½ to 40 horse power, and GUARANTEE they have no equal for Power, Durability and Storm-Defying Qualities.

Horse Powers and **JACKS** both single and double Geared, made heavy and strong.



IXL 2 HOLE CORN Sheller

Adapted to run by hand, horse, steam or wind power. Not cheaply made, but strong, durable and effective in its working, yet light running. It is now run by a similar to the large Power Shellers, and is the best 2 Hole Sheller on the market.

SAW TABLES

Both Swinging and Sliding Tables. We make a Saw Table especially adapted to sawing long poles. Special care is taken to make these machines strong and durable.

THE IXL STALK CUTTER

made in 5 sizes, with **Safety Fly Wheel, Safety Lever,** and all late improvements.

THE IXL IRON FEED MILL

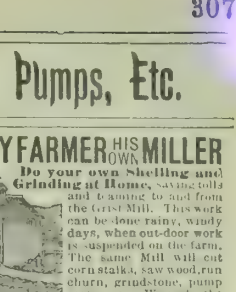
3 sizes, both Belt and Geared Mills. Can be run by any power, and especially adapted to Wind Power. Will grind any kind of grain, and is the lightest running and most effective Feed Grinder made.

IXL TANK HEATER

For warming water in Stock Tanks. Made of the best quality of iron cast in one piece, no sheet iron to rust or solder to melt and cause leak. Will burn any kind of fuel. It is very effective and takes less care to operate than any other Heater made.

We also make the

HALLADAY PUMPING WIND MILLS



In sizes; 8 to 60 ft. diameter, and one man to 40 horse power. The **U. S. SOLID WHEEL WIND MILL,** 7 sizes. **Iron and Brass Pumps** in great variety. **Tanks** all kinds and sizes, and the **Standard Hay Tools** consisting of **Anti-Friction, Swivel, Reversible** and **Rod Hay Carriers, Harpoon** and **Grapple Horse Hay Forks, Pulleys, Floor Hooks, etc.** All goods fully guaranteed. Send for Catalogue and Prices. **Reliable Agents wanted** in all unassigned Territory.

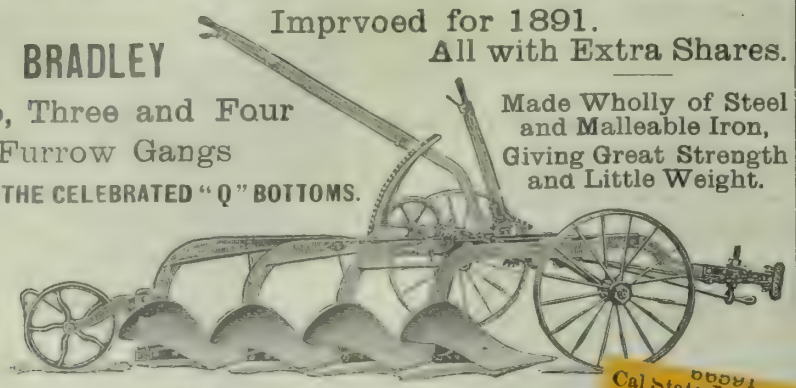
The New "Bradley" Gang Plow.



Imprvoed for 1891.
All with Extra Shares.

BRADLEY

Two, Three and Four Furrow Gangs

WITH THE CELEBRATED "Q" BOTTOMS.

Made Wholly of Steel and Malleable Iron, Giving Great Strength and Little Weight.

Cal State Library JL '90

THE "BRADLEY" PRONOUNCED THE "BOSS."

SOLANO, CAL., April 19, 1889.

MESSRS. TRUMAN, HOOKER & CO., San Francisco, Cal.—Gentlemen: In regard to the Four-Gang Bradley Walking Plow you sold me, it is superior to any I ever tried. I can plow as much in half a day with it as I did with my old Eureka two-gang plow all day, and only two more horses. All the farmers who saw it pronounce it the "Boss." I certainly would not be without one. You can put my testimony as strong as you see fit. I cannot say too much in its favor. Yours truly, A. W. McPHERSON.

THE "BRADLEY" TURNS THE GROUND PERFECTLY.

SANTA CLARA, CAL., December 4, 1889.

MESSRS. TRUMAN, HOOKER & CO., San Francisco, Cal.—Gentlemen: I write to inform you that I have been using the two Four-Gang Bradley Plows that I purchased of you last month for the last two weeks, and that they give me entire satisfaction. I have been using plows of all makes for many years on this coast, and I know that the Bradley is the best that I have ever seen or used. They turn the ground perfectly, and pull as easy as my old two-gang Eureka did, which only turned 24 inches, while the Bradley turns 41 inches, plowing at the same depth. If you have any customers in these parts who are thinking of purchasing plows, send them here to see my Bradley work. Yours very truly, R. B. CAVE.

THE "BRADLEY" WORKS ON THE VERY WORST ADOBE.

SANTA CLARA, CAL., July 10, 1889

MESSRS. TRUMAN, HOOKER & CO., San Francisco—Gentlemen: I cannot say too much for your Four-Gang Bradley Plow. I have plowed with it in THE VERY WORST ADOBE LAND in this section of the country. I have also plowed on side hills that I never plowed before, and cut a full furrow with the four plows. Yours truly, H. S. JONES.

SACRAMENTO, CAL., February 18, 1890.

MESSRS. TRUMAN, HOOKER & CO.—Gentlemen: Mr. Garcia was plowing yesterday with the Bradley Two-Gang Square Corner Plow, and it does good work. There are different kinds of land in my ranch, and we have tried it on all. I think you will sell a lot of them in this neighborhood. Yours truly, J. L. NORIEGA.

The Bradley Square Corner Sulky and Gangs.

"SQUARE CORNER" SULKIES AND GANGS.

Bradley "Square Corner" Sulky Plow

Runs Lighter, is Handled Easier, and the SHARES LAST LONGER than any other Plow sold on the Coast. All the BRADLEY PLOWS have EXTRA HARDENED Soft Center STEEL Moulds.

Note the Points of Superiority.

The Bradley Square Corner Sulky is Without an Equal.

SANTA CLARA, CAL., Nov. 8, 1889.

I, the undersigned practical fruit-grower, have witnessed the Bradley Square Corner 14-inch Sulky Plow in my field cutting a [illegible]4 inches wide and 12 inches deep, [illegible] a draft of 700 lbs., on an average [illegible]ve small horses to do the work on gravel and adobe ground.

DAN GAMER.

Best Made and the Lightest Draft Plows in the Market.

THE BRADLEY SQUARE CORNER IS THE THING FOR PLOWING FOR PLANTING VINES.

GRAND BRADLEY VICTORY.

We don't wish to weary you with too much reading, so we print only our latest testimonial:

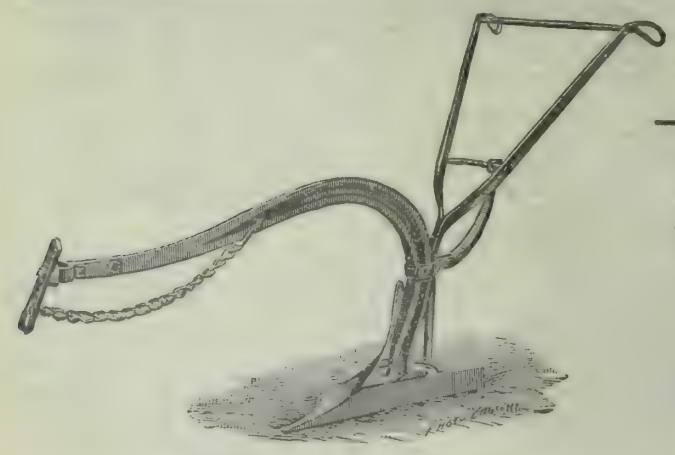
CLAUS SPRECKELS, Moro Coio Sugar Beet Farm, November 25, 1889.

MESSRS. TRUMAN, HOOKER & CO., San Francisco—Dear Sirs: We had a plow trial to-day with the Bradley Square Corner Sulky, 14-inch bottoms, Big Injun and Cassady Sulkies. The draft of each sulky was as follows:

BRADLEY SQUARE CORNER SULKY,	15 in. wide,	11 in. deep.	Draft, 750 lbs.
BIG INJUN SULKY	14 "	10 "	" 950 lbs.
CASSADY	15 "	11 "	" 825 lbs.

The Bradley also turned the land over better than the others. I was so thoroughly convinced of the superiority of the Bradley Plow that I bought eight of them to-day. Respectfully yours, W. V. GAFFEY.

[In two months Mr. Gaffey ordered five more.]



You can PLOW DEEPER with this Plow than any other Sulky ever made, and they are the Lightest Running.

Send for Special Circular, giving Prices and Full Descriptions. Send for our No. 15 1890 Catalogue; Mailed Free to any address.

We have the Finest and Largest Carriage Repository on the Pacific Coast. Agricultural Implements of Every Description. Address,

Pleasing Landscapes.

As the delightful California autumn invites to the open air, we again adorn our first page with glimpses of charming natural scenery. We have had frowning rocks and dense shade in large variety, and at this time we select the thinly-wooded valley and the placid river with its border of graceful trees. The scenes are not Californian. The larger landscape is in Central America, and yet the wide valley with low, shrub-clad hills, and the lake in the middle distance, and the range beyond, might be moved a thousand or two miles up the Pacific Coast and still not be incongruous among other features of our local scenery. To trace the resemblances, then, between scenes familiar to us and those in distant parts may give pleasure to the home-bound reader to whom the opportunity for extended travel never comes. To such, the photographer, the engraver and the printer render delightful service. Additional interest, of course, pertains to Central American scenes not only because of the closer affiliations likely to exist among all American nations, but because of the vast enterprises for travel and transportation which are now planned or in progress. One of these is an international railway connecting North and South American countries, which is now projected, and of which we hope to give an outline at another time.

The smaller scene is probably located somewhere in the Middle States. Many a time those who have long been Californians have cast lines into such still waters, or have mused beneath the shade of such trees, while the sights and sounds of the broad meadows adjacent have delighted the senses and enraptured the soul. The little picture may serve some of our young readers as a suggestion for brush or pencil in the pleasant task of home adornment.

Chrysanthemum Show.

The committee to whom the State Floral Society intrusted the arrangements for a fall show will report in favor of holding a chrysanthemum show on November 6, 7 and 8 in a hall on the ground floor of the new building of the California Academy of Sciences, which has been generously placed at the disposal of the society without charge. It is expected that liberal prizes will be offered, and the show, although more restricted than some the society has held, will be more creditable and more desirable to patrons because of higher-class exhibits. It is proposed to admit only exhibits showing excellence and to display them in the most satisfactory manner. No doubt the report of the next meeting of the Floral Society will contain full information of the show; meanwhile all should have an eye to preparing exhibits in their best style, thus improving themselves and educating the public.

Napa Notes.

Editors Press:—Our first rain of the season commenced falling on the evening of the 28th ult., and during that night and the following two days light showers passed over the county. Though threatened for some time, this rain took many of our grape-growers unawares. Not more than one-third or one half of the grapes in Napa valley had been gathered before the rain, and our vineyardists felt gloomy. There was a lack of sugar in many varieties of grapes, and this rain promised to ruin the crop. Happily for grape-raisers and orchardists who were engaged in drying fruit in the open air, the rain has passed over and we now have clear skies and bright sunshine. About half an inch of rain fell at Napa City. The rainfall farther up the valley was lighter. Some grapes are injured, but the damage is comparatively slight.

Many of our grain farmers' gladly welcomed the good rain, as they are ready to commence operations for another season. Some little dry plowing has been done. There is but a small acreage of summer-fallow. The fact that the Hessian fly has injured wheat in the last few years in certain localities in the county will deter many from sowing this grain to any great extent this winter. The yield of wheat in this valley this season was quite small, owing in part to the very wet winter of '89-90, and to the fact that many farmers are turning their attention to raising fruit of various kinds, in which branch of farming there is certainly more profit.

The yield of grapes in the valley is not large this season, and for that and other reasons the price of this fruit is higher than it has been for several years. So unremunerative had been the culture of the grape for the last two or three years, that several vineyards were left to shift for themselves, and many were not kept in first-class condition. Now vineyard men are more encouraged. Prices vary from $10 to $15 per ton, and some vineyardists are holding for still higher figures. Over in Sonoma valley as high as $17 per ton is paid. The entire yield will not fill the cooperage of our cellars. No grapes, or at least none to any amount, will be dried in this valley, owing to the fogs that drift up from the bay in the early mornings. In the valleys in this county situated farther from the coast, where there are few wine-cellars, and where the climate is warmer, the drying of grapes can be prosecuted profitably.

Wine-makers complain of a minimum amount of sugar in this season's grapes. This is owing to the quite cool summer we have had, for there has been little very warm weather. On every road centering at Napa or St. Helena, scores of wagons loaded with grapes and drawn by two, four and six horses are daily to be seen, early and late.

More fruit has this season been dried in this valley and in other parts of the county than in any previous year. Many prune orchards are yearly coming into bearing, and the drying of this variety of fruit of itself is a growing industry that is destined to attain large proportions. The output is exceedingly creditable to our county. Already 25 or more tons of a splendid article have been shipped to cities in the East.

Our orchardists are much pleased at the result of the season's operations in the matter of marketing green fruits. The yield was very good, nothing extra, and prices were high. Many a one has a well filled purse this fall. Quite a large amount of apples have been marketed, sold either to San Francisco parties or to our local drier, which employs a score or more hands. But cherries, peaches, pears and prunes have been the principal varieties shipped. Some of our foremost orchardists are not disposed to raise many apples, preferring to devote their attention to other fruits, as they have proved more profitable.

Apple trees require so much attention now the codlin moth has made its home in our orchards, that many are deterred from raising the fruit. What with spraying, scraping trees and using other precautions, the time and expense incident to apple culture, as compared with that required by other fruit, is too great. Said a prominent and successful orchardist a day or two ago: "There's not much profit in trying to raise late apples. About the only variety I would recommend for profitable cultivation is the 'Alexander.' This variety matures early, you are at very little trouble to spray, etc., and it always sells well in any market." This same gentleman sold his "Alexanders" in the orchard for $7 per tree, and as he had quite a number he was ahead quite a sum on this variety of fruit alone.

Said another fruit-grower to-day: "B fore I had as much experience as I now have, I thought the stories I used to hear of orchards netting their owners $200 or $300 per acre were, to say the least, overdrawn and not worthy the belief. But what I am about to tell you is the truth without any coloring. I had 2½ acres of Salway peaches that netted me over $1000. I think that is doing well enough. I shipped them green to San Francisco."

The well-merited fame of Napa's race-track is extending and will be the theme of many a horseman's conversation this fall. That it is one of the fastest tracks in the State, and consequently in the country, was the verdict Marvin and other veteran horsemen pronounced a year or two ago. The races during the fair held here last month only hightened the opinion of racing men for our course, and this, coupled with the liberality of the association directors, has made this a favorite track with horsemen. Sunol and Palo Alto made fine records here last year.

Next month the Pacific Coast Horse Trotting & Breeders' Association are to meet here, and there will undoubtedly be some very fine racing. Then, too, later in the season the Blood Horse Association may speed their horses on the same track. Our local society, the Napa & Solano Agricultural Association, has a fine property of 60 or 75 acres of level land just outside the city's limits and on the line of the Napa valley railroad, on which this course is laid out.

One of the industries firmly established in Napa is the manufacture of cream tartar. This article of commerce has been made here for several years, but this year it will be manufactured on a much larger scale than formerly. A new company has spent several thousands of dollars in putting up a well-arranged plant, and has already commenced operations. From time to time new factories are established here, and Napa is rapidly becoming a noted manufacturing center.

R.

Napa.

Shorthorn Breeders' Association.

Editors Press:—The stock sale held under the management of the Pacific Coast Shorthorn Breeders' Association, at Sacramento, Sept. 19th, was a success, and fair prices obtained for stock sold. The association is determined to make their sales a success, and offered some of their best cattle at this sale, which was appreciated by purchasers; knowing that no by-bidding was allowed, and that the stock was bid on legitimately, they bid freely. This sale was considered an improvement on the one held in April last, and at the annual meeting of the association it was determined to continue holding annual sales, and place before the public some of their best cattle for their bids. It may be that a sale of bulls will be held in the spring, thereby enabling stockmen to purchase the best stock in the State, from the best breeders, at public sale.

At the annual election, Judge E A Bridgford of Colusa was re-elected president; A. Heilbron, vice-president; J. F. Chiles, secretary; P. S. Chiles, treasurer.

The board of directors consists of president, vice-president, secretary, El Younger, Jos. Marzen and P H. Murphy. J. F. Chiles.

Davisville, Cal. Sec'y.

Bee Disease and Ergot.

Editors Press:—While in your city recently, thinking to satisfy myself as to the correctness of my conclusion on the bee disease (Claviceps Apium), I called upon Dr. H. W. Harkness, president of the California Academy of Sciences. After a statement of symptoms and surrounding conditions, the doctor remarked: "Your solution is correct. Clevesis or Ergot is found upon the flora and grasses of this State in such quantities that it might be profitably gathered for medicinal purposes, and it poisons stock feeding upon it." He also further cited a case of a cow dying from poisoning by this fungoid. It may be of interest to bee-keepers and stockmen to know of these facts.

W A. Webster.

Amherst, Mass., Sept. 25 1890.

Beginnings in Weather Science. — The history of meteorology has been made a subject of investigation by Dr. G. Hellmann. He finds that it is not exactly known who first kept a regular meteorological journal; but Humboldt attributes it to Columbus on his first voyage to America in 1492, while the Italians also appear to have made daily observations from the middle of the fifteenth century. The oldest of the meteorological instruments is the wind vane. The qualities of the winds were correctly described in the periods of Homer and Hesiod, in the ninth and eighth centuries B. C., while the first arrangement for observing wind direction was the Temple of the Winds, at Athens, built about 100 B. C. Eginhard, in the reign of Charlemagne, denoted the winds by the four cardinal points. The first instrument for denoting wind force—essentially the same as the pendulum anemometer now used—is ascribed to Robert Hooker, in 1667. The absorption hygrometer was invented about the middle of the fifteenth century, by N. D. Cusa, and the first condensation hygrometer is credited to the Grand Duke Ferdinand II of Tuscany. The first continuous hygrometrical observations appear to have been by R. Boyle, at Oxford, in 1666. The first thermometer is attributed to G. Galilei, toward the end of the sixteenth century. The first rain-gauge was used by B. Castelli in 1639. The first barometer was made by Torricelli in 1643.

Prof. Hazen suggests that the force of a tornado may be largely diminished by the explosion of gunpowder or dynamite, just as the waterspout at sea is diverted and broken by a like discharge of explosives.

Agricultural Science.

The Use of Fertilizers in California.

University Experiment Station Bulletin No. 88.

The fortieth anniversary of the admission of California into the Union reminds us that she has ceased to be a stripling. With this advance in dignity comes the inference that however fertile her soils, it is to be expected that those long occupied or heavily cropped will now require serious care in order to keep up or restore production That this is really so is proved by the rapidly increasing correspondence on the subject that is addressed to this station; and to avoid the unnecessary rehearsal of general statements in each individual case, it seems desirable to put in print for general information what can be stated in a general way on this subject. Of course many individual cases will still require special consideration on account of peculiar conditions of soil or location; for in a great many instances the failure to produce satisfactory crops is not at all due to soil exhaustion, but to improper physical conditions of the subsoils, unsuitable cultivation or irrigation, alkali, etc. The fact that orchards and vineyards form costly investments of much greater permanence than the annual crops that occupy the vast majority of the cultivated land east of the Rocky mountains, and the high returns so often realized from them, has brought the manure question forward here much earlier than has usually been the case in the United States; and happily the silly adage that "manuring is too costly and will never pay," which has long kept agriculture on the down grade elsewhere, has never had a serious foothold in California. The sovereign truth that nothing pays worse than poor crops upon large areas of which the cultivation costs just as much as if it were yielding high returns, is quite generally appreciated here. Cultivating too much land poorly, and getting poor returns both as to quantity and quality, has been the bane of farmers all over the East, and has doubtless done at least as much toward "agricultural depression" as all other causes combined.

But whether fertilization will pay or not clearly depends directly upon the particular requirements of each soil. Unlike Europe, where long cropping has reduced all soils alike to a condition when they require an "all-around" fertilizer, the soils of California have mostly had only a *one-sided wear* from the constant succession of one and the same crop. In orchards and vineyards this state of things is unavoidable, since they are expected to last 20 to 40 years without renewal and possibility of rotation of crops. It is this one-sided wear, inseparable from the chief horticultural industries of the State, that requires special attention at this time; for it is clear that to apply "complete" fertilizers in these cases, would be to pay out a portion of their cost uselessly, since nothing can be gained by adding to the soil more of the ingredients that are already abundantly present in an available form.

In order to fertilize intelligently we must know, first of all, what ingredients are chiefly drawn upon by the crop sold off the land; secondly, we must know which of these ingredients are so abundantly present in the soil (or irrigation water, as the case may be) to render their replacement unnecessary for the present at least.

The subjoined table* gives some insight into the amounts removed from the soil by some of the chief fruit crops, of nitrogen, potash, phosphoric acid and lime; these being, according to all experience, the only ones of which the replacement need ordinarily be considered in fertilization. These amounts are expressed both with reference to 1000 pounds of fresh fruit, and to what, according to our best information, may be assumed to be a "fair crop" per acre. The latter figure is, of course, liable to great variations and differences of opinion: but by the aid of a little arithmetic each one can calculate for himself the data suitable to his own case or views. The crop assumed in the case of oranges is 325 boxes per acre of 15-year-old trees; that of grapes is intended to represent a mean between upland and lowlands.

QUANTITIES OF SOIL INGREDIENTS WITHDRAWN BY VARIOUS FRUIT CROPS.

Fresh Fruit.	Total ash, lbs.	Potash, lbs.	Phosphoric acid, lbs.	Nitrogen, lbs.
Grapes, 1000 lbs	3.8	5.0	1.52	1.70
Crop of 10,000 lbs. per acre		90.0	15.20	17.00
Oranges (seedless), 1000 lbs	6.07	2.78	.67	2.69
Crop of 20,000 lbs per acre		55.60	13.40	53.80
Pears, 1000 lbs	3.3	1.8	.5	6
Crop of 20,000 lbs. per acre		36.-	10.-	12.-
Plums, 1000 lbs	2.9	1.72	.41	4.2
Crop of 30,000 lbs. per acre		51.60	13.20	167.7
Apples, 1000 lbs	2.2	.80	.03	.6
Crop of 20,000 lbs. per acre		16.00	6.00	12.0

It will be seen that for equal weights of these fruits, *grapes* take from the soil by far the largest amount of mineral matter, of which nearly five-ninths is potash; they also carry off the largest amount of phosphoric acid. For seedless grapes the latter item, would, however, be considerably smaller.

Next in the drain of total mineral matter from the soil stands the *orange;* it also draws heavily on the potash, and also upon the nitrogen of the soil, but less than the grape upon phosphoric acid. This independently of the seeds, the analysis having been referred to seedless fruit; seed-bearing (seedling) fruit would draw more heavily both on phosphoric acid and nitrogen.

Pears come next as regards total mineral matter, but draw quite lightly on nitrogen.

Plums (including prunes) are conspicuous chiefly for their heavy draught on the nitrogen of the soil, greatly exceeding in that respect the orange for equal weights, and enormously for an (assumed) average crop.

The difference between *apples* and *pears* in respect to soil exhaustion for an equal weight of fruit is quite striking, the amount of potash in apples being less than half; the phosphoric acid only a trifle over half as much as in the pear; while nitrogen is equal in both and quite low as compared to the orange, which has over four times as much and must therefore be accounted relatively much more nourishing to man, as well as more exhausting to the soil.

While the data given above in relation to the "outgo" of soil ingredients through the harvesting of the several fruits may be considered as holding good, practically, in all countries and on all soils, the vast differences in the nature and composition of *different soils* introduce an element of uncertainty as to the need of returning to every soil the full amount of the outgoing ingredients. Few soils are about evenly constituted with respect to the four important plant-food substances; there is in most cases one or several of these present in superabundance, so that to replace the small amount carried off by the crop would be as useless as "carrying coals to Newcastle," at least for the present. *The analysis of soils and irrigation waters is necessary to gain information on these points.*

As regards waters, the information so obtained is positive and unimpeachable. Whatever is dissolved in the irrigation water is absolutely available to vegetation, and the amount annually so conveyed to the soil is capable of close calculation on the basis of the current practice of each irrigation district. If the amount of any substance so given to the soil approximates to, or exceeds the amount withdrawn by crops, it is quite certain that no money needs be expended in the purchase of that particular substance as a fertilizer.

As regards soils, the indications given by chemical analysis are not so definite, because the acids used in the laboratory are more powerful than those at the command of the roots of plants; although some of the latter (*e. g.* oxalic acid, that of sorrel, rhubarb, etc.) approximate closely to the same solvent power. Here experience must be our main guide; and this has shown that practically, soils containing (by the results of analysis) more than a certain percentage of a given substance, may be considered as abundantly supplied with the same; while if the percentage so indicated falls below a certain other point, such ingredient may be considered as being deficient. The crucial test in either case is the experimental use of that substance as a fertilizer on the soil in question; when if it fails to produce a definite favorable result it may beconsidered that the native supply is sufficient, and *vice versa.*

It is obvious that in order to secure to the farmer this saving of the purchase of superfluous fertilizing ingredients, a comprehensive system of investigation of soils and waters is necessary. This has been from the outset the central thread of the work of this station; the object being to obtain as quickly as possible the facts necessary for the compilation of a soil map of the State. For want of funds for field work, and too limited a force for the laboratory work, this fundamental plan has been carried out only to a limited extent and chiefly in certain regions where considerable interest in agricultural improvement was manifested. We are not, therefore, as yet, prepared to give information as to the entire State; and unless some special provision is made, it will be long before this can be the case. But so far as the work has gone, the following points may be considered as practically settled:

1. From climatic as well as geological causes, nearly all the soils of the State may be considered as abundantly supplied with *lime.* The chief exceptions occur in the higher portions of the foothills, where the rainfall is high and summer rains occur. In *all* the valley soils lime is abundant; and liming is therefore not among the means of improvement usually to be thought of in California. This applies to the use of quick-lime and ground limestone; not necessarily to the use of marls, which usually contain other ingredients besides lime to render their use valuable where it can be done with little cost.

2. Almost the same that is stated above of lime, may be said of *potash.* The great majority of soils in this State, more especially nearly all valley soils, and absolutely *all* soils in which there is the least manifestation of alkali, contain an abundance of available potash for all agricultural purposes; so much so that dissolved potash salts frequently circulate in the soil water. Most irrigation waters furnish an additional supply, sometimes enough of itself to make up for all that crops take away. Outside of the rainy belts of the Sierra and of the Northwest Coast, therefore, the addition of potash in fertilization must in general be considered in the light of "carrying coals to Newcastle"—superfluous and unprofitable at the present time; and farmers should object to paying for the potash in commercial fertilizers (put there under the Eastern idea of making a "complete" fertilizer), because the investment will pay them no interest. They should demand for their money the ingredients that will pay them for their use in this State, regardless of what may pay elsewhere.

The few cases in which at present the use of potash *will* pay, are those of intense culture in vegetable gardens and berry patches, where crops are grown continuously and successively throughout the season. Here the draft upon the soil ingredients is so heavy that within a few years *all* require current replacement.

3. Of *phosphoric acid*, an ingredient so im-

*The analyses of ashes here given are mostly those of European chemists, generally accepted as representing averages. California-grown fruits will be investigated at this Station the coming season for this purpose.

portant that even in Europe it is beginning to be claimed as the practical measure of fertility, analysis has shown an almost universal *scarcity* in the soils of this State; always excepting the alkali soils, in which it, or its compounds, frequently circulate in proportionally large amounts. Phosphoric acid is one of the substances to be first suspected of exhaustion in the non-alkaline soils of California; it is therefore an ingredient that should be prominent in *all* compound commercial fertilizers, and which will be found to "pay" in most cases of decreasing production.

4. As to the fourth of the critical soil and plant ingredients, *nitrogen*, its ordinary measure in soils is the vegetable mold or humus, the presence of which is generally manifested, and outside of "red" soils is fairly measured, by the more or less blackish tint when wetted. From climatic causes, humus is rarely abundant in the upland soils of the State, and very generally its amounts may be said to be small. This is especially true of the mesa soils of the South—those best adapted to the growth of the citrus fruits—and hence it is reasonable to suppose that *a lack of nitrogen* will be among the first things to be apprehended when that fruit shrinks in size, and production falls, on these soils.

Elsewhere stable manure is the ordinary source of this as well as of the other substances when required only in moderate amounts; but for many reasons stable manure is less available in the dry climate of California than elsewhere. It is produced only in small quantity in horticultural communities; and when put in the soil it is long in decaying and becoming effective. It should for our climates be systematically "cured" in the manure-pile before being used—a point of vantage which explains, in part, the good effects of sheep-corral manure.

By far the most convenient, and at present certainly the cheapest and most available source of nitrogen at command of the farmer is *Chile saltpeter*, which contains about 16 per cent of nitrogen, in its most effective form. From 150 to 200 pounds per acre is the usual dose; more than this will not be used by the crop plants in one season, and a surplus is likely to be washed out of the soil by the winter rains. Moreover, an excessive application might result in too much wood and too little fruit, and that fruit of a sappy, flavorless character, though of large size.

Sulphate of ammonia is the other most available source of nitrogen obtainable in commerce; a good commercial article contains 20 per cent and over, of nitrogen. It does not, however, act quite as rapidly as the Chile saltpeter.

To the citrus-growers, then, who at present appear to be most concerned about the fertilizer question, I would say that, well-cured stable and sheep-corral manure apart, their best resort at present is to the commercial phosphates and superphosphates of high and honest grade, mixed, either by themselves or by the manufacturer, with a proper proportion of Chile saltpeter or ammonia sulphate; and generally no potash whatever.

In order to cover approximately the ground of the questions most commonly propounded in our correspondence on the subject of fertilizers, the following points are briefly stated:

This station has no direct or definite knowledge of the quality or "trueness to name" of any of the commercial fertilizers now sold in this State. Analyses of mere samples sent by the manufacturers or others prove little or nothing, so long as no regular "fertilizer control" is established by State authority. That this should be done as soon as possible, in the interest both of the users and honest manufacturers of fertilizers, is manifest; and nearly all the older States have found this regulation of the fertilizer trade necessary long ago. At present this station declines to analyze and certify to the composition of fertilizer samples, except in cases of suspected fraud; for the reason that such samples prove nothing as to the general quality of the material put on the market, and their analyses have been used in advertising as though offering a kind of guarantee or recommendation on the part of the director. The latter disclaims pointedly any such responsibility and does not authorize the use of his name in connection with any fertilizer advertised. He has, however, no reason to question the *bona fide* character of the several fertilizers manufactured in this State. That in individual cases disappointment must often occur, is natural from the causes stated above and proves nothing against the honest composition of the goods. In this as in other cases, the right thing may be put in the wrong place. The useless addition of considerable potash is the objection lying against several of the brands in the market.

Farmers should be willing to pay a good price for a high-grade fertilizer, especially in the case of superphosphates. The only consequence of insisting on too low a price is that the manufacturer, in self-defense, adds to the active matters enough of some cheap, inert material to be able to afford the lower rate; the result being that the farmer pays freight, to say the least, on "dirt" which he might as well put in himself on the spot, if so inclined. "Spent refinery charcoal" in coarse grain is about as unprofitable an investment as a farmer can well make; he should be willing to pay enough to justify the manufacturer in reducing every grain of it to the soluble form by the use of enough sulphuric acid. It is not advisable for any one to attempt to do this at home.

In regard to the use of *bones*, it may be said that any one may with little trouble use all the bones accumulating about a homestead in either of three ways:

1. Bones put into a *well-kept* (moistened) *manure-pile* will themselves gradually decay and disappear, enriching the manure to that extent.

2. Raw bones may be bodily *buried in the soil* around the trees; if placed at a sufficient depth, beyond the reach of the summer's heat and drought, the rootlets will cluster around each piece and in the course of a few years consume it entirely. But it will not do to have these root-clusters broken up by cultivation every season.

3. Bones may be packed in moist wood ashes, best mixed with a little quicklime; the mass kept moist but never dripping. In a few months the hardest bones will be reduced to a fine mush, which is as effectual as superphosphate. "Concentrated lye" and soil may be used instead of ashes. In this process the *nitrogen* of the bones is lost, going off in the form of ammonia, the odor of which is very perceptible in the tank used.

For neither of these processes should the bones be *burnt*. The burning of bones is an unqualified detriment to their effectiveness, which can only be undone by the use of sulphuric acid.

4. Bones *steamed* for three or four hours in a boiler under a pressure of 35 to 50 pounds, can, after drying, be readily crushed in an ordinary barley-crushing mill, and thus be rendered more convenient for use. Practically very little of the nitrogen (glue) of the bones need be thus lost.

Very good *bone-meal* is found in the market at reasonable rates.

For information concerning the value and proper uses of *land plaster* or *gypsum* (also one of the inquiries continually made), I refer to pages 144 and 145 of the "*Report on the Experiment Stations*," lately issued, which will be mailed free to any one desiring it. It may here simply be stated that while gypsum is not a general fertilizer like the phosphates and nitrates, for the simple reason that it does not contain, and therefore cannot supply, the plant-food substances of which the withdrawal by crops causes sterility; yet its uses, especially in the irrigated regions and on alkali soil, are so many and so important, that it should be very widely used so soon as a reasonably cheap supply can be obtained.

Berkeley, Oct. 6. E. W. HILGARD.

FARMERS' INSTITUTES.

Report of Institute at Union, Oregon.

The Farmers' Institute, located at Union, Eastern Oregon, was carried out according to printed program, with the exception of the absence of some who were down for essays and addresses. The time was fully taken up from Wednesday evening at 7:30 o'clock until the close of the Friday-evening session.

Upon arriving at Union on the noon train on Wednesday, we found arrangements had been made by Mr. Shirley to have us visit his immense wheat farm to see the Harvest King cut, thrash and sack grain at the rate of 800 to 1000 bushels per day. This was a rare treat indeed. Twenty-two horses and six men were doing the cutting and thrashing. Several teams were engaged in hauling the grain away. This machine cleans the wheat perfectly and grades it into three classes. Six of our party, including two ladies, had the pleasure of riding around the field on the machine while it was at work. This made 12 grown people and a little girl on the machine at one time, yet there was room for more. It was wonderful how the machine would pass over rough, uneven ground without the least apparent effort and no cessation of its duty.

After taking several photos of the harvester and grain field, we were driven across this 800-acre field of grain and through other grain-fields to quite a watering-place known as Hot Lake. The lake covers two acres, I should think, and the water is comfortably warm throughout. At the spring the water is boiling hot and has a strong sulphurous taste and smell. We staid long enough to have an egg boiled in the spring, which took about eight minutes. At times the water is hot enough to cook eggs much quicker. On leaving the spring, we were driven six miles past grain and meadow fields back to Union, arriving in the early evening.

After eating supper hastily, we repaired to the courthouse, where the Institute was to be held. Here we found not less than 250 people awaiting the evening exercises. There was also on exhibition a fine collection of ores from Sparta mines and an exhibit of vegetables and fruits from Eagle valley that for quality and size could not be easily surpassed.

The evening session was begun at once by placing Hon. L. B. Rhinehart in the chair, and after a piece of music, calling upon Hon. W. T. Wright, who responded by an address of welcome, which was listened to with interest throughout. Mr. Wright made brief sketches of the history and improvement of agricultural industries. Many valuable and interesting points were touched upon in this first exercise of the session.

After another musical selection, Prof. Letcher responded to the address of welcome by giving a paper upon "The Proper Education for the Farmer and other Industrial Classes," with special mention of the course and plan of work at the Agricultural College. The paper was well received, showing the interest which is taken in the Farmers' School. This paper was followed in succession by a vocal duet, a declamation by L. J. Davis, and a piece of instrumental music, after which the evening session was adjourned.

Thursday forenoon was taken up in arranging and adding to the exhibit of mineral and farm products.

At 1:30 P. M., the afternoon session was called to order with the seats well filled with intelligent men and women, a large majority of whom were engaged in practical agriculture. The first exercise on the program was a paper by your humble servant on "Breeds of Cattle, and their Adaptation to Particular Uses." Much interest was manifest in this branch of practical agriculture in a discussion following the paper. There were farmers present who supported their favorite breeds with much earnestness. Shorthorns, Holsteins, Jerseys and Herefords were defended in an able manner.

After a piece of music, Hon. W. T. Wright read a paper on "Dairy Farming." Although Mr. Wright is engaged in banking, he takes great delight in looking after the welfare of a fine herd of Jersey cattle. Mr. Wright placed great stress upon performance. A cow that will not make seven pounds of butter per week should not be retained on the farm. Improvement in quality rather than quantity of milk should be the aim of the dairyman. Some fine representatives of Jersey cattle are found in Mr. W.'s herd. This paper was also followed by a discussion on practical butter-making, in which the ladies took part. Mrs. Eaton thought the men did all the talking and the women did the work in butter-making—a point well taken.

Mr. Selder gave his experience in practical butter and cheese making.

The afternoon session adjourned, and a half-hour was taken up in social greetings.

Thursday evening's session was opened with an anthem by the choir, followed by a declamation by Miss Belle Henderson of Sparta.

Prof. Letcher was the first on the program with a paper on "Roads and Road-Building." This paper was listened to with much interest, all seeming to realize the great importance of having good roads, and appreciating the suggestions offered. When we consider the fact that this country has the fewest roads of any country in the world, the subject becomes an important one, and one which every thoughtful man should study carefully. The professor truly said, the degree of civilization of any country is marked to a large extent by the condition of her thoroughfares.

Music followed the paper, and T. Oliver read a poem entitled "The Vale of Grande Ronde," written by Judge Brainard, with whom all were acquainted.

Miss Bertha Bloch then rendered a vocal solo, which was followed by Dr. J. G. Lewis of Sparta, who gave a very entertaining description of Eagle valley and the mining interests of Sparta and vicinity. The doctor upon closing his address presented the Oregon Agricultural College with a fine collection of minerals which were on exhibition at the Institute. The exhibit of fruit and vegetables from Eagle valley was presented to the members of the press and the big watermelon to Prof. Letcher.

After Dr. Lewis had finished, a discussion upon diseases of cattle was brought up with special reference to tuberculosis. There was some fear that the disease might spread throughout the State, but this fear was put to rest when the vigorous measures taken by the State Veterinarian were understood.

After a vocal solo by M. M. Hall and a piano solo by Miss Fanny Wright, the chairman announced that there would be a stock show in the courthouse yard in the morning and invited those present to bring in their blooded stock.

As a result of this announcement, on Friday morning there were assembled in the yard some 25 head of thoroughbred cattle and horses representing the dairy and beef breeds of cattle and the draft and trotting breeds of horses. The exhibit would have done credit to a county fair. Across the street Mr. Shirley exhibited some big steers and a hog weighing nearly 800 pounds and some very fine Shropshire sheep.

Mr. Neal of La Grande exhibited as fine a herd of young Shorthorns as is often seen in many of the older States. His herd contains representatives of the Rose of Sharon, Roan Duchess and Young Mary families.

Many interesting notes might be made regarding this most creditable exhibit of live-stock, but space forbids. Mr. Shirley exhibited a two-year-old colt, which would command a long price in trotting circles.

At 1:30 P. M., the people assembled in the courtroom again and Prof. Washburn presented an instructive and interesting lecture upon fruit pests and methods of collecting and studying habits of insects. This subject is not so important to the people of this valley, for the orchards are practically free from these pests. There was not a codlin moth to be found; only a few green aphis were noticed upon visiting several orchards. The people are wide-awake to keeping out the pests and were much interested in learning how to do this the most effectively.

Mr. Hendershot followed Prof. Washburn with an entertaining talk upon things of general interest, dwelling especially upon the horticultural interests.

After this, Judge Goodall made some remarks upon diversified farming, and a general discussion followed, with the majority favoring this system.

It was not our pleasure to be present at the evening session, which was the last one of the Institute, but from those who did remain we learned that the session was equally interesting with each of the others, and a permanent organization was left with the determination that one or more Institutes would be held the following year.

To those who may chance to have the pleasure of visiting this beautiful and productive valley, and to become acquainted with the pleasant people who reside there, our advice would be not to fail to embrace the opportunity, for it is a treat indeed. H. T. FRENCH.

Agricultural College, Corvallis, Ogn., Sept. 29, 1890.

THE FIELD.

The Beet-Sugar Industry.

FIRST PAPER.

EDITORS PRESS:—The passage of the Tariff bill has opened up new avenues of industry which it would be well for our farmers and capitalists to consider. One of the many industries to be benefited is the encouragement offered to the producer of sugar.

California is the most favored in the way of natural advantages of any country on the globe, and should be able to compete in sugar supply without the aid offered by Congress. The bounty of two cents per pound, however, is offered to the entire country, and California can add her own natural advantages and thereby compete successfully in the race for supremacy.

It will be the object of the writer in these articles to begin with the culture of the sugar beet, in order that those who may become interested will have the experience of others as a guide.

Soil.

Although beets will grow in a great variety of soils, yet all are not equally adapted to produce this crop to perfection. The best soils are those in which neither clay, lime nor sand predominates, but those which contain these constituents in fair proportion, together with corresponding proportion of organic matter so mixed that the land is neither too stiff nor too light, and crumbles down after being plowed into a nice friable loam. The land should be cultivated to a depth of 16 inches, as the beet-root grows entirely under the soil, and should attain an average length of 12 to 14 inches.

Lime in land is necessary to the perfect development of the sugar beet. Light sandy soils are not profitable for beet-root crop. Clay soils when well cultivated will raise a succession of beet crops, with a steady improvement of the yield for seven or eight years. Peaty soils produce large, watery roots unfit for use. Sediment lands are the best in California, speaking generally. The best soils for sugar beets are precisely those on which other root-crops can be grown to perfection—that is, land which is neither too heavy nor too light, which has a good depth, is readily penetrated by the roots, and naturally contains lime as well as clay and sand, as well as organic matter in such proportions as in good friable loams.

Soils unfit for beet crop, on account of injurious salts that enter into the composition of the beet juice, are new timber lands grubbed within 15 years, clover lands, sheep pastures, and lands near salt works, volcanic and saline soils of all kinds.

Sowing.

The best time to sow the beet-root seed should depend upon the late rains and frost. The tender beet plant is easily destroyed by frost; at the same time, to obtain a good crop, the plant should secure a good start before the moisture has left the ground. It should be borne in mind that beets require a good deal of water the first two months to insure good crops.

In Europe, from 12 to 20 pounds of seed are required per acre, but in this State from 4 to 6 pounds is all that is necessary or ever desirable. The beets should be planted from four to eight inches apart in the rows, and the rows should be from 15 to 18 inches spaced.

Never grow beet crop from newly manured land.

Never graze sheep on beet land.

Sow early; but if frost-bitten, cultivate old plants under and resow.

Sow in rows 16 inches apart and 4 to 8 inches between plants. This will give about 40,000 beets at an average of 1½ pounds, or 60,000 pounds per acre.

Remove weeds as soon as possible and keep the ground clean.

Never remove leaves during the growth of plant. Twenty-four thousand beet-seed will weigh one pound.

The system adopted in this country, and that has proved most successful, is for the farmer to prepare the land, sow the seed and do all the work that can be done by teams. By this time the young beet has become quite strong, and the farmer then makes a contract with Chinese, Portuguese or Italians to take care of and to harvest the crop from this time, delivering them on board the farmer's wagon at a cost of $1.50 per ton—thus giving a good profit to the farmer.

B. B. CHANDLER,
Alameda, Cal. Mechanical Engineer.

THE Phœnix *Herald* says 5000 acres will be planted to oranges in the Salt River and Gila valleys this fall and winter.

THE Russian Government is about to send an expedition to Mongolia to explore the desert of Gobi.

PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

The State Grange in Session.

The 18 h annual session of the State Grange of California was opened in the Masonic hall, at Watsonville, on Tuesday, Oct. 7th, at 10 o'clock A M

The usual committees were appointed, and a recess taken till 2 o'clock.

The afternoon was spent in listening to officers' reports, which were referred to the appropriate committees.

In the evening there was held a public meeting at which County School Sup't Linscott, in behalf of the citizens of Watsonville, bade the State Grange welcome; Past Master I. C. Steele responded. The address of welcome in behalf of the Watsonville Grange was made by its Worthy Master, Edith Z Roache.

Tuesday night's dispatches state that the attendance was unusually large for a first day; that the local Grange is doing everything possible for the entertainment of its visitors, who cordially appreciate the hospitalities extended; that the session promises to be a very harmonious one, and the Grangers are apparently determined to do something for themselves.

The RURAL PRESS is duly represented at Watsonville by the Worthy State Secretary, who will render full reports later.

The Worthy Master's annual address is as follows:

Address of Worthy Master E. W. Davis.

Brothers, Sisters, Patrons Dear:—In bidding you welcome, it is proper to remind you that another year in the work of the California State Grange has passed. Another season of successes and disappointments is ours. Another turn of the great Grindstone of Time (which, while it may brighten at the same time cuts away) has moved us one year nearer the Great Change, and again we find ourselves in annual conference for the Good of the Order, for the love of home and friends, for the welfare of country, and in the interest of humanity. Of the successes of life, each thinks his share, alas! too small. Of the disappointments, each one feels his share all too large; and yet whatever our portion may have been, there is hardly one who would willingly exchange with his neighbor. For, as Shakespeare has well and truthfully said, 'tis better to "bear those ills we have than fly to others that we know not of." The Order of Patrons of Husbandry has, during the past 12 months, done much to increase our love for it; to strengthen our confidence in a farmers' organization; to convince all thoughtful people that the Order is not dead, nor sleeping, and to teach us *within* the gates that we must "Hope and Persevere." The work done by those sturdy Patrons and patriots, Bros. J. H. Brigham, John Trimble and Leonard Rhone, aided and encouraged by intelligent thousands, is enough of itself to keep up a growing love for the Grange. It is not worth while in this paper to review in detail the good work thus done for agriculture. To those *within* the Order it is known that many dollars have been saved and much knowledge given to the farmers of America by the Grange and its representatives. To those *without* the Grange gates, it is not yet their privilege to know when, or how, or by whom, this work is done. But it *is* their duty as loyal farmers, as co-tillers of the soil, as heads of thrifty, industrious, intelligent families, to identify themselves and their families in this work of political purification, of practical protection and personal education. For it cannot be truthfully asserted that the Grange does not do these things; ay, it does more than these.

The National Grange

Has anticipated our wants; knowing we wanted to build, it has given us material, tools, muscle, brains, and a keystone. That good things may be brought about, we are here to-day, and hundreds of thousands of sturdy and true Patrons in every State and Territory of this Union are laboring with us for the following objects: "To develop a better and higher manhood and womanhood among ourselves. To enhance the comforts and attractions of our homes, and strengthen our attachments to our pursuits. To foster mutual understanding and co-operation. To maintain inviolate our laws, and to emulate each other, to hasten the good time coming. To reduce our expenses, both individual and corporate. To buy less and produce more, in order to make our farms self-sustaining. To diversify our crops, and crop no more than we can cultivate. To condense the weight of our exports, selling less in the bushel and more on hoof and in fleece; less in lint and more in warp and woof. To systematize our work, and calculate intelligently on probabilities. To discountenance the credit system, the mortgage system, the fashion system, and every other system tending to prodigality and bankruptcy."

Those of us who have lived the most closely to this schedule, as propounded by the National Grange, have succeeded most liberally. Success hardly attends without management. True, now and then some one wins honor and wealth without apparent toil, but such an one is rarely ever a farmer. To the farmer, honest toil seems absolutely necessary if he will eat his bread and pay his taxes. But it is an admitted fact that *intelligent, honest* labor wins more laurels than ignorant, honest labor. Hence it is that Patrons ought to be more than ordinarily successful; for each Patron has *inside* opportunities for gaining both practical and theoretical information, and while "*Money* makes the mare go," *brains* move the world. To the Grange, then, may the agricultural world look with pride and hope for the relief which, as a class, they so much need. But you ask *how* and when can this be accomplished, and I answer,

By Organization—By Confidence.

We may have all the organization it is possible for man to suggest, but if we fail to have *confidence* in that organization and in the membership that compose it, little will be accomplished. On the other hand, we may have all the *confidence* it is possible for one human being to have and to place in another, and if we fail to have a compact, intelligent, harmonious organization, we will fall short in results.

Thus it seems that if we want to realize the greatest possible results, we must have a perfect, confidential organization. Such an organization the farmers of America have in the Grange. By it, through it, and with the Grange, we have scattered the seeds of social, political, financial, moral and individual reform in soil that is bearing a hundred-fold. The recent visit and session of the National Grange within the borders of our fair and fruitful State has done wonders for the Order. Those brothers and sisters who came from their far-away homes to join with us in the good work of reform have left, and received impressions which are growing and ripening into abundant harvest. From Maine to Georgia, and from the Atlantic to the Pacific, the voice of the farmer is being raised, to be heard, respected and obeyed. The demands of agriculture are listened to even in the halls of Congress. Ballot reform, legislative relief, and political position are now the promised panacea which the politician has ready to offer the sturdy farmer. Truly the world moves. But we of the Grange are not yet satisfied. There is more to be accomplished and *we* are to aid in the work, and *we* are to succeed.

Our Business Relations.

The Executive Committee has made an effora to assist the members of the Order in Californir in their purchases and in the sale of thei' products. Thus far the "Trade Card Plan' has not been as generally approved by the subordinates as was to have been expected. The further and definite consideration of that (or, if possible, of some better and more practicable) plan is hereby most respectfully brought to the consideration of this State Grange. Let the subject be considered in a spirit of fairness, and let no hasty, selfish or unwise conclusions be reached. Any business relations that may be assumed should be carried out in a just and honorable way by the members of our Order. If there is to be any bad faith, or any violation of agreement, let it come from those not members of an Order whose cardinal virtues are based on Faith, in Hope, in Charity and with Fidelity.

Grange Visitations.

At the April, 1890, meeting of the Executive Committee it was agreed to visit each subordinate Grange, if possible, by some one representing the State Grange. Accordingly, the State was districted and Deputies were appointed for each of said districts. The plan in the main has been successful, but owing to diffidence on the part of some of the Deputies (who have waited for *special* invitations from the Granges in the territory assigned and owing to the neglect of such Granges to send these invitations), there are a few Granges which have not been officially visited. The Worthy Master has gone to each and every Grange where invited, when health, weather and other engagements did not prevent. California is a large State. Most of the Granges meet on Saturday and not more frequently than twice a month. Hence it is absolutely impossible, on the theory of meeting with Granges at the *regular* meetings, for any one officer to meet with one-fourth of the subordinates during the year. In the hope that more and better work in the way of visiting subordinates may be done another year, it is suggested that at this session of the State Grange, a field program of dates and places be prepared for the spring campaign of 1891. Let the subordinates know just when the visitors are to be present with them. Let competent speakers be employed. Have open meetings wherever and whenever practicable, to be followed by a closed meeting. Put the responsibility of making these meetings a success right on each subordinate Grange and its officers. Surely they can't, for personal reasons alone if for nothing else, afford to let their own neighborhood be neglected. This plan will save much expense in the way of traveling and much time to the officers, and certainly, any subordinate is willing to have at *least one special* meeting during a year for the Good of the Order. Other fraternal Orders have found it necessary to adopt a plan similar to the plan herein briefly outlined. The further development of this suggestion is sincerely referred to this body either as a committee of the whole or through some of its special committees.

The Finances

Of the State Grange are in a fairly healthy condition. The Executive Committee, without being parsimonious, have tried faithfully and successfully to be economic. They have been willing to spend money whenever and wherever in their judgment it seemed the Good of the Order warranted such expenditure. They have allowed to organizing Deputies, or any one securing the names, the sum of $15 for a minimum charter list, and for all names up to and including 25 they have allowed an additional dollar for each name, thus making $25 for a new Grange with 25 or more charter members. The committee have also allowed the actual expenses of Deputies, but have in no case allowed any per diem to Deputies. For further and more specific information on the subject of Grange finances, your attention is directed to the reports of the Executive Committee, the Worthy Secretary and the Worthy Treasurer.

Lecture Fund.

The ten cents per capita, quarterly dues, paid by subordinates for the exclusive use of lecture expense has been carefully husbanded, and when spent has been economically expended. As a consequence, there was, Oct. 1st, $1200 29 on hand. If the plan heretofore proposed, or some better one, for reaching the subordinates can be adopted by this body, it seems to me that the State Grange of California will be able to show the farmers of the State how important is the work of the Order and that self-protection demands the organization of many new Granges.

Farmers have had heavy State and county taxes to pay for the past two years, and as their crops have been comparatively short and the prices not too high, it is important that they unite, to the end that each one's bank account may be swelled. In our desire to be economical and careful, we must not, however, cripple our organization by refusing the necessary sustenance. Let this subject receive your prayerful and thoughtful consideration and let not the action taken be such that we may be accused of being penny-wise or pound-foolish. In referring this subject to you, it is respectfully called to the attention of the Committees on Finance, on Constitution and By-laws, on Good of the Order and to the Executive Committee.

Amendments.

The Constitution of the National Grange has been so amended that each State Grange may regulate its own initiation fee, provided the fee be not less than $1 for a man and 50 cents for a woman. At this session the California State Grange may consider that subject, and the Committee on Constitution and By-laws ought to give the matter their thoughtful attention. Brother Past Master S. T. Coulter has presented an amendment to the Constitution of the State Grange. Due and legal notice has been given each of the subordinate Granges of this proposed amendment. This amendment ought to pass, for as it is, our Constitution, on the subject of dimits, is in conflict with the rulings and decisions of Worthy Master J. H. Brigham of the National Grange,

Education.

The Grange everywhere fosters the cause of education. The children, not of the farm alone but of the land, are our special wards. We of the Grange know full well that unless the softening, sweetening, elevating influences of education are liberally bestowed, fairly enjoyed and generously encouraged, our homes, our families, our country must perish. Hence it is we urge on the membership everywhere to interest themselves in maintaining good, efficient, free public schools. We don't want the young taken from the schoolroom before the mind has received that gentle care and training which will insure dignity in labor and honesty and virtue in manhood and womanhood. We want the public schools of California to be as good as—yes, the best of—any under the sun. We demand that the fountains of free education shall run clear and pure and bright from every hillside, through every valley and in every section of this golden sunset land—a land where sweet children are to be found and where father, mother, sister, brother, all who hold each other dear, find a home. We of the Grange are willing to be taxed heavily—ay, perhaps some think too heavily—that education may be as widely diffused as possible; and there be those in this Order who would make some reasonable educational test a basis for voting at general elections. Of the Agricultural College of the State University at Berkeley, I am unable to give any detailed information. Prof. E. W. Hilgard, in charge of that department, keeps each of you specially well informed by the publication of the agricultural bulletins.

There is one thing in connection with the University of California that is a source of regret to the alumni and many lovers of that grand educational institution. It is this: that the presidency of the University has been so many times made vacant. Though the University of California is less than a quarter of a century old, it has had no less than half a dozen presidents. It seems to many that this constant changing of the executive head is dangerous. Won't the Board of Regents get for us of California a big-hearted, broad-minded, sociable, educated, progressive president? The people will be loyal to such a man. We have had such men in the past. Other leading educational institutions have such men now. The University of California needs such a man. Where is the farmer's son who can fill the requirements? And right here it must not be forgotten that though the State Grange of California has passed its 17th birthday anniversary, not one of its leading members has ever been appointed to the office of Regent of the State University. Both of the great political parties have had Governors, but neither of them has been able to see a Patron who would make a competent Regent. The attention of the candidates for Governor, as well as the members of this Order, is hereby respectfully called to this (to farmers) important subject. Why should the farmers of California expect much from an institution *in* which, *about* which and *over* which they have no voice, vote or control? Let us look to and then patronize the University of California!

It is *our* Alma Mater. We pay for it; we must support it. Our boys and our girls need its influence, need its advantages, and need its facilities, to educate them for the duties which will devolve on those who are to live in the twentieth century, and who, while living, would honor father and mother.

Legislation.

No subject is of more importance to the members of this Order. Individually and collectively we need the helping hand of wise legislation. The farmers ask no special legislation for themselves as a class; but they do ask, yes, and they *demand*, such legislation as will place them and their vocation on an equal footing with all other men and with all other vocations. This they have not had. This they now demand. We need legislation on the question of insurance; we need it on the subject of taxation; we need it for the betterment of our public highways; we need it for the purity of the ballot and the freedom of the electoral right; we need it to be even with corporations who have had favorable legislation for a quarter of a century. That we may the more certainly secure some if not all of these things, it is sincerely hoped this body will send a most competent and energetic committee to Sacramento during the session of the Legislature. Such a committee will find ample field for all their talent and for earnest hard work. But I am sure good results will follow to the people of the entire commonwealth, regardless of party, politics or vocation. Surely we can prove to the world not only that we believe in co-operation, but that we practice and profit by it.

Grange Literature.

Nothing has done more to advance the cause of the Grange, and thereby the cause of humanity, during the past decade than the printed page. The orator and Grange speaker is a necessity. His voice, his gesture, his smile, his presence, add pleasure to the meeting and impart wisdom to the membership. But such information, however good, is only for a favored few. The speaker cannot be with you more than a small fraction of the time, for his work and yours prevent it. But the printed page is with you 52 weeks of the year. It is with you by night as well as by day. Its speech is silence, but its silence is golden. Every farmer ought to take one, two or three good Grange or agricultural papers. Have one for the boys, another for the girls, and the third for father and mother. There is little danger of getting too much good news. Welcome the *News*, for it comes from the North, from the East, from the West and from the South, and you know this Order recognizes no sectional lines. Our Grange organ, the PACIFIC RURAL PRESS, has done faithful work for the Order. It deserves a liberal patronage from the membership. Subscribe for it, if you do not now do so; read it and know that you can help the PRESS as well as be helped by it. In this connection I cannot refrain from asking (nay, I would beg of the membership) for correspondence to *our* paper. There are subordinate Granges in this jurisdiction from which not one word of correspondence has appeared in the RURAL during the past year. This seems to me to be wrong—not alone wrong to your own Grange, to the State Grange, to the Order in general, but to the general reading public, to the PRESS and to the cause of education. We must not put our light under a bushel. And, again, I do earnestly hope the Masters and Secretaries especially, and all Patrons, will furnish proper Grange news and items to their local papers. Newspaper men are our friends. They want news. We can furnish many "notes" that will be of interest and profit to readers, and in so doing help the local Grange, build up the Order and disseminate useful data. Try it.

Woman's Work

Is never done. At home, as well as in the Grange, there is no limit to the queenly, refining and purifying influence of woman. Our Order, chiefest among all Orders, recognizes this great power and influence. We accord all honor, all station, all right that we ourselves possess in the Grange, to woman. Her work and her presence in our council-room and at our annual conclave is not any less welcome nor any less appreciated than it is by the family hearthstone, at the Harvest Feast, or at the bedside of the sick. With us, she is always welcome; and it suggests itself to me that if the sisters of the Grange will but undertake the work at this session, they can devise ways and means for holding a series of district meetings, picnics and reunions that will both surprise and astonish the male members of the Order; in

fact I am sure they can plan, and carry out the plans, for a most successful State picnic and Grange reunion. The sisters can get better terms from transportation companies; they can secure and prepare better exhibits; they can carry to a success this line of Grange work. Of one thing you may be sure: wherever and whenever the sisters congregate, the brothers will attend, on short notice, if they are invited or even permitted. Sisters, don't you believe this field of work is waiting for your care?

Experimental Stations.

Every subordinate Grange in the United States is an experimental station; but unlike the stations supported by the General Government, our stations are experimenting, and successfully, too, with the elements of Nature and the brightest and best specimens of human nature. We deal with mind as well as with matter. We turn the clod of Ignorance with the lever of Intelligence, and warm to life the seeds of Development with the sunshine of Brotherly Love. We irrigate with the sympathetic tear, while the pulsations of charitable hearts, the gifts of willing hands, and the fidelity of pure womanhood and honest manhood are the outgrowth, the fruit-bearing and grain-producing results, of our experimental stations.

The Only Grange Hall

Dedicated in California during the year was built by the members of Two Rock Grange, in Sonoma county. The Patrons of that Grange deserve unstinted praise. Their example is worthy of all imitation. This new hall is especially adapted to the needs of the Grange. It is sufficiently large, very conveniently arranged, and is a standing monument of the Faith, Hope, Charity and Fidelity of the true and tried Patrons of Two Rock. The hall was dedicated, according to the rules and usages of the Order, on the 18th day of September, 1890. Long may it stand, a shelter and Grange Home for its members; an ornament to the quiet and orderly neighborhood which surrounds it; a granary for golden sheaves and golden thoughts. May its doors swing on noiseless hinges and always open to the mystic knock of Worthy Patrons. May storms of discord forever pass it by, and may its walls echo and re-echo with sweet songs, kind words fitly spoken, and the laughter of those who are really true, beautiful and good.

Our Dead.

While we, who sit here, have been working for the Good of the Order, that other messenger, Death, has stolen from among us some of our cherished ones. While we will miss their faces and will listen in vain for their familiar voices, we will not forget them. Though we cannot have them back, we can and will profit by their good words, spoken to us in days agone. While we know the silver cord is loosed and the golden bowl broken, never again to be united on earth, still we have that faith which teaches "The Lord is my Shepherd; I shall not want," and that we shall, if we live properly, join those who have gone to the Great Grange above and "dwell in the house of the Lord." We shed the silent tear and lament the death of Bros. L. H. Fassett, P. M. of Florin Grange; Morris Toomey, P. M. of Sacramento County Pomona Grange; O F. Alley, P. M. of San Jose Grange; S. H. McCrary, P. M. of Potter Valley Grange; W. D. Ashley of Stockton Grange, Samuel Myers of Stockton Grange, Julius Chester, P. Secretary of California State Grange and a member of Eden Grange; J. Jenks of San Miguel Grange; and Sisters A. Kane of American River Grange, Eliza Brooks (dear old Grandma Brooks!) of Temescal Grange, and Silas M. Martin of Two Rock Grange.

Appropriate resolutions ought to be reported, the memorial pages dedicated, and the solemn and fraternal ceremonies observed.

Grange Life.

During the year past the Order has grown in this jurisdiction; but the membership has not increased as it should have done. Stimulated and honored as the Patrons of California were by the meeting of the National Grange in our midst, in our fair capital city last November, we had hoped for a larger Grange harvest. In fact, the promises were very encouraging; but the horrid winter, the late spring, the shortness of many crops, the damage done to property, the heavy taxes and comparatively dull times (all of which we hope are over and past), conspired to keep many from uniting with the Grange who had decided to do so, and these facts also kept several sections from instituting new Granges. But despite it all, we are pleased to report Gridley Grange, organized by Bro. B. F. Frisble, Jan. 2, 1890, with 29 charter members; Selma Grange, organized Feb. 1, 1890, by Bro. A. P. Merritt with 21 charter members; Hanford Grange, organized by Bro. A. P. Merritt, March 22, 1890, with 16 charter members; Grimes Grange, organized April 10, 1890, by Bro. D. Flint, with 28 charter members; Waterloo Grange, organized April 14, 1890, by Bro. Wm. L. Overhiser, with 52 charter members; Orland Grange, organized April 15, 1890, by Bro. Dan'l Flint, with 22 charter members; Anderson Grange, organized April 16, 1890, by Bro. Flint, with 14 charter members. The following named Granges, formerly dormant, have been reorganized and are now in a thrifty and useful condition. They feel themselves a part of this great organization, and we may reasonably expect their valuable aid, advice and co-operation: Carpinteria Grange, reorganized by Bros. O. N. Cadwell and Delos Dimmick, Nov. 13, 1889, with 16 members; Millville Grange, reorganized by Bro. B. F. Frisbie, Jan. 18, 1890, with 31 members; Lockeford Grange, reorganized Feb. 13, 1890, by Bro. C. W. Norton, with 20 members. While this Grange harvest is not as large as we would like to have had it, yet, when we think of the many who have joined the Order by initiation into other subordinate Granges, and when the review of all the circumstances is made, there is much to be thankful for, and there is no reason to be afraid or discouraged. Let us, at this session, devise ways, provide means, secure persons, advertise our work, rely on justice and truth for fighting weapons, keep our Faith, renew our Hope, practice Charity, and with Fidelity, pull for the shore, and there plant the Grange banner. Do not, I pray you, cease in your work till every section of this great State where agriculture thrives and where agriculturists reside has a subordinate Grange.

A Glorious Gift.

Col. J. B. Armstrong, a Sonoma county citizen, proposes to give to the people, in perpetuity, 600 acres of redwood land, of which 400 acres are densely covered with a giant growth of timber, almost the last representative of these big woods on Russian river. The site is near the town of Guerneville, about 70 miles northwest of San Francisco. Two hundred acres are set apart for gardens, conservatories, etc., for propagating the flora indigenous to this coast, to be exchanged freely with other botanic gardens in this and other countries. The gift will be placed in the hands of six trustees, with an Endowment Fund of $100,000 cash, the increase from this fund to support the garden. The 400-acre forest will be jealously guarded for all time against the ruthless slaughter of the ax, and it will forever be kept as a forest in all its majesty and beauty, except for a few winding drives and now and then, in sunny spots, a cluster of flowers on a border. The donor is obliged to get an Act of the Legislature to legalize the gift to posterity, as it does not come under the head of a charity. All honor to the donor. The Grange is fully appreciative of such a donation, for it is sure to be one of the out-of-door attractions of our wonderful State. Generation after generation will venerate the giver, and our children and our children's children will seek health and inspiration at this natural laboratory.

Conclusion.

Without mentioning names, for there would be many, permit me at this time, in this way, with a sincere and devout heart and with emotions of deepest gratitude, to return thanks to all who have so kindly received me and so generously, patiently, promptly and faithfully aided in the work we found to do. For my many shortcomings you have had and shown abundant excuses; for any meritorious word or act you have been more than fully appreciative. And now as the labors of this session begin so auspiciously, may we, one and all, think wisely, act manfully, legislate discreetly, speak gently, live temperately and work faithfully; and when our life-work is done, may it be well done and as pure as the snow where our foot leaves a mark, but not a stain.

Fraternally submitted,

E. W. DAVIS, W. M. C. S. G.

The Grange and Politics.

[By M. WHITEHEAD, National Lecturer.]

In a number of the States of our Union the fall elections are drawing near and the campaign grows warmer as the day for casting the ballot approaches. The party lines are drawn as closely as possible by the party managers. The "machine" is kept in good running order, and citizens who "belong" will go through the form of depositing the ballot with little thought as to the qualifications of the candidates for the positions. Parties are all right in their places, and the more equally balanced they are the better, for it keeps them on their good behavior; but we should see to it that the people run the party and not the party the people. The voters are greater than any party. Mr. Emerson once said: "The great end of all political action is to secure morality as the basis of all political action," and Thomas Jefferson wrote: "The whole art of Government consists in the art of being honest." We need honesty in politics in these days, and honest men in all political parties. The Grange teaches the farmer to purify his own party, and not to believe the wrong is *all* on the other side. "It is his duty to do all he can in his own party to put down bribery, corruption and trickery, to see that none but competent, faithful and honest men, who will unflinchingly stand by our industrial interests, are nominated for all positions of trust." Here is a plain duty for all members of the Grange, for all farmers, for all good citizens.

So long as men serve their party in preference to their own sense of right and justice, so long we must suffer from unjust legislation. It lies with the people to demand that the best men be nominated for office, and then go to the polls with the determination to support the best men, without regard to their political beliefs. Farmers in the past have spent all their time in labor and producing crops, and have devoted too little time to studying what the laws and politicians are doing for them, but a change is coming, and thank the Grange for it.

And yet the Grange is not a partisan, political organization, and *cannot* and *must* not be used as such. Our laws plainly say: "No Grange, if true to its obligations, can call political conventions, nominate candidates, nor even discuss their merits in its meetings." Don't forget this and mix the Grange up with other farmers' organizations that do send delegates to nominating conventions and take partisan, political action. "And yet," says our Declaration of Purposes, "the principles we teach underlie all true politics, all true statesmanship, and if carried out will purify the entire political atmosphere of our country." How and why? By learning well in the Grange *school* the true lessons of political economy, and then going right out from that school, just as school children go out in the world of practical business life, and *applying* the lessons we have learned by affiliating with any political party that will best carry out our interests. This is being done more and more; and so the Grange, without being partisan, is having a grand, good influence on all political parties, and politicians quick to feel the pulse of *educated* public sentiment are more than ever willing to give agriculture its share of representation in the halls of legislation, and laws that will promote this greatest of all industries.

Our forefathers wisely established the free school at the same time that they established the free ballot. A ballot in the hands of an ignorant voter is as dangerous as a gun in the hands of a child—dangerous to himself and to those around him. As our population increases we must have an increase and not a decrease of intelligence, or our free institutions cannot be sustained. There are generals who can command a brigade who are failures in handling a corps. There are men who can conduct a small business in a country village who would fail in carrying on a large wholesale business in a city; men who would make excellent mayors of a city of a few thousand inhabitants who could not act as the Governor of a State. And so with our increasing millions of people and voters, we need more intelligence, higher statesmanship. The thousands of Granges scattered all up and down our land are the schools of political economy, the schools of citizenship, from which are going out more intelligent voters and legislators, State and National, prepared to grapple with the new issues that an ever-advancing age is bringing to the front.

What an important mission has the Grange! How can any farmer who loves his country any longer say "It is nothing to me"? He *has* a duty to unite with his neighbors for the good of his community, of his State and of his country. There *is* a responsibility here that no one can lightly pass by or attempt to shirk. We are held accountable for our sins of *omission* as well as those of commission.

The Grange growth of this year has been most satisfactory. Three hundred and seventy-two new Granges have been organized this year (to Sept. 1, 1890). Its growth is healthy, solid and sure. As other and temporary organizations pass away, the farmers having learned of some of the benefits of organization, take up the Grange and go forward "united by the strong and faithful ties of agriculture" to benefit themselves, their country and mankind.

Ballot Reform—An Object-Lesson.

The Ballot-Reform League, the Federated Trades and the Single-Tax Society held a joint meeting at Metropolitan hall in this city, Monday night, in advocacy of the Australian voting system. To an audience of about 2000 persons, Judge Jas. G. Maguire and T. V. Cator, Esq., explained and commended the new system, of which a practical exemplification was then given.

A row of little stalls had been erected on the stage for this purpose, with railing and ballot-box in the same positions as they would be in a real election. At one end of the railing was a table where sat the registration clerks and the keeper of the ballots; at the other end stood the ballot-box guarded by the proper officers.

In the illustration of the working of the system the voter stepped up to first table, where the registration clerk saw that he was on the voting list, and the ballot clerk tore a ballot off the pile of ballots bound in book form, and gave it to him. The voter then entered one of the little stalls back of the railing, marked his ticket where no one could see him, passed on to the ballot-box, deposited his ballot and went out. About 100 men voted within 15 minutes, thus refuting the allegation of its cumbersomeness.

After the voting, questions were answered as to the protection afforded the voter in various circumstances.

Notes on Fairs.

Stockton—2d District.

The 30th annual fair of the San Joaquin Valley Agricultural Association (2d district) opened auspiciously at Stockton, Tuesday, Sept. 23d. The pavilion, under the management of Mr. F. Arnold, had been decorated as never before, the whole interior being festooned with bunting of various shades—red, blue, orange, light green, white and pink. In the art gallery only white bunting was used, with a beautiful circular center-piece of pink drapery. In the western part of the building, on the lower floor, where the vegetable and fruit displays were located, corn was brought into requisition for decorative purposes with very pleasing effect. When lighted by electricity and thronged with visitors, promenading to the music of the Sixth Regiment band, the pavilion presented a scene of rare brilliancy.

The annual oration was delivered by the veteran journalist, Will S. Green of Colusa, who spoke admirably, not to say rapturously, of Californian agriculture.

In remarking on the agricultural exhibits in the pavilion, the *Independent* says: It has spread abroad that California is not a good corn country, but one would never suspect it from the great array on exhibition, the size of the ears and the plumpness of the grain.....The potato exhibits are of wondrous size, white, smooth-skinned, and in great variety, with a few red "merinos" to vary the color. Sweet potatoes keep the other tubers company, some of them nearly as large as the rutabagas that lie beside them.....Watermelons, that delightful product that gave Lodi fame, form a feature by themselves, while dried fruits, jellies and preserves look as inviting and tempting as the fresh product, and delight the eye almost as much. Another great product of San Joaquin county, the onion, is well represented in large red and silvery bulbs that look almost as tempting as the fruits. The squash, too, is there, not the mammoth, overgrown article, but the medium-sized, mealy Hubbard of from 60 to 100 pounds.

The olive is present as well as its product in oil, but the display of esculents is meager, very little celery, cabbage or lettuce being on exhibition.

In the Bahach display, about $2000 worth of products are gathered. Besides boxes of the prepared powder, there are great bunches of luscious grapes of over a dozen varieties, some of the largest quinces ever seen, and dried fruits, all grown on what was but recently a desert.

The silk products of the county are represented by a case full in various forms of beauty, in white and golden, yellow, and a quantity of cocoons.

Fresno—21st District.

The fourth annual fair of the 21st Agricultural District opened at Fresno on the 1st inst. with creditable displays and good attendance. The children of the public schools had a free day and were out in force, 3000 strong, viewing the exhibits and enjoying themselves highly. We glean from the *Republican* the brief notes which follow.

The stock parade in former years may have excelled in numbers, but never was so high a grade of horses or cattle shown. The horses included heavy Normans, English hackneys, Cleveland bays, roadsters, racers, draught horses and carriage horses, single and in teams, and they were a delight to look at. Then came the cattle, Polled Angus, Durham, Galloway, Herefords and humbler ungraded cattle of the local farms. The large crowd that witnessed the parade gave frequent evidence of their admiration of a showing which indicated that the farmers are on the up-grade in the rearing of both horses and cattle.

Poland-China porkers were exhibited by four persons.

The poultry department was full and exceedingly interesting, the display of pigeons being especially fine.

Under a tent, between the poultry and the pavilion, was housed a considerable display of vehicles and agricultural machinery, mainly made by two people, Mr. Porteous of the Fresno Agricultural Works and Scovel Bros. There were buggies, wagons, plows, reapers, harrows, cultivators, pumps, engines, etc., in profusion. This department was largely visited, the farmers taking an especial interest in the exhibits.

The second day of the fair was the most successful the company had ever known. The attendance was large and the various departments had filled up quite perceptibly. This was especially true in the pavilion, which proved very attractive.

The center of the building was occupied by a pyramid of raisins, intended to represent Fresno's leading industry. Mr. Denicke had a handsome shield of figs.

The display of apples, peaches, pears, quinces and prunes was the best ever seen at a fair here. W. E. Cowan showed 10 varieties of apples, 4 of peaches, 13 of pears, 2 of quinces, Japan plums, Japan persimmons, the Silver prune and Coe's late red plum; also some fine stalks of Egyptian and American corn.

A. Littlefield and Thomas Downey of Pine Ridge had outputs of apples that made the mouth water.

Mrs. S. C. Waltz made a very inviting display of preserves, jams, etc.

Mrs. W. N. Snow also had a fine lot of canned fruit, jellies and jams and the only exhibit of fresh grapes in the pavilion, including Zinfandels, Malaga and Muscats.

Mrs. J. O. Colwell had an interesting collection of botanical and mineral specimens, and some marvelously fine ferns were exhibited.

The vegetable exhibits of Vincent, Chittenden & Co. and J. H. Rogers of Oleander had the field exclusively to themselves.

Mrs. W. More Young made an admirable display of fresh-cut flowers, mainly roses.

Steve U. Mutrovich showed a case of silk cocoons raised in Fresno.

VICE-PRESIDENT MORTON has put a stop to the sale of wines and liquors at retail in the Shoreham at Washington.

A Reason.

Written for the RURAL PRESS by MARTHA T. TYLER.

Ten dolls had Mollie; in a row
She placed them all for my inspection.
This one was Mrs. So-and-So
And that, forsooth, a poor connection.

A boy, a baby and a nurse,
A pretty miss of sixteen summers;
A lady with a sealskin purse,
A sailor and a pair of drummers.

"Americans," said I, "all these—
Blue eyes and flaxen ringlets, Mollie;
Would you, dear, like a Japanese—
A little yellow, foreign dolly?"

"Not so? Now why?" "Because," said she,
Arranging Mrs. S.'s wrapper,
"Why only just because, you see—
Why *just* because I'm not a *Japper*."

The Right Will Right Itself.

When overcome with anxious fears,
And moved with passion strong,
Because the right seems losing ground
And everything goes wrong,
How oft does admonition say:
"Put trouble on the shel';
Truth will outlive the liar's day,
And Right will right itself."

By all the triumphs of the past,
By all the victories won,
The good achieved, the progress made,
Each day, from sun to sun;
In spite of artful ways employed
By perfidy and pelf,
Of one thing we can rest assured,
The Right will right itself.

Unshaken in our faith and zeal,
'Tis ours to do and dare,
To find the place we best can fill
And serve our Maker there;
For he is only brave who thus
Puts trouble on the shelf,
And trusts in God, for by His aid
The Right will right itself.

—*N. Y. Ledger.*

Courage and Chivalry.

Miss Comfort Walker went boldly ahead, opened a first-class boarding-house and made money.

"Men go on credit," said she, "and why shouldn't women? At the year's end, if I can't any more than pay expenses, I'll try something else."

But at the year's end there was a snug little balance in Miss Comfort's favor, so she took heart and continued.

"Oh, it's you, is it?" said Miss Comfort as she perceived Ellen O'Brien, the washerwoman, in the basement hall.

"Yes, it's me—worse luck, Miss Comfort," whimpered poor Ellen.

"And what's the matter?"

"It's me bill up-stairs, Miss Comfort—the boarder in the second story front, with the gay goold shirt studs an' the green and yellow stones in his sleeve buttons. Nine dollars and sivinty cents, Miss Comfort—six weeks' washing and ironing—and now, when I makes bould to ax him would he be pleased to pay me, he tells me it isn't convanient; and when I tells him how sore I need the money, he up and gets mad and says I shan't have it at all."

Miss Comfort stood listening with knitted brow and troubled eyes.

"Have you your bill with you, Ellen?" said she after a moment's hesitation.

"Jimmy wrote it out, all nate and proper," faltered Ellen, producing a crumpled slip of blue paper from her pocket.

"Give it to me," said Miss Comfort, "and you come here this evening at eight o'clock, and you shall have your money."

Ellen shook her head disconsolately.

"And thank you all the same, Miss Comfort, dear," said she, "but you can't get it no more'n we can get blood from a stone."

"We'll see about that," said Miss Comfort.

She went slowly up-stairs with the little piece of paper in hand.

"It's a shame," said Miss Comfort.

Leotard Carlyon was Miss Comfort Walker's best boarder, with the single exception that, up to the present moment, his twenty-five dollars a week had been in the future. Now it so chanced that one reason for her reposing so much confidence in Mr. Leotard Carlyon, the new boarder, was that he was the nephew and heir apparent of Caleb Carlyon, the rich banker from whom she rented her brownstone house at the trifling consideration of $3000 per annum.

"He can't be a thorough-going impostor," said she to herself, "with such a relation as that."

So she went bravely up to Mr. Carlyon's room and tapped at the door.

"Come in," he called out. "Oh, it's you, Miss Walker, is it?"

Miss Comfort advanced valiantly with the bill in her hand to where Leotard Carlyon reclined languidly amid a heap of sofa pillows with a newspaper in his hand.

"Don't you think you can settle this little account, Mr. Carlyon?" she said. "The poor woman needs it very much."

"She has been to you with her story, has she?" snarled he. "No, I can't settle it! And I wouldn't if I could. It's worth more than the money to me to be so badgered and beset. Have the goodness, Miss Walker, for the future to remember that I am able to attend to these little affairs for myself without any interference."

"That means that I am to attend to my own business," thought our little housekeeper, as she retreated, coloring and rather indignant. "Well, I will."

So Miss Comfort tied on a little brown velvet hat she had trimmed with scarlet poppies and brown autumn leaves, and set out bravely for the Mount Orient bank.

The clerks stared at her a little curiously as she was shown into the president's room at the back, where Mr. Carlyon sat, straight and upright, with blue eyes like a falcon's and hair slightly sprinkled with gray.

He elevated his brows at sight of Miss Comfort Walker.

"I believe your rent is not due for a month yet, Miss Walker," he said, with the cold courtesy which always made her feel as if he were incased in an armor of ice.

"No," said the little lady, courageously; "but it's about your nephew, Mr. Leotard Carlyon," and she told the story of Ellen O'Brien and her wrongs.

"He ought to pay the money," said Miss Comfort, excitedly. "He must be made to pay the money."

"May I ask, Miss Walker, why you interest yourself in this affair?" the banker asked, with a cold, measured calm that contrasted strangely with the little woman's heat and flurry.

"Another way of telling me to mind my own business," said Miss Comfort to herself. But she kept up a bold front and answered:

"Because I think no man has a right to cheat a poor woman out of her hard-earned money."

"Cheat is a strong word, Miss Walker," observed her landlord.

"It's the only correct word in the case, Mr. Carlyon."

"Perhaps he is owing something to yourself?" questioned the banker keenly.

"Yes, sir," Miss Comfort answered; "but it isn't that I came about. I am able to lose little if it should be necessary; but this poor woman is friendless and alone."

Mr. Carlyon glanced at his watch. Miss Comfort turned toward the door.

"I'm sorry that my time is no longer at my own disposal," said he courteously.

And Miss Comfort went away almost crying.

But that evening, just as Miss Comfort was beginning at her account-book, a ring at the door, and Mr. Carlyon, the banker, was shown in. Miss Comfort rose, confused and flattering.

"Miss Walker, pray don't let me disturb you," said the banker. "I have only dropped in for a little call. You showed yourself to me to-day as a true-hearted, noble-natured woman! You need no longer distress yourself. The bill is paid; and now, if you are at leisure, I'll just take my evening cup of tea with you."

How pleased Miss Comfort was as she poured the fragrant Young Hyson into her great-grandmother's china cup, decorated with butterflies and oblong scrolls of gilt and violet; and how she kept wondering all the while how Mr. Carlyon, the great banker, could take such an interest in her little affairs.

But if she had only known it, Mr. Carlyon seldom came across a true, real heart in his complicated business transactions.

* * * * * *

"It's not true," said Mr. Leotard. "My uncle would never make such a fool of himself at his age. Why, he's fifty if he's a day."

"Only forty-four," said Mrs. Creswick. "But of course it must be a great mortification to you, Mr. Leotard, who have always been looked upon as his heir, to think he is going to marry that little woman who keeps the boarding-house. But it is true! I saw the wedding-ring myself."

Leotard Carlyon gnawed silently at his mustache. If he had paid that washerwoman's bill, Miss Comfort Walker would not have gone to his uncle, and he would have been the rich banker's heir.

He wished he had paid the washerwoman.—*Hartford Times.*

CHARGES SUSTAINED.—Immigrant inspector: We have information that you come over here on contract. Lord Fitz-mud Fitz-mud (indignantly): Aw-what-er-er-er? Why you wude, impudent fellah! I come over here to marry Miss Angelina Goldust of New Yawk. Immigrant inspector (triumphantly): Well, what's the matter with yer—ain't marriage a contract? You'll have to go back.—*Life.*

"THE KING'S DAUGHTERS."—There are said to be now nearly 200,000 of the "King's Daughters" in the land. Mrs. Margaret Bottome of N. Y., their founder and president, has just become one of the editors of the *Ladies' Home Journal*, in which she will hereafter write and edit a department entirely devoted to the best interests of the Order.

Woman's Press Association.

A large number of ladies met Saturday afternoon, Sept. 27th, at the home of Mrs. Emelie Tracy Y. Parkhurst, 1419 Taylor street, for the formation of the Pacific Coast Woman's Press Association. Henry M. Clement presided as temporary chairman.

Mrs. Emilie Parkhurst delivered an address in which she set forth the objects of the association. In order to aid her to form a correct idea of the needs of those whose object it is to benefit, she has communicated with more than 800 journalists and magazine writers, of whom not more than one-third were women. Social, industrial, philanthropic and reformatory questions will be the main issues within their province, and if the movement is properly developed it will be a fellowship for concerted action, in which the heart and soul will be enlisted.

Mrs. Nellie B. Eyster of San Francisco was unanimously elected president; Mrs. Jeanne C. Carr of Pasadena, first vice-president; Mrs. Ella Higginson of the Portland *West Shore*, second vice-president; and Mrs. Sarah B. Cooper, third vice-president. Mrs. Emelie Parkhurst was elected corresponding secretary; Mrs. Sam Davis, recording secretary; Mrs. Mary O. Stanton, treasurer; and Mrs. M. H. Field of San Jose, auditor. The Executive Board was still further fortified by three members at large, Mrs. Hall Wood of the Santa Barbara *Independent*, Miss Andrea Hofer of the Salem *Journal*, and Miss Frances Bagby of the San Diego *Union*.

Mr. Clement conducted Mrs. Eyster to the chair. Her salutatory put the audience in excellent humor for the more serious business of the meeting. A vote of thanks and the Chautauqua salute was given to the temporary chairman, Mr. Clement, for his services in conducting the organization.

Mrs. Jeanne C. Carr then read a paper on "The Influence of the Printed Page," which called forth frequent applause.

In the social reunion which followed, the members were kindled into enthusiasm by discovering in each other mutual aspirations and aims in the prosecution of journalistic and other literary work.

Among those present were: Mrs. Emelie Parkhurst, Mrs. Nellie B. Eyster, Mrs. Jeanne C. Carr, Mrs. Sarah B. Cooper, Mrs. M. O. Stanton, Mrs. Caroline Severance, Mrs. Gertrude Atherton, Eliza D. Keith, Alice Kingsbury Cooley, Mrs. Eva Cook, Mrs. George Mitchell, Mrs. Hall-Wood, Mrs. Carrie Walker, Mrs. M. L. Hoffman, Mrs. Rosa Eigenmann, Mrs. Lillian Shuey, Mrs. Gelwicks, Mrs. M. G. C. Edholm, Mrs. M. B. Watson, Miss King, Miss Hanson, Mrs. Virginia Hilliard, Mrs. Mattie Owen, Mrs. Isabelle Raymond, Mrs. P. D. Campbell, Mrs. Oulton, Louise Humphrey Smith, Messrs. Henry Clement, John Swett and John W. Parkhurst.

A communication was read from Mr. Babcock of the Hotel Coronado, offering the association the hotel for the next meeting of the association. The invitation was referred to the Executive Board for approval.

A motion was made to elect as honorary members Helena Modjeska, Henry N. Clement and the *Western Journalist* of Chicago. The motion was carried, and after refreshments the meeting adjourned.

Among those who sent in applications for membership, but who could not be present, were: Rose Hartwick Thorpe, Evelyn Ludlum, Andrea Hofer, Josephine C. McCrackin, Mary Lambert, Mrs. Adolph Sanchez, Nettie Freeman, Mary V. Lawrence, Anna C. Murphy, Mary H. Field, Frances L. Mace, Frances Bagby, Flora M. Kimball, Adelaide Baker, Winifred Sweet, Adele Ohretien, Mrs. Sanford, Mary M. Bowman, Eliza A. Otis, Carrie B. Morgan, Genie Clarke Pomeroy, Edith A. Brown, Mrs. O. A. S. Beale, Miss Beale.

A vote of thanks was tendered to Mrs. Parkhurst, whose energy has resulted in the organization of the literary talent on this coast. The meeting then adjourned, subject to a call from the Executive Board.

Chaff.

"SARA CHEESEBROW'S BOY'S got back. He's been in the standin' army fur five years." "In the standin' army fur five years? Waal, I reckon he'll be glad enough to set down a spell now."—*Harper's Bazar.*

MRS. GRUMP: Bobby, I shall have to tell your father about you. You've been fighting. Bobby: Well, mum, hain't I been licked bad enough, now, without having another scrap with pa?—*Siftings.*

TEACHER: Now, children, here we have the word "intuition." Who can tell what it means? Phenomenally bright scholar: Intuition is that faculty of the human mind which enables a person to distinguish at a glance a patent-medicine advertisement from a real news article.—*London Tid Bits.*

SENATOR KENNA of West Virginia has been in the habit of smoking 10 to 20 strong cigars daily, and the practice brought on "tobacco heart." The doctors made him stop summarily, and thus saved him in the nick of time from nicotine.—*Lowell Courier.*

"UNCLE ABE, what is your idea for having the camp meeting held in another place this year?" "Wal, sah, the chicken cholera been ragin' pow'ful in de ole neighborhood."—*N. Y. Herald.*

Old Age.

Soon—but by gradual steps across the blue
The regal sun will steal from east to west,
And veil in clouded gold his flaming crest,
With all his fiery plumage drenched in dew.
Soon will the leaves of summer change their hue
And flutter down to earth's all-hiding breast;
And silent birds forsake their wind-swept nest
For distant climes and fields and woodlands new.
So, year by year, youth's brave morn and noon
Life cools into its sunset unawares.
And looking back across the long, long days
Eastward, where rose our sun, a spectral moon
Peeps through uncertain clouds, or dumbly stares
Upon an unknown grave in twilight haze.

This were a boon all others far excelling,
Could we attain that faith so near yet far,
In the deep inner world where naught can jar
The steadfast house and home, our chosen dwelling,
Or check the immortal fountain there upwelling,
And happy they to whom the gods unbar
The gates of night to greet their evening star
Ere vesper chimes are changed to funeral knelling.
Ye fellow-lingerers in the twilight gloom—
Ye who with me have lived through morning's glow,
And down life's darkening slopes have trod together—
This greeting take—this trust; that not to doom
But victory bound, our lives are pledged to know
Another morn in Heaven's uncloudèd weather.

—*C. P. Cranch in Scribner's.*

Fuss in the Clark Family.

Many will remember the fuss me and my wife had last spring. I wanted her to cook with green willow wood, and she just gave me "down the country." Well, when a woman will she will, and when she won't, you can bet she won't. I dried the wood, and then it was fine stove wood. I said: "We won't have any trouble," wood is a small item in the way of living. Water was the next thing. I have been hauling water sixteen and a half years here in Bell county. Some days wife would want to wash. It was often the very day that I wanted to go to the picnic or primaries, but the water must come or no clean clothes would come. I am very fond of clean clothes, especially on other folks. Well, this water-hauling was very worrisome. I would rail about it, and yell, and run half the children off to the field to work, and cut up in general. I determined to put a stop to that kind of fussing, for I always hauled the water when I cooled off, and then got to the primaries or picnic in time. But to completely beat this scheme I ordered me a 12 foot windmill and the fixtures. Wife smiled and said: "Yes, you are always going to do something smart!" I put it up, and now wife has all the wood she can use cut up and all the water by just turning faucets to let it run in the kitchen, in the dairy, in the gallery, in the yard lot, or anywhere else. I tell you that made peace for awhile. Up to that time none of us washed our faces more than once a day, and all in the same water, and then gave that to the hog. When I have to haul water I believe in economy in its use. Now every one of us can have a panful and wash three times a day, but I don't need but one wash a week myself. All have clean faces. Wife says I am an exception—but she's prejudiced because I'm popular with the sisters. I even give the hogs and calves all the clean water they want. This water comes through pipes over 300 yards without any help from me. You see Providence helps those who help themselves. The wind that runs this mill has gone to waste for over 16 years, and I hauled water! I thought peace and harmony would be ours, but the other day my wife told me that the meal, flour, coffee and the coffee-pot were out and that the children needed some clothes. "Well," I says, "I can't do everything. I will leave you what's here and go!" "Now, don't go off," says wife. "Yes I will. I will go, and see how you will get these things without me." So I got me some clean clothes. She says: "If you will go, I will take you to town in the wagon." "All right. If you like it, do so," says I. So we went to town, taking some of the little ones along. I bought my two little boys some new hats; then I had a few more words with my wife.

We divided the money, I taking about nine-tenths of it. Then I left. I went to the depot. The train was two hours late. By the time it came I was not so mad, but I was determined to go. So I went on until I came to Georgetown. When I got there, I stopped to stay all night and found that there was a farmers' institute, half used up. I was invited to stop and make them a speech on fine-spun agriculture. I accepted, and just such a speech they never heard. I kept the courthouse full of people in an uproar. They cheered me. "Put him out!" said one. "Hit him with a cabbage!" yelled another. "O rats!" said a third. That's the way they approve a fellow in these parts. When I was through and got my dinner, I felt better. Then I looked at my shirt. It was dirty. Where was the next clean one to come from? I turn for home in self-defense. When I got home it was night-time. I was glad of it. Wife kissed me and baby kissed me, and so forth.

Now everything is running smoothly.—*W. A. Clark in Texas Farmer.*

THE Woman's Christian Temperance Union will hold its State Convention at Stockton, Oct. 20th to 24th.

Young Folks' Column.

The Three Poets of the Seventh District of Hutchins.

[Written for the Rural Press by Katherina Bryant Nolan]

One very cold and frosty morning away back during the year of 1865 the boys and girls of the Seventh District of Hutchins hurried along the different roads leading to the old red schoolhouse that stood by itself just out of the village and looked deserted, except for the smoke pouring out of the chimney in great puffs.

Hutchins was in the northern part of New Hampshire and a new teacher was to open the school that morning. The master who began the term had been taken ill, and after a short vacation the Seventh District was to be taken in hand by a new pedagogue. This district had the reputation of being a hard one, and the scholars prided themselves on it and instilled their doctrines into all new-comers by precept and example year after year.

It was a bold man who undertook to train these worthy scions of the soil, and it was not the first time the master had been unable on account of sickness to teach the term through.

The red-hot stove was surrounded by a noisy group and every pupil joined this magic circle as soon as he reached the schoolhouse.

Several places had been breathed clear in the frosty window-panes, and at these trusty sentinels stood on guard, something after the manner of the lookout in old-time baronial castles through loop-holes.

"The teacher's a comin'," yelled the boy nearest the road.

"Yes, he's a turnin' in," cried the next, jumping up and down in his excitement.

"It's the teacher," screeched the third, and at that there was a grand rush for seats. A new master was always treated to a great show of order lest he might possibly have been prejudiced against them.

So when Mr. Hunt walked in they were all in their places, and beyond whisperings and gigglings and sly pokings from some of the more boisterous, appeared like extremely innocent and well-behaved youngsters.

The master was a tall, loose jointed fellow. His hair was red and he had big, uneven teeth and was not prepossessing in appearance. He stood somewhat uneasily by his desk and the younger ones looked at each other solemnly, as if they pitied the teacher rather than themselves. The large boys maintained a dogged look of martyrdom and the older girls put on a bravado air, as if they "did not care whether school kept or not."

Mr. Hunt called the school to order, took the names of pupils, read a short scripture lesson and led them in the Lord's prayer. He assigned their lessons in a business-like way that created a very good impression, and at four o'clock dismissed the afternoon session promptly. Two or three of the boys loitered behind and the master followed in their footsteps after locking the schoolhouse securely, but he did not overtake them.

A dead silence greeted Mr. Hunt the next morning when he entered the red schoolhouse. The scholars appeared cool and calm, but the stove was turned at right angles, and the stovepipe, which ran the whole length of the building, was twisted, and looked like a tortured thing. The smoke poured out of the joints thus opened in little fitful curls and rings, the blackboards were covered with mysterious characters, and everything was topsy-turvy. Two chairs—one for the master and one for any stray visitor—usually stood primly on the platform, but this morning they sat sociably near the stove and were adorned with dry branches. A few dead leaves clung miserably to them, as if they had wanted to live. On the blackboard behind the teacher's desk, in a free, bold hand, the following profane prayer was written:

"O Lord! have pity
On our committee!
They've hired a fool
To teach our school.
No matter what we suffer,
He'll be sure to have his supper."

"Masters Wood, Barnard, Hackett, step this way," Mr. Hunt called after surveying this poetry.

They came forward. These were the three boys who had staid behind in such earnest consultation the night before, and they stood quietly, with innocent faces, as if this sort of thing was a regular occurrence in the district.

"Wood, you and Barnard better fix that stovepipe; the smoke is really unpleasant. We shall not trouble about the stove this morning, as it would be uncomfortable to put the fire out, it is so cold. Master Hackett, you may hunt up the water-pail, if you please. Some of these scholars will be getting thirsty, shortly."

When it came to cleaning the blackboards, Wood took up the brush and started to rub out the poetry, but Mr. Hunt turned on him as quick as a flash and requested him to leave it.

"It is really satisfactory to know we have so able a poet, and as he is probably one of the pupils attending the Seventh District school, I shall endeavor to have him disclose his identity. Certainly such genius should be duly encouraged. I have always entertained a lurking suspicion that my talents would be appreciated sooner or later, and the hour seems to have arrived."

The big girls tittered and nudged each other at this speech, and a sort of low growl came from the back seats, where the boys were displaying some very even sets of teeth. They all paid more attention to their books that day than was usual, and no further reference was made to this escapade.

Within the next few days the three boys were interviewed separately by the master, and for the first time in their lives treated each other with distrust and scowling severity, and one night they gathered in the woodshed to have it out.

"Now look a here, Si Barnard, you peached on me on that poetry. You helped with it, and you've got to stand your share of the blame. I won't stand no foolin'," said Wood in a menacing tone.

"Who's a foolin'?" asked Si, hotly. "You've tried to make the teacher think I scrawled them blackboards, so he'd believe I wrote the poetry. You can't play no games on me."

"Now see here, boys, I ain't afraid of the teacher," said Bob Hackett from his seat on a log. His hands were clasped about his knees in a careless way, and he had listened to the conversation with an air of arbitration hanging about him. He interrupted boldly, as if he fully intended to settle the matter. "I'll take the blame," he continued; "you both said I was a coward because I sat on a desk and let you do the work. I planned it out so as to make sure of your doing something worthy of the Seventh District," he ended with a chuckle. "I'll take the blame."

"There's no use giving the thing away," growled the other two, scowling.

About this time Mr. Hunt whipped into the schoolhouse and a grim smile overspread his countenance, showing his uneven teeth. He put his desk in order, walked down the schoolroom and picked up a note here and there. Glancing at them hastily, he put on his hat, locked up the schoolhouse and went on after the boys once again, whistling cheerily as he did so.

The teacher boarded round, as that was the fashion in those days, so he was very well acquainted before the school was closed with as many different families as there were weeks in the term.

He made light of the trouble of the second morning when his boarding mistress mentioned the matter, and it is doubtful if he knew just what to do himself.

He might have felt constrained to lay the matter before that committee so seriously implicated but for an event that nearly proved a tragedy and caused the three conspirators to agree once more.

Mr. Hunt was a man who thoroughly believed in encouraging out-of-door recreations, so the third week of school, a gay party of boys and girls skated up Mill creek in the bright moonlight, and the master was the life of the crowd.

Wood and Barnard and Hackett found more comfort in being by themselves. There was a certain feeling of constraint when in the master's presence, although he singled them out especially and appeared to have great confidence in their loyalty. Perhaps they did not care to be conspicuous under the circumstances, but they were destined to become so on this bright night.

They skated well ahead of the rest, and finally Wood said:

"I tell you what it is, Bob. I'm sick of this thing. Are you going to make a clean breast of it to Old Gravestones?" This was a secret and descriptive name applied to Mr. Hunt when things were not going right. Bob laughed, but other than that his intentions were not expressed, and Bob's chuckles might mean most anything.

"I'll bet you the secret on the business that I'll get to the old mill first. If I win, there's no blabbin'," said Wood impatiently.

"That's fair," said Si Barnard, emphatically.

"All right; that settles it," said Bob; "call away."

"One, two, three," and they fairly flew up the river, which ran very straight at this point, but the race was short, for the ice cracked ominously, and instead of three bold skaters there were but two. Their startled companions gazed far up the stream, but only beheld two figures sharply outlined against the sky, and saw two shadows fall on the silvery ice instead of three.

The master said nothing. He went to the side of the river and seized a pole which happened to be there, and a few long strides took him to the brink of the treacherous air-hole. The girls huddled together and watched breathlessly and almost despairingly. There was silence, only for the wind sighing through the pine trees, stirring up the dry leaves, and the sharp cracks of the ice which now sent thrills of terror to their hearts. They watched the master carefully haul the half-drowned boy out to safety and life, and when they saw him lifted on to his feet and skated along toward them, they heaved a mighty sigh of relief.

"An air-hole," said the teacher to them as he came along holding Wood up by the shoulder with a strong grasp. "A narrow escape; we shall have to take him home."

Bob Hackett supported Wood on the other side, and they all moved on, a silent, thankful crowd. "Supposing he had been drowned," filled every heart with a pean of thanksgiving for this "deliverance from sudden death."

Wood's teeth were chattering like castanets, and he had a vague feeling that he had been all right, and he wished they had just let him alone. He was sure something terrible was at stake. There was a dreadful roaring in his ears, and his brain seemed on fire. He felt better when he was rubbed down and dressed out in the garments of the hired man at the farmhouse, which happened to be near by. The clothes were ill-fitting, but felt comfortable, so it was a goodly change from the wet ones which hung before the kitchen fire and were already beginning to steam in the ruddy glow of the firelight. The master had superintended all the details, and Wood might have been a prize-fighter preparing for some noted contest, Mr. Hunt was so arduous and solicitous and skillful.

The farmer's wife would have had the boy remain under her roof for the night, but he managed to express his wish to go home. Mr. Hunt did not leave him until he was safely stowed away between blankets in the midst of unnumbered hot bricks and bottles, and the next day Wood appeared at school as usual. He looked rather pale, but otherwise seemed in no whit changed by his cold bath.

The scholars had all gone home. The master sat by his desk in the glow left by the sun which had just set behind the distant mountains. He looked up as the door opened and the three conspirators walked in. They stood before him and he smiled kindly on them. Wood acted as spokesman and apologized for their frolic.

"I think I have at least three very manly chaps to help make this term of school a success," declared the master, shaking hands with each of them in turn.

"I am very sorry I wrote that poetry," said Wood.

"I'm sorry I told you to write it out; that was my doing," said Barnard.

"I'm sorry I made up those last two lines," chimed in Bob Hackett. "It's my fault. I planned it."

"Three poets," said the master, smilingly. "Instead of one I have three, and very brilliant ones, too." The boys laughed at that and helped Mr. Hunt shut up the schoolhouse and walked home over the crisp snow with brisk steps and light hearts.

The Seventh District was completely subjugated and a most successful term was the result, so that "committee" were highly honored in the minds of the town people and re-elected on town-meeting day.

Those three boys eventually became teachers themselves and always gave the discoverer of the three brilliant poets the credit of arousing their ambition to become scholars instead of idlers.

Domestic Economy

Peach Pudding.—A peach pudding made o fresh or canned fruit is delicious. For this is required about two-thirds of a can of fruit, and dough made as directed. Put the peaches with a little of the juice in a round tin mold; a cake mold, if not too large, will do. Drop the dough over the top in spoonfuls and set in a steamer over a kettle of fast-boiling water. Cover closely and cook one hour. This should turn out without breaking, when the peaches will be on top. Serve with a sauce made of a scant half cup of butter rubbed to a cream, one cup of powdered sugar and the yolk of one egg beaten very light, and a quarter of a cup of wine stirred in at the last. This sauce should be soft, but not liquid. If wine is not liked, the whole egg may be used and any flavoring preferred.

Superior Blackberry Wine.—Bruise the berries, measure them, and to every gallon add a quart of boiling water. Let this stand for 24 hours, stirring it three or four times during the interval. The third day strain off the juice, and to every gallon of this strained liquor put two pounds of refined sugar. Cork it tight and let it stand until cool weather, when you will have a wine that you will never voluntarily be without, as it will be found so efficacious in sickness, and a good and harmless tonic for the feeble and convalescent.

Cream Cakes.—One pint of boiling water in which is melted half a pint of butter; stir one pint of flour into the boiling water and set away to cool. When cool, add six well-beaten eggs, drop in a tin by spoonfuls and bake quickly. *Cream.*—Bring one pint of milk to a boil; mix together two cupfuls of sugar, one cupful of flour and four eggs; stir into the boiling milk, flavor to taste. When the cream is cool, with a sharp knife open the cakes on one side and fill with the cream.

Cheap Sponge Cake.—Three eggs well-beaten, one cupful of sugar, one cupful of flour, with one teaspoonful of cream tartar sifted with it; half a teaspoonful of soda dissolved in three teaspoonfuls of hot water. Dessertspoonful of extract of lemon or vanilla. Bake about one-half hour in not too hot an oven.

Peach Pie.—Line a deep pie-plate with a rich paste, fill with mellow peaches pared and stoned (I use canned peaches), sprinkle with sugar, a dredging of flour and two spoonfuls of water or juice if you use canned fruit; cover with pastry and bake, not too quickly.

Spiced Cookies.—One and a half cupfuls of sugar, half a cupful butter, three eggs, half a teaspoonful of ginger, cinnamon, cloves and half a teaspoonful of soda dissolved in warm water.

Good Health

Poison Oak or Poison Ivy.

The genus *Rhus* (sumac) is a genus of many species, with a habitat worldwide, and (as is not generally known) nearly every species will poison some persons cruelly, and if they do not soon get relief they will suffer terribly. Other people may handle nearly every species with impunity and then strike one, harmless to most persons, but capable of giving them a dose long to be remembered. Some persons may be poisoned by all except the white, or staghorn, sumac. This is the only species that I have not known to be poisonous.

Of the genus in North America, the swamp sumac, *Rhus venenata*, the climbing sumac, *R. toxicodendron*, and its variety or so-called species, dwarf sumac, *R. pumela*, and its variety on this California coast, *R. toxicodendron*, var. *Californica*, are the most to be dreaded. These last three are vulgarly called "poison oak" or "poison ivy," and the first is known in the Eastern States as "mercury."

While living in the East, up to the age of 30 years, our "poison oak" there was a fearful terror to me, and caused me a great amount of suffering. Then on until I was 50 it was innoxious. The variety on this coast is exceedingly plentiful on nearly all uplands, and is closely allied to ours, but is injurious to many more persons. The first time I went among it, it poisoned me from head to foot, and so it did a friend who was with me, also a new-comer here, who could handle without harm both it and *venenata* East. It laid him upon his back in great suffering for about a week. Pioneers here say that after a time the system becomes inured to it, and it does not injure them. But it does just rap it to the thin-skinned city dudes!

Remedies.

Many simple things will relieve and cure all forms of this poisoning, such as sugar of lead, sulphate of zinc, saltpeter, and muriate of zinc in solution with water. I do not know but I have discovered the best, handiest and cleanliest of these, to wit, a saturated solution of

Saltpeter.

I asked an old hunter what he used to cure poison oak with. He answered: "I wet some gunpowder and rub it on, and it kills it on me every time, if I put it on as soon as I feel it." Thinking that the only thing in the gunpowder that would do any good was the saltpeter, the next time I got a touch, all over my face, I tried it, and sure enough I felt the pain no more, when, in a few hours, if I had not got relief, my eyes would have been swollen shut. Now I keep a strong solution of saltpeter handy in my office all the time. Saltpeter is, of course, the nitrate of potash of the drug store. Nitrate of soda would probably be just as good or better, and borax, or borate of soda, should have the same effect. But the best thing of all is a certain simple preventive; this we have, I think, in the carbonate of soda, or

Common Baking Soda.

By washing the person in a solution of this before entering the "brush," or directly on returning, no injury will result from an exposure by the most sensitive. At least an old physician of 50 years' practice where these plants were common so informed me.

I have known men who through their whole lives dared not go into the woods in summer for fear of this plant, and others who were driven from comfortable homes by it. Therefore, I have undertaken the labor of this writing, for, as before said, any one may get cruelly poisoned by it when away off in the woods, far from medicaments, and if he knows all the simple remedies, he may save himself great suffering; for this reason every remedy and palliative should be yearly published.

The poison oak of this coast region is a very neat, pretty shrub, most abundant nearly everywhere. Its flowers are very rich in choice nectar for the honey bee; the honey from it is fine and wholesome, yet it poisons me and many others when riding along the road near the bushes.—*Cor. of Forest and Stream.*

Something About Wrinkles.—The general impression about wrinkles is that they are caused by worry, but the truth is that most of them come from laughing. To know how to laugh is just as important as to know when to do it. If you laugh with the sides of your face, the skin will work loose in time and wrinkles will form in exact accordance with the kind of laugh you have. The man who always wears a smirk will have a series of semi-circular wrinkles covering his cheeks. A gambler, who is accustomed to suppressing his feelings, generally has a deep line running from each side of his nose to the upper corner of his mouth, which in time extends to the chin, forming the shape of a half-moon. A cadaverous person is usually marked with two wrinkles, one on the jaw and the other under the eye, meeting at right angles at the cheek bones. The scholar's wrinkles form on his brow, while the schemer's wrinkles come around his eyes and look like spokes of a wheel.

Sitting Down.—An English scientific person has discovered that sitting down is an acquired habit. The majority of mankind do not sit, but simply squat, or, as it is sometimes said, sit on their heels. This position, the scientific person thinks, is the natural one, while sitting on a chair is an artificial one.

The Week.

The contrast between California and the East usually becomes more and more apparent as fall approaches winter. This year both natural and political affairs enter into the contrast. California adds to her usual autumn sunshine this year the heat of field and forest fires and the boiling of the political pot, which is displaying unusual ebullition for an "off year." At the East, "terrific storms and gales" are reported along the Canadian border, and with such a start the youngsters ought certainly to have "good skating for Thanksgiving"—a thing earnestly desired by the Eastern youth, if our memory correctly serves.

The new tariff is the leading topic in circles of producers and merchants. We give on another page the leading agricultural features of the now law, by which our readers may judge how their individual interests may be affected. The time for the discussion of the new measure has passed by only to return perhaps when the people have had a little experience in living and working under its provisions.

The proposed annexation of its suburbs would give New York an area of 400 square miles and a population of nearly 3,000,000. London includes nearly 690 square miles and over 5,000,000 population.

A Fine Advertisement Nevertheless.

The British Consul at Los Angeles has been guilty of the great indiscretion of reporting to his Government that possibly Southern California might be a good place to buy horses for the royal army and ship them to the old country via New Orleans. The *Yorkshire Post* rises in its wrath and smites the consul in this way:

Consular reports were intended to give information to the people of England as to the demand for their products, but if they are to be converted into vehicles for conveying to foreigners information as to how they can crush British industries, they advise that the sooner Lord Salisbury stops their publication the better.

After extolling the worth of the English-bred horse, the editorial says:

It would be well to suggest to the foreign office that we should have a different breed of the vice-consul at Los Angeles from one now on view there. A Chinaman could probably be got to do the work of the post at considerably less cost, and, to judge by the example before us, with quite as great concern for British interests. The present vice-consul states that horses can be raised at a much smaller cost in Southern California than here, as, owing to the mildness of climate, they can graze all the year round; and so, no doubt, a Chinaman as vice-consul would be economical, as he could vary his vice-consular duties by taking in washing. However, if these plains of Southern California can produce colts and fillies worth from £1000 to £4000, we would recommend breeders to stick to thoroughbred stock, for it is very rarely indeed that the War Office gives more than £1000 apiece for cavalry remounts; somewhere about £45 or £50 is nearer the limit.

It is perhaps quite natural that a journal representing the home-producers of Great Britain should resent the suggestion of buying Yankee horses for the royal cavalry. English producers are so hard-pressed by competition with American grains, meats, dairy produce, fruits, hops, etc., that it does seem rather adding insult to injury to suggest that American horses should prance in the parades and consume on British soil American feed grain—all at the expense of British taxpayers. It does not appear right that the consul at Los Angeles should be thus roasted for advising his Government candidly of the horse resources of California. The blame should rest, if anywhere, with the officials of the British Government, who could have used such unwelcome information quietly instead of putting it into hard type for local journals to injure their knuckles upon.

The sentiment of the Californian should be one of sympathy for the truth-telling consul in his plight. Many a frank individual has similarly suffered. There will also be satisfaction to the Californian that, although the ill-tempered publication of the British journal is intended to be a crusher for both the consul and the country to which he is accredited, it will serve as a more expressive and impressive advertisement of our resources and adaptations than any amount of fulsome eulogy can be. There is no intimation that what the consul said is not true. It is true, and it is to our advantage to have the world know it.

Fertilizers for Fruit.

Prof. Hilgard, in his University Bulletin, which appears in full upon another page, writes in a very clear and interesting manner upon a subject which is just now pressing itself strongly upon the attention of our fruit-growers. For the last few years the use of fertilizers has been increasing and the results attained have not always proved as satisfactory as desired. Probably this has been due in some cases to the use of poor material and in others to the application of material not needed in greater amount than the soil already offers. The perusal of the bulletin will afford suggestions in both these directions and in many cases point the way to more rational procedure. As this is a matter upon which much light can be thrown by discussion and relation of experience, we hope our fruit-growers will take part in such comparison of methods and results through the columns of the Rural. There is no question but the matter is becoming one of the greatest moment in our fruit-growing, and upon its elucidation depends in great measure the success of many growers. This fact should lead them to sharpen their wits and pencils and use up some writing paper.

"California on Wheels" continues to receive compliments from Eastern journals as it moves along. Over 600 such notices have reached the State Board of Trade headquarters.

Our Fruit at the East.

We alluded last week to the results of the wide distribution of California fruit at the East, and the subject is of such importance that it will bear frequent allusion. The New York *Sun* hints at a very promising state of affairs as follows:

Our native fruit is not holding its own against the Western invader. This is especially true of pears, which are much inferior to the luscious, clear-skinned California Bartletts that may be seen on hundreds of stands in tempting, picturesque pyramids of gold and rose. The peaches from across the continent don't come up to the best from near-by orchards, but they are big and juicy and fair to look upon.

But though our peaches do not strike the writer of the above paragraph as better than the best of the Eastern product, he must remember that our fruit has to be picked too soon to allow it to develop its highest quality. The Eastern peach-growers are, however, looking with much interest upon the peaches we are shipping, and probably appreciate the unavoidable effect of too early picking. A recent issue of the Wilmington, Del., *Republican* takes some of the big peaches shown in the cars of "California on Wheels" for a brief sermon on peach-culture, commenting upon the methods here and contrasting them with the soil-exhausting methods of Delaware growers. The writer of the article referred to charges, as do many of the best horticultural authorities, that the almost entire failure of the peach crop in that region this season is due to the non-progressive and impoverishing practices of the producers.

This quite accords with the conclusions of California peach-growers who have visited the New Jersey and Delaware orchards to inform themselves upon Eastern peach production. Mr. Flickinger, for instance, at a recent meeting of the State Horticultural Society, as reported in the Rural, took the ground that the weakness and short life, the yellows and all that sort of thing, of the peach was due to poor soil, poor cultivation and other conditions which do not exist to any extent in California. This conclusion may be too broad, and there may be failures there in spite of all efforts at fertilization, cultivation, etc., but the comments of the California visitors seem to be quite in accord with those with which the Delaware journal regales its peach-growing readers.

The Columbian Fair.

Satisfactory progress seems now to be making in preparation for the great World's Fair in Chicago. The Commissioners are in continual session this week, and telegrams show that preliminaries are being rapidly arranged. George R. Davis has been chosen director-general, and he issued on Tuesday of this week an address which gives official information concerning the enterprise as follows:

By an Act of Congress it is provided that the buildings for the World's Fair shall be dedicated on Oct. 12, 1892, and that the exhibition shall be open to visitors on the first day of May, 1893, and shall close not later than the 30th of October thereafter. Thus we have two years in which to arrange the grounds and erect the buildings, and seven months additional in which to receive and place the exhibits. So far as this country is concerned, the undersigned feels justified in the statement that the presentation of agricultural and stock products will be in every respect superior to any previous exhibition; also, that in inventions the progress of the United States will be indicated in a most remarkable manner. There is also every reason to anticipate exhibits in large numbers from every other nation on the globe, it being estimated by practical experts that the total number of exhibits will not be less than 50,000, divided equally among the United States and all foreign nations.

It is proposed to make this exhibition especially interesting in all that relates to manufactures by the presentation of the most important processes in active operation. In comparison with these will be presented the methods used in other countries for a hundred years past. Already there are indications that nearly every State and Territory in the Union will be fully represented and that large appropriations will be made at the approaching sessions of the different State Legislatures. Circulars and blank applications for space will be forwarded in due season to all intending exhibitors.

No doubt California will be creditably represented at this grand display, as probably she can invoke no more potent agency for the dissemination of knowledge of her unequaled resources and productions. An organization, as previously stated in the Rural, is now at work to this end, and the Legislature this winter will be called upon to furnish substantial and adequate aid. There seems to be general consent that the California display must be original in design, unique in development and striking in its impression. It will, of course, take time to determine how this can be done and at what outlay. We acknowledge that we have been very favorably impressed with a plan worked out by E. W. Keeler of the State Board of Trade, which is a happy combination of panoramic representation of characteristic California scenery, with display of material products in a way which it seems to us will give the visitor a realizing impression of California's charms and adaptations. No doubt due attention will be given to Mr. Keeler's proposition and to all others which may be presented.

Enforcing the Anti-Lottery Act.

A circular letter to postmasters containing explicit instructions as to the treatment of "lottery matter" under the recent anti-lottery Act, has been prepared by Assistant Attorney-General Tyner, under direction of the Postmaster-General. Portions of this circular read as follows:

Newspapers, pamphlets and publications of all kinds bearing the date of or since the 19th day of September, 1890 (at which date the Act took effect), which contain an advertisement of any lottery, gift enterprise or similar scheme, or the whole or part of the list of prizes awarded at the drawings of lotteries or similar schemes, are by the provisions of this Act denied carriage in the mails or delivery to subscribers' addresses or to any other person, or as "sample copies." Postmasters should refuse to receive them from the publishers, or deliver them if by an inadvertence they reach the office of their destination.

The term "lottery," as used in this Act, embraces all kinds of schemes, general or local, for the distribution of prizes by lot or chance, such as gift exhibitions, enterprises, concerns, raffles, or drawing prizes in money or property at fairs. Hence letters and postal cards and circulars concerning them, and newspapers, pamphlets and other publications containing advertisements of them, are unmailable.

About 5 o'clock last Sunday morning the issue of the S. F. *Examiner* for that day was sent to the city postoffice, in bags and bundles, addressed to its usual recipients in the country, Eastern States and foreign parts. The postmaster was soon apprised that on the eighth page of the paper was a list of prizes drawn recently at the fruit and flower festival held in Woodward's Gardens by the ladies of St. Joseph's parish for the benefit of the Youth's Directory. Although it was a lottery for charitable purposes, P. M., Backus felt he had no discretion in the matter. "The instructions which I have from Washington," said he, "point out to me that I must interfere in such cases, and I would be derelict in my duties if I did not obey these rules," and so the whole edition was refused transportation through the mails.

American Wild Flowers.—Those interested in the preservation and improvement of our wild flowers should join the American Wild-Flower Club. Information can be had by addressing Chas. S. Horn of Wilmington, Del. We have received from the club an interesting pamphlet explaining the purpose and methods of the club, which we presume will be mailed to all applicants who send a postage stamp. It is stated that at the East some of the most beautiful wild flowers are becoming exceedingly scarce, so much so that European visitors comment upon the paucity of the natural growths, and wild-flower lovers are appealed to to rescue and multiply desirable species. On this coast we have not reached such a state yet, but it is certainly time to increase an appreciation of our grand natural growths and to foster their growth. The Wild-Flower Club ought to have many local branches on this coast.

Ventura Grapes.—Cyrus Kenny of Fillmore, Ventura county, sent us last week a large box containing some of the finest Muscat grapes we ever saw or tasted. They were grown at Sespe and certainly demonstrate the grape resources of that locality. One cluster weighed 5¾ pounds. The berries of all the clusters were exceptionally large, thin-skinned and of delicious sweetness.

Puyallup is fast recovering from her recent conflagration. Insurance companies are paying losses promptly.

Public Affairs.

The New Tariff as Applied to Agricultural Products.

We give below the portions of the new Tariff law, approved last week by the President, so far as articles of agricultural produce are affected. This law has already gone into effect, as by its provisions it became operative within a few days after its enactment. We make compilation from the *Daily Commercial News* of Oct. 7. In the tabulated forms, the first column shows the rates on the articles under the former law and the second column shows the rates on the same articles under the new Tariff bill.

In cases where both rates are ad valorem or specific, the difference is readily seen, but where one is specific and the other ad valorem the dealer can calculate the amount of the change from the market value of the article. The letters "p. c." signify "per cent ad valorem," and the rates expressed in dollars and cents signify that that is the new duty per pound when ton or gallon or other standard of quantity is not expressed.

OILS.	Old Rate.	New Rate.
Castor oil, per gallon	80c	80c
Cod liver oil, per gallon	25 p c	15c
Cottonseed oil, per gallon of 7½ lbs. weight	25c	10c
Croton oil, per pound	50c	30c
Flaxseed, or linseed and poppyseed oil, raw, boiled or oxidized, per gal. of 7½ lbs. wt.	25c	32c
Fusel oil, or amylic, alcohol	10 p c	10 p c
Hempseed oil and rapeseed oil, per gallon	10c	10c
Olive oil for salad purposes, per gallon	25 p c	35 p c
Peppermint oil	25 p c	80c
ANIMALS, ALIVE.		
Horses and mules, per head	20 p c	$30 00
Horses valued over $150, per head	20 p c	30 p c
Cattle over one year, per head	20 p c	$10 00
Less than one year, per head	20 p c	$2 00
Hogs, per head	20 p c	$1 50
Sheep, one year old, per head	20 p c	$1 50
Less than one year old, per head	20 p c	75c
All other live animals	20 p c	20 p c
BREADSTUFFS AND FARINACEOUS SUBSTANCES.		
Barley, per bushel	10c	30c
Barley malt, per bushel	20c	45c
Barley, pearled, patent or hulled	½c	2c
Buckwheat, per bushel	10 p c	15c
Corn or maize, per bushel	10c	15c
Cornmeal, per bushel	10c	20c
Macaroni, vermicelli	Free.	2c
Oats, per bushel	10c	15c
Oatmeal, per bushel	½c	1c
Rice, cleaned	2½c	2c
Uncleaned	1½c	1¼c
Poudy	1¼c	¾c
Rice flour, meal and broken	20 p c	¼c
Rye, per bushel	10c	10c
Rye flour	½c	½c
Wheat, per bushel	20c	25c
Wheat flour	25 p c	25 p c
DAIRY PRODUCTS.		
Butter and substitutes	4c	6c
Cheese	4c	6c
Milk, fresh, per gallon	10 p c	5c
Preserved or condensed	20 p c	20 p c
Including weight and packages	20 p c	3c
Sugar of	Free	8c
FARM AND FIELD PRODUCTS.		
Beans, per bushel	10 p c	40c
Beans, peas and mushrooms	35 p c	40c
Broom corn, per ton	10 p c	$8
Cabbages, each	10 p c	1c
Cider, per gallon	20 p c	5c
Eggs, per dozen	Free	5c
Yolk	20 p c	25 p c
Hay, per ton	$2 00	$4 00
Honey, per gallon	20c	20c
Hops	8c	15c
Onions, per bushel	10c	40c
Peas, green, per bushel	10 p c	40c
Dried, per bushel	10 p c	20c
Split, per bushel	20 p c	50c
In papers or small packages	10 p c	1c
Plants, trees, shrubs and vines	Free	20 p c
Potatoes, per bushel	15c	25c
SEEDS.		
Castor beans, per bushel	50c	50c
Flaxseed, linseed, poppyseed, oilseed, per bushel	20c	25c
Garden seeds	20 p c	20 p c
Vegetables, prepared or preserved	35 p c	45 p c
In natural state	25 p c	10 p c
Straw	Free	30 p c
Teazles	Free	30 p c
FRUITS.		
Apples, per bushel	Free	25c
Dried, desiccated, prepared	Free	2c
Grapes, per barrel of 3 cubic feet	20 p c	60c
Plums and prunes	1c	2c
Figs	2c	2½c
Oranges, lemons, limes, in pkgs. of 1½ cu. ft. or less, per pkg	13c	13c
1½ to 2½ cu. ft., per pkg	25c	25c
2½ to 5 cu. ft., per pkg	50c	50c
Over 5 cu. ft., for every additional cu. ft. or fraction	—	10c
Oranges in bulk, per thousand	$1 60	$1 50
Lemons and limes in bulk, per M	$2	$1 50
Olives	Free	Free
Raisins	2c	2½c
Comfits, sweetmeats and fruits preserved, jellies	35 p c	35 p c
Fruits preserved in their own juices	20 p c	30 p c
Orange peel and lemon peel, preserved or candied	35 p c	2c
NUTS.		
Almonds, not shelled	5c	5c
Shelled	7½c	7½c
Filberts and walnuts, not shelled	3c	3c
Shelled	3c	6c
Peanuts, unshelled	1c	1c
Shelled	1½c	1½c
Nuts not specially provided for	2c	1½c
MEAT PRODUCTS.		
Bacon and hams	2c	5c
Beef, mutton and pork	1c	2c
Meats not specially provided for	25 p c	25 p c
Extract of, not specially provided for	20 p c	35c
Extract, fluid	15c	15c
Lard	2c	2c
Poultry, live	10 p c	8c
Dressed	25 p c	5c
Tallow	1c	1½c
Wool grease, including degras	½c	½c
MISCELLANEOUS PRODUCTS.		
Chicory root, prepared	2c	2c
Chocolate	2c	2c
Cocoa	2c	2c
Cocoa butter	25 p c	3½c
Dandelion root and acorns, substitutes for coffee	2c	1½c
SPIRITS.		
Anhydrous alcohol, per gallon	$1 00	$2 50
Brandy and spirits distilled, per gallon	$2 00	$2 50
WINES.		
Champagnes and sparkling wines in bottles from 1 pint to 1 quart, per doz	$7 00	$8
One-half pint to 1 pint, per doz	$3 50	$4
One-half pint or less, per doz	$1 75	$2
More than 1 quart, in addition, on quantity in excess, per gallon	$2 25	$2 50
Still wines in casks, per gallon	50c	50c
Ginger wine in casks, per gallon	20 p c	50c
Still wines in bottles, per case of 1 dozen quarts or 2 doz n half-quarts	$1 60	$1 60
Any excess found on such excess per pint	5c	5c
Cherry juice, prune wine, fruit juice, not containing more than 18 p c of alcohol, per gallon	20 p c	60c
More than 18 p c of alcohol, per gallon	20 p c	$2 50 25 p c
BAGS, TWINE, ETC.		
Binding twine of manila or sisal grass	—	7-10c
Of hemp	35 p c	2½c
Tarred	3c	3c
Hemp and jute carpets and carpetings, per square yard	6c	3c
Burlaps, flax, jute and hemp, except for cotton bagging	30 p c	1½c
Bags for grain, of burlaps	40 p c	2c
Cotton bagging, valued at 6c or less per square yard	1½c	1 6-10c
More than 6c per square yard	2c	1 8-10c

Wools.

All wools, hair of the camel, goat, alpaca and other like animals shall be divided for the purpose of fixing the duties to be charged thereon into the three following classes:

Class 1, that is to say, merino, mestiza, metz, or metis wools, or other wools of merino blood, immediate or remote down clothing wools and wools of like character with any of the preceding, including such as have been heretofore usually imported into the United States from Buenos Ayres, New Zealand, Australia, Cape of Good Hope, Russia, Great Britain, Canada and elsewhere, and also including all wools not hereinafter described or designated in Classes 2 and 3.

Class 2, that is to say, Leicester, Cotswold, Lincolnshire, down combing wools, Canada long wools, or other like combing wools of English blood, and usually known by the terms herein used, and also hair of the camel, goat, alpaca, and other like animals.

Class 3, that is to say, Donskoi, native South American, Cordova, Valparaiso, native Smyrna, Russian camel's hair (free), and including all such wools of like character as have been heretofore usually imported into the United States from Turkey, Greece, Egypt, Syria and elsewhere, excepting improved wool hereinafter provided for.

The standard samples of all wools which are now or may be hereafter deposited in the principal custom-houses of the United States, under the authority of the Secretary of the Treasury, shall be the standards for the classifications of wools under this Act, and the Secretary of the Treasury shall have the authority to renew these standards and to make such additions to them from time to time as may be required, and he shall cause to be deposited like standards in other custom-houses of the United States when they may be needed.

Whenever wools of Class 3 shall have been improved by the admixture of merino or English blood from their present character as represented by the standard samples now or here after to be deposited in the principal custom-houses of the United States, such improved wools shall be classified for duty, either as Class 1 or as Class 2, as the case may be.

The duty on wools of the first class which shall be imported washed, shall be twice the amount of the duty to which they would be subjected if imported unwashed; and the duty on wools of the first and second classes which shall be imported scoured, shall be three times the duty to which they would be subjected if imported unwashed.

Unwashed wools shall be considered such as shall have been shorn from the sheep without any cleansing—that is, in their natural condition. Washed wools shall be considered such as have been washed with water on the sheep's back. Wool washed in any other manner than on the sheep's back shall be considered as scoured wool.

The duty upon wool of the sheep or hair of the camel, goat, alpaca and other like animals which shall be imported in any other than ordinary condition or which shall be changed in its character or condition for the purpose of evading the duty, or which shall be reduced in value by the admixture of dirt or any other foreign substance, or which has been sorted or increased in value by the rejection of any part of the original fleece, shall be twice the duty to which it would be otherwise subject, provided that skirted wools as now imported are hereby excepted. Wools on which a duty is assessed amounting to three times or more than that which would be assessed if said wool was imported unwashed, such duty shall not be doubled on account of its being sorted. If any bale or package of wool or hair specified in this Act imported as of any specified class, or claimed by the importer to be dutiable as of any specified class, shall contain any wool or hair subject to a higher rate of duty than the class so specified, the whole bale or package shall be subject to the highest rate of duty chargeable on wool of the class subject to such higher rate of duty, and if any bale or package be claimed by the importer to be shoddy, mungo, flocks, wool, hair or other material of any class specified in this Act, and such bale contain any admixture of any one or more of said materials, or of any other material, the whole bale or package shall be subject to duty at the highest rate imposed upon any article in said bale or package.

	Old Rate	*New Rate.*
Wools and hair of the first class	10c	11c
Of the second class	12c	12c
Of third class, value 13c or less per pound	2½c	32 p c
Of third class, camel's hair, value 13c or less	Free	32 p c
Of third class, value over 13c	5c	50 p c

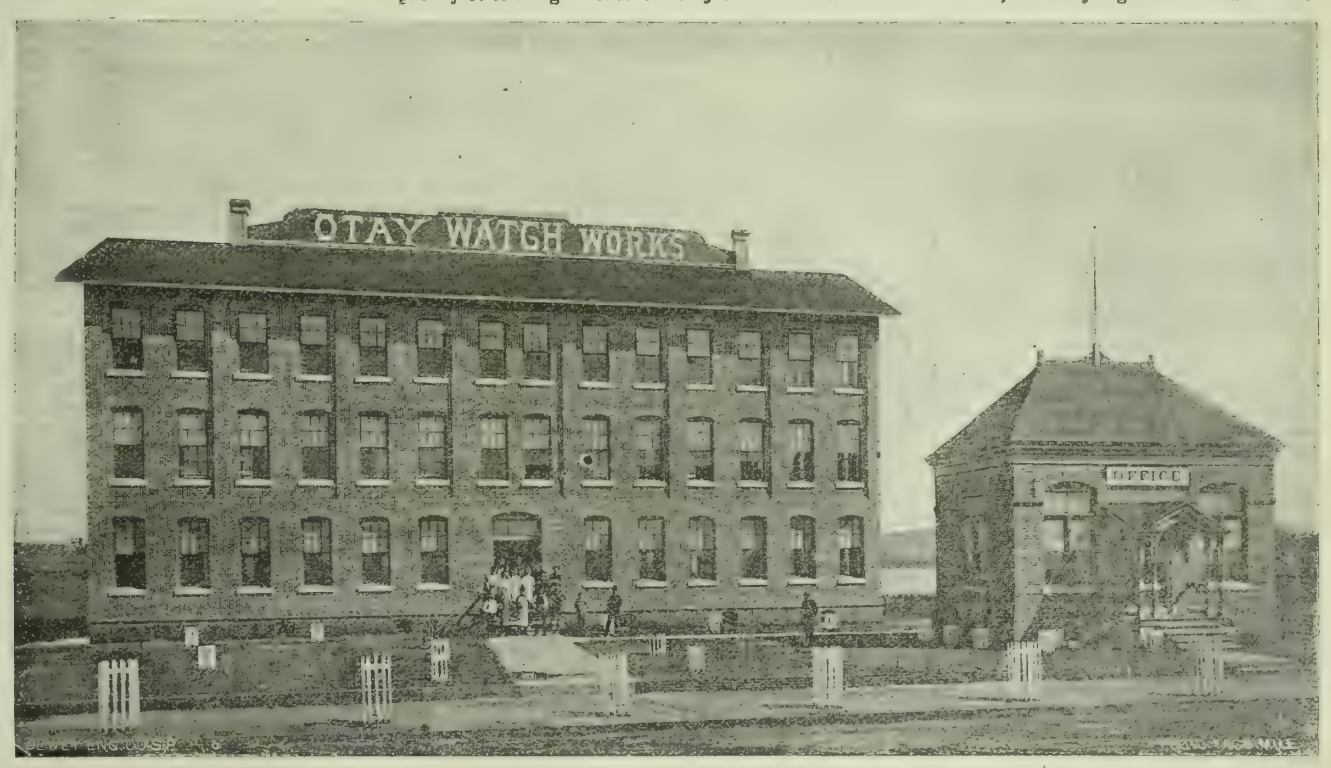
Wools on the skin shall pay the same rate as other wools, the quantity and value to be ascertained under such rules as the Secretary of the Treasury may prescribe.

The Sugar Bounty.

That on and after July 1, 1891, and until July 1, 1905, there shall be paid from any moneys in the Treasury not otherwise appropriated, under the provisions of Section 3689 of the Revised Statutes, to the producer of sugar testing not less than 90 degrees by the polariscope, from beets, sorghum or sugar-cane, grown within the United States, or from maple sap produced in the United States, a bounty of two cents per pound; and upon such sugar testing less than 90 degrees by the polariscope and not less than 80 degrees, a bounty of one and three-fourths cents per pound, under such rules and regulations as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe.

The producer of said sugar to be entitled to said bounty shall have first filed, prior to July 1 of each year, with the Commissioner of Internal Revenue, a notice of the place of production, with a general description of the machinery and methods to be employed by him, with an estimate of the amount of sugar proposed to be produced in the current or next ensuing year, including the number of maple trees to be tapped, and an application for a license to so produce, to be accompanied by a bond in a penalty, and with sureties to be approved by the Commissioner of Internal Revenue, conditioned that he will faithfully observe all rules and regulations that shall be prescribed for such manufacture and production of sugar.

The Commissioner of Internal Revenue, upon receiving the application and bond hereinbefore provided for, shall issue to the applicant a license to produce sugar from sorghum, beets or sugar-cane grown within the United States, or from maple sap produced within the United States, at the place and with the machinery and by the methods described in the application; but said license shall not extend beyond one year from the date thereof, and no bounty shall be allowed or paid to any person licensed as aforesaid in any one year upon any quantity of sugar less than 500 pounds.



Tin Plate.

There shall be allowed on the imported tin plate used in the manufacture of cans, boxes, packages and all articles of tinware exported, either empty or filled with domestic products, a drawback equal to the duty paid on such tin plate, less one per cent of said duty which shall be retained for the use of the United States.

Breeding Animals

Any animal imported specially for breeding purposes shall be admitted free. Provided, that no such animal of the female sex shall be admitted free unless pure bred of a recognized breed, and duly registered in a book of record established for that breed.

Animals brought into the United States temporarily for a period not exceeding six months, for the purpose of exhibition or competition for prizes offered by any agricultural or racing association, free.

THE OTAY WATCH FACTORY, OTAY, SAN DIEGO COUNTY.

A Visit to the Otay Watch Factory.

EDITORS PRESS:—Leaving San Diego over the National City & Otay railroad, in a few minutes we reach National City (which I will describe in a future letter), and continuing, cross the rich valley of the Sweetwater. Here the N. C. & O. R. R. branches, one line going to the famous Sweetwater dam, the other to Tia Juana. Taking the Tia Juana line, we find ourselves a mile farther or ten miles from San Diego at Chula Vista. This in a few years will be one of the finest suburban towns in Southern California. Here are 5000 acres divided into 5-acre villa sites. The price of lots and cost of building as required by terms of sale preclude the possibility of an undesirable class settling here. The town is laid out on a beautiful stretch of land in full view of ocean and mountains, and is already well dotted with homes. Passing on three miles, we come to Otay, the home of the Otay Watch Co. By courtesy of Mr. P. H. Wheeler, the superintendent, I had the pleasure of seeing a California watch in all stages of its makeup from the crude material in the material-room to the finished watch ticking the tick of Otay. I give the following notes of the works, which, while brief, may be of interest to the PRESS readers:

The Otay Watch Works are situated in the flourishing young village of Otay, San Diego county, Cal. The works commenced building machinery a little over a year ago, and turned out their first watches May 17, 1890. The watch was a success from the very start, and it is truthfully said that it is the handsomest watch made in America, and for time it has no equal, thus speaking volumes for the great Pacific Coast. The watches may be found in all

jewelry stores in California, Oregon, Washington and Nevada. Many have been shipped to Yokohama, Japan. The factory is on a very successful basis, at this time carrying a surplus to its credit each month. It is said beyond question that this has been the most successful start that has ever been made in America. The factory is three stories high, built of fine red brick, 100 feet long, 40 feet wide, with office, boiler and engine rooms separate. Fine green lawns are laid out in front of main building, covered by growing tropical vegetation of all kinds.

The experts came from Eastern factories at Elgin, Ill.; Springfield, Ill.; Columbus, Ohio; Waltham, Mass. The factory is under the supervision of P. H. Wheeler, the superintendent, who is the originator and designer of the Otay watch and the patentee inventor of all the inventions in use by this company. The factory is equipped with the finest kind of modern machinery, and the departments are run by skilled experts of the highest order and most successful in the watch business in the United States.

The company at present employs over 90 people, and is constantly adding to the number. To Frank A. Kimball, general manager, may be given much of the credit of establishing the company on a solid basis. In its early days before the first wheel turned, the company having underestimated the size of the undertaking, scarcely knew whether to continue or to retire. In this predicament Mr. Kimball, with the same enterprise that has ever distinguished him, came forward and personally set the company on the solid footing it now enjoys.

Otay, Cal. J. B. H.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

A FRUIT CLEANUP.—Haywards *Journal*, Oct. 4: It is reported that W. C. Blackwood made a "ten-strike" on apricots this year, cleaning up from 20 acres something like $10,000, or about $500 an acre. We know a number who did well on pears, the Bartletts bringing them over $100 an acre, and still they say there is no money in fruit.

Colusa.

HONEY.—Colusa *Sun*, Oct. 4: Robert Alexander of Grand Island was in town Wednesday afternoon with a large load of honey, which he soon disposed of at very reasonable rates. He has about four tons to sell this fall.

Contra Costa.

SQUIRRELS AS GRAPE GATHERERS.—Martinez *Gazette*, Oct. 4: It is not the wheat-raisers alone, as has been demonstrated to the sorrow of orchardists and vineyardists, who pay heavy toll for the support of the vast army of squirrels that infest the agricultural portions of the State. Fruit and grapes are equally suited to their appetites, and they are not slow to help themselves extensively. H. Raap, near Martinez, has a vineyard of about 35 acres of six-year-old vines, which bore 60 tons of grapes this season. He harvested one-third; the squirrels had previously done the rest, and relieved him of the other 40 tons.

Fresno.

FRESNO'S RAISIN PACK.—*Expositor*, Oct. 1: T. C. White, the grower and packer, placed the total shipment at 1,000,000 boxes. In this estimate are included those shipped in boxes and those in sacks. The former will probably amount to 800,000 boxes, provided, of course, the weather does not change for the worse. At $1 50 a box, this would represent a value of $1,200,000—quite a respectable sum. I do not think this is an excessive estimate, for a large acreage came into bearing the first time this year, and the old vines and those planted a few years ago are more heavily loaded than they ever were before. The cheerful part of the whole business is that every berry has been placed; in fact, the pack will not supply the demand by a good deal. Yes, the raisins are being packed better this year, but there is still room for improvement in many cases. I have also observed that the shipments of dried grapes are considerably in excess of last year's shipments.

WINE VS. RAISIN GRAPES.—*Expositor*, Oct. 1: "It is a fact," said a gentleman connected with one of the largest wineries in the county, "that the immense number of grapes being dried will affect the vintage in this county to a considerable extent. The decrease in the acreage in wine grapes is another factor worthy of consideration. It is only natural that vineyardists will prefer to dry their grapes to selling them to a winery when they can get 3½ cents a pound for them, and just as natural is it that those who have wine grapes will replace them with raisin grapes when they see what a great difference there is between the profits from each."

THE DRIED FRUIT INDUSTRY.—Fresno, Sept. 30: Next year a number of the packing-houses which now put up raisins only will also pack and ship dried fruits. The industry gained quite an impetus this year and will become one of the most important in the county—indeed it is already such. The prices paid for dried fruit have been quite high and will always remain at a figure that will make the industry a profitable one. B. F. Whitmer, freight and ticket agent of the Southern Pacific Co., says that the shipments in carloads of green fruit, dried fruit, dried grapes and raisins up to date are as follows: Number of carloads of green fruit shipped, 138; dried fruit, 62 carloads; dried grapes, 78 carloads; raisins, 88 carloads.

DRYING GRAPES ARTIFICIALLY.—Selma *Irrigator*, Sept. 29: W. S. Sanders of Clifton has been traveling through the colonies to learn how to take care of his grape crop, and thinks he has found a solution of the problem. West of Fresno he found people putting their fruit into close rooms and heating the rooms by means of stoves. They raise the temperature to 90° and keep it there till the moisture is pretty well evaporated from the fruit, and then raise it to about 125°. Mr. Sanders says the colony people dry their fruit in this way, and he is going to try it. He has bought two stoves and will put one in each end of a room 18x18 feet, letting the pipe from each stove extend across the room and pass out at the opposite end.

Inyo.

HONEY SHIPMENT.—Bishop *Register*, Oct. 2: Henry Trickey expects to start Saturday for the East with a carload of honey, chiefly from his own apiary. Over ten tons of honey, all in pound sections, and nearly all first grade, will constitute the lot, and is destined to New York or Boston. This will be the largest single shipment yet made from this valley to any distant point.

Kern.

GOOD RETURNS.—Bakersfield *Echo*, Oct. 2: Lowell Bros. have received returns from the first carload of peaches sent East from their orchard. There were 1000 20-pound boxes in the car, and they were sold in New York at a figure that netted them $1008.41. Their crop from 15 acres amounts to 8000 boxes of shipping fruit.

Lake.

DOGS KILLING SHEEP.—Lower Lake *Bulletin*, Oct. 4: What is to be done for the protection of our sheep? Dogs have almost annihilated the sheep business in Lake county. Frank Hanson has lost between 250 and 300 head since last April, Mr. Stubbs has lost in proportion; so has Mr. Keatinge and D N. Hanson. Now all the ready money in the county is derived from wool and mutton. About eight or nine years ago the yield from those flocks of sheep, not to say anything of the rest of the sheep in the county, amounted to from 28 to 30 bales each yearly, and to-day the whole of them will not amount to any more.

Napa.

WAITING FOR RAINS TO PLOW.—Carneros Creek, Oct. 2: Our farmers are making preparations for winter and are patiently waiting for early rains. As soon as the ground can be plowed, many teams will be put to work. Much of our land has been resting for a year or two and ought to bear good crops another season, providing the Hessian fly does not visit us.

DAIRY FARM.—Carneros Creek, Oct. 2: B. H. Bentley has moved on to Jas. Dealey's dairy ranch near the tules, below Jas. Duhig's place. He will devote his attention to dairying for the next year or more.

DEMAND FOR FRUIT TREES.—Napa *Register*, Oct. 3: The supply will not equal the demand by a million trees, says Max Crow, book-keeper for Leonard Coates, nurseryman and fruit grower. The greatest demand, Mr. Crow says, is for French prunes, with peaches, plums and pears coming next in the order named. Growers in the southern portion of the State, principally in Los Angeles and San Diego counties, are the largest and most urgent buyers. The growing of deciduous fruits has proved such a success in the citrus-fruit country that many orchards are being set out there. The causes for the great demand of trees are the prevailing high prices for green and dried California fruits in the East, the scarcity of this year's crop, and the fact that many trees were killed by the rainy winter. In the vicinity of Vacaville and Winters, in some orchards not more than 10 per cent of the trees survived the ordeal. In Napa valley the loss was not so great, but all orchardists lost more or less heavily. Mr. Coates, however, lost only 200 trees out of 4500, and these were on low ground which could not be well drained. He attributes his good fortune to the fact that he plowed the orchard *to* the trees, leaving a furrow in the center of the rows, which drained the water away from the trees. The loss was chiefly to apricot and peach trees, which will not thrive in wet land.

Placer.

ONLY FOUR YEARS OLD.—Colfax *Sentinel*: Among the many fruit-raisers of Placer county who had a place in the Auburn pavilion last week was Mr. Gaylord, who has a ranch two miles south of Auburn. The fruit that occupied his space was principally oranges and pears, besides quite a number of black walnuts. In size and quality of the fruit there was none that could excel his in the pavilion. The reason that we are making special mention of this particular display is because we want to show that Placer county land is peculiarly adapted for fruit raising. Just four years ago Mr. Gaylord began to clear the undergrowth from the land where his ranch now stands. It was nothing but a thick mass of chaparral and poison oak. After getting it all cleared, he set out fruit trees of different kinds and planted from the seed some black walnuts. To-day many of the trees are from 20 to 30 feet high and are loaded down with fruit and nuts.

Sacramento.

FAST-HORSE NOTES.—*Record Union*, Oct. 6: Mention was made a couple of months ago of the fact that the young Electioneer stallion Alaska, on the Rancho del Paso, had trotted a mile in 2:20 on the home training track. In all probability Alaska will be given a record at the Breeders' meeting at Napa, and it is thought he will cut his record down considerably. Trainer McConnell went out to Rancho del Paso recently, and was so pleased with the looks of Albert W. that he asked John Mackey to let him take him for a few months and give him the mark he is entitled to. McConnell says 2:15 would not stop him. Mr. Reavis shipped Vic H. to Chico after the State Fair, and will not trot her again. She will be sent East at the head of the long string of Blackbirds, Monroe Chiefs, etc., that Mr. Reavis intends selling in New York this fall.

San Benito.

IRRIGATION CANAL WORK.—Hollister *Advance*, Oct. 3: The Irrigation Co. will shortly commence work on the branch canal leading northwest over the lands of Ladd, Nash, Gury and others. It is the intention of Mr. Gury to set out a large tract of land in alfalfa and fruit trees. The branch canal will run through the land of J. B Swan into the San Juan valley. Property-owners are waking up to the importance of the irrigation project to this county.

LAND FORFEITURE BILL.—Hollister *Free Lance*, Oct. 3: The Land Forfeiture bill has passed both houses of Congress, has been signed by the President, and is now a law. This will affect thousands of acres of land in this county. Filings will be received probably in about 60 days.

San Diego.

THE HONEY SEASON.—S. D *Union*, Oct. 2: The prospect for early fall rains is encouraging the apiarists to hope for a largely increased yield of honey next year. When the rainy season begins early, is fairly continuous, and falls until late in the spring, a large crop of honey results. This was the case in 1884, when 3,000,000 pounds were secured, the largest yield the county ever made. One of the head men in the business says that this year's crop will be but little over half that figure, or 1,750,000 pounds, which is 750,000 pounds greater than last year's crop. This season the northern part of the county is furnishing most of the honey—from San Jacinto, Fallbrook, Temecula, etc. This is because the hot weather did not have a chance to powder up the bee plants as it did in lower regions where the development was more advanced. The only section still making honey for this crop is around Campo, where the plants being at higher elevations, have matured later. Many who have honey to sell also are holding it for a better market, though prices have been good through the season.

WHEAT NOTES.—S. D *Union* Oct. 2: C. F. Smith, who for several years has been in charge of one of Senator Hearst's fine stock ranches at San Luis Obispo, has made arrangements to sow 4000 acres of wheat on the Pauba ranch, just east of Temecula. In the valley land on this ranch are about 5000 acres of level, rich soil. It is to be turned over and prepared for sowing by a large traction engine, which will move from 16 to 20 plows. The sowing of 4000 acres of wheat in one field will greatly increase the acreage of San Diego county. There seems to have been quite a revival in the wheat-growing industry of this county, and as a result there will undoubtedly be a large increase in the wheat shipments next year from San Diego. Mr. Spreckels this year commenced buying wheat with the intention of shipping one cargo to Liverpool from San Diego. He has been so successful in his purchases that instead of one he will send two cargoes from San Diego this year.

CHINESE PHEASANTS.—*San Diegan*, Sept. 29: An organization of sportsmen was formed Saturday evening for the purpose of introducing Chinese pheasants into this county. Chinese pheasants are about the size of Leghorn hens, and 400 or 500 pairs will be secured. Some time since pheasants were introduced in Northern California and Oregon, and reports show that the birds have increased and are becoming plenty. The experiment has even gone further, and the birds have been tamed and raised as domestic fowls.

Santa Clara.

ORCHARD ITEMS.—Los Gatos *News*, Oct. 3: Large additions will be made to acreage of orchards the coming winter. Especially is this true of French prune, which have no pests and are regular bearers. One year ago Col. Slaughter grafted 600 old peach trees with Silver prune scions. They have made a most remarkable growth and are far ahead of anything in the vicinity, having made the past season six to eight feet growth.

San Luis Obispo.

FARM NOTES.—"Pioneer" writes to the S L. O. *Tribune*, Oct. 3: J. B. Meacham lives about 18 miles above the town of Arroyo Grande, on the Arroyo Seco. He has watermelons by the hundreds, and such ones! Some of them would weigh between 40 and 50 pounds. I saw there a fine crib of corn raised this season. Close by the crib was growing some massive corn, tasseling out and silking, some 11 or 12 feet high, planted in June; also some broomcorn, the brush fully two feet in length. He gave me an apple he called a fall pippin that measured 10⅞ inches in circumference. There were peaches, apples, plums, apricots and prunes, all growing and flourishing. Never had had a drop of water and never needed it. In addition to the above are as fine and large blackberry vines as any that are grown in the county. I find the bean farmers very uneasy about the rain. They told me yesterday that the beans were not injured so far, and informed me that they have a good average crop.

San Joaquin.

CATTLEMEN PROSECUTE HUNTERS.—Stockton *Independent*, Oct. 3: A New Hope farmer says hunters are annoying stockmen of that section, and in self-protection land-owners will prosecute sportsmen as trespassers. Last week, men hunting on Sargent's land, near New Hope, stampeded a band of cattle, and some of the frightened animals ran into the Mokelumne river. Farmers on Staten island, opposite the Sargent ranch, pulled out several cattle, but it is known that a number floated down the river and were lost.

Solano.

ONION FARM.—Wheatland *Four Corners*, Oct. 4: John Scott informs us that the Granger Store garden will have 10 acres planted in onions in December. The plants are sprouting finely at this time.

Sonoma.

GRAPE-PICKING.—Sonoma *Index-Tribune*, Oct. 4: The rains of the past week have had a tendency to hurry up our vineyardists in gathering the grape crop. Last Wednesday it cleared up, since which time large gangs of grape-pickers can be seen in many of the vineyards. The early rains of last season destroyed the entire crop in many of our vineyards, while all suffered more or less. With last season's experience so vividly impressed on the minds of the grape-growers, it is safe to assert that with favorable weather the next two weeks almost the entire crop of wine and table grapes will have been gathered.

A FINE YOUNG ORANGE GROVE.—Sonoma, Oct. 4: Jas. McMackin, who resides at Shellville, a few miles south of Sonoma, has one of the thriftiest two-year-old orange groves that we have ever seen. The grove contains over 200 trees, the whole being irrigated from an artesian well to which is attached water pipes which lead up to the base of each tree, thus insuring thorough irrigation without waste of water.

THE VINTAGE.—Santa Rosa *Democrat*, Oct. 4: Grapes mature fully 15 days earlier at Cloverdale than elsewhere in this county. E. G. Farber, a well-known wine-maker, states that the grape crop this year is a full average in quantity, and better in quality. There are no losses from sunburn as last year. The quality is good, there being plenty of sugar for fermentation. About 1500 tons are being dried. These were engaged early at from $8 to $10 per ton. At present the prospect is for a very successful outcome of this venture, and it presages good for the future. Muscats are selling for $17 per ton, and the prices for other table grapes are $10 to $12. The parties who dry grapes in this portion of the valley are benefited by the large amount of saccharine matter that goes into sugar and increases the weight; consequently Cloverdale grapes should fetch good prices. In consequence of the quantities going into dried grapes, the wineries have no surplus and they easily handle the crop.

GOOD YIELD OF HOPS.—Santa Rosa *Republican*, Oct. 2: From 6½ acres of land, Anthony McPeak, who resides near Guerneville, has harvested 73 bales of hops. This is equal to about a ton to the acre.

Sutter.

ONE ACRE'S YIELD.—Y. C. *Farmer*, Oct. 3: We give the following figures of the yield of one acre in the orchard of G. F. Starr above Yuba City, for the season. The figures are correct, even if they do appear large. From 100 peach trees of the Salway and George's Late varieties, planted on one acre, Mr. Starr received 273 pounds of peaches to the tree, making 27 300 pounds, which were sold to the cannery for 3¼ cents per pound, making the receipts for the acre $887.25.

Tehama.

SEEDING GRAIN.—Red Bluff *People's Cause*, Oct. 4: Farmers are busy putting in their grain. Warned by last year's experience, they intend this year to be ready for wet weather, whether it comes or not. Last year hardly any had all their grain sown, and a great many were without wood part of the time, though it was growing around them.

STOCK NOTES.—Red Bluff, Oct. 4: Most of the farmers are disposing of their hogs, although at not very remunerative prices. Shearing is nearly over. The wool is fully up to the average.

Tulare.

VOLUNTEER GRAIN.—Visalia *Times*, Oct. 2: The late rains will undoubtedly cause the grain now lying in the ground to sprout, and should a dry spell of considerable duration ensue, the sprouted grain will then die out. This would probably work no detriment to the farmer, as it is only about one time in ten that a volunteer crop proves of enough value to pay for cutting and sacking it.

Yolo.

TREE PLANTING.—Woodland *Mail*, Oct. 4: It is good to begin the preparing of the ground for transplanting trees and to do it thoroughly. If it is done in a careless manner, the trees will make but a feeble growth and you will think orcharding a failure. If the trees are to be set in the ground that is too rough to plow and cultivate, dig the holes at least five feet square, remove the turf and pile on one side, also remove all stones and trench the soil thoroughly to at least a foot and a half, and throw it into the center in the shape of a cone, so that the frost cannot penetrate it during the winter.

State Fair Awards.

The following awards, made at the State Fair lately held at Sacramento, are of special interest to stockmen, farmers, and horticulturists:

County Exhibits

Sacramento county, 1st premium ($500 cash); Colusa, 2d; Humboldt, 3d; Yolo, 4th.

Horses.

THOROUGHBRED STALLIONS.—4 yrs old & over, 1st premium, Prince of Norfolk, W. B. Todhunter, Sac.; 2d, Imp. Cheviot, W. G. Ross, S. F.; 3 yrs old, 1st, Flambeau, L. Stanford; 2 yrs old, 1st, Power, Wm. Murry, Sac.; 2d, Aristocrat, same; 1 yr old, 1st, sorrel colt, Wm. Murry; 2d, Laurelwood, W. L. Appleby, Sac.; colts under 1 yr, 1st, bay colt by Hidalgo, C. Halverson, Routiers; 2d, Golden Eagle, W. F. Smith, Sac.

MARES.—4 yrs old & over with suckling colt, 1st, Maggie S., C. Halverson; 2d, Nellie Fashion, Mrs. Alice Cutter, Sac.; 4 yrs old & over, 1st, Isabella, C. Halverson; 2d, Annie Laurie, W. F. Smith; 3 yrs old, 1st, Minuet, L. J. Rose, San Gabriel; 2d, Fabiola, C. Halverson; 2 yrs old, 1st & 2d, fillies by Hindoo, L. J. Rose, San Gabriel; 1 yr old, 1st, Blondinette, W. F. Smith; 2d, filly by Pat Malloy, L. J. Rose.

STANDARD TROTTERS.—Stallions—4 yrs & over, 1st, Eros, F. H. Burke, Menlo Park; 2d, Clay Duke, J. W. Martin, Woodland; 3 yrs, 1st, Falrose, F. P. Lowell, Sac.; 2d, Proof-reader, Dr. Hicks, Sac.; one yr old, 1st, Saucelito, La Siesta Ranch; 2d, Kebir, W. F. Smith.

MARES. — 4 years & over with skg colt, 1st, Oleta & colt, F. H. Burke; 2d, Pansy & Sarge, W. F. Smith; 4 yrs & over, 1st, Sylvia, & 2d, Lady Grosvenor, E. Topham, San Jose; 1 yr old, Luck, F. H. Burke; 2d, Remora, W. F. Smith; skg colt, 1st, Abacca Wilkes; J. P. Callundan, Sac.

NORMANS, PERCHERONS AND CLYDESDALES.—Norman st, 4 yrs & over, 1st, Beaufort, J. P. Rodehaver; 2d, Des Champs, same; Percheron st, 4 yrs & over, 1st, Utile, Voorhies & Barney; 2d, Cinq Mars, Geo. McElroy; Per st, 3 yrs, 1st, Oregon, & 2d, On Siso, J. C. Smith, Oakland; Per st, 2 yrs, 1st, Magnet, J. C. Smith; Per st, 1 yr old, 1st, Harrison, Voorhies & Barney; Per st, under 1 yr, 1st, Prince A., & mare, 4 yrs & over, with colt, 1st, Perinette & colt, Voorhies & Barney; P. m, 4 yrs old, 1st, Laura; 2d, Theresa, & 1st, P. m, 1 yr old, Maud, J. C. Smith; 1st, P. m, under 1 yr, 1st, Princess A., Voorhies & Barney; Clydesdale st, 4 yrs & over, 1st, Prince, John Coakley; 2d, Black Champion, C. W. Bennett; C. st, 3 yrs old, 1st, Douglas Dale, Stoddardt & De Gomez; C. st, 2 yrs old, 1st, Plunger, John Coakley; C. st, under 1 yr, 1st, Clyde Boy, T. A. Neeper; 2d, Annodale, C. W. Bennett; C. mare, 4 yrs & over, 1st, Queen, Henry Pierce, S. F.; 2d, Blanche, same; C. m, under 1 yr, 1st, Adelaide, C. W. Bennett; 2d, Addine, same.

DRAFT HORSES, (OTHER THAN PERCHERONS, NORMANS AND CLYDESDALES.)—Stallions—3 yrs old, 1st, Franklin, H. Ehrhardt; 2d, Birney, R. J. Merkeley, Sac.; 2 yrs old, 1st, Lothair 4th, Parsons & Griffith; 2d, Prince, Geo. McElroy; 1 yr old, 1st, California Tom, Parsons & Griffith; under 1 yr, 1st, Blarney, W. J. Prather.

MARES —4 yrs & over, 1st, Lady B., Parsons & Griffith; 2d, Lady Lomond, same; 4 yrs old, 1st, Fanchon, R. J Merkeley; 2d, Langtry, Parsons & Griffith; 3 yrs old, 1st, Puck, F. N. Midgley; 2d, Black Bess, R. J. Merkeley; 2 yrs old, 1st, Queen, R. J. Merkeley; 2d, Estredo, J. B. Harris; 1 yr old, 1st, Mollie (black), R. J. Merkeley; 2d, Mollie (gray), F. W. Midgley.

ROADSTERS.—Stallions—4 yrs & over, 1st, Somerset Prince, C. H. Carson, Lodi; 2d, Comet, J. R. Jacobs, Knight's Landing; 3 yrs old, 1st, Duke Cameo, A. Herold, Sac.; 2d, Belvidere, Matt. Storn, Sac.; 2 yrs old, 1st, Willard Wilkes, J. B. Ramsey, Meridian; 2d, Sid, W. F. Smith; 1 yr old, Wood Vernon, J. A. McCloud, Stockton; 2d, Hickorynut, E. Pickett, Elk Grove; skg colt, 1st, Douglas, B. C. Harris, S. F.; 2d, Chico, R. McEnespy, Chico; gelding, 1st, Little Phil, G. C. McMullen, Sac.; 2d, Dexter, W. Gardiner, Sac.

MARES.—4 yrs & over with skg colt, 1st, Lena Bowles, B. E. Harris; 2d, Juno, A. D. Miller, Walsh's Station; 4 yrs old & over, 1st, Belle Patchen, W. J. Irvine, Sac.; 2d, Maid of Killarney, Miss N. J. Ryan, Sac.; 3 yrs old, 1st, Marina, W. F. Smith; 2d, Adiba, T. C. Snider, Sac.; 2 yrs old, 1st, Daisy Vernon, J. A. McCloud, Stockton; 2d, Hattie Vernon, same; 1-yr old, 1st, Sidena, B. F. Harris; second, Rose, J. C. Perkins, Perkins; skg colt, H. S. Beals, Sac.

CLEVELAND BAYS AND FRENCH COACH.—Stallions, 4 yrs & over, Lord Huntington, W. J. Prather, Fresno; 3 yrs old, 1st, Loyalty, Wm. Wilkinson, Fresno; 2d, Scamper Swell, W. J. Prather.

MARES —4 yrs & over with colt, Rose Leaf, W. J. Prather; 4 yrs old & over, 1st, Queenie, Prather; 2d, Phantom, Wilkinson; 3 yrs old, Rellington Lassie, Prather.

CARRIAGE TEAMS.—Matched span, owned and used as such by one person, 1st, Jas. McNasser, Sac.; 2d, E. M. Leitch, Sac.

ROADSTER TEAMS. — Double-team roadsters owned and used as such by one person, 1st, J. H. Barnard, Chico; 2d, A. L. Nichols, Chico.

HORSES OF ALL WORK.—Stallions—4 yrs & over, 1st p. C. Patchen, C. Kincaid, Davisville; 2d, Davie Crockett, W. Ober, Sac.; 3 yrs old, 1st, Selby, J. Heintz, Sac.; 2d, Hugo, B. C. Harris; 2 yrs old, 1st, Tom Shields, J. B. Ramsey, Meridian; 2d, Selmi, J. Heintz, Sac.; 1 yr old, 1st, Hamilton, B. M. Lovejoy, Perkins; 2d, Stockton Vernon, J. A. McCloud, Stockton; under 1 yr, 1st, Colonel, B. M. Lovejoy; 2d, Donald Card, G. Lessner.

MARES.—4 yrs & over with colt, 1st, Flora, B. M. Lovejoy; 2d, Colley, H. H. Wilson, Rocklin; 4 yrs & over, 1st, Luella, A. D. Miller, Walsh; 2d, Daisy, W. M. McIntosh, Roseville; 3 yrs old, 1st, Nellie, A. D. Miller, 2d, Nell, H. H. Wilson; 2 yrs old, 1st, Alice Vernon, J. A. McCloud; 2d, Lucy C., B. Harris, Nicolaus; 1 yr old, 1st, Ella B., G. Lassner, Freeport; 2d, Orphan Girl, G. Lassner; skg colt, 1st, Bessie, Voorhies & Barney; 2d, Flora, H. H. Wilson.

FAMILIES.—Best thor'bred dam, with 2 colts, all thor'bred, Maggie S and colts Isabella, Friablo & Daniel S, C. Halverson, Routiers; best stallion, other than thor'bred, with 5 colts, Director & 7 colts, Pleasanton Stock Farm; 2d best, Eros and 5 colts, La Siesta Ranch; best dam, other than thor'bred, with two colts, Lady Nutwood & 4 colts, E. Topham, Milpitas; 2d best, Brown Jennie & 3 colts, J. H. McCord, Sac.

SADDLE HORSES.—1st, J. D., J. M. Dixon; 2d, E. A., Ed. Bridgford, Colusa.

SWEEPSTAKES.—Stallion, Kebir (1 yr), W. F. Smith, Sac.; mare, Sidena, B. E. Harris, S. F.

Jacks, Jennies and Mules.

JACKS.—4 yrs & over, 1st, Alfonso, H. W. Jeans; 2d, Black Jeff, Chas. Studarius; 3 yrs old, Longfellow, E. S. Driver; 1 yr-old, Moses, J. H. Harlan.

JENNIES.—4 yrs & over, Laura, C. Studarius; 1-yr-old, Belle, same.

MULES.—Matched span, 3 yrs & over, California bred, 1st, Pet & Mell, H. H. Wilson; 2d, Sally & Beck, H. W. Jeans; skg, C. Studarius.

Cattle.

DURHAMS.—1st, 28th Duke of Gloster, Heilbron Bros., Sac.; 2d, 26th Kirklevington of Forest Home, C. Younger & Son, San Jose. Bulls—2 yrs & over, 1st, 44th K. of F. H., Younger & Son; 2d, Cavalier, James Jones, Pleasant Grove. 1 yr old, 1st, Manemga Duke, P. Peterson, Sites; 2d, 2d Duke of Wild Flower, Heilbron Bros.; b calf, 1st, Heilbron Bros.; 2d, P. H. Murphy, Brighton. Cows—3 yrs & over, 1st, 21st Rose of F. H., Younger; 2d, Hattie, P. S Chiles, Davisville; 2 yrs old, 1st, Bonnie Belle 6th, Younger; 2d, 3d Rosoly K., P. Peterson; 1 yr old, 1st, Duchess of Wild Flower, Heilbrons; 2d, Jessie Maynard 6th, Younger; h calf, 1st, Lady Alice, P. H. Murphy, Brighton; 2d, 5th Duch. of Aberdeen, Heilbrons.

JERSEYS AND GUERNSEYS.—Bulls—3 yrs & over, 1st, King of Y. B., W. C. Smith, Florin; 2d, Duke of Alameda, S. A. Hoxby, Alameda; 2 yrs old, 1st, Alameda Chief, T. Ward, Oakland; 1 yr old, 1st, Bob Mercury, L. F. Eaton; 2d, Onandago, T. Ward; calves, 1st & 2d, W. C. Smith. Cows—3 yrs & over, 1st, Queen of Sacto, W. C. Smith; 2d, Bonita, T. Ward; 2 yrs old, 1st, Lady Wells, P. Stanton, Sac.; 2d, Nona of Florin, W. C. Smith; 1 yr old, 1st, Maud S. of Florin, W. C. Smith; 2d, Xariffa Baker, L. F. Eaton; h calf, 1st, Frankie Baker, L. F. Eaton; 2d, My Own, P. Stanton. Herds—Best herd of thoroughbred Jersey or Guernsey cattle, 1 male and 4 females, W. C. Smith; young herd under 2 yrs, F. L. Eaton. Sweepstakes—Best bull any age, King of Y. B., W. C. Smith; best cow any age, W. C. Smith.

DEVONS.—All awards (bulls, cows, herd and sweepstakes) to R. McEnespey, Chico, except one, viz., for best 3-yrs-and-over bull, Landin Duke, Boon Jones, Chico.

AYRSHIRES.—All (11) awards to Geo. Bement & Son.

HEREFORDS.—All (11) awards to Heilbron Bros.

HOLSTEIN-FRIESIANS.—Bulls—3 yrs & over, 1st, Egmond Pride, G. B. Polhemus; 2d, Mousell, T. B. Hall, Sac.; 1 yr old, 1st, Fanjo 2d Pride, Polhemus; 2d, Troy Sedro, F. H. Burke, Menlo Park; b calf, 1st, Model of Bonnie Brae, Bonnie Brae Cattle Co., Hollister; 2d, Sam Rucker, Polhemus. Cows—3 yrs & over, 1st, Anna Egmond, & 2d, Autocrat Poel, both Polhemus; 2 yrs old, 1st, Aggie Leila 2d Precious & 2d, Bontie Lincoln 2d, both Burke; 1 yr old, 1st, Alexia 2d, T. B. Hall, Sac.; 2d, Dominita of Bonnie Brae, B. B. Co.; h calf, 1st, Tryntje Lincoln 4th, Polhemus; 2d, Bonita of Bonnie Brae, B. B. Co.; herd, 1st, Polhemus: herd under two years, T. B. Hall, Sac.

ANGUS OR GALLOWAYS.—Bulls—3 yrs & over, 1st, Kier's Knight, J. E. Camp, Perkins; 2d, Wanda, W. B. Gibson, Woodland. 2 yrs old—1st Brilliant, Dr. G. M. Dixon, Sac. 1 yr old—1st, Wanda 4th, W. B. Gibson; 2d, Egbert Laird, J. E. Camp. B calf—1st, Nero of Argonaut, Dr. Dixon; 2d, Pacto, same. Cows—3 yrs & over—1st, Coquette 2d of Lake Forest, Dr. Dixon; 2d, Nevada, W. B. Gibson. 2 yrs old—1st, Lady Whitmore; 2d, Lady Melve, both Dixon. 1 yr old—1st, Dorcas of Argonaut Dixon; 2d. Gretchen Hass, J. E. Camp. H calf—1st, Annie Unice, Gibson; 2d, Lady of Brighton, Camp. Herd—Best herd of thoroughbred Angus or Galloway cattle 1 male and 4 females, J. E. Camp, Perkins. Sweepstakes—Best bull, any age—Wanda, W. B. Gibson. Best cow, any age—Coquette 2d of Lake Forest, Dr. Dixon.

GRADED COWS.—3 yrs old—Gilley Flower, R. Ashburner; 2 yrs old, Pauline, Younger; 1 yr old, Fawn, S. Tryon; h calf, Margery, R. Ashburner.

HERD SWEEPSTAKES.—Beef Breed—best herd, 1 bull and 4 females of the following ages: 4 yrs old or over, 3 yrs old, 2 yrs old, 1 yr old, 1st premium, Younger & Son.

MILK BREEDS.—Best herd, 1 bull and 4 females of the following ages: 4 yrs old or over, 3 yrs old, 2 yrs old, 1 yr old, Polhemus.

Sheep.

SPANISH MERINOS.—All (7) awards, for rams, ewes & lambs, to F. Bullard, Woodland.

FRENCH MERINOS.—All (7) awards to J. H. Glide, Sac.

SHROPSHIRES.—Ram, any age, 1st & 2d, J. H. Glide, Sac.; pen of ewes (5), any age, A. Smith, Redwood City; ram and 5 lambs, 1st, Royal Duke of California 2d, and 5 lambs, A. Smith; 2d, Jumbo and 5 lambs, J. H. Glide; 3 ram lambs, 1st, Smith; 2d, Glide; pen of 5 ewe lambs, 1st, Smith; 2d, Glide.

Angora Goats.

THOROUGHBREDS.—Buck, 2 yrs & over, 1st, Gov. Helm, Jr., J. H. Harlan; 2d, Soledad, C. P. Baxter; buck under 2 yrs, 1st, Oasis, J. H. Harlan; 2d, Mariposa, C. P. Bailey; pen of 3 does, under 2 yrs, 1st, Bailey; 2d, H. H. Harlan.

GRADED.—Pen of 3 does, 2 yrs & over, H. H. Harlan; pen of 3 does, under 2 yrs, same.

HERD.—Herd, not less than 10, any age or breed, 1st, J. H. Harlan; 2d, C. P. Bailey.

Swine.

BERKSHIRE.—Boars—2 yrs & over, 1st, A. Smith; 2d, J. Waite; 1 yr old, 1st, Smith; 2d, Waite; 6 mos. old, 1st, Waite; 2d, Smith. Sows—breeding sow 2 yrs old, 1st, Waite; 2d, Smith; 1 yr & under 2 yrs, 1st & 2d; also 6 mos. old & under 1 yr, 1st & 2d; also sow and 6 pigs under 3 mos., 1st & 2d; also pair of pigs under 6 mos., 1st & 2d, A. Smith. Sweepstakes—Boar, any age, Smith; sow, any age, Waite; pen of 6 pigs under 6 mos., & family, A. Smith.

ESSEX.—All (7) awards to Geo. Bement & Son.

POLAND CHINA.—Boars—2 yrs & over, J. Melvin, Davisville; 1 yr & under 2 yrs, 1st, Smith; 2d, Melvin; 6 mos. old & under 1 yr, 1st, Smith; 2d, P. H. Murphy. Sows—2 yrs & over, 1st, A. Smith; 2d, J. Melvin; 1 yr old & under 2, 1st, Melvin; 2d, Smith; 6 mos. old & under 1 yr, 1st & 2d, Melvin; sow & 6 pigs, Smith; pair of pigs, 1st, Melvin; 2d, Smith. Sweepstakes—Boar any age, Smith; sow any age, Melvin; 6 pigs under 6 mos, Smith; family, Melvin.

Poultry.

FOWLS.—Light Brahmas—Cock and hen; breeding pen, 1 male, four females, T. Waite; cockerel & pullet, C. J. Cox. Dark Brahmas—3 premiums, E. H. Freeman. Langshans—3 premiums, G. E. Duden. Buff Cochins—ck & hen; breed pen, C. J. Cox; ckrl & plt, T. Waite. Partridge Cochins—3 prems, E. H. Freeman. Plymouth Rocks— 3 prems, E. H. Freeman. Black Leghorns—3 prems, C. J. Cox. Brown Leghorns—ck & hen, T. Waite; ckrl & plt, b pen, C. J. Cox. White Leghorns—ck & hen, b pen, E. H. Freeman; ckrl & plt, C. J. Cox. W. F. Black Spanish—ck & hen, ckrl & p, T Waite; b pen, G. E. Duden. Houdans—ck & hen, E. H. Freeman; ckrl & p, T. Waite. Silver-Spangled Hamburgs—ck & hen, b pen, C. J. Cox; ckrl & p, T. Waite; best ck & hen, C. J. Cox. Polish—3 prems, T. Waite. Wyandottes—3 prems, E. H. Freeman. Seabright Bantams—E. H. Freeman. B. B. R. Game Bantams—ck & hen, T. Waite; b pen, E. H. Freeman.

TURKEYS —Pair Bronze turkeys, T. Waite.

GEESE.—Pair Toulouse geese, P. Stanton.

DUCKS.—Rouen ducks, T. Waite; Pekin ducks, 1st, T. Waite; 2d best, E. H. Freeman.

GUINEA FOWLS.—Best pair, T. Waite, 2d best, E. H. Freeman.

Farm Products.

GRAIN, SEEDS, ETC.—Best sample Australian wheat, not less than one sack, C. Studarius, Routiers; 40 sheaves grain, sample Sonora wheat, do small white club wheat, do Proper wheat—all to W. H. Jones, Colusa; sack yellow corn, Acusa, Camp Grant; sample timothy, do mesquit grass, do orchard grass seed, John Miller, Rohnerville; sack oats, J. W. Oliver, Alton; box garden seeds (40 var.). Mrs. Geo. Muddox, Sac.; sk barley, W. S. Shaffer, Union House; display of millet, J. Hamilton, Sac.

VEGETABLES, ROOTS, ETC. — Crooked-neck squashes, C. Studarius; licorice root, Isaac Lee, Florin; Hubbard squashes, Centennial potatoes & cucumbers, M. Mento, Sac.; pumpkin, P. H. Murphy, Perkins; cantaloupes, A. A. Krull, Sac.; red potatoes, sweet potatoes, long blood beets, drum head cabbages, red Dutch cabbage, cauliflower, broccoli, lettuce, celery, Lima beans, white dry beans, kidney beans, pole beans in pod, field peas dry, garden peas dry, castor-oil beans, best and greatest variety of peas dry & table collection vegetables—all to F. Grabrielle, Sac.; white potatoes, parsnips, carrots, sugar beets, white onions & yellow onions—all to Chauncey Langdon, Rohnerville; mountain sweet watermelon, watermelons, any other variety, salsify, turnip beets, purple egg plants, ears sweet green corn, Morrow squashes, peppers for pickling & tomatoes—all to Bowden & Burkey, Colusa.

Miscellaneous.

BUTTER.—Humboldt Creamery, 1st; Alton Creamery, Humboldt Co., 2d. Fruit trees, Ingleside Nursery Co., Sac. Cayenne peppers, Joe Tash, Sac. Dried tomatoes, J. P. Odbert, Sac. Lard, royal brand, W. S. Merry, S. F. Gen. display lard, Mohr & Yoerk, Sac. California cotton, Sylvester Tryon, Sac. California Cotton Mills, East Oakland, display towels and table-cloths, dressed flax, cloth of flax cotton, linen sack twine, Cal. manufacture, kersey, cotton duck and toweling, Cal. manufacture, stocking yarn, carpet warp. Cocoons, W. B. Ewer, National City. Ramie plant, W. H. Murray, S. F. Olive oil, Mrs. E. Roberson, Auburn. Blackberry cordial, J. P. Odbert, Sac. M. J. Bobo, veterinary medical chests. L. A. Box Co. fruit baskets. C. T. Bailey, San Jose, Angora goat robes. H. H. Harlan, Venado, mohair mats. Berry and vegetable wine, Mrs. Geo. Muddox, Sac. Apple cider, S. Martinelli, Watsonville. Honey vinegar, glutena, horse hair, and canned fruits, W. H. Jones, Colusa. Sugar made from sugar beets, sugar made from cane and syrup made from either above-named articles, W. H. Murray, S. F.

Ladies' Tournament.

Prizes for the ladies were awarded as follows: 1st; Miss LeMay; 2d, Mrs. J. M. Collier; 3d, Mrs. B. C. Trefry; 4th, Miss Grace Dixon; 5th, Miss May Foss; 6th, Miss Anna Kemler; 7th, Mrs. W. A. Stephenson; 8th, Miss Laura Aubertus.

Prizes for misses were arranged as follows: 1st & 2d divided between Miss Effie Klemp and Miss Bradley; 3d, Mabel Fay, aged ten years; 4th, Bessie Quarrels; 5th, Miss Logan.

A special extra prize offered for expert riding, was won by Miss LeMay, winner of the tournament prize.

Fruits, Grapes, Nuts, Etc.

GREEN FRUITS.—Best display & variety of pears, do of apples, A. Hansell & Sons, Camp Grant; 2d best display apples, J. B. Smith, Camp Grant; best display & var peaches, G. W. Threlkel, Newcastle; 3d disp & best var pears, J. P. Odbert, Sac.; 3 kinds green figs, & 2 kinds quinces, J. P. Odbert, Sac.; disp pears, E. L. Hawk, Rocklin; disp peaches, Geo. Perkins, Newcastle; box Sicily lemons, Geo. Rich, Florin; 2 var peaches, Mrs. E. Shields, Routiers; disp figs, R. Greer, Sac.; Silverskin prunes & Winter Nelis pears, Dr. Manlove, Perkins; Freestone seedling peaches & Tragedy prunes, J. L. Stubbs, Sac.; Jap persimmons, A. A. Krull, Sac.; pomegranates, Jos. Sims, Union House.

HONEY, PRESERVES, ETC. — Strawberry jelly, Mrs. F. T. Robinson, Florin; fruit in glass, pickles, jams in glass, black currant jelly, seedless blackberry jam, raspberry jam, Mrs. J. P. Odbert, Sac.; quince jelly, blackberry jam, 2d disp jams & jellies, in glass, honey, Mrs. Geo. Muddox, Sac.; red currant jelly, blackberry jelly, C. Langdon, Humboldt.

DRIED AND PRESERVED FRUITS, NUTS, ETC.—Dried pears, J. E. Clanton, Sac.; bleached figs, unbleached figs, E. B. Beecher, Auburn; dis dried pears, J. P. Odbert, Sac.; dried raspberries, A. Hansell & Sons, Camp Grant; 4 kinds prunes, Mrs. E. Shields, Routiers; wash for trees, Calton Bell, S. F.; soft-shell almonds, Isaac Lee, Florin; disp same, R. Greer, Sac.

GRAPES AND RAISINS.—Display of Thompson's seedless grapes, J. P. Onstott, Yuba City; table grapes, 6 var wine grapes, 1 var wine grapes and grape syrup, Mrs. Joseph Sims, Union House; gen display Muscatel raisins, E. J. Clanton, Woodland; best var table grapes, P. H. Murphy, Perkins; 3 var table grapes, James Harris, Roseville; 6 var table grapes, J. M. Davis, Florin; display Muscatel raisins, J. P. Odbert, Sac.; 6 var table grapes, general display of grapes by the producer and 1 var of wine grape, E. L. Hawk, Rocklin; 6 var table grapes, 3 var wine grapes, Rob. Greer, Sac.; display and var of grapes, Dr. Manlove, Sac.

BRANDIES AND WINES.—H. W. Crabb, Oakville, Napa county, 8 premiums.

FLOWERS AND PLANTS.—Best and largest collection of flowering plants in bloom, coll ornamental foliage plants, display of cut flowers, coll new and rare plants, display colens in vat, roses in bloom, fuchsias in bloom, tube-roses, ferns, bouquets, coll plants for greenhouse conservatory, hanging baskets containing plants, pinks, Bell Conservatory, Sac.

The Whole Country Needs Fertilization

ADMONITION TO FARMERS!

GUAYMAS, MEXICO, September 9, 1890.

R. B. CUNNINGHAM, ESQ., Agent Mexican Phosphate and Sulphur Company—DEAR SIR: In answer to your inquiries as to the value of phosphates for worn-out lands, I will state that it is my opinion the lands of the older settled portions of California afford a good field for the use of phosphates. These lands have been cropped for years without any restoration of the chemical constituents necessary for an abundant crop. They therefore show plainly that they need assistance artificially to produce crops good in quantity and quality, let the crop be whatever it may.

Take, for instance, San Joaquin and Santa Clara valleys, and what do you see? Many crops that are so imperfect in quantity and quality that the eye at once detects the defect. The only relief that can be resorted to must be infused into the soil to replace the chemical properties that have been extracted by previous crops, and the writer is of the opinion that a liberal supply of phosphates will accomplish this.

The attention of the cultivators of the soil is sharply turned to rotation of crops, hoping thereby to get wealth out of their lands without fertilization. Some have turned their attention to beet cultivation in soil worn out by other crops. Beet or other seeds will not grow successfully unless the soil will nourish them.

This summer I saw several crops of beets on excessively cropped lands, the majority of which showed that there was something wanting to complete the plants to ample size and in quantity that should be expected of sugar beets under favorable circumstances. If a good crop is not obtained, there is deficiency in profit. It costs as much to cultivate soil deficient in chemical properties as it does if ample nutrition was in the soil. Under the former condition a deficient crop is certain, while under the latter condition he may reasonably expect an ample crop with profit.

Fields often are allowed to go to weeds, supposing thereby to enrich the soil. This is an uncertain method and not profitable. Your weeds have grown up and seeded; the dead stems can only add a limited addition to fertilize the soil, while the seeds of the same will cause much expense to exterminate them from the future crops. Besides, while thus only weeds as a crop, no profit was realized, while if a supply of phosphates had been applied to the soil, a profitable crop of beets or corn would be had. Besides, the weeds would have been exterminated during the cultivation of the said crop. I am, Sir, your obedient servant,

EDWARD PALMER, M. D.

THE MEXICAN PHOSPHATE AND SULPHUR CO.

Manufacture three grades of this Superior Fertilizer of the following analyses:

GUARANTEED ANALYSIS.	Brand [A] for Sugar Cane, Soga Beets, Etc	Brand [B] for Grain, Gardens, Lawns, etc.	Brand [C] for Fruits, Vineyards, Etc.

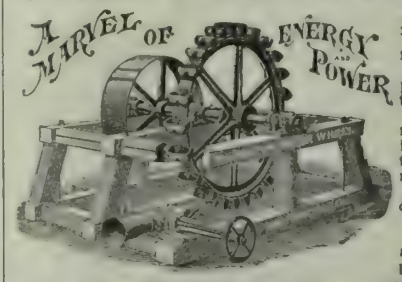
THE CELEBRATED

CLIMAX SPRAY PUMP

Is now manufactured only by R. S. CHAPMAN, he having purchased all rights for same. These pumps have been greatly improved in material and workmanship, and are the best and most economical machines in the market to-day. The Climax No. 1 (represented by this cut) is the cheapest reliable sprayer made, and is especially adapted for effective work in the average orchard.



THE IMPROVED CLIMAX NO. 2

Is a double pump mounted on a 50-gallon barrel and equipped complete with two lines of hose, spray tips, extensions, shut-off valves, etc. This outfit has just been improved and perfected for the season of 1890-91, and is especially desirable in large orchards where economy in material and labor is necessary. Send for descriptive catalogue and testimonials. Address all communications to

R. S. CHAPMAN,

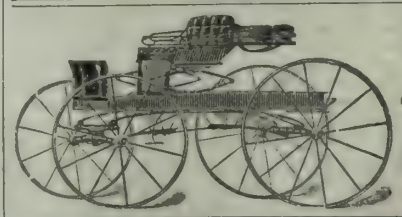
18 California Street, San Francisco, Cal.

THE PELTON WATER MOTOR

Affords the cheapest and most convenient power for Ranch, Vineyard or Dairy purposes, as well as for running dynamos for electric lights, pumps and every other variety of machinery.

It possesses in the same degree the wonderful energy and power that has made the Pelton Wheel famous in all parts of the world.

These motors are made of varying sizes, with capacities ranging from the fraction of one up to 15 and 20 H. P., enclosed in iron cases, all ready for pipe connections, and are warranted to develop a given amount of power with one-half the water required by any other wheel.



The cost, considering capacity and efficiency, is fully 50 per cent less.

Circular, giving full information, sent on application.

Parties writing for information should give full particulars as to power wanted, source of water, supply, with head or pressure. Address

THE PELTON WATER WHEEL CO.,

121 Main Street, San Francisco, Cal.

HORTICULTURE.

State Horticultural Society.

The September meeting was held on the 26th in the elegant new Assembly hall of the State Board of Horticulture adjoining the offices of this body at 220 Sutter street. Secretary Lelong has shown a praiseworthy appreciation of public needs in securing this excellent place where all meetings of horticulturists may be held, and he has shown good taste in fitting it up.

At the meeting on the 26th, President Hilgard occupied the chair. Alexander Craw, the new Quarantine Guardian of the State Board, and E. W. Maslin, the well-known fig grower of Placer county, were proposed for membership.

Mr. James Shinn of Niles exhibited specimens of the following apples: Lawver, Walbridge, Minister, White Pippin and Stark apples, which were examined. John Rock of the California Nursery Co. showed good samples of the Fox seedling pears—Col. Wilder, B. S. Fox and P. Barry. Joseph Sexton showed his new apple, "Sexton's Seedling," a handsome pure yellow with red cheek, crisp and delicious fruit, which was greatly admired. Dr. Gibbons of Alameda showed a seedling peach originating on his place.

As the October meeting is the annual meeting, the following nominations for offices to be filled at that time were made as follows:

For president, Prof. E. W. Hilgard; vice-president, S. J. Stabler; secretary, E. J. Wickson; treasurer, R. J. Trumbull, A. T. Perkins; Directors—Leonard Coates, A. L. Bancroft, B. M. Lelong, W. C. Blackwood, I. A. Wilcox, G. P. Rixford, S. J. Stabler.

Nomenclature of the Prune.

Under the head of correspondence, the following letter from Felix Gillet, a regular member of the society, was read as follows:

Edward J. Wickson, Secretary of State Horticultural Society — DEAR SIR: I see by the proceedings of the last meeting of the society, as published in the RURAL PRESS, that the prune nomenclature, which is yet in a rather confused condition, is threatened by some members of the society to be made still more confused by giving the name "Robe de Sergent" to a prune called in its very home "False Robe de Sergent." Now, and before the society takes any action in the premises, I would like to lay before it all I know, and I know a great deal, I believe, about that very prune.

At the time that we started in California (six years ago) the discussion of that prune question with a view of straightening up our prune nomenclature, and when we were yet in doubt whether we had the true d'Este or Robe de Sergent of the French, under the name of Petite d'Agen or French prune, I ordered from *five* different places in France trees of the d'Este or Robe de Sergent, so as to compare them with our Petite or French prune here. I got trees from Clairac, the center of the great prune district in the southwest of France, right in the valley of the Lot; from Agen, farther up in the same valley; from Prof. Baltet's large horticultural establishment away in the northeast, in Champagne; from Croux & San's well-known nurseries near Paris; and last from Doue & Tours, in the valley of the Loire, where are also situated Orleans and Angers, from which places some nurserymen in California imported what they thought surely to be the true Robe de Sergent.

From all these various places the trees I ordered were sent to me as the true d'Este or Robe de Sergent. However, as soon as I got the trees, I was struck by the great difference in the wood and buds of the trees from the Loire district, when compared to those I obtained from the Lot. I inquired how that was, but was told that that Robe de Sergent had been propagated in the Loire for years and years, and certainly was true, though it was admitted that the prunes when cured were much inferior to those from the Lot, which was attributed to the difference in soil and climate. That was far from being satisfactory to me, but when spring came there was no doubt in my mind that that "Loire Robe de Sergent" was altogether a different prune from the true one which I got from the Lot and Prof. Baltet, which were exactly like our Petite or French prune. The bearing of the trees afterward dispelled the last doubt in my mind, if such doubt there was, about the identity of that prune.

Mr. Coates in his paper, as read at the last meeting of the society, gives a very clear and correct description of that "False Robe de Sergent," the fruit being on the average larger and more round (with no pear-shape about it) than the Petite or French prune of ours; and I will add, it is also much darker in color, almost blue, and ripens two or three weeks before the French prune. It bears as heavily, and the fruit is certainly more juicy and acid than the French. It dries darker (a dull black, though) than the French, but is less shiny. What is quite remarkable with that variety, and which distinguishes it so widely from the true Robe de Sergent or French prune, is its foliage, the leaves being longer and more narrow and very shiny. As Mr. Coates says, in nursery rows the trees are easily distinguished by their characteristic foliage. As to the young wood, it looks more like that of the Duane's Purple than that of the Robe de Sergent, with the buds set close against the wood, while those of the true Robe or French prune are sticking out at an angle of 45°.

This "False Robe de Sergent" has, however, a fine appearance, though being greatly inferior in quality to the true one. The pit is of the same shape as that of the true Robe, but with a much coarser surface. That prune is certainly a parent, though a distant one, of the d'Este or Robe de Sergent.

Well, when in 1885 I had got unmistakable evidence that that Loire Robe de Sergent was such a different type from the true one, as is found all over the valley of the Lot, I wrote to the nurseries of Doue & Tours about it and called their attention to their type of that famous prune, which I maintained was a false one, and suggested to them to send to the Lot for trees of the true type, which they did; and on inspection and comparison of the wood, they admitted that I was right, and when in the summer they were able to compare the growth and foliage of both kinds, they did not hesitate a moment in propagating the Lot type as the true Robe de Sergent. Since the trees imported from the Lot produced fruit with them, they could not comprehend how at a comparatively short distance from the great prune district of the Lot, they could have propagated for so many years the wrong type of that famed prune. The nurseries of Doue & Tours were frank enough to admit that it was rather provoking to be told from six thousand miles away, and conclusively shown, that they had been propagating right along for years the false Robe de Sergent for the true one. They therefore named that old type of them "False Robe de Sergent" to distinguish it from the true Robe.

On my inquiries I was told that the nurseries of Orleans and Angers, in the same valley, were in the same fix and had been propagating that false type for the true one.

Now when Messrs. Coates and Rock ordered their Robe de Sergent from nurseries in that valley, as I believe they did, they surely thought, and they had no reason to believe differently, that they had the true Robe de Sergent, and they could not be blamed in propagating and advertising that type as the true one. I would have been misled in the very same way if I had not at the same time I ordered trees from the Loire nurseries ordered some also from the *Lot*. But since those gentlemen themselves admit that that variety is so different from our French prune, so much so that it is proposed to create two main divisions of the French prune, I do not see how they can consistently keep on naming this false type Robe de Sergent. But as that new type of prune (new to us) may have something to recommend it to prune-growers, it would be well to give it a distinct name. It would not be wise, however, to call it Robe de Sergent because it was sent to us as such, for it is proved all around that it is not such a prune. If the generic name of the French prune, d'Este, had been adopted in California, as it should be, there would be no trouble in giving that prune a clear and distinct name. The French prune, or Robe de Sergent, or d'Este, has no other commercial name in France and all parts of the world to which it is exported than that of "Prune d'Este," so I have called the different varieties of that prune that I have introduced from France as follows: Lot d'Este, Mont Barbat d'Este, and that type from the Loire, "Loire d'Este." If Messrs. Coates and Rock wish to retain for that prune of theirs the name of Robe in lieu of d'Este, why not call it "Loire Robe" or "Loire Robe de Sergent"? In that way every one would understand that the Loire d'Este or Loire Robe is a different type of the Lot d'Este or California d'Este (French prune)

Mr. Coates further said: "The question arises: Can the Robe be grown to make a prune to go in the trade as a French prune as a larger grade? If so, it may prove very valuable."

I will give that query the same answer I did to that from a correspondent in Oregon who wrote asking if I thought that he could pass on the London market Silver prunes of his, which were as large as Imperials, for *Imperials*. Yes, I replied, just as easy as you could pass on that same market *cotton* for *silk* goods. FELIX GILLET.

Nevada City.

Mr. Gillet's letter was heard with interest and referred to the special prune committee, which has the subject in hand, for future report.

There were a few figures of yield of the French prune given by different members as follows:

W. C. Blackwood of Haywards reported 56 tons from 1100 seven-year-old French prunes. E. H. Ehrman of Mt. View reported 40 tons from 700 trees six years old. These figures were for fresh fruit.

Discussion on Fig-Growing.

There was a long and interesting discussion of the fig in its various aspects, of which we will give an outline next week.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos, $1; 10 mos., $2; 15 mos., $3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Public Documents.

EDITORS PRESS:—Can one procure, and in what manner and place, the reports of the University Department of Agriculture? Also those of the Government Department of Agriculture. I believe there are such reports and that they cannot fail to be of great value to farmers. H. W.

Contra Costa Co.

The publications to which our correspondent refers can be had free of charge. For publications of our State University Agricultural Department, address Prof. E. W. Hilgard, Berkeley; for the United States reports, address Hon. J. M. Rusk, Secretary of Agriculture, Washington, D. C.

California's Stallions.

I beg to announce that, with a view of perpetuating the forms and characteristics of the leading stallions of California, I am issuing a series of lithographic likenesses. Each portrait issued will be an acknowledged likeness, the result of a close study of the horse and an artistic treatment of the subject. In order to secure for the series an immense advertising value, from a breeder's point of view, 4000 copies, at least, of each portrait will be issued.

Terms, $100 for first issue of 100 copies. In quantity, for advertising purposes, copies will be furnished at low rates.

H. BOYD, Artist.

268 Golden Gate Ave., San Francisco.

NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & CO., Publishers,
No. 220 Market St., S. F.

"Battle of Gettysburg."

The celebrated Panorama of the Battle of Gettysburg and Museum, corner Market and Tenth Streets, San Francisco, is a wonderful production. It has captured the entire State, doing a great deal of good. There is no better way of passing an hour or so, and in studying American history, than by visiting this Grand War Panorama. If any of our readers have not seen it, it will pay them well to do so.

RANCH MANAGER OR FOREMAN.—Albert H. Benson, Berkeley, Cal., advertises in another column for a position as manager or foreman of a ranch. He is practically acquainted with farming and has had wide experience in responsible positions, as his references show.

A COLONY of Nationalists, with 40 members, has been formed at Highlands, San Bernardino county.

DR. T. J. FRAZER, Dentist, Room 54, Flood Building, Market and Fourth Streets, San Francisco, Cal.

SPECIAL AUCTION SALE

— OF —

High Bred and Standard Trotting Stallions

Fillies and Brood Mares,

— BY DIRECTION OF —

WILFRED PAGE, ESQ., Cotate Ranch, Penn's Grove, Sonoma County,

— At 10 A. M. on —

THURSDAY, OCT. 17 and FRIDAY, OCT. 18

(During Meeting of Trotting Breeders' Association),

At FAIR GROUNDS, NAPA CITY.

The offering will consist of over 40 head. There are Stallions by Alexander 490, Le Grande 2868, Admont 5349, and Stallion Colts by Mortimer 5346 and Eclectic 11,321, standard sons of Electioneer. The Mares offered are by Elector, Mohawk Chief, Satellite, Alexander, Ethan Clay, Sportsmen, &c., &c. The Fillies are out of these Mares by Admont (son of Piedmont), Mortimer and Eclectic. The mares have been bred this year to these horses and are believed to be with foal. We have Mr. Page's assurance that every animal offered will be sold absolutely, without limit or reserve, thus placing the sale entirely in the hands of purchasers.

Catalogues are being prepared giving full description and pedigrees, together with details regarding each animal. They will be sent only on application.

KILLIP & CO., Live Stock Auctioneers.

Young Bulls and Crossbreds on Devons for sale.

H. MECHAM,

Importer and Breeder of Shropshire Sheep

They were all imported from England in '83, or bred direct from Imported Stock, and all registered.

H. MECHAM,

—BREEDER OF—

American Merino Sheep Without Horns.

The only flock in the United States. When we bought our sheep East 20 years ago, among them was a ram without horns. He grew to be a large fine sheep, shearing at 2 years old, a 12 months' fleece, 35 lbs. of long white wool.

I have bred from him and his get ever since and have never made an out-cross and never used the same ram but one year on the same flock. My rams at 2 years old will weigh from 160 to 180 lbs.; have a strong constitution, without wrinkles, and will shear on an average about 25 lbs., a 12 months' fleece, of long white wool. Rams and Ewes for sale. **P. O. Address:**

Stony Point, Sonoma Co., Cal.

R. R. Station, Petaluma.

IMPORTED STALLIONS!

HOLBERT & CONGER,

S. F. Market Report

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Oct. 8, 1890.

Trading in farm products has been more or less active. Although the weather has remained clear, yet producers are fearful of more rains, and consequently they are warehousing their grain, hay, etc., and marketing their fruits, vegetables, etc., as fast as possible. The local money market is easy, but at the East it is reported close, which is against some lines of produce. Wheat has been quiet with us, but active at advancing prices at the East and abroad. The following is to-day's cablegram:

LIVERPOOL, Oct. 8.—Wheat—Firmly held. California spot lots, 7s 1½d to 7s 4½d; cargoes off coast, 36s 6d@37s; just shipped, 36s 9d; nearly due, 36s 9d; cargoes off coast and on passage, firm; Mark Lane wheat, quiet but firm; English country markets, firm; wheat and flour in Paris, steady.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.
Thursday	7s2d	7s3d	7s4d	7s4½d	7s4½d	7s5d
Friday	7s2½d	7s3½d	7s4½d	7s4½d	7s4½d	7s5d
Saturday	7s2½d	7s4d	7s4½d	7s5d	7s5½d	7s5½d
Monday	7s3d	7s4d	7s5d	7s5d	7s5½d	7s5½d
Tuesday	7s4½d	7s5d	7s6d	7s6½d	7s6½d	7s6½d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	37s3d	37s3d	37s3d	Steady.
Friday	37s3d	37s3d	37s3d	Steady.
Saturday	37s	37s	36s9d	Firm.
Monday	37s	36 6d	36 6d	Steady.

Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

Day.	Oct.	Nov.	Dec.	Jan.	May.	June
Thursday	101½	10[illegible]	104	....	108¾	..
Friday	0[illegible]	102⅝	103⅞		108½	..
Saturday	102⅝	....	104⅞	....	109	..
Monday	105	....	107⅝	....	111⅝	..
Tuesday	106¼	107⅜	108½		112	..

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

Day.	Oct	Dec.	May.	June.
Thursday	96⅜	97½	104½	..
Friday	96¾	100	104⅝	..
Saturday	....	101⅜	106	..
Monday	100	103⅜	107½	..
Tuesday	100⅞	104½	108⅝	....

NEW YORK, Oct. 8.—Wheat—$1.07½ for cash, $1.08⅛ for December and $1.11¾ for May.

CHICAGO, Oct. 8.—Wheat—$1.03¾ for December and $1.07¾ for May.

Foreign Grain Review.

LONDON, Oct. 6.—The *Mark Lane Express*, in its review of the British grain trade for the past week, says: Fine weather favors threshing. The local markets are well supplied and millers are buying English wheat steadily. Red is quoted at 31s and the finest White at 38s 9d@39s. Foreign wheat is 6d lower; the depression was largely owing to the extremely low freights. English grinding barley and oats are 3d lower and foreign 6d lower. The imports of barley are heavy. The Swedish oat crop is heavy. Maize is 6d lower; the inquiry is poor. At to-day's market wheat was steadier. The inquiry for flour improved. Maize was firmer.

Honey.

NEW YORK, Oct. 6.—A carload of half light Amber and half White honey sold at 6½c.

Eastern Wool Markets.

BOSTON, Oct. 3.—Wool is in good demand. Sales amount to about 7,001,000 lbs of all kinds. Territory wools are active; sales of 2,340,000 lbs, including fine on a scoured basis of 60@62c ₩ lb; fine medium, 59@60c; medium, 55@57c. Eastern Oregon is selling freely at 17@22c; California is quiet at 16@24.

NEW YORK, Oct. 3.—*Bradstreet's* says: Manufacturers are buying wool moderately in the seaboard markets and prices are firm in every particular. The recent advance has been held and the upward movement in some lines is still in progress. Reports from Texas say that the fall clip is coming in in unusually good condition.

NEW YORK, Oct. 6.—Wool maintains a brisk movement with hardened prices. Buyers are anxious to secure all desirable parcels, and in this way important negotiations at the West are in treaty. The seaboard stock is much reduced. Primal point reserves and Southwestern fall clip have been assured a good outlook. In New York, good blocks of carpet, foreign, are taken and all prices are quoted crisply.

Boston reports more active trading, though the assortments were much broken last week. The prices were one-half to one cent higher. The demand is largely for worsted mills. Sales of 141,500 lbs foreign, 5 583,400 lbs domestic, including 243,000 lbs California, 16@24c.

Philadelphia reports a strong, active market, with a considerable New England attendance. The price advanced 1c on sales and holdings.

Hops.

NEW YORK, Oct. 6.—The interest being chiefly in new hops, the spot trade is light. The interior buying for direct export is fairly active. London, 5s advance; Germany, 5 marks. London reports 200s to 220s paid for Pacific; 240s for State; 150s for Pacific sold here at 38c. About 1200 bales go out this week. The last prices are generally strong.

NEW YORK, Oct. 4.—Private cables say Pacific Coast hops have been sold in Europe at £10 to £11 per cwt. (112).

NEW YORK, Oct. 3.—Five thousand bales of new hops were purchased in the interior markets of this State and brought 40@45c ₩ lb. The latest authentic quotations for German hops are: Bavarian, 63@68s ₩ lb; Bohemian, 65@70c, duty paid.

NEW YORK, Oct. 7.—A cablegram from London gives another rise of 10 shillings in English hops and 10 marks in German hops.

Local Markets.

BAGS—The market for standard size is dull at 6½@7c.

BARLEY—The market for sample parcels has made quite an advance, closing strong. In futures, trading has been fair at higher prices. The following are to-day's reported sales on Call:

Morning Session: Buyer 1890—100 tons, $1.42½; 100, $1.42⅜; 300, $1.42¾. Buyer season—300 tons, $1.49⅝. No. 1 Brewing, buyer season—200 tons, $1.54¼ ₩ ctl. Afternoon Session: Buyer 1890—100 tons, $1.42½. Buyer season—500 tons, $1.49¼. No. 1 Brewing, buyer season—100 tons, $1.54¾; 100, $1.54⅞ ₩ ctl.

BUTTER—The market does not show any material change. The heavy supplies of pickled and threatened liberal shipments of creamery from the Central States are against any decided advance.

CHEESE—The market is reported firmer for the more choice. The demand is good.

The receipts of cheese at San Francisco during the past nine months were as follows:

Months—	California.	Eastern.	Oregon.
January, lbs	293,1[illegible]0	60,300	6 0
February	314,000	129,400	300
March	478 300	98,800	100
April	624,000	135,700	2,900
May	761 900	47,000	200
June	469,500	98,400	800
July	483,800	103 700	3,700
August	484,600	187,100	4,700
September	383,000	101,000	1,700
Totals	4,292,200	961,400	15,000
1889	3,538,000	1,054,100	59,400
Increase	754,200	.....	.....
Decrease	.....	92 700	44,400

The total for the present year is 5,268,600 lbs., as against 4,651,500 in 1889.

EGGS—The more choice, fresh-laid large-sized are scarce and fetch good prices. The entire line shows more strength.

FLOUR—The market is easy. Free shipments are being made to foreign ports.

WHEAT—The market has exhibited more strength toward the close, notwithstanding export buyers' bearish news. The markets at the East and abroad have made substantial gains. In futures, trading on Call is more active toward the close. The following are to-day's reported sales on Call:

Morning Session: Buyer 1890—300 tons, $1.36⅞. Buyer season—100 tons, $1.44⅞; 600, $1.45⅜; 400, $1.45 ₩ ctl. Afternoon Session: Buyer 1890—200 tons, $1.36½; 600, $1.36¾. Buyer season—500 tons, $1.44⅝; 1700, $1.44½ ₩ ctl.

[COMMUNICATED.]

Market Information.

Cereals.

There is some talk about the influence of the price of silver on the price of wheat. A London letter says: "The exchange value of the ruble to-day is quoted at over 30d, against only 25½d at the beginning of April, and 24½d a year ago. This depreciation of the ruble in Russia quite prevents Russian shippers from fulfilling their engagements, no less than 4s per qr having by this means been added to the cost price of wheat since April, while, compared with last year, there is a difference of 5s per qr against the shipper. In other words, at the present rate of exchange, 30s per qr paid by English buyers represents in the Russian price and measure only about 80 copecks per pood, while last year the same price was equal to 100 copecks or one ruble. Thus the Russian producer loses 20 per cent. Two to three years ago, however, the ruble exchange on London was as low as 19d, so that at that time, if 30s per qr in English money was obtained, it represented 125 copecks per pood. This state of things cannot fail to have an effect upon prices, for we cannot have both Russia and the Atlantic ports holding back their wheat for any time without sending up values." If the United States had free coinage for silver, then the Russian ruble and the Indian rupee would be still higher.

The local wheat market has held dull throughout the week. As far as we can learn, farmers are not in the market as sellers, except at higher prices. The sales that are reported are said to be made by speculators who are tired of holding. The tonnage in port under charter is not receiving quick dispatch. The rains reported in our last week's issue did not wet the ground to sufficient depth to admit of plowing, but in many localities they have caused volunteer grains to sprout, and unless more rains fall soon the plant will not have rooted enough to withstand the absence of moisture. Very little, if any, damage to exposed grain was done by the late rains.

Barley has held to strong prices under a good demand and firm holding. The situation is confirmatory of our previously expressed view on the market. There can be no doubt but the supply is short of requirements. Oregon may possibly have some to send to us. More was exported the past week than for some time past.

Oats show a stronger tone, notwithstanding freer receipts. The strength exhibited by barley, no doubt, causes oats to sympathize.

Corn is reported unchanged. Buyers do not appear disposed to bid up, fearing that new crop corn will come in too freely with prices advanced in the commencement of the season.

Rye is essentially unchanged.

French crop reports show the size of the crop and the imports for a series of years:

Cereal year.	Acreage.	Crop, Qrs.	Net Imports, Q s.
1890-91	17,650,000	*41,000,000	.....
1889-90	17 655,000	39.346,000	4,163,000
1888-89	17.235,000	33,251,724	6,4[illegible]0.000
1887-88	17,492,000	38,777,968	4,832 000
1886-87	17,181,0.0	36,996,442	4,753,000
1885-86	17,180,000	34,026 691	2 249,000
1884-85	17,418,000	39,389,992	4,967,000
1883-84	16,803,000	35,777,043	4,453,000

*Measured quarters—likely to be reduced to qrs. of 480 lbs. weight. 38,500,000

While the English trade papers are all giving estimates showing a deficiency in the world's crop of wheat, the *Bulletin Des Halles* gives the following:

	Yield. qrs.	Imports. qrs.	Exports qrs.
Europe	156,062,000	42,420,000	26 640,000
America	19,090,000	.....	11,343,000
Asia	35,578,000	.....	4.125 000
Africa	5,020,000	.....	1 410,000
Australasia	4,984,000	.....	1 647,000
Totals	260,734,000	42,420,000	45,065,000

It is seen by the above table that we estimate the total world's wheat production at 758,000,000 hectols (2,145,140,000 bushels). The countries which have not sufficient wheat for their own requirements will have to import 123,400,000 hectolitres (42,420,000 quarters) and the exporting countries can dispose of 131,100,000 hectolitres (45,065,000 quarters). The difference in favor of exports is then 7,700,000 hectolitres (22,791,000 bushels). When the general production is viewed, this difference is insignificant.

In view of the difference in the crops this year, the origin of the supply of wheat imported into the United Kingdom for the past eight months is a matter of interest. It shows as follows:

	Eight months ended Aug. 31. 1890.	1889.
Russia	12,033,728	14,347,653
Germany	727,749	1,853 915
France	880	105,298
Turkey	529,295	420,9 3
Roumania	713,936	1,009,610
Egypt	221,124	309 182
U. S. Atlantic ports	5,130,986	2,272,886
U. S. Pacific ports	7,860,443	8,859,875
Chili	24,000	552,893
British East Indies	5,801,338	5,509,708
Australia	1,724,902	1 268,811
British N. America	446 555	462 354
Other countries	2,74 ,730	948,316
Total cwts	37,955,641	31,861,422
Flour.		
Germany	432,875	850,595
France	59,109	50,562
Austrian Territories	845,789	1,366 345
United States	8,718,314	5,858,923
British N. America	362,413	384,537
Other countries	242,270	280,263
Total cwts	10,660,770	8,791,225
Oats, cwts	7,896,868	10,833,546
Corn, cwts	33,820,744	25,975,371

The Cincinnati *Price Current* says that there is an indicated corn crop of 1,565,000,000 bushels, 548,000,000 bushels below last year. The seven surplus States are deficient 474,000,000 bushels. The old supply is said to be low in Ohio, moderate in Missouri and Nebraska, much reduced in Iowa, fairly good in Illinois, and rather liberal in Kansas. The old supply is estimated at 250,000,000 bushels.

Feedstuff.

Bran and middlings have held steady, as has feed-meal. Ground barley is higher. The demand for the latter is reported quite active.

Hay shows more strength, with the more choice fetching an advance. Clear weather, no doubt, causes the market to show considerable strength, for its continuance up to the usual run of seasons will cause the supply of hay to run short, particularly so if we should have a hard winter.

Fruits.

The effects of the rains are witnessed in the general rush of perishable fruits to the market, with a large proportion being more or less moldy.

Berries are more or less soft, causing commission merchants to force sales.

Pears are slow at quotations. Apples are cleaning up better, owing largely to fewer poor trashy coming in. The latter sell at the best prices obtainable, generally from 20c to 50c a box. A good choice article fetches $1.25. There is an increasing demand for shipment. Peaches are stiff for canning varieties.

Grapes are being rushed into market. It looks as if the late rains prevent as much drying as was expected, and consequently the fruit not being suitable for that purpose is marketed green. Large quantities of wine grapes are coming in, which has also a bad effect on the market. Some over-ripe, moldy and otherwise defective grapes are placed at buyers' prices so as to clean up.

Melons show more strength, due to a better demand.

T. L Gates of Vacaville sent in the first persimmons of the season. They were placed at $1.50 a box.

Dried grapes are stronger, owing to rains having prevented free drying.

In dried fruits, apricots and plums show more strength. Prunes are easy under offerings of parcels varying from ⅛ to 1 ton each. The quantity offering is not large, but some holders get two or more brokers to try and sell the fruit and buyers are thus led to believe that more is offering for sale than there really is, Peaches are easier. Chinese dried peaches are in liberal offering, which causes buyers to bid down. Peeled peaches are scarce.

Raisins are in good demand. The market is very firm at full prices. Fears that the damage to the crop is greater than was expected is a bull factor in the market. So far as we can learn by private telegrams and other sources, the advanced duties on foreign raisins do not cut any figure in our market. It is the overland freights on fruit that do, and not the tariff. The railroad gets all the advance in the tariff.

Vegetables.

Garden truck is in fair supply, with prices fairly steady.

Tomatoes are in free receipt, keeping canners busy.

Corn is going out, as are beans. Cucumbers are in liberal supply as are summer squash, egg plant and other summer varieties.

Cabbages continue to meet with a good home and shipping demand.

Onions are coming in sparingly, barely enough to meet current requirements.

The receipts of potatoes are not over large, which keeps the market fairly firm. There is some complaint regarding the quality of river potatoes. Sweet potatoes are in good supply, with the market favoring buyers.

Live-stock.

The market for bullocks, mutton sheep and hogs is easy. Offerings continue free. The former are coming from Nevada and Arizona, and are in most excellent condition. As fall shearing progresses, more sheep are offered to slaughterers. Hogs are in good supply. The crop this year is the largest on record, which will admit of more being packed. For horses and milch cows the market does not show any material change.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4@4½c ₩ lb; dressed, 7@8c ₩ lb.; heavy, 3½@3⅝c ₩ lb.; dressed, 6@7c ₩ lb. Stock hogs, 3¼@3½c ₩ lb.

BEEF—Stall fed, 6½@—c ₩ lb.; grass fed, extra, 6@—c ₩ lb.; first quality, 5¼@5½c ₩ lb.; second quality 4¾@5c ₩ lb.; third quality, 4c@— ₩ lb.; bulls and thin cows, 2@3c ₩ lb.

VEAL—Small, 6@8c ₩ lb.; large, 4@6c.

MUTTON—Wethers, 7½@8c ₩ lb.; ewes, 7@7½c ₩ lb.; lamb, spring, 9@10c.

Miscellaneous.

Poultry has held to steady prices. Game has fluctuated to lower prices.

Nuts show more strength under an active demand. It is feared that the late rains discolored some kinds. The first chestnuts of the season came to hand on last Tuesday. They were sent in by W. Meek of San Lorenzo. They were sold at 20c.

Honey appears to have a stronger tone. Interior advices report free shipments overland.

Beans fluctuate. Prices appear to be governed from day to day by the receipts and demand. The weather is quite an important factor in the market.

Hops are strong. It is said that some are realizing sales, which are against the market for the time being.

Wool shows considerable strength. It now looks as if the market at the East has been glutted by heavy importations of woolen goods, which will tend to keep wools down after the first result of the new tariff is worn off. If luster goods still hold fashionable, then fine wools will not appreciate much, only luster-goods wools will advance materially. This ought to help Angora wool still more.

There is an improving demand for grass seed. Quotations are, as yet, nominal.

Exports by sea the past week are as follows: Wheat, ctls, Queenstown, 58,161; Liverpool, 9201. Flour, bbls, Sligo (Ireland), 19,796; Honolulu, 1095; Central America, 7782; Tahiti, 1143; South America, 2000; Kahului, 450; China, 10,115; Japan, 4188; Vladivostock, 125; Manilla, 500; Liverpool, 5600. Barley, ctls, Honolulu, 1212; New York, 47.816; Liverpool, 4075; Tahiti, 579; Kahului, 798. Rolled barley, lbs, Kahului, 68 968; Honolulu, 70,000. Mustard seed, lbs, New York, 29,534. Beans, lbs, Victoria, 1268; Honolulu, 31,571; New York, 37,108; Nanaimo, 1500; Panama, 1040; Tahiti, 5706; Kahului, 6865. Cotton, bales, 133 to Liverpool. Wine, gals, New York, 66 844; Central America, 788; Panama, 2412; Tahiti, 2056. Bran, sks, Honolulu, 1885; Kahului, 750. Hay, bls, Honolulu, 612. Brandy, gals, Liverpool, 1838. Dried fruits, lbs, Honolulu, 750; Victoria, 4580. Canned fruits, cases, Melbourne, 50; China, 55; Japan, 183; Liverpool, 7800. Apples, bxs, China, 330; Japan, 130.

From the *Commercial News* of Oct. 8th the following summary of tonnage movement is compiled:

	1890.	1889.
On the way to this port	272 695	218,350
On the way to neighboring ports	21,763	16,619
In port, disengaged	11.042	26,371
In port, engaged for wheat	55 587	78,090
Totals	361,087	339,430

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to Oct. 1, 1890, the following are the exports from this port:

	1890.	1889.
Wheat, ctls	2,581 315	2,709 483
Flour, bbls	285,835	215,284
Barley	70,821	407,098

Dried Fruits, Etc.

The quotations given below are for average prices paid. Something very fancy fetch an advance on the highest quotations while poor sells slightly below the lowest quotations.

Prices named, unless otherwise specified, are for fruit in sacks. Add for 50-lb. boxes ¼c per lb., and for 25-lb boxes ½c to 1c per lb.

California Fruits East.

CHICAGO, Oct. 2.—The Earl Fruit Company sold California fruit at auction to-day as follows. Strawberry peaches, $1.45@1.50; hf boxes, 75c; Salway, $1.35@1.45; Muscat grapes, hf crates, $1.80; full crates, $3.50@3.55; Tokays, hf crates, $1.55@1.80; full crates, $3.10@3.30; Japan prunes, $2.50.

Porter Bros. Co. sold to-day seven cars of California fruit. Peaches, $1.15@1.50; full crates Muscat grapes, $3 65; hf crates Muscat grapes, $1.60@1.75; hf crates Tokay grapes, $1.55@1.65; full crates Tokay grapes. $3.50@3.70; hf crates Cornichon grapes, $3.25; Ickwith plums, $2; hf crates Cornichon grapes, $2.

CHICAGO, Oct. 3.—The Earl Fruit Co. sold California fruit to-day at the following prices: Grapes, Cornichon, $3.30; hf crates, $1.70; Tokay, full crates, $3.05@3.25; hf crates, $1.50@1.60; Emperor, hf crates, $1.85; White Malaga, $1.70; hf crates, $1.25; Muscat, full crates, $2.80@3.25; hf crates, $1.50@1.60; White Hollis, $2.35; Beurre Clairgeau, $3.55; Salway peaches, $1.30@1.45; Henrietta Cling, $1.50; Rose Cling, $1.40.

CHICAGO, Oct. 3.—Porter Bros. sold five cars of California fruit to-day at the following prices: Peaches, $1.20@1.50; grapes, hf crates, Muscat, $1.65@1.70; Tokay, $1.35@1.75; pomegranates, $1.10@1.65; Bartlett pears, $3.40@4.20; Beurre Clairgeau, $3.35; Howell, $3.35; quinces, $1.70@1.80.

NEW YORK, Oct. 3.—Sgobel & Day report the market strong on Tokay and Muscat grapes from California. The first cargo of Almeria grapes was sold here to-day. It amounted to 9000 barrels, and was sold at $3.50@6.50, all in good order. These barrels hold between 25 and 50 lbs., and the grapes are packed in cork dust.

NEW YORK, Oct. 4.—A fruit auctioneer says: "In about a week we shall have little, if any, fruit from California, because of rains there. The largest quantity of peaches that ever arrived in New York from California has been sold during the past 10 days, fully 50,000 boxes. Sales on Monday, Tuesday and Wednesday this week amounted to about 15,000 boxes."

CHICAGO, Oct. 4.—The Earl Fruit Co. sold to-day Seckel pears at $5; Winter Nelis, $2.30; hf boxes, $1.10; Vicar, $2.20; Tokay grapes, full crates, $3.05; hf crates, $1.55. Weather cloudy and rainy.

Porter Bros. Co. sold four cars of California fruit at auction to-day, as follows: Emperor grapes, full crates, $3@3.10; hf crates, $1.25@1 60; Cornichons, full crates, $3; hf crates, $1.40@1.60; Tokays, hf crates, $1.55; quinces, $1.75; Cling peaches, $1.40; Ickwith plums. $2.10@2.15; Muscat grapes, full crates, $2.75@3.20; Black Ferrara grapes, full crates, $2.50@2.70; Beurre Clairgeau pears, $3.05.

NEW YORK, Oct. 6.—Raisins are not plenty, and are steady. Loose Muscatels ranged $2.05@2.25, spot. Evaporated, unpeeled peaches are weaker in absence of the demand. There is a fancy trade, in a small way, paying 33½c for peeled. Apricots are firm and quiet. Dealers are for the time supplied. Prunes are weaker, perhaps one-half cent, under the late prices to sell. Good French are now 10@10½c.

CHICAGO, Oct. 6.—The Montgomery Auction Co. sold to-day five cars of California fruit at the following prices: Grapes, full crates, Tokay, $3 10@3.35; Muscat, $2.80@3.15; hf crates, Tokay, $1.60; Muscat, $1.60@1.65; Salway peaches, $1.35@1.50; Strawberry, $1.40@1.50; Beurre Bosc pears, $4; Vicar, $2.35; Winter Nelis, $2 25; Easter Beurre $2 20.

CHICAGO, Oct. 6.—Porter Bros. sold three cars of California fruit to-day at the following prices: Full crates Tokay grapes, $3.65@3.80; Muscat, $3.70; quinces, $1.80@1.85; White Doyenne pears, $3.15; Coe's late red plums, $1.85@1.90; Ickwith plums, $1.95.

NEW YORK, Oct. 6.—California prunes are quoted at 12½c ₩ lb.; walnuts, 7¾c; dried peaches, peeled, 33c; unpeeled, 22c; apricots, 20c; raisins, 2-crown, $1.80 ₩ box; 3-crown, $2.20; London Layers, $2.50. In hops there is little doing; Pacific Coast, 1889 crop, 25@32c ₩ lb.; 1890 crop, 40c. Selected California hides, 23@25 lbs., 12½@13¾c ₩ lb. California Spring wool is in fair demand at 18@21c. Several sales were reported during the week. Fall wool ranges from 16 to 18c.

California raisins are coming to hand, and, according to the *Commercial Bulletin*, are selling at full but unchanged prices.

PHILADELPHIA, Oct. 6.—The price of California grapes has advanced 50c ₩ crate here during the past few days. Tokays and Muscats are selling at $5 ₩ crate.

CHICAGO, Oct. 7.—The Montgomery Auction Co. sold to-day for account of the Earl Fruit Co. and others five cars of California fruits. Winter Nelis pears, $2.25@2.15; Beurre Clairgeau, $3.25; Vicar, $2.20@2; Easter Beurre, $2.30@2.25; White Doyenne, $2.75; Glout Morceau, $3.10; quinces, $1.75; Strawberry peaches, $1.30; Salway, $1.30; Muscat grapes, hf crates, $1.70@1.45; full crates, $2.80@2.75; Tokay grapes, hf crates, $1.65@1.30; full crates, $3@2.40.

Porter Bros. Co. sold to-day six carloads of California fruit. Tokay grapes, full crates, $2.60@3.50; hf crates, $1.25@1.80; Black Morocco, hf crates, $1.85@2.05; Muscats, full crates, $3@3.05; Muscats, hf crates, $1.20@1.60; Blue Malvoise, hf crates, $1.35; George's late peaches, $1@1.40; Duchess pears, $2.75; d'Alencon pears, $2.50.

NEW YORK, Oct. 7.—Five thousand one hundred boxes of raisins arrived to-day and must pay new duties. A market pointer to-day is in a cablegram from Bordeaux, saying that French prunes are still higher and are held firmly there at 43 francs for four sizes.

NEW YORK, Oct. 7.—The *Commercial Bulletin* reports a great demand for California apricots and says that they will be sold up earlier this season than usual.

CHICAGO, Oct. 8.—The Montgomery Auction Co. auctioned two cars of California fruit to-day for account of the Earl Fruit Co. and the W. R. Strong Co., at the following prices: Strawberry peaches, $1.30@1.35; grapes, Tokay, full crates, $3.15; Cornichons, $1.35; Black Morocco, hf crates, $1.70; Muscats, full crates, $2.65@2.75.

CHICAGO, Oct. 8.—Porter Bros. sold seven cars of California fruit to-day at the following prices: Tokay grapes. full crates, $2.75@3.50; hf crates, $1.35@1.55; Emperor, $2.50; Muscat, $1.15@1.40; full crates, $2.30@2.85; French prunes, $2.20.

NEW YORK, Oct. 8.—The situation in California raisins here is a little irregular. The goods coming in on contract seem to be taken without ceremony. The prices on future shipments are practically unchanged from the earlier quotations. California prunes are also irregular. The market is rather weak. Really choice are no cheaper.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

APPARATUS FOR MAKING EXTRACTS.—George S. Andres, S F. No. 436,623. Dated Sept. 16, 1890. This is an apparatus for extracting from animal and vegetable fibers the fatty acids, oils and other soluble matter which may be contained in said fiber, all of which constituents are soluble in water or more volatile solvents, such as some of the hydrocarbons, bisulphide of carbon, alcohol, ether, etc. The object of this invention is to provide an apparatus of simple construction by means of which extracts may be obtained from animal or vegetable fiber, either in a continuous or intermittent manner, and which may be also employed for more perfectly removing dirt and other soluble matter from the fiber.

APPARATUS FOR MAKING EXTRACTS.—George S. Andres, S. F. No. 436,624. Dated Sept. 16, 1890. The object of this invention is to provide an apparatus of simple construction, by means of which extracts may be obtained either in a continuous or intermittent manner and which may also be employed for more perfectly removing the solvent from the extract either with or without pressure.

ANIMAL TRAP.—Frank White and Frank J. Murphy, Pomona, assignor of two-thirds to said White and one-third to said Murphy. No. 436,643. Dated Sept. 16, 1890. This is one of that class of animal traps designed for catching moles, gophers, etc., and in which opposing spring-controlled jaws are held separated by a suitable trigger which, upon being tripped, allows the jaws to close. The object of this invention is to provide a simple and effective trap of this class having jaws at both ends by which it is adapted to catch the animal coming from either direction.

FRUIT-PITTING MACHINE.—James T. Ish, S. F. No. 436,629. Dated Sept. 16, 1890. The fruit is placed in suitable cups, and as each cup of the series moves forward, the holders are opened and projected toward it, passing on each side. Then they come together on the front and carry it backwardly into position between knives which at this time have separated. Then the knives come together so that their cutting edges divide the fruit, while the points engage the pit of the fruit. When the knives have closed down on the fruit and cut its flesh from the pit, they then separate laterally, so that the points give the pit a kind of twist, while the knives themselves separate the flesh from the pit, and as the knives open again and the holders separate, the fruit is released and falls into a suitable receptacle below.

LAWN-SPRINKLER.—Thomas Scheen, St. Helena, Cal. No. 436,942. Dated Sept. 23, 1890. This sprinkler consists of a cylindrical head adapted to be fitted to the nozzle. The head has a central opening and a closed outer end. A slit is made with outwardly diverging walls from the central opening to the periphery of the head, and a socket is made in the opposite side of the head to receive a supporting pin. The location and shape of the exit slit provides for the proper area to be covered by the sprinkler and produces a fine, delicate spray like rain under light pressure and a mist under heavy pressure.

TRACTION ENGINES.—Daniel Best, San Leandro, Cal. No. 436,931. Dated Sept. 23, 1890. In this machine are a number of improved features. The general frame includes an angle-iron or bracketed frame with lugs, between which pass the side-bars of the main frame, and said angle-iron frame also supports the boiler. The location of the crank-axle and springs is a distinct improvement, and in connection with these and supporting brackets certain adjusting and brace-rods are used. The intermediate draft connections and the power-transmitting mechanisms are also features of novelty in the device, all the improvements in which are designed to better its working and increase its durability.

THE

PACIFIC GAS OR GASOLINE ENGINE.

PATENTED JUNE 17, 1890—NOS. 430,504, 430,505, 430,506.
Also in Great Britain and other foreign countries.

Starts Instantly Without the Necessity of Boiler, Fire or Experienced Engineer.

The engine uses from 20 to 25 cubic feet of coal gas, or about one-eighth gal. of gasoline per hour per horse-power. It can be used for pumping purposes, running printing presses, small factories, elevators, jewelers' lathes and polishers; dairymen's, agricultural, mining and wood-working machinery; well-boring and all other purposes requiring cheap and convenient power. Persons having but little space will find this the most suitable of all motors.

USE IN BOATS.—The Company make a specialty of ENGINES FOR SMALL BOATS AND LAUNCHES, and claim there is no engine in the market their superior for this purpose. Boats so fitted require no licensed engineer or pilot, as is required by law for all vessels propelled by steam power.

ELECTRIC LIGHTING.—The engines are PARTICULARLY ADAPTED, and cannot be equaled for operating small electric light plants, either arc or incandescent.

STATIONARY and MARINE ENGINES
From ¾ to 15 horse-power.

OVER 100 IN ACTUAL OPERATION.

READ THESE TESTIMONIALS.

ALAMEDA, April 8, 1890

PACIFIC GAS ENGINE CO. GENTLEMEN: Permit me to add my testimonial to the many you have received endorsing your engine. As you are aware, mine was a Regan engine which gave me considerable trouble. I had to remove the head and raise the tappet valve every time I wanted to start the engine. I sent you the engine; you removed all the Regan appliance except the cylinder and stand. You put in your appliances, head, sparking device, inlet valve, and, in fact, changed it to the Pacific Gas Engine, which now works splendidly. I have not had to remove the head for any cause since you made the change (over two months). It gives me no trouble; my boy, 14 years old, attends to it.

The change from the Regan to the Pacific is a decided improvement. I can also get a third more power since the change, and I cheerfully recommend your engine as being simple, effective, and cheap. Respectfully yours,
B. S. HILL, S. W. Cor. Encinal Ave. and Morton St.

MAYFIELD, March 26, 1890.

PACIFIC GAS ENGINE CO.—We have given your little 1-H. P. engine a splendid advertisement. A fire broke out at 2 o'clock this morning, in a tenement house on my premises. I started the engine, connected the hose, and by its use saved at least $3000 worth of my property. I saved my blacksmith shop, lying 12 feet from the burning building, my barn and my dwelling. Three times the fire started in these buildings, and I extinguished it every time. The engine never faltered, and threw water between 50 and 60 feet high. The whole town was astonished, and they acknowledged that I saved at least $20,000 worth of property.

A fire department is being organized here, and I think they will have one of the engines on a truck for fire purposes. They cannot be beaten.

Hoping that all of your customers will be as well pleased with the engine as I am, I remain, Yours truly,
JOS. P. PONCE.

The Early and the Latter Rains.

The rain, which commenced on the 28th ult., was general throughout California, having been confined to that and the following day in some sections of the State, while in others it held on raining more or less for four or five days. While the precipitation in a few localities amounted to as much as 2½ inches, it did not generally exceed half an inch, being even less than that in most places. As a rule, this, like all premature and unseasonable rains in California, did more harm than good. It injured the grapes still on the vines, the unpicked hops and berries, and the raisins in process of curing some harm being also done to the dry grass and the sacked grain left uncovered or but partially protected. The only good that resulted from this rain was the laying of the dust, thereby rendering everything more cleanly, and travel more comfortable. But despite such small benefits nowhere did this rain meet with hearty welcome.

While some affect to see in these early rains the indices of an early or a late, a wet or a dry winter, as the case may be, they really seem to have no significance one way or the other. They have preceded some of our wettest just as they have preceded some of our driest winters.

Ever since our people came to occupy California we have been trying to obtain some clue by which to predict the character of our winters. We have consulted the Indian and studied the habits of the provident chipmunk and the sagacious woodpecker, but as yet to little purpose. During all these years we have been seeking a sign, but no sign has been given us save the sign of the prophet Jonah, and that has proved of hardly more use than the signal service, which presumes only to prognosticate the weather from day to day. We have need of something more far-seeing than this—something that will denote, if not the date of its advent at least in a general way the more notable meteorological features of the coming winter. When will arise the sage who will be able to supply this desideratum? What a boon would it be to the race.

Black Hamburg Grapes.

Our engraving shows the Black Hamburg, a popular table grape grown largely for local marketing in California. The variety is a very old one and has long been considered the first of the black grapes for winery culture. Downing says it very rarely perfects its fruit out of doors, but of course California does not come under that ruling and the variety grows most luxuriantly and produces the most perfect fruit. The engraving shows a section of a Black Hamburg vine as growing on one of the Haggin & Carr ranches in Kern county.

The Black Hamburg is popular here both for arbor and trellis culture, as well as for common short-pruned vineyard. We have in this State some magnificent single vines growing over trees and buildings, and, if we remember correctly, some of them surpass the dimensions of the famous Hampton Court vine, which is of the same variety. As grown in California, the Black Hamburg is a very showy grape, its cluster large and its berries large also, and though hidden by a dense bloom, which gives the fruit the whitish appearance shown in the engraving, the skin is a jetty black, with a high luster when fully ripe. The picture is, of course, much below natural size, for the clusters often attain a length of ten inches and the berries are proportionally large. The flavor of the Black Hamburg, though characteristic, is acceptable to most people, and it is counted as one of our most delicious table grapes.

BLACK HAMBURG GRAPES AS GROWN IN KERN COUNTY.

THE LATEST THING IN "PALACES" is the Interstate Hay Palace, opened at Momence, Ill., Oct. 1st. The building is 206 feet in length and 186 feet wide in the center. The main hall is a circle 103 feet in diameter, with wings on the four sides. The walls are built entirely of baled hay, with just enough baled straw to make a pleasing contrast in shading and color. The structure is to house exhibits of the varied products of Eastern Illinois and Western Indiana, of the farms, factories, forests, mines, quarries, and of the arts, domestic skill, etc., of the people of the district.

POULTRY YARD.

Care and Diseases of Poultry.

EDITORS PRESS:—What a time we have been through with poultry and eggs! The gathering at San Francisco of the Native Sons of the Golden West and their friends and of all those who assembled to witness the "doings," tasked, no doubt, the "entertaining" ability of the Queen City severely. What lots of fowls and eggs they consumed, so that in spite of their bringing with them, as one might say, so many carloads of Eastern poultry, our own had a chance to go off at very fair prices. This does not often happen now, as if one thinks the opportunity favorable for a good price and sends down a lot, expecting to sandwich them in between two lots of Eastern, he is sure to find that the day his got in market there arrived from one to a half-dozen carloads overland, and he is forced to put up consequently with a price which does not give him any satisfaction whatever. In view of such things, one is tempted to think that there is nothing in raising fowls for market, but the fact that they do raise them in the Territories or Western States and continue to put them in our markets at the price they bring would seem to prove conclusively that they either are satisfied with very moderate profits or that they raise them so economically that the profit seems to them sufficiently good. No doubt where corn is so cheap as to warrant them in using it as fuel, fowls can be fed very economically, particularly where one has his own land on which to raise his feed, and I think one having his own land in California can raise his feed as cheaply as he can East. Not in corn, perhaps, which does not produce well in all places, but in wheat, barley, rye and Egyptian corn, as well as vegetables, we can, I think, raise feed at as little cost as they can if once we get in the way of trying it earnestly.

Green Stuff for Fowls.

As I have before said, our young growing fowls can be fed almost entirely on green stuff of various kinds chopped and perhaps mixed with a sprinkling of bran or middlings, and even laying fowls can be fed largely in the same manner. I have corn of the large yellow variety as high as ten feet, with of course quite a thick, hard stalk, which I chop for them and mix with their mush in equal quantities, and they eat it all readily, eating first the pieces of stalk which, although somewhat pithy, are still juicy. Afterward they eat the leaf, but eat all, and having a supply of chopped corn, carrot tops or cabbage to work on through the day, it keeps them bright and fresh-looking and in good condition. For this purpose sunflower seed fed to them occasionally is good also, but like corn (or even more so) it is very fattening and should not be generously fed, as a fat fowl is comparatively a poor layer, especially where yarded and deprived of the exercise it would have on a free range.

I am inclined to think that when fowls are yarded, particularly in somewhat small yards, the tendency is to overfeed, which I consider another argument in favor of feeding green stuff plentifully, as even when quite fleshy, if fed in this way, it does not seem to lessen the number of eggs as it would do if fattened on corn or wheat.

On two acres of land, well watered, enough green stuff can be raised to feed 2000 hens and to spare, and at trifling cost, and 20 acres in grain, which in these days of combined harvesters need not cost one (outside his own labor) more than $2 or at the outside $3 per acre in sacks, on his own land, would furnish the necessary grain. One man's labor is sufficient (except the harvesting) for all this and the necessary care of the fowls, particularly if he has a family inclined to be helpful in the care of the chicks. Therefore it seems to me that we really could prepare ourselves to meet successfully competition prices if we gave ourselves determinedly to the effort. We need very little, really, that we cannot raise ourselves, such as gravel, shells, charcoal and some lime. These things, if we except the shells, are of trifling cost and fill a very small place in the expense list.

Labor-Saving Arrangements.

I read not long since a description of the manner in which the fowls on a large poultry farm were kept and fed. Being kept in yards, the yards and houses were arranged so as to leave lanes so that each yard could be reached readily by a cart containing the feed, drawn by a horse with a driver who gave out the feed to each yard without the necessity of getting down from the cart. He afterward followed with the water in the same way. I suppose this could be done, but I have learned to believe it needful to clean their feed and water vessels each day, particularly the water pans, which collect a green, poisonous slime if not washed each day with a cloth thoroughly. The eggs were collected, I believe, much in the same way by having the nest-boxes arranged along the side of the house or yard at such a hight that the driver could reach them from the cart. The writer dilated on the amount of time and labor saved, needing only one man, a cart and a horse.

I don't know but that method might be successful for a time, but I do not think that they could continue it long without introducing disease and vermin among their fowls. I have raised poultry as a business for many years, and have never failed to find that neglect or a slighting, wholesale way of keeping fowls in quantity means loss, and to be successful as a poultry-raiser one cannot afford to neglect or omit any detail, however small or unimportant it may seem in the proper care of fowls. This is why, as a general thing, women are more successful than men in raising chicks. Things, which to a man who has not learned to the contrary, seem trifling and fussy, have their due importance and are not omitted, and the result is paying returns.

Fowls are small animals (perhaps I should say birds) and small things affect them for good or ill. A hen, if a good laying strain properly kept, will pay easily enough a dollar a year profit, while the same hen, neglected, might be considered a very poor layer and altogether unprofitable. This happens so many times, I have no doubt it is owing altogether to the kind of care and not so much to the kind of fowl which one pronounces a good or poor layer; and this brings to mind the practice of a neighbor, a brother poultry man of several years' experience, who, during the time of low prices in eggs, does not care to have his fowls lay and feeds them accordingly, so that during the high prices, his hens being fresh, he feeds them up and starts them to laying. Although I have never tried that, I have no doubt that there may be something in it. Fowls may be stinted in food until they haven't the heart to try to lay and are satisfied to merely try to live, but I should be afraid that it would do them a permanent injury and that they might after awhile refuse to lay under any circumstances. But in poultry-raising, as in many other pursuits, there is always something to learn, and among the things not yet learned is

How to Determine

A hen's age, or rather how to know when a hen is an old hen by any marks, signs or appearances it may carry. A hardening or stiffening of the whole bony structure, a thickening of the legs and an increase of scaliness, and perhaps a thickening and overhanging or protruding of the skin over and around the eyes are the only signs known to me by which an old fowl may be known unless it is excessively old. It seems to me that a good practice by which to indicate a fowl's age would be to cut a slit in the comb, much as one earmarks an animal, for instance, marking always at one certain time in the year. One slit in such a manner as to cause a portion of the comb to lop would indicate a year old and two slits a two-year-old, etc., and such marks can be easily seen when desired. Marking with a shoe-punch between the toes would make it necessary to catch the fowl to examine it, while the comb-mark, if properly made, could be seen without this necessity.

Where fouls are yarded, one can keep run of their ages without necessity of marking in any way, as, for instance, supposing it desirable to sell the three-year-old fowls, they would be found in yard No. 3, and when removed from the yard the fowls from No. 2 should be moved into the vacant No. 3 and those of No. 1 moved into No. 2, and that year's hatch into No. 1, and so on. In this way a tolerable certainty could be arrived at; there would be an occasional "fly-over," but not enough to affect the general result materially, and this method I think would be open to less objections than would any other that I have known of. Where fowls were not yarded, the combs might be marked in the way indicated above, and if any poultry-man has knowledge of a better method, will he, for the good of the fraternity and for the benefit of would-be poultry raisers in general, please communicate it? As a general proposition, there is comparatively little profit in keeping an old fowl, or a fowl that is three years old. Some breeds hold out longer than others and occasionally fowls of the same breed will continue to lay long after the balance have ceased to be profitable as layers, but a safe method is to sell everything at three years old and fill their places with younger ones.

Feeding for Eggs.

There is a great deal in feeding fowls in such manner as to make them good layers, and while I do not advocate the forcing or stimulating of fowls to make them lay, I do believe in getting and keeping them in the best possible condition by careful and regular feeding of good and nourishing food in proper quantity—sufficient but not too much, as overfed fowls become dumpy and refuse to lay. By condition I do not mean fat or flesh, but a bright, fresh, healthy appearance, indicating that the fowl is in its best state for the doing of its full duty as an egg-producer, and with the fowl in this condition, not only are the eggs produced more in number, but they are larger and finer and contain more nutriment, are richer in flavor and in every way than an egg laid by a poorer or an overfed fowl, and for this reason eggs from properly kept poultry farms, and known as "selected ranch eggs," are always in demand at higher prices than are eggs from poultry allowed to forage for their own food and getting little care. Such eggs come into market through the stores and are known as "store eggs," which eggs, by the bye, are not always quite up to the mark in goodness, as witness the experience of a friend of mine not long since (during the hot months), who, on buying a dozen eggs at the store and finding only three of the dozen good, begged the grocer to give him three more eggs that he might stand a chance of getting a half-dozen at least out of the dozen. I am willing to admit, however, that this was perhaps an extreme case, and that store eggs are not always quite so bad as were these.

Where one desires to feed egg food he will find the following receipt, I think, as good as any and as little hurtful, in fact they are all things constantly needed by fowls to keep them in proper laying condition: 10 lbs. best ground beef scrap, 5 lbs. fine ground bone, 2 lbs. granulated or powdered charcoal, 1 lb. sulphur, 2 oz. cayenne pepper, 4 oz. salt.

One quart of this mixture to every hundred fowls say twice a week will be found helpful, and is to be given in soft food.

In this connection I would say also that fowls should be fed morning and noon a mush of middlings (unless very rich, when bran should be mixed with it) mixed with scalding water or milk, and milk is much the best, as stiff as can be made. At night a feed of grain, principally wheat, but barley, rye, buckwheat, or an occasional feed of corn, may be used also, and for the mush a mixture of ground rye, barley and oats, with an equal bulk of bran, may be used in the place of the middlings. I have been for some time past substituting fine-cut green stuff for half the middlings or ground grain mixture of the mush, and find it excellent.

I know of no other one thing so good as a plentiful supply of green stuff to keep fowls bright and fresh-looking, and consequently healthy. With regard to the

Diseases of Fowls,

Very little is really known, and as in the human family, prevention is better than cure, and to this end unfailing care in supplying the necessary amount of healthful food and fresh, pure water, clean, well-ventilated quarters free from vermin, is essentially needful. Whitewash does no harm, and among my hen-houses I have one, and only one, whitewashed, but all are free from vermin of any kind. Neither have I found it requisite to use carbolic acid or coal oil, or coal tar, or any of the numerous insecticides or disinfectants, but I clean thoroughly and regularly my houses and yards at least once per week and see that my fowls have dust-baths.

Sitting hens and little chicks require generally some treatment to keep them clean and free from lice. Persian insect powder or carbolic powder and sulphur carefully used on the head of each chick is amply sufficient for this purpose.

With regard to Dr. Gally's fowls and their death from some disease, no one, I think, can tell with any certainty what the disease was, but I should say from what he says of the manner of their death that it was chicken cholera, and for this there are many "infallible remedies," but I regret to say that they don't always cure. Of course, nothing can now cure Dr. Gally's, but if he has any more attacked in this way he had better yard them and give them water with a teaspoonful of liquid carbolic acid to each quart of water, and not allow them any other, and keep everything about them clean and dry, and constantly disinfected, for which purpose lime or wood ashes is probably as good as anything. Phenyle is also good and inexpensive. I have seen also a plentiful use of strong alum water highly recommended, as mixing their food with it twice a day for two or three days, afterward once a week, or you may put in the feed for one dozen fowls a tablespoonful each of red pepper, gunpowder and turpentine, thoroughly mixed in, and give them this every other day for a week or so. Then there are methods of treating each fowl separately, which would not pay except in the case of a valuable fowl; as I have before said, prevention is always best, for doctoring is generally uncertain.

Lodi. T B GEFFROY.

THE IRRIGATOR.

The Wright Law.

We received the following from an old and valued friend, Alfred Cridge, of the S. F. *Weekly Star:*

SAN FRANCISCO, Sept. 24, 1890.

Mr. J. W. Mackie—SIR: (1) Have you formed any opinion on the Wright Irrigation law? (2) Does it, or not, give undue advantage to holders of large areas of unimproved land for speculation as against holders of small, well-improved farms, vineyards, etc.? (3) Does it, or not, tend to clean out farmers with small means by compelling them to pay a high price as a tax on construction before they are in a position to utilize the water, thus, in a measure, forced prematurely upon them? (4) Would it not be more in the interest of the small farmer if the tax was levied mainly upon owners of large areas of unimproved land, no improvements taxed, etc., and no bonds at all?—ALFRED CRIDGE.

1. Yes, a very favorable opinion.

2. It does not, and offer as evidence the very decided opposition of owners of large areas of land to the formation of irrigation districts. One irrigation district is rendered inoperative by the manipulations of the owners of large tracts of land. The holders of small, well-improved farms, vineyards, etc., are the most benefited by the irrigation-district system, which eventually must compel the breaking up of large farms, for the unimproved farm has to pay as much per acre to the tax-collector as the owner of a ten-acre vineyard.

3. We admit the hardship of paying up before the realization of benefits. Farmers are used to that; they have to do it every year. Seed-time comes before harvest and sometimes there is no harvest, especially here when there is no water. Water we must have, and but for the Wright Irrigation law it would be impossible for us to get any, as the owners of large areas of land, by appropriations of water gained by their ability to maintain lawsuits and other ways better known to them, so manage it that small farmers are left high and dry. The Wright Irrigation law gives the poor, small land-owner a greater power than he ever possessed before

4. Why, yes! If the owners of large areas of land, whether improved or unimproved, paid all the taxes and the cost of construction, it would most decidedly be for the benefit of the small farmer, and if our friend Cridge will only so arrange it the small farmer will be exceedingly glad. But the small farmer is willing to pay his just proportion of expense. No bonds at all! How otherwise is the money to be raised? For it does require money to build reservoirs, excavate canals, and all the appurtenances necessary to an irrigation system.

With friend Cridge, we believe that it would be better to not tax improvements on lands for any purpose. The man who improves land should receive a gratuity instead of being fined for conferring a benefit on the public. The taxation of lands only is an excellent idea, whether the single-tax idea be good or not. The National and State Government might have other sources of revenue and should. But it is not yet A. D. 2000.

The law regulating assessments is: Section 17. Said bonds and the interest thereon shall be paid by revenue derived from an annual assessment upon the real property of the district, and all the real property in the district shall be and remain liable to be assessed for such payments as hereinafter provided.—*J. W. Mackie in Tulare Register*

HORTICULTURE.

Fig-Growing.

At the last meeting of the State Horticultural Society there was a long discussion on fig-growing. The following outline was prepared by Charles S. Aiken, a member of the society, for the *Evening Bulletin:*

An interesting address on the Smyrna fig was given by Dr. Gustav Eisen. He related that in the fig plantation at James Shinn's at Niles, among the trees grown from *Bulletin* cuttings he had found three of the five known varieties of choicest Smyrna figs, and he had found also growing with these trees a number of Capri figs, the wild fig of Greece and Asia Minor. There was very little fruit to examine, but the leaves and habit of growth denoted the characteristics of each variety. Some leaves were full lobed, some three; some were sharply serrated, others smooth-edged. There were distinct features enough to show beyond all question the presence of three varieties, highly prized abroad for their large and delicate fruit.

"These varieties," Dr. Eisen said in response to a question, "are without doubt the true Smyrna, and as such they are destined to be of great value to the State. I am thoroughly satisfied that they are a very distinct type from the White Adriatic fig, grown here, and far superior."

Very unexpectedly, following these remarks and subsequent discussion, E. W. Maslin of Placer, who has made a special study of figs, corroborated Dr. Eisen's views as to the identity of the *Bulletin* fig. A leaf shown by Dr. Eisen taken from one of the Niles trees, is precisely the same in shape and structure as those on Mr. Maslin's trees, which he raised from seed taken from a box of the best imported Smyrna figs that he could get in the New York market.

The value and use of the Capri fig, found with the Smyrna importations, were explained by Dr. Eisen in detail. It is the fig that is relied upon in districts of the Old World for caprification purposes, for the little insect, *blastophaga*, breeds only in these wild figs. Some fruit taken from the Niles Capri figs were examined and found to contain, differing from other figs, traces of both male and female blossoms. The precise difference in formation between the Capri and other figs was explained by blackboard illustration. The value of caprification was explained in great detail. In summary, Dr. Eisen's views were that caprification is necessary for the Smyrna fig, in order to produce paying crops of fruit. It will set its fruit without caprification, for some figs matured this year at Niles, but, in his judgment, the trees will not bear in abundance without caprification. This matter of caprification is easily managed. Since the trees are here, the insect which makes its home in them may easily be obtained by importation, and with them perfect fruit and more of it on Smyrna trees may be assured. An obstacle similar to this was met by West India planters some years ago when they started to raise vanilla beans. The bearer would not mature until they brought from South America a pollen-carrying moth which made fruitful the otherwise barren blossoms. In figs of this type, it is claimed by Dr. Eisen, caprification will increase size and yield, will prevent possible scurfing, and will make the figs drop in every instance when ready for gathering. The White

Adriatic sets fruit without caprification, but its fruit is not perfect. Its seeds will not reproduce. There is a wild fig similar to the Capri in Lower California, but the fruit of the Capri is about 50 times larger than this native fig. Any failure of the wild fig crop in the Smyrna districts is regarded by the natives as a great calamity because then all the fruit, from the effect of non-caprification, has to be cut from the trees instead of picked from the ground where it falls. There has lately been much complaint around Fresno of White Adriatic figs souring; caprification would likely prevent this trouble. Apparently figs sour more in hot interior districts than where fogs prevail. In order to produce botanicaliy perfect fruit, caprification will be found necessary, anu the speaker expressed confidence that in the future the practice will be thought all-important in fig-growing.

A member suggested that some of the finest fruit is really imperfect. The cultivated banana produces no seed, neither does the Washington Navel orange, nor the Sultana or Thompson grape.

Secretary Lelong of the State Board of Horticulture took issue with Dr. Eisen as to the need of caprification for successful fig-culture. Recent European correspondence has given results of tests made in the Grecian archipelago. There trees have been entirely inclosed in tents and kept from the pollen-carrying insect, and yet those have borne and ripened figs as well as trees freely exposed. In some places it has been found that the fruit simply ripened earlier with insects than without. The French Minister of Agriculture has lately recommended the entire abandonment of the practice of caprification.

Dr. Eisen, replying to Lelong, said that, so far as the best authorities state, there are now no true Smyrna figs, similar to these *Bulletin* figs, in either Italy or France. So, if the Minister of Agriculture of France discourages caprification, he is considering a matter which he likely knows nothing about.

Regarding treating figs, Secretary Lelong favored sulphuring by careful fuming, claiming that the process was necessary to kill all fungus. He showed some of the Delemater figs from Placer sulphured in this way last year, and defied any one to detect the traces of sulphur.

Mr. Maslin expressed the belief that sulphuric fumes gained entrance to the fig, generating gas that would spoil the finest fruit.

Mr. Maslin said he had not yet made up his mind as to the value of caprification here. His fig-growing experience dated from 1885, when he bought a box of the largest Smyrna figs he could get in the San Francisco market and planted the seeds. Last year some of the trees from these seeds bore. The leaves varied in form, and the fruit of these reputed white Smyrna, some of it, at least, was blue as any ever seen and nearly circular in shape. In 1886 he obtained from New York another box of Smyrna figs, the largest he ever saw. The following year he set out seven acres of young trees from these seeds. Last year they had sent up shoots nine and ten feet high, and four trees bore about two dozen figs. They were yellow-skinned, with amber meat and very sweet. He decided he wanted stocky trees, so he cut the long shoots back. The result was disastrous, for some branches died, some trees died, and none bore any fruit this year. From this experience, he has decided to never again prune a fig tree. Fully five per cent of the trees in his seven acres planted hexagonally, 25 feet apart, have died, but the rest are doing well, and choice fruit is looked for next year. The leaves of trees from his New York seeds are similar as above noted to some of those found by Dr. Eisen on the *Bulletin* Smyrna trees at Niles. From his observation of figs about the State he is satisfied that the foothills are best adapted to fig culture, producing the thinnest skinned and by far the sweetest fruit.

Emory Smith referred to sulphuring figs, condemning the indiscriminate practice. He told lately of testing some figs in the local market which came from Fresno. They had bee sulphured so much that they were as tasteless as so much cotton.

[This discussion was followed by one on orchard cultivation, of which we will give an outline next week.—EDS. PRESS]

Prunus Simoni—Olives.

EDITORS PRESS:—In the report of proceedings at the August meeting of the State Horticultural Society, the *Prunus Simoni* is recommended as a profitable fruit. Surely the Winters shipper who got $2 45 for 17 fruits could not have had the genuine *Prunus Simoni*, which is a worse fraud than even the Kieffer pear. The fruit has a fine aroma, which was probably the attraction with the buyer, who, now that he has tasted them, would probably not give $2.45 a ton for them. The fruit resembles in shape and color a medium-sized red tomato, is firm-fleshed, and would therefore stand a long journey, but it is uneatable until dead ripe, and even then is both sour and bitter. Mr. Barbank, my predecessor, being charmed with the description of the fruit by Prof. Budd, and wishing to be up with the times, secured buds to bud some orchard trees, and also propagated some nursery trees which were among the stock purchased from him two years ago. When the orchard trees bore we watched the fruit with interest, but it was found to be utterly worthless, and I had the budded branches cut off. In my first catalogue I described it as a "large, showy, red, Chinese plum—very sour till ripe, peculiar flavor." Of course, such faint praise failed to sell the nursery trees, which, however, did not trouble me, as I wish no "cuss words" connected with my name by disappointed customers. If we wish to ship plums to Europe, why not plant the Kelsey or the Satsuma, which will ship equally well, and have a much better flavor than the *Prunus Simoni?* The Burbank excels all three in flavor, and, though not so good a shipper as the abovementioned, it will stand a much longer journey than any of the American varieties.

Olives.

As the time has come for buying trees, some of your readers might wish to know how olives do in wet ground. Most people suppose that, as they do well among rocks and on hillsides, they will not stand much moisture. Our experience last winter proves that they will stand much more moisture than peaches, for we had peaches and prunes on peach roots killed on both sides of a row of olives four feet distant (and on same level) which survived the winter without apparent injury. True, we had some olives killed in low places where there was a hardpan beneath, preventing drainage, and the ground was quite soft for two months. Some rows of olives, which were too small to sell, stood under an inch or more of water during every heavy shower, and yet they came out all right and are now alive.

I may add, in this connection, that the improved varieties stood the frost and excessive moisture as well as the Redding Picholine. The Manzanillo, for instance, will withstand even more frost than the Redding, while the True Picholine Columella and Manzanillo are all more vigorous growers than the Redding Picholine.

R. W. BELL.

Santa Rosa, Cal.

[These notes are interesting. There must certainly be confusion about this *Prunus Simoni*. We have seen specimens grown by I. A. Thomas of Visalia, which we did not consider so objectionable in flavor—in fact we liked them well for so early a variety. We notice, also, that there is much difference of opinion at the East about Prunus Simoni. What do other growers think of it?—EDS. PRESS]

Arsenical Sprays on Peach Trees.

Prof. Bailey of the Cornell University Station has been experimenting in spraying peaches this year, and in a bulletin just issued announces the following summary of his results:

1. Peach trees are very susceptible to injury from arsenical sprays.
2. London purple is much more harmful to peach trees than Paris green, and it should never be used upon them in any manner.
3. Injury is more liable to occur upon full-grown foliage and hardened shoots than upon young foliage and soft shoots.
4. The immunity of the young growth is due to its waxy covering.
5. Injury late in the season is more apparent than early in the season, because of the cessation of growth.
6. Injury from the use of London purple may be permanent and irreparable.
7. The length of time which the poison has been mixed appears to exercise no influence.
8. London purple contains much soluble arsenic (in our samples nearly 40 per cent), and this arsenic is the cause of injury to peach foliage.
9. A coarse spray appears to be more injurious than a fine one.
10. A rain following the application does not appear to augment the injury, and it was shown that the arsenic passes at once into solution without the aid of rain.
11. Meteorological conditions do not appear to influence results.
12. Spraying the peach with water on a bright and hot day does not scorch the foliage.
13. Paris green, in a fine spray, at the rate of one pound to 300 gallons of water, did not injure the trees. Probably one pound to 350 gallons is always safe.

FRUIT PRESERVATION.

Sulphuring Fruit Not a Mistake.

EDITORS PRESS:—I submit the following propositions:

First—Sulphured fruit dried on wood on wooden trays contains no sulphuric or sulphurous acid, provided the fruit is thoroughly dried.

Second—If it does, those acids taken in small doses are not poisonous, but beneficial to the human family.

Now I will leave the first proposition to any fair-minded chemist in the State to decide. Sulphur when burned in air is oxidized to two degrees, or is a binoxide. To oxidize it higher, it must come in contact with nascent oxygen and must be confined. This is done in a leaden chamber by chemists in the presence of fuming nitric acid, the leaden chamber having on its upper surface a large *bell glass* for the operator to see through so that he can tell when the reaction is going on, or if in presence of a metal oxide, this dioxide of sulphur will form a sulphite, which, when exposed to the atmosphere, will slowly change to a sulphate or higher salt. So we see here where our chemists have been getting their sulphuric acid from—their *evaporated* and not from their *bleached* fruits.

Now I took some bleached fruit not long since, and placed my "Qualitative Chemical Analysis," by Fusenius, before me so I should not make any mistake. The fruit had stood over night in distilled water. I used barium chloride and pure hydrogen chloride. I proceeded to make an analysis of my bleached peaches, and the result was what I expected—I got no *precipitate;* therefore, no sulphurous or sulphuric acid. Had they been evaporated, I should have gotten sulphate of barium showing the presence of sulphuric acid.

Now when we bleach fruit it contains large quantities of water. This water absorbs the sulphur dioxide in large quantities, and as the water is given off in the air the sulphur dioxide is liberated and leaves the fruit, hence the necessity of drying thoroughly in open air.

Now about the flavor. This is generally destroyed by stacking the fruit in large piles, as it is taken in before cutting and is sometimes entirely lost in this manner. If the essential oils have been broken up from the tissues of the fruit by standing and heating before being cut, then the heat of the bleaching process will complete the work and the fruit will come out tasteless.

Fruit containing sulphuric acid in small quantities is not poisonous, but in a malarial country is beneficial to the persons eating it, so say John Scudder, Dunglinson and many more medical men, since the sulphuric acid is an anti-zymotic; but this would cause less "calls" for a physician. Let us be sure that we are right as drying-men and go ahead. Let us have ripe, fresh fruit, placing it on wooden trays, bleaching thoroughly and drying in the same manner. People want such fruit and will have it. It looks nice, and for the sick person this is a great consideration when he has no appetite. Growers, if you want to sell your fruit, follow the hints given by that able article published in the PRESS in June, I believe, from a friend in San Bernardino. All the points for drying were given there in a nut-shell, and one that any person could crack.

Los Gatos. J. J. SHANER.

[The article on fruit-drying to which Dr. Shaner refers approvingly was published in our issue of Oct. 4th —EDS. PRESS]

THE FIELD.

Rice-Growing Suggested.

Horace D. Dunn of this city writes to the *Bulletin* suggesting the trial of rice-growing in this State and giving the following information:

Soil and Location—The soil should be of a mucky or swampy nature, so situated as to permit drainage and of being supplied with water by gravitation or machinery when required. The place for an experimental trial should be located the farthest up stream where overflow can be most readily controlled. I suggest location in Colusa, Butte or Sutter counties, so as to reduce the expense of levees, and obtaining water as low as possible.

Time and Method of Planting—Rice can be planted as soon as danger from late frosts is past, say from the 10th to the 20th of April. The land should be prepared as for wheat, and if the rice is sown in drills, as is the case in the Atlantic States, it should be flowed afterward with, say an inch of water, increasing the same as the plant grows. Until the plants grow so as to shade the ground between the drills, twitch grass and weeds will have to be removed by using long, light rakes. In Japan and Hawaii a seed-bed is used and the plants transplanted, thus saving considerable time and labor. One acre in rice sown broadcast furnishes plants for ten acres transplanting. Transplanting is done when the plants are about a foot high. The plants are made into small bunches, a number of which a man carries in his apron, which, being tied at the waist, makes a sack open at both ends, between waist and neck. Taking a bunch of plants in his hand, the man walks backward between the levees, at every step planting from three to five plants together in the mud—which is half a leg deep—until the other levee is reached. Then facing around and stepping a pace sideways, he goes backward, planting as before. This operation is repeated until the field is planted. By this plan the rice gets such a start that very little weeding is done. The water is increased in depth as the plants grow, care being taken not to cover the joint where the leaves separate, except temporarily, so as to prevent thrashing the blossoms, or grain, when heavy winds blow. A constant small flow of water can be repeatedly used in several fields below, through a system of water gates cheaply and simply made. When the rice is in a doughy state the water should be drawn off, enough moisture remaining in the soil to perfect the grain, the sod becoming firm enough to harvest upon. Harvesting is done by the sickle, or cradle, the grain being left in sheaves to harden until thrashing is done. The stubble forms a thick sod which, in Japan, is cut into brick shapes and turned over by the use of a heavy hoe. If the land is only used for annual crop of rice, this sod is left to the disintegrating powers of wind and rain until just before planting, when a flow of water returns it to its original condition of mud.

Enemies of the Rice Plant—These are weeds, water-rats and birds. By transplanting, weeds give little trouble; water-rats, when numerous, are killed by dogs, and birds driven away by scarecrows or occasional shooting.

Seeds—There are a large number of varieties of rice grown in tropical and sub-tropical countries. Those which have the highest value among the rice-consuming population of this State are as follows: The true No. 1 rice from China, "damio" rice from Japan, long-grain pearly rice from Batavia, Dutch East Indies; the largest long-grain rice from South Carolina, some of which, prior to the Civil War, was had ⅜-inch long and pearly in color. Many years ago similar rice was imported from San Salvador, Central America, and Peru, and probably can now be obtained from those places. It would require probably fifty pounds of seed to plant one acre.

Labor—One of the fallacies about growing rice is that the labor is both degrading in character and not suitable for white persons. The facts, so far as Hawaii and Japan are concerned, are that the labor of preparing and planting the rice-fields is not more severe than our duck-hunters and net-fishermen experience, and does not extend over a period of more than four or six weeks.

Yield and Price—The taro-fields of Hawaii, when first planted, returned crops of 6000 pounds of rough rice per acre, and bore two or three crops per year. This system soon exhausted the land, so that both the yield and quality were greatly lessened, and the practice was modified somewhat, but the quality and size of grain is now much inferior to the best Carolina rice. I believe that annual crops of rice on California tule lands will for many years average 6000 pounds per acre, worth, in an uncleaned state, from 2½ to three cents per pound. If large grain, this would return about 4000 pounds cleaned, at a cost of not over 75 cents per 100 pounds ready for consumption. The expense of planting and harvesting would not be much greater than that of wheat, while the net results would be more than double. An expense of a few hundred dollars would test the adaptability of our tule lands for rice-growing, and be an object-lesson that would return a thousand-fold in case of success for further cultivation in this State.

Early Sown Grain Does Best.

The Colfax, Wash., *Gazette* publishes the following statement by R. C. McCroskey of Garfield in response to inquiries.

The ground was plowed during the fall of 1889, to a depth of 6 inches.

The variety of wheat sown was Red Chaff.

The amount of seed sown per acre was 1¼ bushels.

It was sown during the early part of April, as soon as dry enough, with a toothed seeder.

It was harrowed twice with a drag harrow and clod mashed.

The average per acre was 46 bushels for 22 acres, and 40 bushels for 20 acres. The latter was sown later and on land broken in the spring—the two causes, as I apprehend, of the decrease in average. This was all the grain that I, individually, had ready when header and thresher were here, but from what I observe on my own and my tenants' crops, the grain will invariably diminish in quantity of yield in proportion to the lateness of sowing. Eighteen years experience in California and two years here have proven early sown grain the best without an exception, other things being equal.

ALFALFA AND IRRIGATION.—John Hutchins of Lodi gives the *Sentinel* the following statement of cost and profit of growing alfalfa hay with irrigation: It costs me in cash, besides my time and labor, about 75 cents per acre per wetting, and as I flood the land 3 times for four crops, it would make the water cost me $2.25 per acre for the season. The mowing can be done for $2 and the raking and stacking for $2 per acre for the four cuttings. That would make a total expense of $6.25 per acre. Some of my land produced 2½ tons per cutting, but from some of it I cut but a ton or a ton and a half, owing to circumstances, which by experience gained in the past, I can control, and bring the average production up to 2 tons per cutting or 8 tons per acre for the season. I sold last year's crop for $8 per ton on the ground, which gives a gross income of $64 per acre. Take from this the expense, $6 25, and there remains the snug little sum of $57.75 per acre which belongs to me, John Hutchins. People may say I am an enthusiast on irrigation. Well, if they do, they are right; I am. And why shouldn't I be? I can make more money off one acre of irrigated alfalfa than off of five acres of grain land."

FOREST FIRES in the Black Hills (Dakota) this season are reported to have proved the most destructive in the history of the region, and though now under control they will not be extinguished until the rain comes. In timber 60 square miles have been burned over, mostly brush and dead trees. It is impossible yet to estimate the losses in timber and to ranches.

QUICK STEAMING.—The Pacific Mail steamship Newport ran from Colon to New York in 6 days, 11 hours and 55 minutes, reaching the latter port Oct. 1st—the fastest time on that route yet recorded.

Patrons of Husbandry.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

State Grange in Brief.

We have only time this week to give a few words about the recent meeting and shall not attempt any connected report. Our Grange Edition will contain, from week to week, a more connected report of the most interesting portion of the proceedings. [The Executive Committee have kept us busy thus far this week.]

The session was opened promptly by Worthy Master Davis in Masonic Hall, Watsonville, Tuesday morning, Oct. 7th, and proved one of the largest, most harmonious and generally satisfactory held for many years.

The Master's desk, Ceres, Pomona and Flora's stations and the Secretary's desk were all very tastefully and beautifully decorated with flowers, fruits and cereals. The hall was a very spacious one and most richly frescoed; upon each of its four sides were highly artistic and attractive views. In addition to these expensive adornments of the hall, over $2000 was spent by the Free Masons in carpeting and furnishing the hall and ante-rooms. All in all, the hall and its adornments we believe superior to those of any hall on this coast outside of the metropolis of San Francisco.

Over 200 Patrons were counted as being present at the first morning session. This is a larger number than at any session within the past ten years. Although there was no general election of officers, or any one particular thing to call out large numbers, the session was the best attended for many years. Besides this, nearly all came to stay to the end, and the Love Feast on Saturday evening had about twice the usual number present. The fact that Watsonville Grange numbered so many good and true Patrons (192) added much to the life and enjoyment of the meeting. Every want of their guests seemed to be anticipated.

The Citizens' Reception, Tuesday evening, was an immense affair and greatly enjoyed by both Patrons and citizens. It reminded us of the brilliant entertainments given by our citizens to the National Grange throughout its session and excursions last year. The program of the Citizens' Reception was excellent throughout.

The offerings of the Literary Committee from time to time during the session contained no dross, to the credit of Chairman Roache, Bro. Fay Raymond and other assistants.

We never saw a more hearty interest taken in any spontaneous Grange affair than that led by Worthy Ceres in making Bro. and Sister Roache the present of $100 as a dowry for "baby" Roache—whose name is Granger and his god-father the State Grange. His dowry has been increased to $105 and placed in the Grangers' Bank as a special 20-year deposit, to draw six per cent interest, compounding quarterly. We have never seen Past Master I. C. Steele more happy and satisfied than when informing us of having finished his present task in connection with this generous compliment by securing so favorable a deposit for the benefit of the little "Major."

No Patron present will ever forget the scene when Brother Cressey carried this "child of the Grange" to the altar and presented in fitting words the dowry and the few heartfelt words which the father and mother were able to express in gratitude for the unexpected honor.

Worthy Master Davis presided with ability far beyond his physical strength and received the highest praise for clear and prompt decisions and rapid dispatch of business.

All the Past Masters present were called to the chair temporarily during the session by the W. M., giving all the old members a reminder of the creditable manner in which they formerly handled the gavel.

Brother Cressey was presented a magnificent floral harp, with appropriate sentiments, by a very handsome young sister on behalf of the Matrons of the Grange.

For the first time, all resident Past Masters were required to take seats in front between the Master's and Secretary's desks, a very appropriate requisition. They all through the sessions took an active and helpful interest. The following were present: Bros. Steele, Webster, Flint, Coulter, Johnston and Overhiser. All their better-halves were also present excepting Sister Webster.

The reports of the General Deputies and District Deputies showed that a larger number of visitations had been made on the part of the State Officers and Deputies, to Subordinate Grange and District meetings, than heretofore. Bro. B. F. Frisbie probably made the largest number of visitations, rounding out with Brothers Flint and Steele, and others, an extraordinary year of good service.

Every one of the list of thirteen leading officers was present at the first roll-call; with the exception of the two first days on the part of Brother Webster, the Executive Committee were present during the entire session.

We were pleased to note that some of the younger members of the Grange took more than ordinary interest in the work, and all did well their part.

The preparation and recommendation of important bills for presentation at the next Legislature by the Legislative Committee, if well followed up, must give valuable fruitage from the work of the session. The resolution passed in favor of legislative reform should be effective of much good. Action in favor of business co-operation was favored and we trust is hopeful of excellent returns for the Good of the Order.

The reception of Past Master Hale of the State Grange of Connecticut was a hearty one. His speeches for the Good of the Order were interesting and well listened to.

Further information will be had of the proceedings on this page and others in our Grange Edition. We hope the brothers and sisters present will help us out with our report in noting things that we may overlook. Other mention of the session will be made hereafter.

The pamphlet of the Annual Proceedings will be issued and distributed to each subordinate Grange as soon as practicable.

The Executive Committee Report was unanimously adopted, completely exonerating Dewey & Co. from the scandalous insinuations made by a few members of Eden Grange last November. The charges were emphatically denied by us at the time.

Let us all work with a will for a still larger and better session at Haywards next October. Shall we not have a hundred Granges, good and strong in our next roll-call?

Feast of Flora and Pomona.

At Watsonville, after the sixth degree had been conferred on a class of "ninety and nine" that now lie safely in the shelter of the Grange fold, fair Pomona, with beautiful ritualistic language, invited all to the feast already spread at the Opera-house.

We had had a feast for the mind, and here came a feast for the eye and a feast for the palate.

There were tables reaching the whole length of the hall beautifully and tastefully spread. On the white cloth were strewn pepper leaves to make, as it were, the groundwork of the bouquet. Then there were plates and baskets of all sorts of fruits you could name or imagine, with luscious strawberries and great juicy apples in the lead.

Tableau.

Ceres, Flora and Pomona, with their lovely attendants all appropriately bedecked and posed, were shown upon the stage under the glare of a red stage-light. It was a spectacle to be remembered for a lifetime.

At the close of the tableau, Worthy Pomona sang in a clear voice of exquisite sweetness and rare expression a song of welcome and of joy.

To bring us back to earth again, let us look from the lofty impressions conveyed by the grand and solemn ritual, the imposing ceremony, the triumphs of taste and art shown in hall, songs and sights to the level of the man who says: "I rather guess I can make about as much money outside the Grange as in it."

Brother Roache promises to send a list of all who contributed fruits and flowers. F. S. C.

Uncertainties of the Telephone.—Just before our Grange edition went to press last week, the Secretary telephoned from State Grange: "G. P. Loucks re-elected on Executive Committee." In passing the word from Watsonville to San Francisco, via Santa Cruz, "Loucks" was transformed into "Locke"—in whom the editor thought he recognized our old friend D. M. Locke of Santa Cruz, the husband of the lamented "Mary Mountain"—and that is the way Bro. G. P. Loucks of Contra Costa came to "suffer a sea change into something rich," but by no means "strange."

The Scarcity of local Grange news in this number will be accounted for by the fact that many of our correspondents have contributed to the enjoyment of the recent session of the State Grange.

Free Jute.

The McKinley bill abolishes the duty on raw jute, while it increases the tax on bags and other manufactures of that fiber.

The ship Glenalvon, from Calcutta, brought the first cargo of foreign products which arrived in the port of San Francisco after the new tariff took effect, consisting of 500 bales of raw jute, billed for the State prison, at San Quentin. On this cargo the State will save about $1000 in the way of duties.

At the meeting of State prison directors, last Saturday, Warden McComb reported as follows:

The contract price of the 2000 bales raw jute now in bonded warehouse at San Francisco is 3 75 cents; the duty amounts to $3652, but under the decision of the Revenue Department the invoice will now come in duty free. The charges against this jute since it was placed in bond up to Nov. 23, the expiration of the present storage month, are: Storage, five months, at $200 per month, $1000; drayage from ship to warehouse, $200; insurance, $390; drayage when taken from warehouse to steamer, $200; total, $1790. The State will thus save $1862, and the cost of the jute at San Francisco will be 3 53 cents per pound, as against 3.75 cents, the contract price.

To save insurance the jute now in warehouse in this city will be removed as soon as possible.

A customs' decision is reported via Norfolk, Va., that jute butts imported later than Oct. 6th are free of duty, and that no drawback can be allowed on bagging exported after that date and claimed afterward to have been manufactured from jute butts imported under the old tariff, unless the claim is fully supported by proofs of importation.

Amendment to S. G. Constitution.

The following amendment to the Constitution of the State Grange of California was adopted:

That Sec. 1 of Art. XII of the Constitution of the State Grange of California be amended so as to read as follows: Section 1.—Any member in good standing, clear on the books of the Grange, shall be entitled to a demit on personal or written application in open Grange.

Patrons holding demits may be admitted thereon into the Grange in whose jurisdiction they reside, on application, accompanied by an admission fee of 50 cents, by a majority vote of the Grange; but the application must be referred to a committee and be reported on at a subsequent meeting before the ballot can be taken.

That Sec. 3 of Art. XII be abolished.

Alliance Stockyards.—It is announced that the Farmers' Alliance of the southwest is about to establish independent stockyards at Kansas City. The Alliances in Texas, Nebraska and Iowa are back of the scheme. Fifty acres of land adjoining the present stockyards is the site of the new yard. By maintaining their own yards the farmers believe they can save much money in marketing cattle, doing away with commission men and a great part of other expenses.

Address of Welcome.

[Delivered by Mrs. E. Z. Roache, W. M. of Watsonville Grange, to the State Grange.]

Away back in the misty shadows of antiquity, close by the verge of earth's morning, born to eternal existence and rocked in the cradle of Nature, primeval man took his place amid the teeming activities of animal life, his flickering lamp of reason burning so dimly that it seemed to threaten extinguishment at any moment, leaving him to be governed by his animal instincts alone. By virtue of climatic conditions and geographical conformations, men were naturally different. Yet, gregariousness being an instinct, they congregated into tribes or clans. Impelled by the combative instinct and for lack of better employment, these bootless savages often *met* to fight, yet only with the weapons Nature had bestowed, hence without great loss of life.

Passing over a dismal period of ages from which *time*, that friend of truth, had evolved a semblance of civilization and humanity, we note other hostile *meetings* of Israelites and Philistines, of Mamelukes and Macedonians, of Finn and Pict. Still, bridging another chasm of time, we arrive at the terrible period known as the *Dark Ages*, when selfishness and brutality ran riot and vied with each other in ruin and wrong, then the crusades of Christians against Infidels, presumably for a principle but in fact for rapine and plunder. So on down the lagging centuries to that *meeting* where, for the first time, a true principle was involved and vindicated by our Revolutionary parents whose patriotic actions sounded the knell of human slavery and kindled the fires of eternal freedom and progression, which were only temporarily checked by that other unfortunate *meeting* which arrayed brother against brother, father against son and filled our land with sorrow and death as the cost of sustaining that emblem of peace and purity—our starry flag.

To-day we have a *meeting* to nurture and guard principles as sacred as those over which innumerable wars have been fought. But how different the meeting; neither the battle cries of gathering hosts, neither bows, spears nor cannons are anywhere visible. There appears upon the scene, for the first time, the natural mediator between the man animal and the man human—woman. Here at this meeting reason is the guide, love the control, honesty the purpose, and virtue, happiness and enlightenment the reward.

To me, brothers and sisters, has been accorded the high honor and loving duty of extending our Grange welcome to this grand body—the aggregated intelligence and perfection of all those millions of years since the march of time began. What can I say to these noble sons, these splendid daughters, representatives of an industry founded by the great creative power of first causes, who have left their vine-covered cottages on the hillside, their flower-bedecked cabins on the mountains, their beauty-encircled mansions in the valleys, their to each, be it ever so grand or humble, dearest spot on earth—home, sweet home; where silver-haired parents guard and guide these sanctuaries of the soul and where those peerless nymphs of all natures glory—darling little ones—eagerly and longingly await your return.

To you, brothers and sisters, from north, south, east and west, who come to our little valley by the sea, to unite with us in legislating for that which will benefit humanity, for that which will beautify our homes, purify the morals and exalt the lives of all to efforts of self-perfection, how can we convey to you our appreciation of your coming? In no other way than to offer you our *all*. To none less are you entitled. To the sincere love of unselfish hearts, to the lingering clasp of willing hands, to the light of kindly intentions beaming from our faces and to our best efforts for your comfort and happiness. To our valley, our town, our homes, our farms and our orchards, do we most cordially welcome you, with a welcome as pure as the objects of our noble Order, as simple as undying truth, and as lasting as eternal right. Yet, I would remind you that your stay among us is not to be all pleasure or play. A gigantic work is to be performed. Our members are comparatively weak, our enemies, ignorance, selfishness, dishonesty and intemperance, well-drilled and strong. We meet in the cause of law, order and good government, to assist in eradicating that idea, remote and present, which considers brute force the panacea for many supposed and some real ills. To establish improved educational facilities in our schools, colleges and mechanical institutions, with the view that a practical education may be received by the youth of our land, fitting them to enter into the business relations of the age and earn an honest living. To condemning the present cramming and artificial system which obliterates most of the natural powers of the mind while deteriorating or ruining the physical system. To discountenance the excessive training of the intellect alone, to the exclusion of the morals, resulting, as it does, in giving us a vast army of intellectual sharpers and thieves, on whom, spending great sums to educate, still greater sums are required to sustain in prisons, reformatories and penitentiaries. To assist in reforming our politics—county, State and national—that just laws be enacted and executed in directions which monopolistic capital has long considered its special territory. To see to it that the tiller of the soil be accorded an equal share, at least, of that which his labor has produced, with him who has done nothing, who is a non-producer (without it be of evils) who sits comfortably in his railroad office and dictates whether the farmer shall starve or prosper, or in his counting-house, buys and sells millions of dollars worth of imaginary farm products, and is a stumbling block to agricultural progression and hence an enemy to mankind. These, Patrons, and others of as vital importance, are the questions on which we are to legislate, which stand defiantly before us, which we must meet face to face and either vanquish or be *ourselves* destroyed.

Let each one, then, do the best of his or her ability, and on the honor of a Patron, labor for the best interests of all, that we may abide in unity, peace and harmony, a shining example to the world; and may the fruition of our united efforts be the elevation of manhood and womanhood to the highest attainment of human perfection, until which the mission of the Grange will not be fulfilled.

Again, brothers and sisters, welcome, welcome, welcome. Oh, thrice welcome! Read it in our faces, hear it in our voices, feel it in our hands, breathe it in the air, let it permeate your being.

Trusting that your stay here will be both pleasant and profitable, and that your labors may be blessed with a liberal harvest, and when you have heard the last grand song, the last fervent farewell, and safely wended your way to your several homes, and the waning echoes on the wings of time shall add its enchantment to the past, may the shining stream of memory, on its gliding boat of fancy, turn your thoughts to *this meeting*, and may you be able to truthfully say: "It was one of the pleasantest of your lives."

Oh, toilers with Nature, who kneel at our shrine
Of justice and virtue with thoughts all divine,
To labor for country, for home and for right,
On souls bowed with darkness to let in the light;
And when through the cycling centuries fly
Beyond the beyond- to the by and the by—
If true to your vows here, of friendship and love,
A *welcome* you'll gain from the great Grange above.

E. Z. Roache,
Oct. 7, 1890. Master of Watsonville Grange.

County Exhibits at State Fair.

Humboldt County.

For the fourth time Humboldt comes 400 miles by sea and land to make a display of her resources. These exhibits have always been under the care of Chauncey Langdon. This year she does better than ever with her wonderful products of forest, field and dairy, and is quite unique in her showing of the hunter's and trapper's craft, prepared by the late Seth Kinman, the noted mountaineer. There are a stuffed grizzly, a chair made from deer's horns and grizzly's hide, as a Presidential seat for James G. Blaine, and a large array of Indian curios and tools and treasures of the chase.

Humboldt enjoys almost a monopoly of redwood, and seeks the lead in potatoes, apples, cheese and butter.

ROHNERVILLE EXHIBITS.—Chauncey Langdon shows potatoes in quantity and variety, a fine output of onions, parsnips, beets, carrots, sugar peas, white beans, salsify and grasses, 36 varieties of fruit in glass and 36 glasses jelly; Horace Drake—oats and nectarines; Mrs. Mary E. Carr—oats; Al Leach—wheat; Mrs. W. H. Bryan—jar cherries; Mrs. W. H. Dunnigan—cherries and crabapples; Alex. Mason—soapstone; G. F. Stewart—blackberries, clover and samples nursery stock, showing remarkable growth; Mrs. Mary Martin—crabapples and case-knife beans; A. P. Compton—Early May peaches; John Miller, five sacks grass seed.

GRIZZLY BLUFF.—C. H. Southmayd shows four varieties apples; Mack Madsen—apples; J. Dinsmore—five kinds apples and barley; A. J. Bakes—potatoes; —— McMahill—potatoes and apples; J. Davenport--beets, potatoes, carrots and apples; B. L. Wait—apples, plums, prunes, onions and peas.

EEL RIVER ISLAND.—Smith Tulmore shows corn 15 feet high; G. G. Dudley—four varieties apples; F. Lonquist, six do.

CAMP GRANT.—Amos Hansell & Sons—30 varieties apples, and display of pears, peaches, peppers, walnuts, prunes, dried raspberries and canned fruit; A. Cusa—sack corn and box tomatoes; J. Newman—apples and pears.

HYDESVILLE.—Geo. Gray—rye; F. A. Hansen—finished burl tablet, very fine grain and polish.

ALTON.—M. P. Hanson—peas; Frank Oliver—oats and barley.

BLUE LAKE.—K. Geer—oak tanbark, moldings, pickets and burl redwood, case glass, package canes.

FERNDALE.—M. B. Alfred—salmon berries, red and yellow; Vedder Cheese Factory—display of new and old cheese.

LARIBEE CREEK.—John Smith—apples, pears and peaches.

SALT RIVER.—Conrad Whitman—peaches, beets, carrots and cucumbers; Mrs. Etter—flowers and buckwheat.

EEL RIVER.—G. M. Howard--five varieties apples; John Robinson, apples, pears, peaches.

PRICE CREEK.—John Miller—five sacks grass seed.

FIELD'S LANDING.—Miss C. S. Kendall—hand knit work, very fine, and the flora of Humboldt county in water-colors.

PEPPERWOOD.—H. D. Darnell—three varieties apples and one of pears.

GRAVELLY POINT—Geo. Smith—grasses and clover; —— Montgomery—rye; —— Reynolds—stave-bolt; Humboldt Creamery—butter.

Yolo County.

The tasteful arrangement and large variety of products reflected great credit upon the people of this county, and particularly upon W. M. Lee, the exhibitor, since they had not decided to make a display until shortly before the opening of the fair. If Yolo does take but a short time for it, she "gets there just the same," as the following list of articles and exhibitors will show:

Snowflake wheat, pecans, dried fruit—Barney Parish; Egyptian corn—J. L. Pace, Blacks; grapes—A. J. Thomas and D. J. Hershey; dried figs—W. C. Cole, Esparto; chestnuts, persimmons, dried fruits, etc.—Nick Cadanassee, Capay; grapes and canned goods—Clarence Scott; dried apricots—Sam Nutting; prunes—Jacob Henry and J. C. Winter, Brooks; grapes and artichokes—G. W. Dameron and J. W. Gillam, Madison; dried peaches, nectarines, etc.—J. B. Griffin, Winters; English walnuts, grown on black walnut stock—F. E. Russell, Davisville. (Nuts were fine in quality, and the success of this experiment teaches a valuable lesson in horticulture.) Grapes, almonds, prunes—from Davisville—shown by E. H. Larue, E. Anderson and P. Treat; extra fine almonds, Wm. Bray, Woodland; fine variety of prunes—L. G. Rhodes; canned goods, wheat, etc.—Geo. A. Pierce; vegetables from Clarksburg—H. S. Conner and Dan Webber; Muscatel grapes—Rev. Mr. Belt, Woodland; apples—Mrs. W. N. Lee; cucumbers—Geo. Wiseman; flour—Sam Mering, Yolo; grape brandy and syrup—Mr. Snavely, Woodland; cheese—Calvin Perkins; hops—D. O. Entrican; canned fruits—Mrs. Entrican and W. T. King; broomcorn—W. H. McMullen; melons—Barney Copps; honey—C. H. Gluvz; vegetables—Fred Martinelli & Co.; fine Russian oats—L. N. Scott, Yolo; tobacco—S. Richardson.

HORSES.—Tom Ryder (2:20½), the Alexander Button and Black Ralph pacer, owned by R. H. Newton; Belle Batton, owned by Geo. W. Woodward; Albert and Vidette, owned by Tom Snider; Clay Duke, two standard trotters and three roadsters, owned by J. W. Martin; Creole and Bompter, shown by Tom Snider.

CATTLE.—P. S. Chiles of Davisville showed a fine herd of Shorthorns, most of them to be sold at sale of P. C. S. H. Breeders' Association. Of Galloways there was a large herd, representing 50 or more very fine specimens of the breed, but we have forgotten the owner's name and cannot find his advertisement anywhere. Perhaps he has none to sell.

The sheaves of wheat, the almonds, the grapes and the dried white Smyrna figs were especially attractive. F. S. C.

Mutual Endowment Humbugs.

An *Alta* reporter who called on Labor Commissioner Tobin, one day last week, got a very decided expression as to the degree of credence due the Legion of the West, Endowment Associates, Royal Argosy, Guarantee Endowment, Beacon Light, Order of the Golden Shore, and other "benefit" concerns worked on the same principle.

"They are all gross frauds," said Commissioner Tobin, "and only serve to give the heads of them a fat living for nothing. The annual report of the Legion of the West has not yet been published, but when it is it will reveal little or nothing of the manner in which the money paid into the 'General Expense Fund' has been used. The Pacific Endowment League I consider the worst of all these societies. None of them can last for any length of time. The principle on which they are based is unsound. You pay $100 to get $500. Most of the members of these societies are women. They are naturally sanguine and easily fall into the trap. They pay up their assessments, often at great sacrifice to themselves and families, only to find at last that there is no money to pay them their coupons when they fall due. The organizers of these affairs are careful to give a heavy inducement to members to get others to join. A premium varying from $1 to $3 is paid for every member gained, and thus each member becomes a canvasser and lures dozens besides himself into the fraud. Of course, there is a social feature to these societies, which is a further inducement for the young of both sexes to belong. Then politicians, lawyers and others whose living depends on a large acquaintance, join in great numbers. These, of course, enjoy a benefit in the increase of their patronage. It is the poor fools who stint themselves to pay their assessments that have to suffer."

There is no law to prevent the existence of these societies in this State. They do not come under the head of insurance companies, and are not subject to the investigation of the Insurance Commissioner, Sec. 451 of the Civil Code taking them quite out of his supervision.

Eighteenth District Fair.

At the 18th District Fair, opened at Independence, 23d ult., the *Independent* notes in every department of exhibits decided improvement over former years. The grain, roots and vegetables gave ample proof of the fertility of the soil. J. V. Skinner made a display especially worthy of notice, as being the first crop raised on land irrigated by the Stevens ditch. Corn ripened in 90 days from planting; potatoes, tomatoes, pumpkins, squash and other products of great excellence. E. Robinson, John Baxter, John Kispert, A. N. Bell, C. A. Walter, S. A. Densmore and others showed such fruit as is making Owens valley famous. The apples, pears, peaches, quinces and prunes were all beautiful. Mr. Kispert is admitted to excel in grapes.

The apiarian display of W. Muth Rasmussen included combs in all stages of progress, from the foundation to the finished pound sections, ready for market, bee-keeper's tools and implements of all kinds; also a fruit-drying tray, the invention of the exhibitor, that protects the fruit from insects and is much easier to handle than any other tray in use.

Miss Rachel Bell had a beautiful display of live flowers.

Alex. Clark showed corn with eight ears on a stock, one of the ears measuring two feet four inches in length, grown on grass land, without irrigation.

A. N. Bell had fine walnuts, English and native; also flour of his own manufacture.

E. Robinson showed the best sweet potatoes even seen there.

C. A. Walter had a fine exhibit of home-made hams and bacon.

From the quarry of the Inyo Marble Co., Mr. Staudinger set up a display of fancy marbles, worked into various forms of beauty.

W. L. Hunter had a large and choice collection of the mineral products of Inyo, including gold, silver, lead, bismuth, antimony and other ores, and J. S. Gilman made a fine display of silver ores of the county.

THE SANGER *Herald*, which got burned out a few weeks ago, has reappeared in its usual form, looking none the worse for the hot spell experienced, and is vigorously urging its townsfolk to provide suitable and sufficient means for guarding their property against fire.

IN honor of the memory of Father Mathew, the apostle of temperance, 50,000 persons marched through the streets of Dublin, Oct. 13th. The Lord Mayor, members of the corporation and various trade and temperance societies were in the procession.

ACCORDING to the astronomers, winter has set in early on the planet Mars. They reported a snowstorm there week before last.

Daily City Papers and Market Reports.

EDITORS PRESS:—Many farmers in California take a daily San Francisco newspaper, particularly when they reside near enough to a postoffice to get the paper on time. I have been buying the *Examiner* daily—part of the time from news-dealers—for many years, and as most farmers or producers from "the earth earthy" do, I have instantly referred to the column of market reports; and on last Sunday I bought also the S. F. Sunday *Call*. Being somewhat in the potato line of culture this season, I was willing, if not anxious, to know the price of good "spuds." On turning to the *Examiner*, I found good "Peerless" quoted at 50 to 80 cents per 100 pounds; then turning to the *Call*, I found the quotations of price for the same potato to be 75 cents to $1 per 100 pounds.

Now it is very important for producers of "farming truck" to know which of these two daily papers was correct and beneficial to "old hayseed," because the odds between 50 cents and 75 cents or between 80 cents and $1 on the cental, if lost through printed misinformation, is, upon large potato crop, a fearful discount upon the eminently pious industry of "old hayseed." It is a fearful sin to deceive "old hayseed," as any brilliant daily newspaper pencil-pusher can find out by referring to (to him) a very rare and ancient volume of sacred writing wherein is related the story of the wicked children who were devoured and obliterated to this day for trying to poke irreverent fun at the alkali flat on top of "old hayseed's" head when he was going uphill. And as, with the average agriculturist, it is usually "uphill," we would—at least I would—like to have the RURAL try to tell us which paper, on Sunday last—the *Examiner* or the *Call*—quoted the market correctly from a producing point of view.

Of course we of the hayseed household are aware that a ready writer and rigid ratiocinator, whom our small earnings have probably helped to graduate from some high school or university, can throw off into our wrinkled and toil-worn hands any amount of sophistry and back numbers of statements to show how difficult it is to get market reports daily exactly correct. That is not what we need, and certainly not what we want. What we do need is to know which paper was correct in last Sunday's issue—the *Call* or *Examiner*. Can the RURAL do anything to ease our woe? J. W. GALLY.

Pajaro Valley, Oct. 13.

[The *Morning Call* was right in placing the value of Peerless potatoes at the higher figure. The potato market has been advancing steadily in view of shipments, etc., and Peerless are quotable to-day (Oct. 15) at $1.10 per ctl. The advance shown by the *Call's* quotations was foreshadowed by the RURAL'S report which was prepared on the Wednesday previous.—EDS. PRESS.]

Water Works and Gin-Mills.

EDITORS PRESS:—The Bear Valley and Alessandro Development Co. have a large force of men at work on the ditch on this side of the hill to deliver water on their lands now being sold. Parties are working on both ends of the tunnel through the hills. They have made a good wagon-road over the hills to connect Redlands and their property. They are having 700 acres plowed, to be set out to trees this winter. Their surveyors are busy running lines and platting the land ready for distribution, which takes place on the 15th inst. They have sold over 7000 acres now, mostly in small tracts. This will work a great change in our country. When the poor grain-fields are converted into vineyards and orange groves, the people will begin to prosper.

I have just returned from a trip to Los Angeles by team and was surprised to see the amount of land along the foothills from Whittier to the Santa Ana canyon lying idle, except where it is used for sheep pasture, awaiting the application of water to convert it into beautiful homes; and I was equally surprised on the other road to see the number of saloons there are where the country is settled. The question comes up in one's mind: Do all the country people patronize them that they can afford to run so many? Can farmers, who work so hard for their money, afford to support saloons? If all the farmers in the country would decide to let the saloons alone and give the money thus saved to their wives, there would be fewer saloons and more happy homes.

L. S LYMAN

Alessandro, San Bernardino Co., Oct. 6.

GEN. W. W. BELKNAP was found dead in a room adjoining his office, in Washington, the morning of the 13th. An autopsy showed that the immediate cause of death was inflammation of the inner lining of the heart. Gen. Belknap was Secretary of War during President Grant's first term. He was 61 years old.

THE deciduous fruit shipments over Southern Pacific lines for the season up to October 7th amounted to 2450 cars. Estimating 20 tons to a car, this would make in round figures 49,000 tons, or about 100,000,000 pounds of fruit.

THE Starr-King Monument Committee has the $11,000 necessary for the monument, but $3000 is required for a suitable pedestal.

THE APIARY.

Handling Bees.

EDITORS PRESS:—In all your operations in the apiary, work with the bees carefully, and do not leave any honey scattered about on the hive covers, or on the ground. If honey is not coming in rapidly, you may start some to robbing by this carelessness.

Be very careful in handling frames and hive covers, and always strive to kill as few bees as possible, as smashing bees rouses their ire, and in time an apiary will become almost unmanageable.

In apiaries where bees have become wild from mismanagement and careless handling, a careful man will in a week's time tone them down so that he can handle them without a veil, and with very little smoke; whereas, before it required a good veil and clouds of smoke, to say nothing at all of the small army of bees that followed you around.

Of course, I do not mean to state that a good apiarist can handle bees without a veil at all times and on all occasions, because he cannot.

There are times just after a honey flow when bees do not have much to do, or when there is not much for them to work on, that it is dangerous to open a colony without a veil and plenty of smoke.

An experienced apiarist can generally tell by opening a hive or two whether it will be safe to work with bees at such a time.

Just after a rainstorm is a bad time to handle bees, as they are all at home and naturally not having anything to do, they are mean-tempered and sullen.

When there is plenty of honey coming in, a person with a little experience in bee culture can handle bees without a veil and with very little smoke.

When you go to manipulate or work with a colony of bees, first blow a puff of smoke in at the entrance and then gently pry off the top, after which blow a puff or two of smoke on the frames, and if they are the average bee, you are ready to remove the frames.

Occasionally, when working in the apiary, you will come across certain colonies that are naturally vindictive; it is best to remove the queen as soon as possible and insert another in her place, as it is time and money both saved to you.

Italian and Carniolan bees are the easiest to handle on all occasions. Hybrids are the hardest bee to handle, but strange to state, two-thirds of the bees in California are hybrids.

In Southern California where there are so many bees kept, there is not much show for a progressive apiarist to keep his bees pure. Most of the ranchers keep a few colonies and they do not care what kind of bees they are as long as they gather honey, and, of course, our progressive apiarist raising queens from choice stock does not stand much chance of having his queens purely mated.

I used to carry on quite an extensive correspondence with a Monterey county apiarist, who, for several seasons, managed a large apiary of 300 or 400 colonies. He had tried all kinds of bees and had had a great deal of experience, and had finally arrived at the conclusion that the black bee for his location was a pretty good bee after all, as they were easy to handle and gathered almost as much honey as the Italians. The black bees in the southern counties hold their own to a great extent against the moth, while in the foothills of the northern counties it is nip and tuck between them. The reason I believe is that in the southern counties there is a longer honey season, and consequently the bees breed up and keep in heavier colonies; while in the northern foothill counties it is the reverse; for about two months in the summer they have comparatively nothing to work on. In the higher altitudes of the Sierras, that is, from an elevation of 4000 feet and upward, black bees are rarely if ever troubled by moths, as they have an abundance of pasture to work on during the dry seasons.

In my own experience with black bees, I find that they do pretty well at these higher elevations, but the Italian and Carniolan do considerably better; in fact, enough more so to warrant me in keeping those races entirely. I was never troubled much with cross bees. I used to have an apiary of 20 colonies not over 30 feet from the house, and we rarely got stung when passing them. Bees soon get accustomed to persons, anyway, when placed near a house.

If when working in the apiary a bee or two seems determined to sting, it is a good idea to kill them. A small paddle made from a piece of shake or shingle answers the purpose well. If you do not kill them every time you come in the apiary they will attack you, and I generally carry a paddle with me to kill all these scolders. A good smoker is indispensable when working with bees. For fuel I use rotten oak wood with a few drops of coal oil poured on it; after once started it will last for hours. Never give your bees too much smoke; a puff or two at the entrance and one at the top is all that is required in most cases. Some bee-keepers, though, smoke the bees from the time they commence until they finish—a foolish and unnecessary way of doing.

Grizzly Flats, Cal. S. L. WATKINS.

Uncaught.

O Poesy, thou fair elusive spirit, still lingering
Deep in the woodland shade,
Or by the lonely shore thy lute-strings fingering,
Shy as a rustic maid.

I've caught the shimmer of thy garments trailing
Far up the mountain side,
Or seen thy fairy boat adown the river sailing,
Or drifting with the tide.

But when I sought acquaintance, doubting, fearing
To find thee less than kind,
Thou hast a naughty trick of disappearing,
And leaving naught behind

But poor dead butterflies bereft of grace or glory,
Or floating down of brier,
Foam-flecked water, idle song or story,
That's lost its heart of fire.

Sweet, gentle Melody, thy fair, calm mother,
Will lead me far apart
From noisy haunts of men, and all the pother,
Out near to Nature's heart.

I know thy sister Music, and Rhyme, thy daughter,
Comes often to my dwelling,
With some bright story that her mother taught her,
Spoiled in the telling.

Thy straight-laced brother, Prose, and grim Aunt Reason,
Oft come and sit with me,
And chide thy wayward freaks and call it treason
And impropriety.

Thou art a spirit, fleeing onward ever,
Luring from strife and pelf,
Still upward to the hights of best endeavor,
But all uncaught thyself.

Helps to High Living.

Sun.—Prescribe to yourself an ideal, and then act up to it.

Mon.—Better die than live ill.

Tues.—Be self-denying but do not boast of it.

Wed.—What ought not to be done, do not even think of doing.

Thurs.—Ruin and recovery are both from within.

Fri.—No one is a slave whose will is free.

Sat.—Keep a watch upon yourself as your own most dangerous enemy. —*Epicletus.*

Cooks in the Future.

[Written for the RURAL PRESS by MARGARET P. HARVEY.]

Is it possible, nowadays, to take up a paper or magazine without finding in it something like the following?

Girls should be taught to cook. Upon a thorough knowledge of cookery depends the happiness of the home, etc.

What does it all mean? Is there any real necessity for so many exhortations in this line? In other words, are the girls of to-day less proficient in cookery than their mothers were?

I, for one, believe that the girls of to-day, generally speaking, are *not* proficient cooks, and I unhesitatingly add, rightly so. There is too much expected of the girls of to-day, already, without saddling upon them the burdens which their mothers were not able to bear. Women were intended to be something else besides cooks.

Those exhortations in the "domestic economy" style tell far more than their authors thought or intended. They tell that the girls of this age are not taking kindly to cookery, but they also tell that the writers of such es says are unable to discern in this fact true signs of progress. By preaching cookery to a generation which is rapidly growing beyond it, they are unconsciously trying to turn back the wheels of time.

Of course I understand that we are in a transition age. I know that we cannot all at once reach the period in which cooking will be done out of the house by professionals, just as weaving and dyeing are to-day. We scarcely stop to think that our grandmothers spun and colored their own yarn. How many of us know that "wife" originally meant *a weaver*, and "spinster," or maiden, *a spinner?* But we have mothers and daughters who never spun or wove; in another century there will be just as many mothers and daughters who never cooked.

Do I believe in cooking-schools, lectures on household chemistry, etc.? Not altogether. Perhaps I might if I did not honestly think that we are hearing too much about them. But like other crazes, such subjects will have their day and run out; and when they have run out we shall find that we have advanced without knowing it; we have risen a little higher in a certain line than we probably should had the craze not carried us upward. We laughed at the esthetic craze a few years ago, but now, as one of its results, we are able to see that there is elegance in simplicity and beauty in a straight line.

I grant you that a great deal of the happiness of a home depends upon a well-ordered table and all the rest of it. But the average writer on domestic economy stops a little too short. He—it is often a man—loses sight of the fact that home-making is higher than mere housekeeping; that food is but a means to an end; that housekeepers can be hired, but true wives, mothers, counselors and friends, never. If a cook is all-sufficient for him, why wouldn't he marry Bridget or Dinah?

Do you not see what I am driving at? It is simply this: The person who is arguing so forcibly in favor of girls learning to cook is really upholding the servility of women. He is actually resenting the idea that in these days women are learning better.

Yes, my dear, I was once romantic enough to agree with Lady Mary Wortley Montague when she said that preparing a dinner for her husband was not menial employment—"it is providing refreshment for him whom I love." But the question has occurred to me, Would he have done as much for *her?* Would he not have thought it unmanly?

In simple justice, then, let us have perfect reciprocity before we begin to talk of what is or is not manly or unmanly, menial or dignified—that is, if we can.

For my own part, even in the present imperfect state of society, I think it is *unwomanly* for women to do cooking, washing, or any other kind of heavy housework. A woman's true mission is intellectual and spiritual. Besides which, men have already invaded woman's traditional "sphere." Men, whether French or African, make better cooks than women; and men—American as well as Chinese—are performing the greater part of our laundry-work all over the United States. Now when women are even partly emancipated from the cruelty of old custom, why seek to reverse the present verdict of centuries?

I know all you can say about "emergencies," "reduced circumstances," "difficulties with servants," etc. Well, all this might happen to a man as readily as to a woman. Why should not *he* be prepared with a knowledge of cookery against the evil day? If you will say that *boys* ought to be taught "domestic science," I will agree that girls ought. Boys have quite as much time to learn as have girls, for girls go to school quite as long and earn their own living just as soon; or if they don't earn their living, they can afford to hire their cookery done for them; and boys have quite as much probable need for the accomplishment as have girls.

If boys and girls both learned cookery, as a sort of laying-up for a rainy day, it would be all right; for then the idea of the servility of women would be taken away. Henry Ward Beecher early argued in favor of this, and carried out his belief in his own practice.

Straws show which way the wind blows, and magazine articles and stories indicate what people are thinking about. A short time ago I read an open letter from a woman who said that she was teaching her little daughter to be useful. The little daughter was five years old. The mother stated, with pride, that this little daughter could sew on buttons for her brother, "a year and a half older." Now I should have liked to box that mother's ears. She was already instilling into the minds of those two innocent little ones the pernicious doctrine of the servility of woman. If that brother was a year and a half older than his sister, he was big enough to sew on his own buttons, and, if need be, his sister's too.

With real pleasure I turned to a story which I believed would prove a wholesome antidote. It did. The story was about an old auntie who came to her nephew's house to do what she could in a sick mother's place. There were in the house two boys and two girls. The aunt resolved to take them all in hand and teach them "household science." The whole four entered into the plan as though it were great fun, and the wise aunt made it fun by offering prizes for the best cake and biscuits. When the mother recovered, she found her young savages transformed into the most efficient aids. Now something like this, in the present era, is something like what ought to be.

Do you mean to tell me that those boys would never need the knowledge as the girls would? What if the boys went "camping out," as thousands do, to say nothing of the possibility of their being wrecked on desert islands, as hundreds have been? and what if the girls never married or never went to housekeeping, as, in these days, must be taken into consideration in the case of every girl? The boys may have needed the knowledge more than the girls.

The long and the short of it is, the idea of every girl's being tied to the cook-stove is simply an old superstition which is dying hard. If it wasn't, we shouldn't hear half so much about it. Do you remember how Mary Somerville tells us that her friends would scarcely believe in her right to be an astronomer until she had proved to them that she could make good jelly? That was only another way of saying that the world expected a woman to pay a penalty for being a woman; to escape serfdom, she must purchase freedom with some sort of a ransom. Now is it not high time that we had advanced far beyond this? You would be a little ashamed to say, in so many words, that men were intended to rise because women were made to wait on them. Then why act out such a belief?

But as a matter of fact, it is generally in the lower grades of society where persons insist so strenuously on the idea that men must be waited on by women. Not always, but usually. If ever you see a man sitting at a table while his wife stands by the stove and turns cakes for him, you may safely draw your own conclusions as to the inferior social position of the parties. A *gentleman*, even in reduced circumstances, would stand by the stove, too, until there were cakes enough for both, and then they would sit at the table together. I saw a gifted editor and an influential minister, in places a thousand miles apart, do the very same thing, showing that the instincts of true gentlemen are the same everywhere; and it is usually a gentleman, by birth, education and means, who takes pride in his accomplishments as a cook. He does not think it unmanly in him to cook, though he probably would think it unwomanly in his wife, if he could imagine himself allowing her to do such a thing.

Did you ever hear of famous club suppers, cooked by the members themselves? These members are generally men of wealth and standing.

There is in Philadelphia a noted organization known as the "State in Schuylkill." It has existed ever since Washington was President. It is an aristocratic club, membership in which is strictly hereditary. The club owns a tract of land on the Schuylkill river—a tract which some say was granted by the First Congress, and it is as much a territory, separate from the State of Pennsylvania, as the District of Columbia is from Maryland. On this "State in Schuylkill" is an antique mansion-house, in which the club meets once a year for its annual banquet. Guests are rarely invited. It is said that a feature of this banquet is that the members of the club put on white caps and aprons, and cook the entire repast themselves. The club owns some recipes, handed down from father to son, which the outside world has never been able to get hold of. Now you see that in the most aristocratic city in the Union, aristocratic descent may confer upon a gentleman—what? Why, the privilege of cooking! A common man would probably think himself degraded.

In short, I believe that cooking is a suitable employment for men, but not for women. Men are better cooks than women—they know more about it, and are, as we say, better "diners." The time is rapidly coming when men will do all our cooking. In the meantime, if girls want to cook, let them do it as amateurs, just as some already dabble in painting and photography; but understand, womanly character does not depend upon cookery, nor does the sanctity of the home, nor love, friendship nor hospitality, any more than they do on coal-stoves or gas ones. Keep things in their right places, or, if you choose, separate the permanent from the temporary and the eternal from the temporal.

Moving a Lame Horse.

A big bay horse, one of the car horses on the Montgomery-street road, lamed his ankle on the cobbles yesterday, and the police compelled the driver to take the injured animal out of harness.

An attempt was made to lead the lame horse to the railway company's stables, but he was too badly hurt. The unfortunate beast stood in the street for some time. Then the horse ambulance of the Society for the Prevention of Cruelty to Animals was sent for, and a crowd gathered around to watch the operation and assist.

It was pretty evident that none of the crowd had seen injured animals removed before. Almost before the wagon had stopped the movable platform was run off by the volunteers. One little fat man with a red face assumed command of the volunteers.

"Lift her clear!" he shouted. "Shift to the right. Here, take this rope. Draw that taut there. Whatcher doin'?"

In about two minutes 20 men were standing around the ambulance, all holding ropes or straining at the platform and awaiting further orders.

The orders came.

Secretary Hunter of the society alighted.

"Put back that platform," he said quietly.

"You—I—that is—"

"Put it back."

Back went the platform into the wagon, the volunteers working sullenly enough.

"Drop those ropes."

The twenty let go of the ropes, but looked savage.

Then Mr. Hunter simply took hold of the horse's halter, led him up into the low ambulance, the driver deftly put a sling under him to prevent the animal from falling, and then drove off.

That was all.—*S. F. Examiner.*

KNOWLEDGE OF ANCIENT ROME.—The *English News* states that the commission in charge of the improvement of the City of Rome has unearthed great quantities of lead water-pipe, each plainly stamped with the name of the owner of the house, the year of the plumbing, the name of the consuls for that year, and that of the reigning emperor. In opening the 82 miles of new streets in that city, material has been found sufficient to add to our present knowledge a thousand details concerning the baths, heating flues, water pipes and house sewer pipes, the organization of the police and fire brigades, etc.

THE LONDON POOR are justly indignant because the wholesale fish-dealers of that city frequently destroy hundreds of tons of fresh fish in order to keep the prices up.

Joaquin Miller at Home.

[Written for the RURAL PRESS by VIOLET M. BROWN.]

Seeing Joaquin Miller's article in this month's *Harper's* reminded me of an interesting visit I paid, in company with my mother and a friend, to him this summer at his home on "The Heights," a few miles back of Oakland, walking out from the terminus of the Fruitvale cars for that purpose.

After a tramp of several miles through some of the most beautiful scenery California can boast of, we came in sight of the place. Our hearts began to fail as we thought of meeting the "Poet of the Sierras," whom we had been led to think was a tall, robust, austere, overpowering individual who would look upon our visit as an intrusion. However, plucking up courage, we ventured to enter the gate, expecting every moment to be pounced upon by the wolf Mr. Miller is said to keep.

Crossing a bridge which spans a small ravine, we found ourselves standing before a one-story building of the gothic style of architecture. To the right was a cottage, and farther up the hill another, which we concluded must be the domicile of his mother.

A young Spanish woman came to meet us with a pleasant smile, causing our spirits to go up a degree. She announced our arrival to Mrs. Miller, who came out and greeted us with much cordiality. She is all that a genius' wife should be—small with a beautifully molded form, demi-blonde in complexion and dressed in a navy-blue suit, which was very becoming.

She invited us into the poet's sanctum sanctorum, where we saw reflected the genius and character of the occupant in every article of furniture. On the floor was a large rug composed of six otter-skins. The bed was covered with the woolly horse-hide, so famous.

The sun was shining brightly through the stained-glass window-panes, falling on an antique oak table where an open copy of "Looking Backward" lay. Freshly written manuscript lay on another table, showing that our poet has not given up literary work, as has been reported. Over this second table hung a huge sombrero of Panama straw. The walls were covered with photographs and views of all portions of the globe. While we were taking in these details the great Joaquin himself entered.

We were agreeably disappointed in finding him a whole-souled, genial, hospitable gentleman who made us feel perfectly at home. His personal appearance is indeed striking—about five feet ten, or more, slightly built, dressed in a gray summer suit, with his immense yellow mustache curled so that the ends almost reached the brim of a black sombrero, which, when removed, showed a massive brow.

After a hearty welcome he sat down beside me and looked inquiringly at my pencil and note-book. I told him I was only taking a few points for a local paper. This did not offend him, as I had half expected, but instead he kindly offered to lend me all the assistance in his power. Conducting us through his unique house, he took us into what we supposed was his winter quarters, for a stove was in the center of the floor. However, there was no need of a fire on that July day, for the sun was beating down, making the air very oppressive.

Mr. Miller went outside and turned on a contrivance he had constructed for the purpose of throwing a stream of water on the building, very effectually cooling the atmosphere inside, giving the same effect as though a heavy shower had suddenly come up. We could hear the patter of the drops on the roof and see the water dripping from the eaves on the windows.

While speaking on the subject of nationalism, he picked up a copy of the New York *Independent* and read us an original poem entitled "Nationalist." On our friend expressing the wish for a copy, he courteously handed her the one he had read, telling her to keep it.

On the walls of this room were clippings, invitations, autographic letters from famous men, pictures and many beautiful sentiments in the poet's own writing on the woodwork.

I regret that I did not make a copy of these, but our reception was so different from what I had expected that I almost lost my wits and thus failed to secure much information which I am sure Mr. Miller would have readily given me. However, I recollect one which impressed me very much as our host read it to me, "God forgives all sin but that of willful ignorance." He left us to return in a few moments with a pitcher of claret and water, followed by his daughter Juanita, who is a sweet little lass of about ten years, the image of her father. He seems to idolize her, for he called her his "little princess," his "duchess," and many other nice names.

I asked about the wolf. He laughed and said it was true in a certain sense, for, as he did not keep fowls, he would not allow any one to kill a wild animal on the place, and the canyon contained many wolves, which he fed daily.

In answer to my inquiry, he pointed to his scarred face and asked if a man with such scars was likely to fear common wild wolves. While standing at the door I expressed my admiration for the view, which is indeed grand.

"That's the way!" he exclaimed; "every one comes up here professing their desire to see

me and then turn their backs on me and begin talking about the view!"

I earnestly protested that our sole desire had been to meet him and had only been prevented from coming sooner by the fear that he would think it impertinence. After that he became, if possible, more cordial, even going so far as to present me with a copy of the New York *Independent* containing his Fourth of July article, with the leaf turned down so I could find it easily, and then to crown it all he wrote on the margin "With love to you and yours. Joaquin Miller, The Heights, Oakland, Cal., '90."

I must confess to a great deal of celebrity worship in my composition, for when I got home I dotted the lead-pencil lines with ink so as to preserve it for many years.

He has mounds of rocks all over the place which resemble castle turrets, and from nearly all of them a flag was flying at half-mast out of respect to Fremont's memory, whose death Mr. Miller seemed to feel very deeply.

When leaving, he told us he was a Nationalist—a working one, though—and in proof thereof he exhibited his hands with great welts on them from using the shovel, apparently.

My mother asked him why he left Washington City.

"Because I was bothered to death with Congressmen and Presidents," he answered. He gave us a cordial invitation to repeat our visit, which we intend doing when the opportunity offers.

We returned to Oakland feeling well paid for our tramp.

IT is an odd man who does not enjoy getting even.—*Terre Haute Express.*

FRENCH EDITOR: Did you make a minute of yesterday's duel? Assistant: No, Monsieur; it was impossible. French editor: Why? Assistant: Because it had only two seconds.—*Light.*

"WHAT a horrible punishment!" exclaimed Cumso, as he laid down the newspaper. "What is it, love?" asked his wife. "An American gentleman in St. Petersburg has made a Russian eat his words."—*Atlanta Constitution.*

THE difference between a starving man and a glutton is that one longs to eat and the other eats too long.—*Binghamton Leader.*

"MR. HOPPER, I find my last lot of sugar full of flies." "Well, madam, at this time of the year, you know, we—" "That doesn't account for it, Mr. Hopper. These are sand flies."—*New York Sun.*

AMERICAN MILLIONAIRE (in Paris, proudly): My daughter is being waited upon by a duke. Old Traveler: Well, dukes make excellent waiters. There are several of them in our restaurant, too.—*Good News.*

THERE are two reasons why some people don't mind their own business. One is that they haven't any mind, the other that they haven't any business.—*Harvard Lampoon.*

"WHY do they publish so many dialect stories in the magazines?" "Because it saves the proof-reader the trouble of correcting the spelling."—*Puck.*

THE man that can't sing and won't sing deserves the sincere thanks of a musical community.—*Somerville Journal.*

WILDFLOWER (timidly): I hope you will excuse my behavior of last evening, Miss Jones, but I was so full of—of— Miss Jones (frigidly): I have not the slightest curiosity to know what you were full of, Mr. Wildflower. Mr. Wildflower: But you misunderstand me. It was not alcohol I was full of, but spirits. Miss Jones (contemptuously): Spirits! pooh! another name for the same thing, sir.—*Harper's Weekly.*

SOUND WAVES.—It is estimated, from a careful microscopic examination of the impressions which the little word "hello" makes on a phonographic cylinder, that it produces not less than 16,000 indentations.

YOUNG FOLKS' COLUMN.

An Evening's Amusement.

[Written for the RURAL PRESS by MAUDE S. PEASLEE.]

The education of children cannot be left entirely to the school-room; it must be in the home that the strongest impressions are made. One of the greatest aids to a healthful, profitable childhood and youth is an attractive home. The sweet and beneficial influences of home cannot be gained unless under such surroundings.

Time is never lost, then, in making the home circle cheerful and bright. Children accustomed to such enjoyment have no temptation to seek pleasures without the charmed circle. Their young friends visit them occasionally; they return the courtesy, but they realize joyfully that there is really after all "no place like home."

Sometimes the old well-known pleasures and games grow tiresome and a new divertisement is desirable. One thing that the children with whom I spent my early girlhood never grew weary of was a kaleidoscope made of the polished top of a piano.

They were happy children and had many things to make home pleasant, from their simple games of authors, old maid and checkers to an occasional candy frolic or evening of tableaux.

The kaleidoscope, however, was an especial treat, and half-past nine found them all too reluctant to go to bed. Any kind of piano can be used, square or upright, or even an organ, if highly polished, provided the top can be made to fold back twice. Then the edge of the lid must be supported by books or anything that will hold it in the position or shape of a triangle. This forms an immense (in the case of a grand piano) optical instrument, making a long kaleidoscope.

A lighted lamp must now be placed on a stand at one end. By its side, just out of view, stands the "operator," whose duty it is to twirl and twist about any bright article you may wish to see reflected in the polished surface of the kaleidoscope.

The spectators stand at the opposite end and the beautiful and symmetrical forms are a constant source of delight and ejaculation.

Ribbons and bright-colored flowers may be twisted and twirled together till the glowing mass of beautiful forms becomes quite dazzling.

As it is next to impossible to produce the same figure or form twice exactly the same, it is hard to tire the spectators, and easy to forget the operator's tired arms. Unfortunately only one or two heads can be comfortably accommodated at the same time, and occasionally will be heard the cry, "Let me see now," and a good natured tussle will ensue to secure the coveted place.

An amusing variation is to require the spectators to guess what the operator is exhibiting. If ever so familiar, they often almost lose identity in this position.

This would prove a most acceptable addition to the amusements provided for an evening party where it is often difficult to keep a roomful of half-bashful children happily at ease.

Some little care must be used to get the lamp in just the right focus, and it can only be done by trial. Have it perfectly adjusted before the performance begins, so that all may go smoothly, and in that way the wonder will seem increased.

To Young Girls.

[Written for the RURAL PRESS by THEIR FRIEND.]

Young girls, be reserved!

In these few lines I do not intend to give you "the same old lecture," but only a little reminder of what so many girls forget or probably others never know. That reserve which is the star of woman's life cannot be impressed too early on a girl's mind. By being reserved I do not wish to imply that one must be a mere "figure" in company, neither "over-nice"—simply reserved. We see every day schoolgirls hardly in their teens walking the streets with boys, giggling and talking in a very unlady-like manner, and they are even seen out riding with the boys unaccompanied by mother or chaperon at that early age. They say "Oh, there's no harm in that," and "I'm not the only one," etc. There may be no immediate harm in riding with one's friends, but it does not "look right." There is no harm in trimming a plush dress with velvet, still you will allow that the effect produced is not a pleasing one—not "good taste," so to speak.

A young girl who has, by her actions, once allowed people to call her a "giddy" or "wild girl," can seldom regain perfect dignity. She may grow up to be the "glass of fashion" and reigning belle, but there will always be a gossip-loving somebody who knew her when she was young, and "she was such a giddy-headed thing." A boy may be a "little terror," the worry of mother and sister. He will grow up to be a business and probably a "society" man," and all that will be said of him is that he was very wild when a boy, "but then all boys are."

Another thing over which young girls do not scruple is receiving the attentions of promiscuous acquaintances and even their gifts. We sometimes wonder how a girl whose parents are in straitened circumstances can afford to give her so much jewelry and "knick-knacks." My lady will admit it, and indeed in some cases she will boast, that "This pin is from Johnny," "Harry gave me this ring" and "Bertie had that bangle made for me." Do you know that a man who respects a girl (unless he is very ignorant) will never offer her any gifts of value? Flowers, the latest waltz, or even bon-bons, I admit, may be presented and accepted without compromise or suspicion to that effect.

How many of our girls keep company with this and that young man, receive their attentions, escort to the theater and other amusements, and when if "Cupid" has aimed without thought of consequences, the supposed favorite speaks to her of matrimony, she is "thoroughly shocked" and "never dreamed of such a thing;" "how foolish he is!" Yes, how very foolish he is to waste his time and affections on so heartless an object. I know personally a woman who when a girl kept company with a man whom she "liked" because he was "good company," and an over-indulgent mother supplied him with a great deal of pocket-money, which he applied for her every wish, making her the envy of less beautiful girls. If she did not openly encourage his affections which were becoming more ardent as their meetings grew more frequent, at any rate she gave him no reason to think that he was an intruder. In the meantime when every one expected their engagement, she met a young Italian whose romantic eyes took her fancy and soon became engaged to him. She did not announce her betrothal to any one and even her former lover was not informed of it, although she accepted his escort as before. At length he proposed to her, firmly believing that his love was reciprocated. Then she was obliged to admit that she was already affianced. This was a terrible blow to him. He left that evening, never to see her again. She married the Italian. At first, any young girl who would have seen the loving couple together would have thought that all such things as "reserve" were useless. She seemed to enjoy all that her heart could desire, a loving husband, wealth, social honors; all this was simply the sweet coating of the bitter pill she was about to swallow. She soon found that her husband was a drinking man. It was the novelty of a pretty face that had kept him sober, but now he became the same degraded being as of old. Loss of wealth through games and drink followed, and the usual consequence, loss of social position. A young family was growing up around her in poverty. Her romantic husband became a demon, and she and her little ones were left to the charitable public. When relating this to me (I hired her to do my housecleaning every week), she would say, "O my God! no one knows the misery I endure, but alas! it serves me right; when I close my eyes to sleep I see the pitiful look of Ernest when I told him I was betrothed to another; that look has haunted me through life."

What became of her jilted lover? He died the death of an inebriate after two short years of awful dissipation, which soon caused his mother to follow him in sorrow to the grave. So, dear girls, you see the consequences of encouraging false hopes. Girls, *try* and be "reserved!"

San Jose.

GOOD HEALTH

PREVENTIVE MEDICINE.—It is to be feared that the time is far off when mankind will be wise enough to pay their money for being *kept* in health. The following remarks by Dr. W. W. Johnson, in the *Medical Advance*, are to the point: "We doctors get the most praise when we make the biggest fools of ourselves. When we prescribe accurately and a disease is cured in its incipient stages, nothing is thought of it. It is passed over as of no great importance, and the chances are that the patient is deemed foolish for calling a physician to such a simple case. But if the prescription be a poor one, as many of them are, and the disease takes its natural course, assuming from day to day its progressive and various symptoms, how changed then the conditions! Nurses and attendants move with bated breath, the friends hang on the words and even the looks of the physician. At last the disease having run its course, nature winning solely through a strong vitality, the patient is pronounced convalescent. Then sound the praises of the doctor. What a mighty man he is! Before his august presence grim Death slinks away and yields up another victim to his mighty power. Herald his fame abroad, that suffering thousands may avail themselves of his sapient skill. Does the doctor know he didn't cure the patient? Yea, verily, let us hope he does. Does he tell the friends of it and bid them hold their peace? Oh no, he's no fool, though sometimes foolish.

DEADLY CATERPILLARS.—The Philadelphia *Press* gives an account of a man, 32 years of age, who recently died of blood poison caused by the bite of a common green caterpillar. He was bitten upon the neck as he lay on the grass. The same paper tells of a young lady, 21 years of age, living in Philadelphia, who was at the time in a dangerous condition from the bite of a green caterpillar, which she received while sitting under a grapevine. Severe illness, and even death, is sometimes caused from the bite of a fly. In all such cases, death, or severe illness, is caused by blood poison superinduced by the bite; and it is supposed that insects, usually harmless, whose bites are thus dangerous, have recently come from feasting upon some decayed and poisonous meat or other substance whence the poison virus is taken.

THE USE OF VINEGAR.—Far too much vinegar, says a good medical authority, is used to be compatible with good health. The general belief is that it is a wholesome and necessary adjunct to our diet; but really it might be almost entirely dispensed with except for pickling purposes. If used, it should be used sparingly. A slice of lemon is far preferable as a substitute, and limes may be used if convenient. If vinegar must be used, that made from wine is much more wholesome than that made from cider. In this connection the following upon the effects of acids and alkalies on the stomach from *Good Health* may be read with profit: An eminent Polish physician, Jaworski, has been experimenting to determine the effects of acids and alkalies upon the stomach. He finds that acids precipitate mucus, cause bile to flow into the stomach, increase the amount of pepsin in the gastric juice, but not its acidity, diminish the flow of gastric juice, and in excess, produce disturbances of digestion. Alkalies, on the other hand, dissolve mucus and decompose pepsin. These facts explain the evil results arising from a continued use of vinegar, baking powder, saleratus, soda and similar substances commonly used in cookery.

BLOOD TRANSFUSION.—The operation of the direct transfusion of blood, says the New York *Sun*, is becoming quite common in the great hospitals of that city. It is performed as often as once a month, but not always, however, with success. Of late a similar operation—injecting an artificial fibrinated fluid into the veins of collapsed patients—has become still more common. Remarkably successful results have many times been obtained.

A REMEDY FOR CHOLERA, it is claimed, has been discovered by a Frenchman from Cette. People either attacked by or in fear of the disease must sit for some hours in a garment soaked in paraffine, which irritates the skin, producing a healthy reaction, and kills the cholera microbe. Very doubtful.

DOMESTIC ECONOMY

SPONGE CAKE FOR TWO.—Beat the whites of four eggs to a stiff froth, add one teacupful of sugar, then the yolks; lastly, one teacupful of flour. To be perfect, this cake must always be put together in the order given in the recipe.

CHOCOLATE CAKE.—Two eggs, one cup of sugar, one-third cup of butter, one-half cup of chocolate, one teaspoonful of vanilla, one tablespoonful of milk, 1½ cups of flour, one teaspoonful of cream of tartar, one-half teaspoonful of soda.

JOHNNY CAKE.—Nine tablespoonfuls of molasses or soft sugar, two cups of buttermilk, one teaspoonful of soda, and one-half teaspoonful of salt, and cornmeal enough to make it so it will run out of the spoon; but not too thin, and not thick enough to drop from the spoon.

SLICED GRAPES.—Ten pounds of grapes, eight pounds of sugar, four tablespoonfuls of cloves, four tablespoonfuls of cinnamon, one quart of vinegar. Boil slowly until the fruit is tender. Remove from the fire and rub through a colander; put in tumblers and cover closely. Cherries, gooseberries and currants are nice spiced; the two last need not be strained.

TUMBLER CAKE.—Three tumblers of sugar, one tumbler of water; beat these to a froth with the hand, then add one tumbler of sweet milk and five tumblers of flour, two teaspoonfuls of cream tartar, one teaspoonful of soda sifted with flour, then four beaten eggs and flavor to taste, last of all a tumbler of citron cut fine or chopped.

APPLE PRESERVES.—Peel, core, and if the apples are large, halve them; if not, preserve whole. Add to one pound of fruit a pound of sugar, then place the fruit in a vessel; cover with just enough water to make sufficient syrup. Let it remain all night, then put on to boil; when nearly done, take out the fruit and sun while syrup boils. Return to kettle and cook until done. Flavor with extract of lemon. If boiled too fast the fruit will drop to pieces.

AN OLD-FASHIONED NUT CAKE.—Two cups of sugar, stirred to a cream with three-quarters of a cup of butter, a cup of rich milk, a teaspoon of soda, four eggs, four scant cups of flour and a teaspoon of cream of tartar. A cup of hickory nuts chopped very fine, is stirred through the cake just before it is put in the oven. It should be baked in large brick-shaped loaves, iced with a thick icing, through which half a cup of hickory nuts have been stirred.

SPANISH CREAM.—One quart of milk, one cup of sugar, one package of gelatine, half a teaspoonful of salt, one teaspoonful of vanilla, yolks of four eggs. Soak the gelatine ten minutes in half a cup of cold water. Boil the milk and add the gelatine and other ingredients. At the last, stir in the yolks, which must be beaten to a cream, and pour into molds to harden. Use the whites for cakes or meringues. They are sometimes beaten stiff and stirred in at the last; but the cream is better when made with only the yolks.

The Week.

We have frequently alluded to the great demand for staple vegetables for Eastern shipment. This movement is already beginning to influence local prices, and the question may be whether the great hungry East will leave enough garden sass in this State to supply our own people until other crops can be gathered. On page 340 of this issue is a paragraph from a Pomona exchange showing how active the shipping demand is likely to be. It looks now as though the advice frequently given in these columns, that those who have land *in safe localities* for early planting of potatoes, etc., should get in as large areas as possible, for fine prices are likely to rule for early products.

The recent law reserving over seven townships for the National Sequoia Park will add interest to the valuable essay, accompanied by a map, on the Sequoia forests of the Sierra Nevada, which we print upon another page. It is a grand thing that these monarchs are to be saved to receive the homage of coming generations.

Special Weather Reports.

For the last ten years the work of the local branch of the U. S. Signal Service has been growing more and more valuable to our agricultural producers. The disposition of the several officers who have had charge of the work during that time has been uniformly in the line of rendering their observations and deductions therefrom of greater practical value to our people. Special bulletins conspicuously placed have conveyed to the public much timely and important information, and have saved a vast amount of loss from unseasonable or unusually severe weather. Special reports to meet the needs of special classes of producers have also been transmitted by wire. The present officer in charge in this city, Lieut. Finley, has succeeded in making arrangements which will bring the service still more directly at the command of our farmers, and these arrangements he describes in the following circular:

Signal Office,
Office of Officer in Charge,
Rooms 327–328 Phelan Building,
San Francisco, Cal., Oct. 8, 1890.

This communication is to inform you that arrangements are being made at this office to facilitate the distribution of daily weather forecasts and rain warnings by employing the long-distance telephone service of this city. The Pacific Bell Telephone Company of this city has very kindly placed at the disposal of this office the proper instrument and connections whereby direct communication can be had with the signal office from all towns in the State having long-distance telephone service from San Francisco. It is desired that these facts be made known to the public so that they can avail themselves of quick communication with this office in case of storms or when it is desired to obtain any other meteorological information. It is the earnest desire of this office to place all information which reaches it in the hands of the public, where it will do the most good at the earliest practical moment and in the most convenient manner. It is expected that the service above referred to will not begin later than October 15th, and perhaps by the 12th inst. Any inquiries or suggestions will be cheerfully received and considered from those who may desire further information regarding this scheme. Jno. P. Finley,
Second Lieutenant Signal Corps, in charge.

It would be very easy for neighborhoods of producers to arrange for the reception of such information as they are likely most to need at their nearest telephone station, and to have the announcements taken from ranch to ranch by a boy on horseback, so that every individual may be warned of danger or advised of probable safety in spite of threatening local manifestations. We trust that producers generally will consider the matter and avail themselves so far as possible of Lieut. Finley's timely offer.

Inspector of Experiment Stations.

The many friends of W. G. Klee will regret to learn that ill health has compelled him to resign his position as Inspector of the University Agricultural Experiment Stations. He is seriously ill, and the hardships of the travel which is necessary to supervise the progress of these widely separated institutions would endanger his recovery. For this reason Mr. Klee lays down his work with deep regret, and will pursue a quieter course which will enable him to regain strength.

The Board of Regents of the University, at a meeting on Tuesday of this week, approved the recommendation of Prof. Hilgard that Mr. C. H. Shinn be selected to fill the unexpired term of Mr. Klee. Mr. Shinn needs no introduction to our readers. He has for years been recognized as well informed upon California's agricultural practice and resources and an able expounder of them. He appears to be well fitted to assist Prof. Hilgard in the conduct of the outlying stations and in making their work significant and valuable. We expect that Mr. Shinn's work in this field will be energetic and effective, and therefore add our commendation of his appointment.

The Finest Broadcloth.—It may not be generally known that the finest piece of broadcloth which ever left a loom was manufactured at the Vassalboro woolen-mills of Maine. It was first exhibited at the World's Fair in London, in 1851. It was exhibited at the Centennial in 1876, and was pronounced by the judges in that line of goods as unsurpassed by anything of the kind there on exhibition. There is no public recognition of any other manufacture of broadcloth superior either in texture or finish. It stands to-day unequaled by any goods of its kind on record. This fact is well established, and should be more widely known as evidence that nothing is impossible in American hands which can be accomplished anywhere else. The only reason why these superior goods are not made on a commercial scale is because the high price of labor here forbids it. In this connection we may also state a fact well known on this coast, but not so well known elsewhere, that the finest woolen blankets ever produced in the world were made at the old, but now defunct, Mission woolen-mills, in this city. Those blankets were exhibited at several European expositions, at our own Centennial, and at various exhibitions in this city, and never met an equal in either texture or finish. There is nothing in the world's general produce in the way of skill which Americans cannot attain if they are only properly paid for it.

Sunshine for Consumption.

Plenty of air and sunshine, light out-door work, or horseback riding, etc., constitute an old prescription for consumption and possibly the best one which can be given. It is a fact of constant observation in California, that almost in every neighborhood people are now living, working and enjoying themselves, who came here from other climates with fractional lungs, and threatened with early dissolution. It has been generally supposed that California air and sunshine induced a toning up and strengthening of the system which enabled it to arrest the course of the disease and perhaps to repair its injuries. This hypothesis is so reasonable and seems to be approved by such wide experience that it will probably do to cling to, but it is of interest to note that Koch, the great German student of the minute vegetable organism which is supposed to be the cause of tubercular consumption, has announced that the splendid effect of sunlight on this organism is to destroy its virulence, suspend its activity, and finally render it inert. It follows from this that consumptives cannot do better than live in the open air and the sun, and that the more they are exposed to the solar rays, the greater their chance of escape. Hence a climate that permits open-air life every day is the one for consumptives. There are also some remedies that check the progress of the bacillus, but researches on these are not yet complete.

Possibly even this does not mean that the sunlight exerts a direct effect upon the organism (*bacillus tuberculosis*), but that it saves the patient by rendering his blood or tissues unwholesome for its growth, and then it suffers and finally becomes inert. It does not matter particularly, either, although it would be satisfactory to the waiting consumptive to know that the sunshine which is burning his back is directly killing the organism which menaces his life as well as giving him new vitality for regaining health and strength. In any case, it is in the sunshine and air that lies the patient's hope of recovery, and nowhere can he find such remedial agents as in the drier, warmer portions of California, shunning fogs and malaria and selecting those regions which are well known as especially favorable to the cure of pulmonary disorders.

Wheat as Ballast.—Many of our grain-growing readers who watch the course of prices in the different centers have no doubt noticed the disparity between prices on the Atlantic and Pacific Coasts during the last few weeks, and that the difference in favor of the Atlantic wheat-sellers was more than the usual equivalent of their greater proximity to the English markets. The fact is that freights from New York to Liverpool have been quoted "nominal," which really means that wheat has been carried eastward across the Atlantic as steamer ballast. There has been an unparalleled movement of passengers and merchandise westward—the latter because of the eagerness to get in goods before the new tariff law went into effect. This heavy movement one way has made it impossible to secure return cargoes, and in haste to return, wheat has been taken as ballast. This condition, though temporary, has caused the disproportionate advance in Eastern wheat prices to which we have alluded.

Justice Samuel F. Miller of the U. S. Supreme Court was stricken with paralysis Oct. 10th, and died last Monday night at Washington, aged 74 years.

The World's Fair.

The World's Fair Commission has solved the question of classification, and therefore given the coming exhibition definite form. The main classes or departments agreed upon are as follows:

A, agriculture, farm machinery and appliances, forestry and forest products; B, viticulture, horticulture and floriculture; C, live-stock, domestic and wild animals; D, fish, fisheries and fish products and apparatus for fishing; E, mines, mining and metallurgy; F, machinery; G, transportation and intercommunication; H, electricity and electrical appliances (electrical exhibits will also be found in other departments of the exposition); I, manufactures; K, fine arts, pictorial, plastic and decorative; L, music, education, literature, engineering, public works, sociology; M, the progress of human labor and invention.

The creation of a separate department for horticulture, viticulture and floriculture is credited to the efforts of the California commissioner, Mr. De Young, and it is believed that this will give our State a much better opportunity to display its excellence in this line as well as afford the horticulturists of other States the same opportunity. As the general scheme has been adopted, the general manager and secretary selected and the architects at work, it may be regarded as settled that the opportunity will be provided, and it will be in order for the States to provide their displays. We presume this will be taken up in California as soon as the excitement of election dies away.

The Coming Orange Crop.—Judging by the S. P. Co.'s returns from agents concerning the orange crop, it is estimated that 3750 carloads will leave the State where last year the total shipment was 2600 cars. The largest consignments will be made as follows: Macpherson, Riverside, Castle Blanca and Alisto 1800 cars, San Gabriel and Alhambra 500 cars, Azusa and Glendura 130 cars, Pomona 148 cars, Redlands 120 cars, Tustin 143 cars, Highland 50 cars, San Diego 27 cars, Santa Ana 36 cars, Pasadena and Lemoore 49 cars, Orange 50 cars, Ontario 34 cars, Colton 14 cars, Los Angeles 316 cars, Downey 107 cars, Anaheim 90 cars and Decarte 112 cars.

High Treason and Hog Meat!—A threatened rupture of the friendly relations that have so long existed between the United States and Germany has just been averted. The Yankee youngster who was heard to say, "I sneeze at the Emperor," has been tried and acquitted of the charge of high treason; that both countries breathe easier it were needless to say. The exclusion of our hog meat from the Kaiser's realm remains, however, a matter of irritation between the two peoples. Since now we admit the Kaiser's anarchists and even his saur kraut duty free, why cannot he reciprocate and admit in like manner *die fleisch auf unser schwein.*

Horticulture in the Census.—As our readers have already been informed, Mr. J. H. Hale of Connecticut is now in this State in discharge of his duties as special agent of the eleventh census for the investigation of the nurseries, seed farms, truck farms, florists' establishments and the production of semi-tropic fruits and nuts of the United States. Mr. Hale expects to stay on the coast about two months, and no doubt will form the acquaintance of many of our readers, to all of whom we commend him and his valuable efforts, and bespeak interest and assistance from all producers.

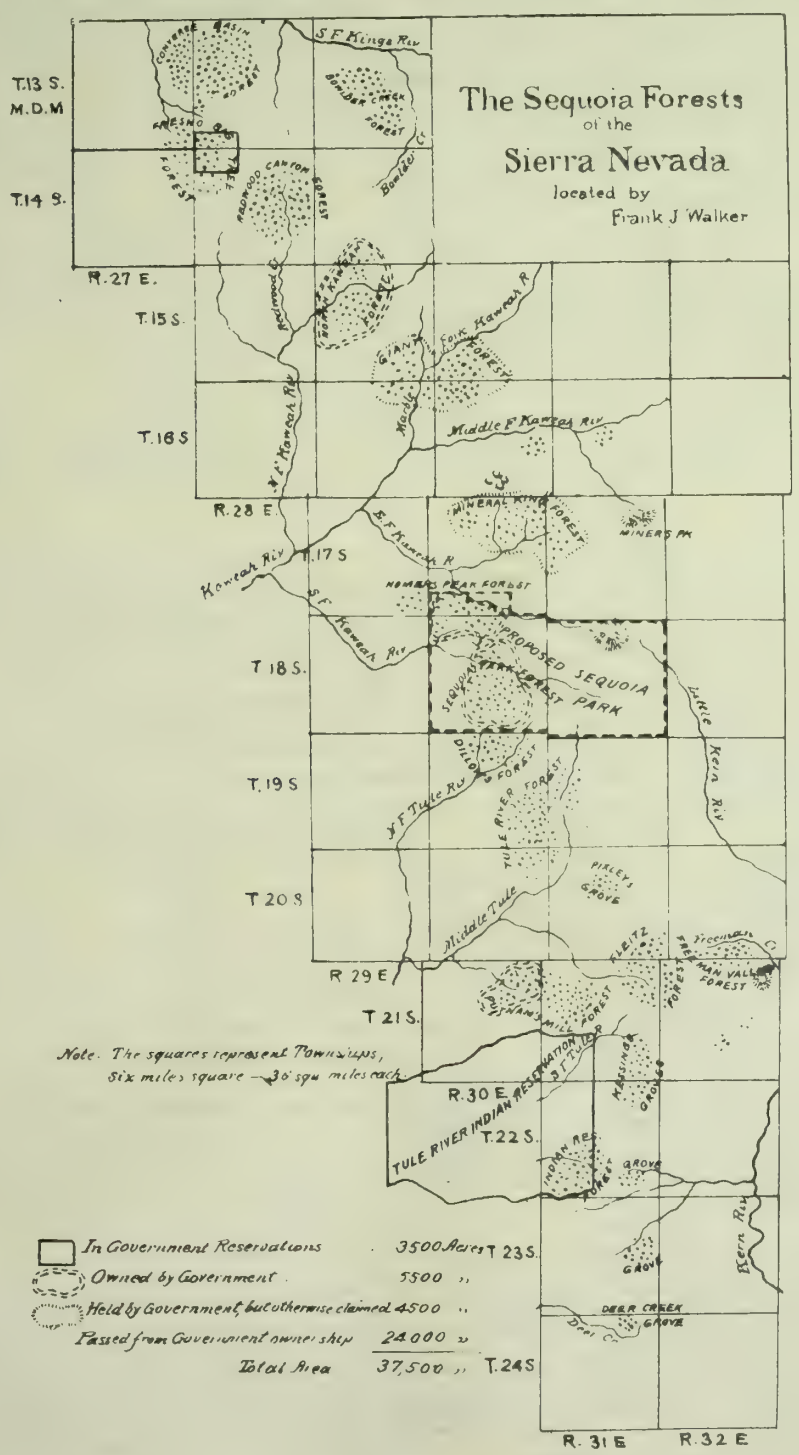
For Less than Nothing.—A Los Gatos fruit-grower dispatched 31 boxes of large egg plums to a San Francisco commission-house, the latter paying the freight bill. A few days later came the fruit-dealer's statement that the plums were sold for 20 cents a box, and requesting the shipper to remit $4.20 to cover his loss. The orchardist thought the entire loss of his plums sufficient, refused to remit and changed his city agent.

Peanuts.—Peanuts may be thought by some to be a small crop, or item, among American farm products, but they were included among the inquiries in the Division of Agriculture of the Census, and the returns in acres and values will be surprising. That "there's millions in it" is shown by the fact that the city of Norfolk, Va., alone handled over $1,000,000 worth of peanuts last year.

The Sequoia Forests of the Sierra Nevada—Their Location and Area.

[A paper read by FRANK J. WALKER at the California Academy of Sciences, Sept. 1, 1890.]

In the Standard Guide-Book to the Pacific Coast, of a late issue, we read this statement: "There are nine groves of big trees in California;" and in the descriptive sketch following this remarkable statement, we find three of the nine groves mentioned as lying south of King's river, vaguely described as: The King's River grove, the grove in the basin of North Tule, and the grove in the basin of South Tule. There are in the localities named, as containing three, no less than seven distinct groves and forests of big trees, while in the enumeration given there is no mention whatever by the author of the several groves and forests of Middle Tule, Kern or Kaweah rivers, nor of the most southern grove, on Deer creek; in short, the omissions comprise some 20 distinct Sequoia groves and forests, aggregating an area of at least 25,000 acres. Few, indeed, of the inhabitants of Tulare county, where most of the forests are found, have any conception of the wide extent of their Sequoia possessions; probably not one person in 500 knows of the existence even of big trees on the Kern-river slope, and many would dispute the fact—a fact I have never seen referred to in print—and yet there are no less than 2000 acres in that region, and some of it the most dense forest growth of *Sequoia gigantea* known to man. And so with other groves; many of them are to the general public practically unknown and unexplored.



The accompanying map is the first ever published with an approximate showing of the area, location or existence even of what is by far the larger part of our Sequoia possessions.

With reference to this map, it is my purpose in this paper to briefly mention what may be termed the forests of Sequoia, and the neighboring groves; and in making the distinction between forests and groves, it will be necessary to draw a somewhat arbitrary line; and for this purpose we will classify as forests all areas of 1000 acres or upward, and all below that as groves. According to this distinction, we can safely assume that all forests of *Sequoia gigantea* are to be found to the south of King's river, and nearly all of them in Tulare county; and with mere mention of the better known northern groves—the Calaveras, South Park, Tuolumne, Merced, Mariposa, Fresno and Washington—we will, therefore, confine our sketch to a description of this region only.

The first, going southward, and probably the largest compact body of all, is located on the south slope of the South Fork of King's river, in Fresno county. It is designated on your map as Converse Basin Forest. Its location may be given more exactly as in the northeastern portion of Township 13 South, Range 27 East, and the northwestern part of Township 13 South, Range 28 East, M. D. M., the larger part being in the latter township. [Please bear in mind that all townships and ranges hereafter given are south and east of Mount Diablo Meridian.] The area of this tract is about 5000 acres. These figures can at best be but an approximation. For most part, the Sequoia country is so broken, and the variation of density of growth so great, and the limits so vaguely defined, that an exact estimation is almost impossible; besides, it is likely to be misleading from the fact that it represents in some instances what might be called a heavy continuous growth, while in others it is more or less broken and scattering. In nearly all cases there is found mixed with the Sequoia a plentiful growth of other timber, principally yellow and sugar pine (*Pinus ponderosa* and *Pinus Lambertiana*), with a sprinkling here and there of fir, cedar and other growths. However, I have aimed everywhere to keep my estimates of areas well within bounds. This first forest, together with the one next in order, are owned by one of the leading lumber firms of California, and, next Wednesday, they celebrate at Sanger the completion of their 40-mile lumber flume, connecting their capacious mills in the mountains with the railroad on the plains. They propose to clean up everything as they go along, stripping the land bare and moving their mills and extending their flume from point to point as the timber supply becomes exhausted. It will probably take years for them to reach the Boulder Creek forest, in Township 13, Range 29, so named from the affluent of King's river, on whose slopes it is found. The area of this forest and neighboring groves cannot be less than 1500 acres, probably more. These two already mentioned lie altogether on the waters of King's river, in Fresno county, but the forest next to the south, the Fresno Big Tree forest, is on the divide between the waters of King's and Kaweah rivers, partly in Fresno and partly in Tulare counties. It lies in the contiguous corners of the four Townships 13 and 14, Ranges 27 and 28. Its original area cannot be computed at less than 2000 or 3000 acres, but so much of it has been stripped of its timber that its limits are hard to determine. Here have been the principal milling operations in Sequoia for the past 20 years. Four sections of it, containing what is known as the "Fresno Big Trees," have already been reserved by the United States Government, it being the only reservation ever made in these southern forests for the purpose of saving the Sequoia. This is the reservation recently confirmed by the Hon. Secretary of the Interior, and containing the famous big tree known as "General Grant," said to be 40 feet in diameter.

Passing on to the west side of Township 14, Range 28, we find along Redwood creek a forest of some 3000 acres. This most magnificent growth has also passed from the possession of the Government to private ownership. Farther south, we next come to a forest on the North Fork of the Kaweah river in the northwest portion of 15–29, and extending northward across the line into 14–29. There are here upward of 1500 acres of Big Tree forest still owned by the Government. The whole township is timbered and well worth preserving, aside from the Sequoia.

A few miles southward brings us to the Sequoia tract, known as the Giant forest, located in the contiguous corners of Townships 15 and 16, Ranges 29 and 30, where there is found an area of some 2300 acres of Sequoia. This, although still in the hands of the Government, is claimed by individual locators, by reason of their locations having been made in good faith and filed previous to the withdrawal from entry of these townships, as explained hereafter. It is generally thought that they will substantiate their claims and acquire the land, and public sentiment seems to favor it. Passing to the Middle Fork of Kaweah river, we find several groves, some of which are still in the hands of the Government, but there exists on this branch no Sequoia tract that could properly be called a forest.

Southward, on the East Fork of the Kaweah river, we come to what is designated as the Mineral King forest, from a mining district of that name, comprising, with the detached groves, some 3000 acres; the main body is in Township 17, Range 30, the township whose recent restoration to entry gave rise to the movement culminating in what is known as the Vandever Sequoia Park bill, lately passed in the lower house of Congress. In December, 1885, Commissioner Sparks of the General Land Office withdrew from entry 18 certain townships, of which this was one. The reason for this suspension was the alleged fraudulent character of the surveys. We need not consider the condition of these surveys, but from the character of the country it would seem that the sub division lines of Township 17, Range 30, could be more readily run with a ruling pen than with chain and transit, and at that time the compensation for either system of survey was supposed to be the same. But one thing is certain, on many of the Government plats you will search in vain for any trace of Sequoia growth, even where the alleged lines run through sections now known to be heavily timbered with the mountain redwood. It is to this fact largely, no doubt, that the very existence of certain Sequoia forests has so long remained unknown to the public.

The fact that several of the suspended townships contained big trees had nothing whatever to do, so far as we know, with influencing the act of the Commissioner. But Commissioner Sparks "builded better than he knew," and the ultimate outcome of his order of withdrawal has been to preserve, in the Government's undisputed possession, several forests of these big trees that would otherwise have gone the way of all the rest—into the hands of speculators and lumbermen. Thus the matter remained in *statu quo* till the opening of the present year, the friends of Sequoia preservation resting easy in the fancied security of their position, inasmuch as the Department had expressly declared its policy not to restore to entry these lands in advance of an official examination. At the opening of the present year, parties interested in acquiring timber, by some means, secured the release of the suspension of Township 17, Range 30. It was restored to entry on May 23d, and in less than six weeks the entire Mineral King forest was filed on by timber-land claimants, and the tract effectually cleaned up. While thus the greed for big-tree timber was developing, the supply was growing short and the attention of timber prospectors was turned to other forests; and it was found that in the township to the south, Township 18, Range 30, there was a forest practically unexplored that offered the best field for their next work. The same measures that had proved so successful in opening up Township 17, Range 30, were forthwith set to work to secure this more valuable prize. At this juncture a few citizens of Tulare county took steps to thwart the attempted spoliation of the Sequoia forests. As the forest in Township 18, Range 30, was the one the timber men most wanted, the inference was reasonable that it was the best of all for the Government to keep. I need not detail the ways and means adopted, but the ultimate outcome of the opposition has been the Vandever bill, embracing in its proposed reservation two townships and four sections to be set apart as a National Sequoia Park. This reservation includes the forest marked on your map as the Sequoia Park forest, and also the larger part of the Homer Peak forest, somewhere from 3000 to 5000 acres. South of these, following the Sequoia belt, in Township 19, Range 30, we come to the Dillon Mill forest, of over 1000 acres, with but little remaining to the Government, and from which thousands of Sequoia fence posts are being hauled this season. And still farther southward, partly in the southeast corner of the same township and extending into the corners of three other townships, is the Tule River forest. Much "cutting and slashing" for a period of years, of which Prof. Eisen told you at a late meeting, has here been going on, and during this time different mills have been drawing their supply of mountain redwood from this forest, and still by far the larger part remains. Here exists a noted center of Sequoia growth known as the "McFadyen 80" (acres), estimated by lumbermen to have on it timber sufficient for 8,000,000 feet of lumber. Only one mill is running this season. This, with the Pixley grove, we will estimate at 3500 acres. About six miles directly south is the Putnam Mill forest, in Townships 20 and 21, Range 31, containing some 4000 acres. A portion of this, that in Township 20, Range 31, is still owned by the Government and is a very beautiful forest of over 1000 acres. In the northeast of this same Township 21, Range 31, and extending into the adjoining townships, is found the Fleitz forest, owned by a Michigan syndicate, while in the southeast portion of the same township, and extending into Township 22, Range 31, are groves owned by the syndicate known as the "Kessing," the several tracts comprising an area of some 4000 acres. Here again, in the southwest of Township 22, Range 31, the Government possesses a forest of somewhat uncertain value and extent, known as the Indian Reservation forest, and estimated at 1500 acres. It is not generally known that there exists any Sequoia on the Kern river slope, but there are on that side at least 1500 or 2000 acres in groves scattered along the slope from Freeman's valley southward for some 15 miles. Only one of these tracts could be classed as a forest—that of Freeman's valley. Here is a tract of about 1000 acres, a limited portion of which is probably the heaviest growth of *Sequoia gigantea* in the world. Unfortunately this also has passed into the hands of lumbermen. One grove more remains to be mentioned, not because of its intrinsic merit, but because of its location, it being, so far as known, the southernmost limit of Sequoia. It is that on Deer creek, indicated on older maps as "Mammoth Grove." It contains less than 150 Sequoias, scattered over an area of perhaps 300 acres.

This completes the list. The Sequoia forests proper therefore extend over a belt of country beginning at Converse basin on the north and ending with the Indian Reservation forest, 60 miles to the south. The groves and forests together in this region are upward of 20 in number, with an average distance between them of perhaps three or four miles.

Within this scope of country, a moderate estimate of the Sequoia area would be, according to the foregoing figures and including a few unnamed groves, 37,500 acres, divided between the several river systems as follows:

King's river	7,500
Kaweah river	14,000
Tule river	14,000
Kern river	1,700
Deer creek	300
Total acres	37,500

It has been sufficiently shown that there are in the State several forests and groves of big trees still belonging to the Government, aside from those embraced in the Vandever bill. To insure the safety of these, and to put them beyond the designs of timber-men, and above all, to protect them from devastating forest fires, it is exceedingly desirable that they be reserved and placed under expert supervision. We need no reminder that the greed of timber and cattle men will soon work havoc with what remains, unless something be done to stay the devastation; and if we would save a portion we must begin at once.

Concerning the utility of the region embraced in these limits as the best natural reservoir for the storage of waters needed for irrigation, we need not dwell. But for a moment let me touch on the suitability of the country for a park because of its charming natural attractions. You need hardly be reminded of this. The heart of the Sierra culminating in Mount Whitney affords grand scenery of peculiar charm and great variety. Here are three Yosemites rivaling their noted prototype in many features, with a little world of wonders clustering around the headwaters of Kern, Kaweah and King's rivers. We will simply mention the Grand Canyon of the Kern, where for twenty miles the mad waters of the river are walled in with the continuous battlements of the California Alps, crowned with nameless and unnumbered domes and towers. Then, only a few miles across the divide, extends the canyon of King's river with its wealth of impressive scenery; and some eight miles farther to the north lies the Valley of Tehipitee—the gem of the Sierra—with its wondrous dome of rock ris-

ing in rounded majesty some 6000 feet from the level of the river-cleft meadow at its feet. Yet a view of the most impressive and characteristic scenery of the region is to be earned by scaling one of the lofty peaks of the Kaweah Range. At least a hundred peaks here rise to altitudes exceeding 10,000 feet. One never can forget the impression, who has once looked out over the California Alps from the pinnacle of Miner's Peak. As I once before said, in describing this scene: "Here amid the companionship of peaks one beholds with speechless wonder the spectacle beyond. No satisfactory view of the Whitney Range can be found from the San Joaquin plains. The intervening Kaweah Range veils the view of the higher peaks beyond. But here, standing on the crest of the Kaweah Sierra, one looks across the Grand Canyon of the Kern, and the encircling wilderness of crags and peaks is beyond the power of pen to describe. Mounts Monache, Whitney, Williamson, Tyndall, Kaweah and a hundred nameless peaks—the crown of our country—have pierced the mantle of green that clothes the canyons below and are piled into the very sky, jagged and bald, and bleak and hoary—a wilderness of eternal desolation."—*Zoe for September.*

AGRICULTURAL NOTES.

CALIFORNIA.

Colusa.

SALE OF MUTTON SHEEP.—Orland *News*, Oct. 11: A. W. Riley of Santa Rosa was in town this week. He purchased 6000 ewes of Hon. John Boggs, and Miller & Lux bought the remainder of the band, some 10,000.

Contra Costa.

LEVEE BUILDING.—Antioch *Ledger*, Oct. 11: Messrs. T. C. Walker, B. F. Porter, J. O B. Wyatt and Wm. Forman have entered into an agreement to build a levee that will be of great importance to their lands. This levee will reclaim about 2000 acres of land that is now subject to overflow. It will extend along the bank of the San Joaquin river from the mouth of Dutch slough to the Giovanetti place, and will fill in a gap that former land-owners would not build. A good and substantial levee already faces the land belonging to Porter, Wyatt and Walker, and in order to complete the gap, Mr. Porter bought the land belonging to Truman and Stanchfield. It is the back water from this gap which has covered the overflow this year. We also understand that Mr. Porter has bargained for or purchased Mr. Walker's large tract of land. This is an important enterprise.

Inyo.

THE NEW CANAL.—*Independent*, Oct. 10: It looks now as if the big canal would certainly be built. Mr. Brooks is in the field with a corps of assistants making a working survey. Mr. C. A. Swan has nearly completed a portable kitchen for the surveyors. It is built upon wheels and is filled with all necessary cooking apparatus. The canal will be one of the greatest works of the kind in the State. From the point where it leaves the river to where the water can be turned loose to find its own way to Salt Wells Valley, the distance is over 60 miles. The water would there flow freely into the valley, a distance of about 30 miles. Tens of thousands of acres of land will be fertilized.

Los Angeles.

PLANT CABBAGES AND POTATOES.—Pomona *Progress*: We have a letter from John D. Cheney of Denver, who says that every pound of potatoes, cabbages, parsnips and such vegetables that can be grown in Southern California this season will be gladly bought by commission merchants not only in Denver but in Cheyenne, Minneapolis and Chicago. Mr. Cheney says he will be in Southern California next January and will himself buy, at the best market prices, 40 carloads of cabbages and potatoes if he can get them. He says that he also knows of several commission men in the East who have their eyes turned toward this part of California for their supplies of potatoes, cabbages, etc., for the winter season, and will buy many carloads if possible. Mr. Cheney says that the supply of potatoes in the East, especially in Colorado, Kansas, Minnesota and Wisconsin, has never been so small for this season of the year. The Canada and New England potato crops are about as near failures as possible. The rains caused a general rotting of the vegetable in the ground.

A VALUABLE RANCH.—The Santa Ana *Blade*, in speaking of a ranch in that vicinity owned by Sanford Johnson of Los Angeles, says: The largest of Mr. Johnson's ranches lies five miles due west of Santa Ana, on First street. It contains 352 acres of land, most of which is utilized in raising hay and corn. Concerning this piece of property Mr. Johnson said: "This ranch yields me an income of $10,000 a year above all expenses, and I hire all my work done. I have 120 acres in alfalfa, and get five crops a year from it. I have 1500 tons of hay in sheds upon the ranch now, a portion of which is last year's crop. At the present price, this would bring me $15,000, but I am going to hold it awhile longer, as I am of the opinion that good hay will bring $15 a ton by January next. Then I have 150 acres in corn that will run from 50 to 100 bushels to the acre, and that is no small item."

Mariposa.

LARGE BAND OF GOATS.—Mariposa *Gazette*, Oct. 11: A band of several thousand goats belonging to C. W. M'Master passed through town Thursday. They were nearly all Angoras, and presented a very handsome appearance, being fat and clean looking.

Mendocino.

HOPS.—Ukiah *Dispatch and Democrat* Oct. 11: We understand that nearly 1000 bales of hops will be shipped direct to New York from this county. The Bartlett Bros. this week shipped their entire hop crop (399 bales) to Horst Bros., New York City. They expect to realize 35 cents per pound net.

Monterey.

THE APPLE PROBLEM.—Salinas *Democrat*, Oct. 11: H. C. Tuttle of San Miguel canyon is hauling apples into town. They are good size, 63 of them filling a box. They are of fine luster and color, and demonstrate to a certainty that the soil on which they were grown is perfectly adapted to their growth. The trees from which these apples were gathered were set out as two-year-olds five years ago and have never been irrigated. The growth made by them has been very good, and the crop this year is very heavy. Mr. Tuttle will clear over $100 per acre on these young trees, and expects next year to double his profits. This is a good showing for sandhills that are practically of no account for cereal farming, and is but another illustration of the fact that Monterey county is destined at no distant day to become one of the greatest apple-producing sections of California.

Nevada.

PEARS.—Grass Valley *Tidings*, Oct. 10: From Clerk Lord we learn that 150 tons of pears have been shipped from Grass Valley for the season to date. From Nevada City about 100 tons have been sent out, representing 4000 fifty-pound boxes. The Grass Valley shipment is equivalent to 5600 fifty-pound boxes, making a total from the two towns of 9600 boxes. Shipments are still being made, and apples and winter pears are to follow. Then there has been more or less fruit sent from Nevada county by Colfax and Clipper Gap, Wheatland and Marysville—in the latter instance to the cannery.

Orange.

PEANUT PLOW.—Santa Ana, Oct. 9: George Phelps, a son of H. Phelps, has invented a peanut plow that is exceedingly simple and does its work to perfection. It is simply a sled, the width of a row of peanuts, with an iron knife running across the bottom, so arranged that it can be adjusted to any required depth. To this knife is attached fingers that carry the bunches of peanuts backward and set them down flat upon the ground, top upward, after having sifted the dirt from the nuts, thus overcoming the necessity of following up the plow with a pitchfork, as is the case with other plows. It will save the labor of at least two men.

SYSTEMATIC FARMING.—Santa Ana *Blade*, Oct. 9: H. Phelps is the owner of 13½ acres of splendid land, all planted to orchard. The land between the trees is planted to peanuts, and a better prospect for a large yield of nuts is seldom seen. In order to give the readers an idea of what can be grown on a small piece of land, the following figures are given by Mr. Phelps, as submitted: Sold this season: Prunes, $70; apricots, $40; pears, $20; walnuts, $100. He estimates that his peanut crop will bring him $1000. When the peanuts are gathered, he intends planting the land to cabbage, and, if everything is favorable, he calculates to take off $1000 worth of cabbage in time to plant the land to peanuts next season. Should his estimates prove correct, the yield for 12 months will amount to $2230.

San Diego.

WHEN RAISIN PACKING WILL BEGIN.—*San Diegan*, Oct. 10: Douglas Ogden, who is in from El Cajon, informs the *San Diegan* that raisin-packing will not begin in full force for a week or ten days. At present the Chicago firm is working 30 or 40 hands at the Cowles packing-house, but 150 will be used when the grapes are ready. The Boston ranch, John T. Gordon and S. M. Marshall, are also beginning to pack. The pack will be 25 per cent over that of last year.

NO DISEASED VINES.—San Diego, Oct. 10: Mr. Gordon says that State Inspector Dowling has been looking over the vineyards in the El Cajon valley for several days, and says he will report that the scare of disease as manifested last year was altogether uncalled for. He finds the vines in a perfectly healthy condition, and only in a few places does he discover even a trace of the so-called disease. By next season he is sure that it will have entirely disappeared.

FARMING EARLY THIS SEASON.—*Union*, Oct. 9: About two inches of rain fell on the Otay mesa during September, and the soil was never before in better condition for farming so early in the season. Taking advantage of this favorable condition, the farmers have already prepared considerable land for grain and hay.

VALUE OF FRUIT FARMS.—San Diego *Sun*, Oct. 8: H. F. Norcross returned last week from a trip through the northern part of San Diego county and through San Bernardino, Orange and Los Angeles counties. "Wherever I went," said Mr. Norcross, "and found small orchards of from five to ten acres, I found the people prosperous and with money in the banks. Wherever I found a country without irrigation and without orchards, I found a settlement where everybody was complaining about hard times and the scarcity of money. I will give you an instance of what a small fruit orchard does for a man: A few weeks ago a gentleman who lives at Elsinore asked me for a loan. He said he could pay it back when he had marketed his fruit. As he could not get the money in time, he secured it elsewhere. Returning home from the county above, I called to see the same gentleman. He had marketed all his fruit, and with the proceeds had paid back the borrowed money, had purchased 20 acres adjoining his fruit farm and had $1500 loaned out besides. Owing to not having much money, he had marketed his crop early. Had he held on a few days longer, he might have realized $1000 more. It is enough, however, to show that the surest way to make money in this country is to grow fruit."

San Luis Obispo.

SEEDING WHEAT.—San Miguel *Messenger*, Oct. 10: The farmers in the vicinity of Parkfield are plowing and sowing wheat. This is the earliest sowing done in the valley for a number of years.

Santa Clara.

LATE GRAPES DAMAGED.—"Kilp," writing from Carpinteria to San Jose *Mercury*, Oct. 12th, says: The damp weather is causing the grapes to rot, even on the highest lands, entailing upon the grape-growers considerable trouble and pecuniary loss. Grapes that begin to mold are only fit to make brandy of, and make a very poor quality of that. The unsuccessful attempt of the wine men to depress prices for grapes is going to add another proof to the old proverb, "out of evil cometh good," many of the farmers declaring this is the last year that they will be dependent upon wine-makers, but they will build wineries and handle their own grapes. They say they might as well be at the mercy of the San Francisco wine ring as the pettier wine-makers' ring which is said to exist in the county, as the former would not stoop as low as the latter.

FRUIT FOR MEXICO.—San Jose *Times*: A. Campiglia, the fruit shipper, has consigned ten crates of Flame Tokay grapes to a firm in the City of Mexico. Mr. Campiglia reports that he sends fruit constantly to this firm, which demands only the largest and finest that is to be had.

Sonoma.

CARELESS FARMERS.—Santa Rosa *Democrat*, Oct. 11: As an instance showing why some farmers are always complaining of hard times, a gentleman says that while driving along one of the main county roads he passed an orchard where at least 10 wagon-loads of apples were lying on the ground. The fruit was large and of fine quality, as could be seen from the samples which the gentleman had picked up and put in his pockets. Apples of this kind are now worth $15 a ton at the drier's, and such careless methods entail a loss of many dollars.

LARGE YIELD OF GRAPES.—Cloverdale *Reveille*, Oct. 11: J. G Heald informs us that he raised 15 tons of grapes to the acre on his vineyard in Oat valley. This is a great yield, and, we believe, is the best yield in the valley.

Sutter.

PEACH YIELD.—Yuba City, Oct. 10: Now that the fruit crop of California is practically harvested, we may expect to hear of the wonderful profits realized from fruit from various parts of the State. Sutter county submits the following facts and figures furnished by G. F. Starr, a prominent orchardist near Yuba City: From 98 six-year-old peach trees, 49 George's Late and 49 Salway, Mr. Starr sold to the Sutter Cannery 27,300 pounds of fruit at three and a quarter cents a pound, amounting to $887.25, besides drying a ton of fruit, worth $65. These trees yielded the snug sum of $952.25. The orchard from which this fruit was harvested is on high ground, unirrigated, and the trees are 20 feet apart, making 108 to the acre. We challenge comparison.

TREE PLANTING.—Yuba City *Farmer*, Oct. 10: Mr. Tharsing of the Sutter County Orchard Company informed us a few days since that he would put on a large force of men soon to drain and otherwise put the bottom-land of the company below town in a good condition for planting. Besides replanting where the trees were killed by the water last winter, he intends planting 150 acres more, and on the higher ground will probably build a levee to protect the trees.

CROPS IN DISTRICT NO. 70.—Those residents of District No. 70 who were fortunate enough to get an opportunity of planting their land to corn, vegetables, etc., after the water had subsided last spring, are now busy harvesting the same and the yield of such products has never been seen in that section. The bean crop is extra good and is selling at $55 per ton. This is the white bean and is a good marketable article. Ira H. Wood has 200 acres planted to beans, which he is now thrashing or having tramped out by horses. A cleaner is then used to run the beans through to separate them from the chaff and pods. Corn and potatoes, with some fields of buckwheat, comprise the balance of the late crop in that part of the county, from which the farmers have received rich returns. A large amount of land will be sown to grain this season, as the greater part of the district has been plowed and is in excellent condition for seeding.

Tulare.

BUYING LAND ON SHARES.—Traver *Advocate*, Oct. 9: Considerable land is now being sold in the 76 country under contracts providing that the purchaser of a tract of land of say 80 acres, is to plant the said tract to fruit, cultivate the same for three years, and then have deeded to him one-half of the tract. We know of one party who earned 40 acres of fine vineyard in this way, and is now planting out 80 acres more on a like contract.

GOOD RETURNS.—Traver, Oct. 9: James Hurst, whose farm is some three miles northwest of Traver, made a large profit from his young peach orchard this year. He kept account of the amount realized from eight of his trees. He sold the crop on the trees for 2¼ cents per pound. The purchaser shipped 133 boxes of 21 pounds each, or 2583 pounds; 200 pounds had been previously sold, and Mr. Hurst had 600 pounds left that he dried. The total yield of the eight trees was 3383 pounds; at the rate of 2¼ cents per pound, the trees brought him $75.12, or $1502.40 per acre. Not a bad income from young trees set out only two years ago.

FINE CORN.—Monache *Tidings*, Oct. 10: At Mrs. Harper's place, a few miles west of Porterville, there is a field of corn that beat anything we have seen of late years in California, in the way of a well-matured crop. The ears and rows on the ears were large, more than ordinarily perfect and free from worm work. We also noticed rows of sorghum cane, growing on river-bottom sand where beets or anything else refuse to grow.

Ventura.

A TRAINLOAD OF LIMA BEANS.—Huenome, Oct. 11: The steamer this evening carried 110 tons of Lima beans to San Pedro to go to Eastern points via the U. P. R. R. This shipment will make a train of ten cars, and is said to be the first entire train of beans ever shipped from California.

Yolo.

GOOD YIELD OF PEARS.—Winters *Express*, Oct. 11: T. E Boyd & Son, who are conducting H. G. Finch's ranch in Pleasant valley, gathered eight tons of Bartlett pears from 40 trees this season. This fruit netted them $500, clear of all expenses. In addition to this, the wind blew off a ton and a half of pears in one night, and these they sold to J. M. Pettengill of this place for two cents per pound for drying. When it is known that this return is from less than half an acre, it will be seen what our land is capable of doing.

TALL MILLET.—Winters, Oct. 11: Supervisor Snider informs us that he sowed some golden millet on his ranch near Washington on the 27th of July, and it was ready to cut when the rain of last week came on. Now, since it got wet, he says there is not a mowing machine that would go through it, it being so tall and thick. The millet is over six feet high and as thick as the hair on a dog's back.

Yuba.

RAISIN GRAPES.—Marysville *Appeal*, Oct. 11: From reports received Thursday, the raisin-grape growers breathe more freely than they did on Tuesday and Wednesday. The strong north wind had the desired effect, and it is now thought that all the grapes that were exposed will be saved. C. E. Williams, who is one of the most extensive raisin-grape raisers in this vicinity, was seen yesterday by an *Appeal* reporter in relation to the effect of the late rain. He stated that he had between 12,000 and 14 000 trays out exposed to the recent storm, but he believed that they would come out all right. They might be damaged some in quality, but he thought not to any great extent. Speaking of the raisin grapes, Mr. Williams said that the second crop of Muscatels was just ripening, and that he had doubled his force of help in order to handle them.

ARIZONA.

RAISIN VINEYARDS.—Phœnix *Herald*: In Section 33, T. 3 N. and 2 E., Messrs. Logan & Adams own 160 acres. In March, 1888, they planted 80 acres to Muscats. From September, 1889, to the present time these received three irrigations, in March, June and August last. The vines are simply superb in rapidity and solidness of growth. On the first of August grape-picking began. The second crop had been gathered and was drying yesterday when the reporters called. This is about 40 days ahead of California grapes, and means six weeks' monopoly of the raisin market. The raisins were not London layers, for grand party show, but they were an extra quality of ordinary family raisin, good enough for every-day use, clear-skinned and full of sugar. Next year perhaps the layer variety may be possible. But ordinary family raisins from vines two years old is satisfactory to the watchful owners, who see $300 profit per acre in a very short time. The cuttings were simply thrust into the ground, whose only cultivation, from raw desert, was the single furrow for each row of vines. Eighty thousand rooted cuttings were raised from them this year and have been already sold. The two Thompson brothers of New Haven, Conn., will each put out an 80-acre vineyard next winter, immediately east of Logan & Adams' place. These latter will add another 80 acres to their present vines. Col. Adams has also been in practical charge of his enterprise, and to his watchful skill is due the success thus far. He secured for the raisin-making, Capt. Wright, who claims the credit of producing California's first raisins. Long experience has made him master of the business and he pronounces this valley equal in every way to the Pacific Coast State as a raisin country, with the advantage of nearly six weeks' earlier maturity.

BEE INDUSTRY.—Wm. Osborn, who is in the bee business in this valley, has taken 12 tons of strained honey from 182 hives of bees this season and expects to take fully five tons more.

The Stable.

Brood Mares at the Agnew Stock Farm.

In our issue of Sept. 20th, we gave on the first page a portrait of the standard trotting stallion Dawn, owned by Harry J. Agnew, proprietor of the Agnew Stock Farm, Hillsdale, Santa Clara county, and mentioned a fine band of brood mares as also to be found on the farm. The following shows the resources of the establishment in the line of brood mares:

Maude—Bay mare, record 2:20, registered; sired by Bertrand 3262, the sire of Frank Fisk, 2:29. Dam by Hamilton Chief, son of Royal George 9. This mare is well known in California by all horsemen, having been on the turf for three years, entered in 21 races and winning 18 of them, since which time she has been bred to such horses as Guy Wilkes, 2:15¼; Woodnut, 2:16½; Director, 2:17; having had a filly by each of the former and a horse colt by the latter, and is again stinted to Director.

Emma Temple—Bay mare, standard and registered; record 2:21, in the fifth heat at Stockton in '89; sired by Jackson Temple 11042, a son of Volunteer 1758. Dam, Lizzie R, by Emigrant. This mare is also well known to turf-goers, and last year (1889) after winning at Santa Rosa, Napa and Petaluma, won also a well-contested race at Stockton, defeating such good ones as Hazel Wilkes, Alfred G, Lorita, Pink and Mary Low, getting a record of 2:21 in the fifth heat. She wound up the season by winning a race at Fresno and Visalia; she has been stinted to Dawn, 2:18¾.

Baby Mine—Black mare, standard and registered; record 2:27; sired by Nephew 1220, a son of Hambrino 820, 2:21¼. Dam, Lady Burns, by Black Boy. This mare has shown trials much faster than her record, and is also well known for her gameness; she has been stinted to Dawn, 2:18¾.

Clara P—Brown mare, standard and registered; record 2:29½; sired by Mambrino Wilkes 6083, son of Geo. Wilkes 519. Dam, Cora, by Corsican, son of Imported Corsican; stinted to Dawn, 2:18¾.

Nettie Nutwood—Bay mare, standard and registered; sired by Nutwood 600, son of Belmont 64. Dam by Ethan Allen, Jr. (Vicks) 2993. This mare has repeatedly shown miles in 2:30 when not in condition, and getting hurt was placed in the stud; she has a foal by her side by Antinous, a son of Electioneer, and has been stinted to Director, 2:17.

Angie Wilkes—Bay mare, standard and registered; sired by Guy Wilkes, 2:15¼, son of Geo. Wilkes 519. Dam, Maude, record 2:20, by Bertrand 3262; stinted to Dawn, 2:18¾.

Lyla A—Chestnut mare, standard and registered; sired by Arthurton 365, son of Hambletonian 10. Dam, Flora Langford, the dam of Lillian Wilkes, 3-year-old record of 2:17¾; Joe Arthurton, 2:20½. The produce of this mare by Sable Wilkes as a yearling, sold by Killip & Co. to B. C. Holly, the former owner of Woodnut, 2:16½, for $2600; she has been stinted to Sable Wilkes, 2:18.

Veronica—Brown mare, standard and registered; sired by Mambrino Wilkes 6083, son of Geo. Wilkes 519. Dam by Winthrop 505, son of the Drew Horse, sire of Molly Drew, 2:27; Corette, 2:19; and Oakland Boy, 2:29. This mare took first premium as a 2-year-old standard trotter at the State Fair of 1886.

Daisy—Gray mare, sired by Gov. Stanford's Mohawk Chief, sire of the dams of Lot Slocum, 2:17½; Sallie Benton (4 y. o.) 2:17¾; Pedlar (2 y. o.) 2.27¾; Eros, 2:29½, and Stanford (4 y. o.) 2:30. Dam by Gen. Taylor. This mare has been stinted to Holly's Mountain Boy.

Low M—Gray mare, standard and registered; sired by Arthurton 365, sire of Arab, 2:16¾; Joe Arthurton, 2:20½. Dam, Nancy, by Gen. Taylor. This mare is a full sister to Corbitt's Blanche, the dam of Hazel Wilkes, 4 y. o. record 2:20.

Belle—Bay mare, sired by Frank Malone, son of Ethan Allen, Jr. 2903. Dam by Paul's Abdallah, a son of Ry. Hambletonian 10. Belle was one of the noted road mares, and while owned by Hiram Cook, got a record of 2:39¾ in a roadster race at Bay District track; she has been stinted to Dawn, 2:18¾.

Istar—Bay mare, standard and registered; sired by Mambrino Wilkes 6083, the sire of Alpheus, 2:27; Gus Wilkes, 2:22; Balkan, 3 y. o., 2:29¼; Clara P, 2:29½. Dam, Narka, by Nephew 1220; sire of Voucher, 2:22; Ha Ha, 2.22¼; Bracelet, 2:21; and four others in 2:30 list.

Lady Powers—Bay mare, standard; sired by Alexander 490, son of Geo. M. Patchen, Jr. 31. Dam by Gen. Dana 1757, son of Whipple's Hambletonian, 2:25; stinted to Dawn, 2:18¾.

Laska—Bay mare, sired by Alaska, son of Electioneer 125. Dam, Sarah Kinny, by Alexander 490; stinted to Dawn, 2:18¾.

Directress—Black mare, sired by Director, 2:17. Dam, Daisy, by Mohawk Chief.

Lena Monroe—Standard, sired by Monroe Chief, 2:17. Dam, Lena Bowles by Ethan Allen, Jr., 2993. Stinted to Eros, son of Electioneer.

Electress—Bay mare by Elect, a son of Electioneer 125. Dam by Joe Daniels. Stinted to Dawn, 2:18¾.

Josie A.—Black mare sired by Doncaster, a son of Elmo. Dam, Kitty Malone by Patchen Vernon, sire Allen Roy, 2:17. Stinted to Dawn, 2:18¾.

Laura—Bay mare, sired by Rea's Nutwood, son of Nutwood, 600. Dam by Dick Patchen, a. g. s. G. M. P., Jr., 31. Stinted to Boswell, Jr.

Violet—Bay mare sired by Jack Patchen, son of Geo. M. P., Jr., 31. First dam the dam of Quinn's Patchen, the sire Marin, 2:22½. Stinted to Boswell, Jr.

Maude Woodnut—Chestnut, standard and registered, sired by Woodnut, 2:16¼, son of Nutwood, 600. Dam, Maude, 2:20, by Bertrand, 3262.

Nettie B.—Bay mare, standard and registered, sired by Altimont, a son of Almont, 33. Dam, Lizzie R., Standard, the dam of Emma Temple, 2:21. Stinted to Free Trade.

A Fine Young Stallion.

Boswell Jr.—Chestnut stallion, bred at Honolulu, Hawaiian Islands, by Harry J. Agnew, sired by Boswell, a son of the great Almont 33; first dam Maude, record 2:20 (and winner of 18 races out of 21 races); second dam by Hamilton Chief, a son of Royal George 9. This horse has not been trained but a few months, but could show miles in 2:26 and quarters in 35 seconds, as many of the Petaluma horsemen know who have timed him. At present he is in Lee Shaner's hands at the Petaluma track in order to give him a record. Boswell Jr. stands 16 hands, weighs 1100 lbs., of fine form, good bone, well-muscled and a coat of hair as fine as satin. His disposition is of the very best.

Stockton Fair Awards.

The fair for the Second Agricultural District, which closed at Stockton Saturday night, Oct. 4th, proved—according to the *Independent*—pretty good for an off season, and far more successful than was at first anticipated. The attendance at the pavilion was large nearly every evening. A bench show, at which medals were given for mastiffs, New Foundlands, greyhounds, spaniels, terriers, etc., was a feature of the affair this season. The following exhibits, at park or pavilion, in the line of agricultural and related industries, were awarded premiums:

Horses.

THOROUGHBREDS.—Stallions—Four Aces, 4 yrs old, Matt Storn, Sac.

TROTTERS, STANDARD-BRED.—Stallions—Campaign, 4 yrs old, W. H. Parker, Stockton; Dictator Wilkes, 2 yrs, L. U. Shippee; Recompense, 1 yr, Mrs. M. E. Warren, Linden. Mares—Unnamed, 2 yrs, Funck Bros., Farmington.

ROADSTERS.—Stallions — Harry N., 4 yrs, F. Nevin, 1st; Jaggers, 4 yrs, R. E. Stowe, 2d; Miles, 3 yrs, O. P. Munson, Turlock, 1st; Stonewall Jackson, 3 yrs, C. Herd, 2d; Revive, 2 yrs, Geo. Kneier, 1st; Fresno Prince, 2 yrs, C. Garrow, 2d; unnamed, 1 yr, S. Lombard. Mares or geldings—Seal, 4 yrs, old, J. S. Dunham, 1st; Maude, 5 yrs, D. Leiginger; Ella H., 3 yrs, O. P. Munson, Turlock, 1st; Hunter Prince, 3 yrs, S. Lombard, 2d; Rosalind, 2 yrs, Mrs. M. B. Larry; Lucile, 1 yr, N. Nevin, 1st; Bright Night, 1 yr, M. Belden, 2d; unnamed, under 1 yr, Joshua Cowell.

ALL PURPOSES.—Stallions—Stampede, 4 yrs, J. Cowell, 1st; John Vernon, 4 yrs, Alex. Gross, 2d; Lathrop, 3 yrs, G. H. Shedd, Lathrop (special); Frank, 2 yrs, J. N. Solomon; Jesse, sucking colt, J. Cowell.

DRAFT.—Stallions—Young Eureka, 3 yrs, C. E. Barnhardt; Granger, 5 yrs, W. L. Overhiser; Ben, 5 yrs, C. P. Allison, Lodi. Mares or Geldings—Maude, 3 yrs, C. E. Barnhardt, 1st; Vic, 3 yrs, J. Cowell, 2d; Fan, sucking filly, C. P. Allison.

CARRIAGE.—Jack & Dan, L. U. Shippee, 1st; Dolly & Queen, J. S. Dunham, 2d; Frank (single) Shippee.

MULES, JACKS AND JENNIES.—Span of mules, 1st, J. Cowell; 2d, C. E. Barnhardt. Jacks—Tommy, 5 yrs, & Goliath, 5 yrs, L. U. Shippee; unnamed, 2 years, C. C. Eastin, Newman, Maltese, 1 yr, 1st; Shippee, 2d, unnamed, 1 yr, Eastin; Juno, under 1 yr, Shippee. Jennets—1st, Lummix, 8 yrs, Shippee; unnamed, J. B. Crow, Crow's Landing; unnamed, 2 yrs, Eastin, 1st; Kate, 2 yrs, Shippee; Susie, 1 yr, Shippee; unnamed, suckling, Eastin.

Cattle.

DURHAM.—All awards—Bulls, cows & herd, Shippee.

HOLSTEIN.—All awards—bs, cs & herd—E. S Beecher.

Swine.

ESSEX AND BERKSHIRE.—Best boar, Shippee.

Poultry.

FOWLS.—Best Bantams, D. Hewlet; best Leghorns, Blk Minorcas, W. A. French; 2d Bantams, 2d Leghorns, best Cochins, Brahmas & P. Rock, Wm. Hickox.

TURKEYS.—W. A. French; (Guinea fowls, special mention.)

Agricultural Implements.

[In awards under this head "W'ks" stands for Stockton Combined Harvester & Agricultural Works, "M. & W." for Matteson & Williamson and "G. U." for Grangers' Union.]

Best combined harvester, W'ks; 2d do, Houser, Haines & Knight; combined electrical harvester, John E. Doak. Best header, W'ks; 2d do, M. & W. Best sweep, horse-power, M. & W. Combined clod-crusher, harrow, pulverizer, and leveler, W'ks; special prize, G. U. Grain-cleaning attachment for thresher, W'ks; cleaner, independent, W'ks. Harrows, M. & W.; spading harrow, six-foot-cut mower, seeder and cultivator, spring tooth, H. C. Shaw. Adjustable gang harrow, W. A. Zumalt, Farmington. Stump puller, W. Daley, Sac. Hay press, W'ks. Best road scraper, Grangers' Union; 2d, Works; 3d, Matteson & Williams. Best display agricultural impl'ts by any one house, Cal. man'f's, M. & W. Best mowing machine, H. C. Shaw; 2d, John Caine. Best plow for all purposes, G. U.; 2d, J. Caine; best gang plow, Caine; best single plow, M. & W.; 2d, G. U.; best road plow, M. & W.; 2d, G. U.; sulky plow and garden gang plow, M. & W. Best fanning mill, G. U.; 2d, W'ks. Best grain sower, G. U. Best cultivator, G. U.; 2d, M. & W.; 3d, Wm. Daley, Sac.; vineyard cultivator, M. & W. Best derrick fork, M. & W. Best farm wagon for gen'l purposes, M. P. Henderson & Son. Special mentionfor J. Caine's display. Best lift pump, best force pump & irrigating pumps, John Jackson; 2d best force pump, D. C. Crummey, Los Gatos. Best churn, G. U.

Farm Produc s (f District).

CORN.—50 lbs, raised by exhib tor—Fred Arnold.

CULTIVATED NUTS.—Best 5 lbs English walnuts raised by exhibitor—Asa Collins, Knights Ferry; soft shell almonds, A. Collins; 2d do, Mrs. Jos. Hale; 25 lbs mixed nuts, A. Collins.

GRAINS & GRASSES.—Best and most artistically arranged display of California grains and grasses, Mrs. Jos. Hale; 2d, Mrs. R. W. Miller. Exh wheat raised in district No. 2, J. M. Welsh.

BRANDY AND WINES.—Buhach Co.

Fruits.

APPLES.—Finest and best collection & best 5 varieties, Shippee.

ORANGES.—Best display and best 4 var, K. Vogt, Knights Ferry.

LEMONS.—K. Vogt.

GRAPES.—Best coll, Buhach Co.; 2d do, Mrs. D. A. Learned, Stockton; best 3 var, Buhach Co.; 2d do, Mrs. D. A. Learned; best single var table grapes, best single var wine grapes, and best 8 bunches raisin grapes, Mrs. D. A. Learned.

FIGS.—Best coll, Walter Yost, Stockton; best 6 specimens, A. Collins, Knights Ferry; 2d do, Willie Hickox, Stockton.

PEARS.—Best coll and best 12, L. U. Shippee.

PEACHES.—Best coll, B. F. Langford, Lodi; best 12 of any var, Mrs. Jos. Hale.

QUINCES.—Best 12, Buhach Co.; 6, B. F. Langford.

POMEGRANATES.—Best coll, Walton Rhodes.

OLIVES.—Best exhibit, Mrs. W. H. Buttrick, French Camp; best exh olive oil, Mrs. W. H. Buttrick.

Dried Fruits Cured by Exhibitor.

PRUNES.—E. F. Langford, Lodi; 2d, Mrs. J. Hale; rasins, Buhach Co.; figs, A. Collins, 1st; Mrs. Hale, 2d; plums, apricots, cherries, apples, pears, Mrs. Hale; peaches, B. F. Langford, 1st; Buhach Co., 2d; Mrs. Hale, 3d; nectarines, Buhach Co.

Preserves, Jellies, Canned Fruits.

Best exhibit fruits preserved in spirits, Mrs. J. Hale; 2d do, Mrs. J. C. Reid; best exh fruits preserved in sugar, Mrs. J. Hale; 2d do, Mrs. Reid; jellies, best exh 5 var or more, put up by exhibitor, Mrs. Reid; 2d, Mrs. Hale; 3d, Mrs. John Wilson; canned fruits, put up by exhibitor; & crystallized fruit, best assortment, Mrs. Jos. Hale.

Floral

Mrs. E. C. Clowes—Largest collection flowering plants in bloom; display of cut flowers during fair; 1st display of white roses, not less than 100 (made on Saturday, Oct. 4th); coll ferns; display growing ornamental grasses; best and largest display trees or plants or both.

Mrs. R. P. Bates, coll ornamental foliage plants; new and rare plants, 2d; display white roses (Saturday, Oct. 4th); display bouquets; coll plants suitable for house culture; 10 hanging baskets containing plants.

Special floral exhibit, Wednesday, Oct. 1st—Best and largest display floral pieces, not less than 6; best single floral piece, Mrs. E. C. Clowes. Lasting floral piece, Mrs. M. Severy.

Special floral exhibit, Oct. 4th—Best display of not less than 6 pieces, Mrs. J. C. Brandt; 2d do, Mrs. M. Severy; single floral piece, Mrs. R. P. Bates.

Miscellaneous.

SILK.—Best display cocoons, Mrs. J. D. Utt, Stockton; 2d, Mrs. J. C. Reid; reeled silk, Mrs. Utt; 2d, silk-worm eggs and moths, Mrs. Utt.

GRAIN, FRUITS, ETC.—Heads of Seneca Chief wheat, Mrs. Fannie L. Hammond; 100 lbs Seneca Chief wheat, N. W. Hammond; four sacks wheat imported from Australia, N. M. Welsh; watermelons, exh corn, F. M. Miller; Upland rice raised in San Joaquin Co., N. G. Griffith, Union Id; Salway peaches, L. L. Northup, Camanche; red peppers, J. W. Willy; Club wheat, J. H. Crow; disp ornamental grasses, R. P. Bates; exh vegetables, L. W. Robbins; large bunches grapes, Bush & Harlow, Hanford, special mention; corn on ear, best var, Mr. Irving, Clements; Sultana grapes, J. C. Bowden, special mention; olives on branch, Italian gardens near French Camp, special mention; Sultana grapes, 25 feet grapevine, growth since April 1st; persimmons, J. C. Bowden, spec. mention; quinces, grapes and raisins, L. W. Zimmerman; grapes, oranges, walnuts, muscadines, — Finley, Amador Co.; flowering pyrethrum plants; dried pyrethrum, flowers; insect destroyer, Buhach Co.

County Exhibit.

Best county exhibit, L. U. Shippee, Stockton, $100.

The Rural as an Aid to the Teacher.

EDITORS PRESS:—**The RURAL PRESS should come regularly to our library and I will so recommend to trustees. It is a proper educator in our work, both as hand-aid for teacher, especially in our legal requirement, "Entomology," and as a reference work for pupil.**

L. A. JORDAN,
Centerville, Cal. Principal Public School.

RANCHO CHICO NURSERY.—**The catalogue of this well-known establishment is the first of the fall crop of nurserymen's publications to reach us, and it will be hard to beat in style or contents. Evidently the matter has been prepared with care. The arrangement of peaches, according to order of ripening, is an effort in the right direction and will commend the catalogue to planters. Address John Bidwell, Chico, Cal.**

"Battle of Gettysburg."

The celebrated Panorama of the Battle of Gettysburg and Museum, corner Market and Tenth Streets, San Francisco, is a wonderful production. It has captured the entire State, doing a great deal of good. There is no better way of passing an hour or so, and in studying American history, than by visiting this Grand War Panorama. If any of our readers have not seen it, it will pay them well to do so.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

Improved Ranch
FOR SALE.

Artesian, Raisin and Fruit Lands.

Located seven miles southwest of Tulare City and three miles from Tokay Switch on the Southern Pacific Railroad. It is centrally located in the artesian belt of Tulare county, and has one flowing well, capable of irrigating 100 acres, the depth to the main flow being only 308 feet. The water is soft for washing, healthful to drink and contains no substance injurious to vegetation. A reservoir of one acre, surrounded with handsome trees, receives the water from the well. Several ditches carry it in different directions on to the land.

The whole 160 acres (quarter-section) is unusually level, is entirely enclosed with fencing, and cross-fences partition the land into several enclosures for pasturage purposes.

The improvements consist of a modern styled, two-story, hard finished house, containing seven rooms, with walled cellar, kitchen and porches additional, surrounded with elegant shade trees, etc.; a large barn, storehouse, blacksmith shop, windmill, sheds, stables, etc.

In front of the place is a row of about 40 well-grown elm and Carolina trees. There are eight acres of orchard and vineyard, mostly in bearing, 30 acres of alfalfa, several miles of ditches and 40 acres of land checked and leveled.

The soil is dark Tulare lake bottom land, very productive, grows all kinds of tropical and semi-tropical fruits, except apples, and is especially adapted to the growth of alfalfa and for stock range. Water of good quality is found at ten feet from the surface. There are three surface wells on the place.

The climate is as healthful as any part of the Sacramento or San Joaquin valleys Adjoining lands are supplied with water for irrigation from Elk Bayou, a never-dry stream, lying one mile from these lands, and water can be had on the land from the same source.

The simple fact that abundance of artesian water can be had so cheaply on this land will soon make it worth more than the land is now offered for.

The owner (not being a farmer) is determined to sell at the best price offered soon The land is under cultivation, except necessary pastures. Terms easy.

Also 160 acres just outside of Tulare City limits, surveyed out in five-acre lots. The whole will be sold for cash for much less than its real value if applied for soon.

Three hundred and twenty acres of improved land adjoining will also be sold cheap and on easy terms, in tracts of 40 acres or upward, to suit.

Call on E. OAKFORD, Agent, Tulare, or address E. M. DEWEY, Porterville, or A. T. DEWEY, 220 Market Street, San Francisco.

BLISTER FOR HORSES. WHAT TO USE.

Fashion Notes.

Girls' Dress.

FIG. 1.—This illustrates a dress for girls from five to twelve years of age. In this instance the dress is pictured developed in plaid and plain wool goods and plain velvet. The full, round skirt is finished at the bottom with a deep hem, and the top is gathered and joined to the body, which has a smooth front and back of lining. Arranged over the smooth front is a full front that is effectively disclosed between jacket fronts. The jacket fronts are rounding at their lower edges and curved at the top to follow the rounding outline of the velvet yoke-facing, and their upper corners are trimmed with rosettes of velvet ribbon. The full backs are arranged in gathers to correspond with the full front, and the lining exposed in round-yoke shape at the top of the front and backs is faced with velvet.

The full puff sleeves are gathered at the top and bottom; the smooth linings are trimmed at the wrists with deep cuff-facings of plaid goods, and a standing collar is at the neck.

All sorts of seasonable dress materials, either of silken or woolen texture, will make up prettily in this way, and combinations of cashmere, serge, flannel, etc., with fancy silk, velvet or novelty goods in striped, checked or plaid designs will be stylish and becoming. Rows of velvet or satin-edged ribbon, embroidered bands, fancy braid or feather-stitching may trim the edge of the skirt, and rosettes of velvet ribbon or braid may ornament the body.

Fig. 1.—GIRLS' DRESS.

Ladies' Costume.

FIG. 2.—The costume is here pictured developed in mode and dark blue cloth and dark blue velvet, with Kursheedt's standard cord-passementerie and lace edging for decoration. The foundation skirt, which is in the popular four-gored style, is concealed at the left side beneath a drapery which is arranged at the top in small plaits that are well pressed in their folds for a short distance, the fulness below falling in deep plaits to the lower edge, where two rows of lace edging form a stylish foot-trimming.

Over the smooth fronts of the over-dress, which extend to basque depth and are adjusted by the customary double bust darts, is arranged a fanciful, low-necked front. This front is widened to lap in double-breasted style, and forward turning plaits laid in its upper and lower edges at each side of the center flare into becoming fulness over the bust. The lower edges of the fanciful front and of the right smooth front beneath are joined to the top of the front drapery, which falls with graceful fulness produced by shallow plaits at the belt; and back of these plaits a deep, well pressed plait presents the effect of a panel.

The edges of the fanciful front and drapery are trimmed with cord passementerie, and the pointed girdle, which conceals the joining and is fastened with hooks and loops at the left side, is trimmed with similar passementerie. The superb adjustment is completed by wide side-back gores that extend in panels to the edge of the skirt, and backs that reach to basque depth.

The back edges of the panels are overlapped by the edges of the back-drapery, which falls at the center with fan effect to the edge. Overlapping the top of the plaits at each side are a bournous fold and backward-turning plaits which throw the fulness below into a series of stylish jabot folds. The back drapery is joined to the lower edge of the back, and straps tacked to the panels beneath the drapery secure the over-dress against possible disarrangement. The full sleeves curve well over the shoulders, and below the elbow, where the outside seams terminate in dart style, they are stylishly close-fitting; a section of cord passementerie ornaments each inside seam. The standing collar of the pattern is here omitted in favor of a becoming collarette of lace edging matching that on the skirt.

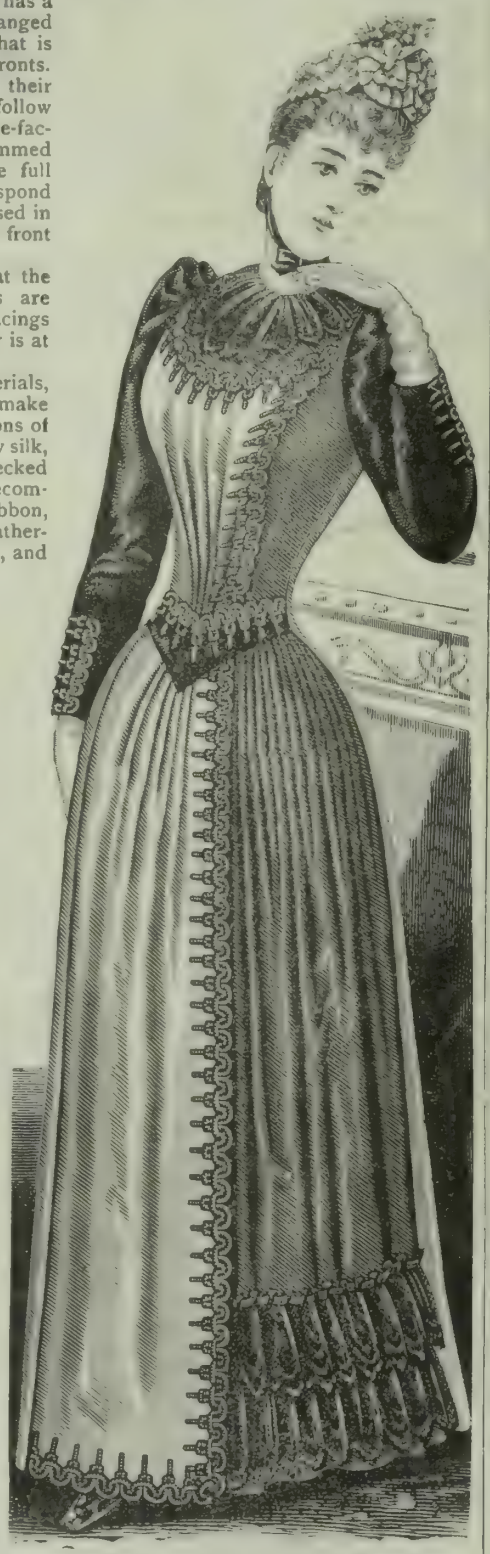

Fig. 2.—LADIES' COSTUME

Tweed, cheviot, Henrietta cloth, homespun, serge and camel's hair, as well as numerous fabrics of silken texture, will develop satisfactorily by the mode, which is particularly well suited to combinations of materials and colors. Embroidered bands, metallic braiding, passementerie, Velasquez Vandyke lace and various other handsome garnitures may be applied in any tasteful manner.

The stylish toque is prettily trimmed with silk *crepe*, ribbon loops and Autumnal foliage.

MAKE

We want every one on the Pacific Coast to become acquainted with our establishment and the various advantages it offers to those at a distance.

TO THE THRIFTY HOUSEWIFE, trading with us means a large saving on all her HOUSEHOLD SUPPLIES and WEARING APPAREL.

TO THE LADY OF STYLISH TASTES it gives a command of the latest styles in the market and enables her to dress as

YOUR

correctly and fashionably as her city friends.

TO PARENTS our stores are of special interest. Clothing, Footwear and Headwear are kept by us in great assortments and sold at prices that make it an object for people 1000 miles away to trade with us by mail.

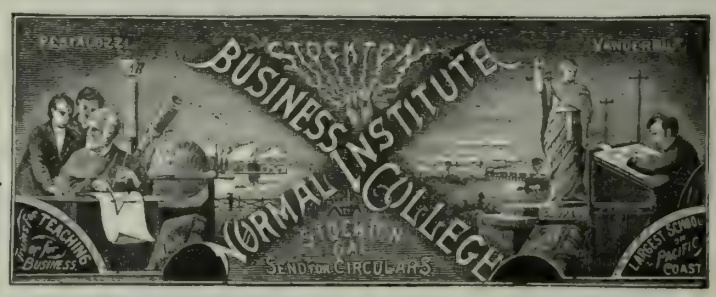
TO MEN we can say that we have everything that a man

DOLLARS

requires, either for rough or fine wear. The difference between our prices and what you've been paying will surprise you. We will send you FREE samples of Clothing if you say so.

TO EVERYBODY there are countless attractions here. If you want to know what we keep, write for our FALL AND WINTER CATALOGUE, which illustrates and describes

COUNT.



everything in our great establishment. Ordering from it is easy, for every line and statement is plain, truthful and concise. Send for it and learn HOW TO MAKE YOUR DOLLARS COUNT.

The following brief list by telegraph for Oct. 14, will appear more complete on receipt of mail advices:

California—Mahlon K. Biser, Los Angeles, washing machine; Nelson Giles, Jr., and L. E. and W. E. Brown, National City, insecticide; John Hander, S. F., fly paper; Ellsworth D. Middlekauff, Stockton, churn; James M. Miller, Vacaville, verge wire for clocks; James R. Phelps, Sacramento, harness; John M. Pray (assignor of one-half to H. H Liethead), Los Angeles, pipe-tongs; Joseph F. Prizgent, Los Angeles, shirt-measuring appliance; George C. Richards (assignor of one-half to W. T. Tuckwell), Sisson, tire-tightener; John C. Shelley, Stockton, cable railway; Thomas W. C. Spencer, S. F., automatic throw-off for cable-grips.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Carpinteria Items.

EDITORS PRESS:—For some ten days past the threshers have improved the beautiful weather by securing the beans and getting them to railway stations and boat landings.

The walnuts are being gathered with a full force.

If the weather holds good for a week more, most of the fall crops will be gathered.

Fruit dealers from Los Angeles are paying as high as two cents per pound for the best apples, boxing and packing the fruit themselves, which is the highest price paid here in several years for apples in the orchards. Some have refused two cents and will store their apples for a better price.

September closed with about one and one-half inches of rain. Grass has started finely, but must perish if no more rain falls before December.

As the weather turned dry, the beans were injured very little, and but few are lost. The Lima beans are not a full crop, but the price will, in a measure, make up in cash, as the best now bring four cents a pound delivered here at stations or landings.

Most of our crops are contracted for delivered at the cars or steamers, so the San Francisco commission men do not do quite so much work for the farmers of this place as formerly.

O. N. CADWELL.

Carpin'eria, Cal, Oct. 12, 1890.

An Index to "Looking Backward."

Mr. S. Stetson of this city, an enthusiastic convert to Nationalism, has prepared a handy guide to the best points in Bellamy's famous book, whereby he hopes largely to extend its circulation and usefulness. In the preface to this index Mr. Stetson says:

"This book has shown to thousands, for the first time in their lives, that both the necessities and luxuries of life would be secured to all in great abundance by working on an entirely new plan, so simple and sure that there would no longer be any fear of coming to want through sickness or other misfortune. The hours of labor would be reduced at least one-half, giving every one abundant time for recreation and the cultivation of faculties now unused. To read this book is a *real entertainment* for both young and old."

After giving pages and chapters in the volume for a long list of subjects, he announces that "Looking Backward" can be bought for 30 cents (about half price) of J. K. Cooper, 746 Market street, S. F. The index, on heavy book paper, may be had at the same place, or of S. Stetson, 1165 Market St., 20 copies for a dime, or 100 for 30 cents, post paid. The postage on "Looking Backward" is but one cent a copy if sent to a club ordering five or more, or four cents on a single copy.

The Daniel Best Agricultural Works.

[Written for the PACIFIC RURAL PRESS.]

The Daniel Best Agricultural Works occupies over two acres of ground in the central part of the town of San Leandro, near the depot of the Southern Pacific railroad, broad gauge. The whole of the two acres and over, which is inclosed with a handsome high board fence, is covered with workshops and machinery. The establishment has a capacity of 100 workmen. The leading outputs of these works are the Daniel Best Combined Steam Harvester, the Combined Harvester and the Remington-Best Traction Engine. Along with these are manufactured very extensively, to meet a constantly increasing market, Best's Cleaner for attachment to the Combined Harvester and Separator, which is attached to threshers, and Daniel Best's Hand Separator for cleaning grain for seed. Mr. Best's Combined Harvester and Combined Steam Harvester undoubtedly surpass very greatly all other agricultural machines in their line now made. Abundant first-class testimonials establish this. To them, at the late State Fair at Sacramento, was awarded, without reservation, the first premium and a gold medal. Mr. Best now puts his New Steam Harvester and the Remington Traction Engine together to be run as a steam traction harvester, and the two running together through one of the great grain-fields of our State excites wonder. This Combined machine stands among the highest mechanical achievements of the age, and certainly far above any other production in agricultural machinery. Mr. Best claims that this machine will, under all tests, beat all machines of its kind in the world, and he can well sustain his claim. This machine solves completely in the affirmative the problem whether wheat can be raised profitably in this country. All who have used one of the machines testify to this. Mr. Walton of Yuba City says in a letter to Mr. Best that in the one season in harvesting a little over nine hundred acres he saved more than the price of the harvester by curtailing the expenses, and this was done with horses for the pulling-power. When the traction engine is used, the saving is much greater.

But the traction engine is the grand achievement. It is simplicity itself, and as powerful as it is simple in construction. It seems impossible to have a machine of its proportions and power with fewer wheels or less machinery, and it is wonderfully substantial, standing the strain of the great pulls it makes without breakage or a twist or a displacement of any part about it; and then going at full speed, say eight or ten miles an hour, over the roughest kind of ground or road and stopping very short without the least harmful jar of any of the parts or any displacement whatever.

These engines are as secure from breaks as a wagon or carriage or a railroad locomotive. There are a number of traction engines in the market of original designs, and some imitations of the Remington-Best engine; but the Remington-Best excels them all for power, speed and durability and for handiness. It is the "steam wagon" and the power for field uses and for use on the highways the world has been looking for, and the world will be its market; and Mr. Best's belief is a safe one that it will have this market almost exclusively. It can be made of all sizes, and can be readily adapted for use in all places for pulling purposes that horses are used, and in the woods "logging" and on soft ground where horses or even oxen cannot be used and for stationary purposes as well. Much has been written and published about these engines within a recent period, and from various sources the following extracts are made:

"For fuel, straw, wood or coal can be used. It will pull 12 12-inch plows, running to the beam at a tireless speed that would soon exhaust 100 horses. It will pull a 40-foot harvester. It will go into the field and reap and thrash and clean and prepare for the market more than 100 acres of grain in a single day. It is not a ponderous, unwieldy machine. It is just heavy enough to do the work required of such a machine, and its tractability is something wonderful. It will move in every direction, back and forth, in a circle, and in all imaginable curves, and turn a square corner with the same ease that a railroad locomotive can move back and forth on the rails, and it can climb as steep a hill as a team of horses can with a loaded wagon, and it will climb over a larger log than a team of horses can be driven across. It will plow and seed your land, and then with the Combined Harvester reap and thrash, clean and sack your grain, and haul it to market for you. The cost of plowing with it is about 60 cents per acre, and the cost of harvesting, the same or less. During the whole season the machine needed no repairs."

Mr. Best will be pleased at all times to answer inquiries about his engine and the agricultural implements manufactured by him, and give information as to details, price and terms. Mr. Best is an inventor, and thoroughly understands all branches of work in his establishment, and he superintends the whole. He employs none but first-class mechanics, and uses nothing but first-class material, and he warrants every piece of machinery that leaves his factory.

The engine manufactured by Mr. Best is the only traction engine manufactured at San Leandro, and it is the original Remington engine with Mr. Best's patented improvements.

At the State Fair, in September, it took the first premium, and was awarded a gold medal. Its performances there were the wonder of all spectators. It pulled, under inspection of the committee, seventy-two (72) tons of gravel over the common road and through the streets of the city loaded on eight (8) great heavy wagons. In a field where the ground was not in very good order for plowing, it made three (3) rounds of three-quarters (¾) of a mile each, making a total distance of two and a quarter (2¼) miles in thirty-five (35) minutes, drawing twelve (12) plows and turning over a breadth of eleven (11) feet. The competing engine was just *sixty-five* (65) minutes, almost double the time in making the same rounds.

Training School for Nurses.

UNDER THE DIRECTION OF THE FABIOLA HOSPITAL ASSOCIATION.

We publish the following complimentarily and with pleasure, having full faith in the advantages to be gained by a worthy and well-conducted institution for the public good and those who may become in any way connected with it through our circulation.

The Fabiola Hospital Association has made arrangements for giving a two years' course of training to young men and women desirous of becoming professional nurses.

Those wishing to receive such a course of instruction must apply to the Association at their regular meeting, the first Friday afternoon in each month, either in person or by letter.

The most desirable age for candidates is from 20 to 35 years; they must be in sound health, and must present on application a certificate from two responsible persons (one, a physician preferred) as to their good character and good health. Upon recommendation they will be received six weeks on probation.

The first three months pupils will receive no compensation; for nine months $10 per month will be allowed for expenses, and the second year pupils will receive $15 per month.

This is in no wise intended as wages, it being considered that their education during this time is a full equivalent for their services.

Pupils are required to wear at all times while on duty in the wards dresses of material that can be washed, simply made, and such caps, cuffs and aprons as may be prescribed.

The second year pupils will be expected to perform any duty assigned them by the matron or superintendent, either to act as nurses in the hospital, or to be sent to private calls among the rich or poor.

When the full term of two years is completed, the nurses thus trained, receive (after final examination) diplomas certifying to their knowledge of nursing, their ability and good character, signed by the medical examining committee and the officers of the Society.

It is expected that nurses will bear in mind the importance of the situation they have undertaken, and will evince at all times the self-denial, forbearance, gentleness and good temper so essential in their attendance on the sick, and also to their character as Christian nurses.

The physicians and matrons have charge of the Training School, under the direction of the Fabiola Hospital Association, and the nurses are subject to the rules of the hospital.

Their fitness for the work and the propriety of retaining or dismissing them at the end of six weeks of trial, are determined by the instructors in charge of the school and the Association, who can discharge them at any time for misconduct or inefficiency. Further information can be had by addressing Mr. John Yule, President, or Dr. Avery, Physician, Fabiola Hospital, Oakland, Cal.

Russia is not America.

"Tokology, a Book for Every Woman," is so popular in America that it is hard to realize the state of things in a country that could forbid its publication and sale. The medical council of Russia pronounced against the work, claiming that it causes distrust of the profession. It is supposed, however, that this is only a pretext, and that it is forbidden on account of the indorsement of Tolstoi, who had it translated and wrote a strong recommendation in the preface to the Russian edition.

In this country, many physicians urge their patients to follow its teachings. S. A. Porter, M. D., Conesville, Ia, writes: "'Tokology' should be in the possession of every married man and woman. I say this, because it teaches men how to be husbands from the standpoint of true manhood, and women to be true wives and intelligent mothers."

"Tokology" cannot be bought of dealers, but must be procured direct of the publishers or through agents, for whom no work is more popular. Price postpaid, $2 75. Address Alice B. Stockham & Co., 161 La Salle St., Chicago, Ill.

Mr. Skillman's New Importation.

Theo. Skillman sailed from Havre Oct. 1st, with his new importation of draft stallions, comprising Percheron, Shire and Suffolk Punch. Mr. Skillman expects to arrive in Petaluma on or near Nov. 1st, and will be glad to have intending purchasers, or any one interested in good horseflesh, examine his stock. To make room for this new lot, the imported draft and coach horses now for sale at Magnolia Stock Ranch will be closed out at very reduced figures. For information apply to ERNEST SKILLMAN, Petaluma, Cal.

A TASTY LITTLE PAMPHLET is that sent forth by the Famous Manufacturing Co., Randolph and Canal streets, Chicago, telling, in dainty green and crimson typography, what users say of the "Champion" Hay Presses.

TWENTY-FIVE THOUSAND people attended the memorial services for the late Mrs. Booth, wife of Gen. Booth of the Salvation Army, at the Olympia in Hammersmith, England.

CALIFORNIA FRUITS
— AND —
HOW TO GROW THEM.

A MANUAL OF METHODS WHICH HAVE YIELDED GREATEST SUCCESS; WITH LISTS OF VARIETIES BEST ADAPTED TO THE DIFFERENT DISTRICTS OF THE STATE.

A NEW BOOK.

BY EDWARD J. WICKSON, A. M.,

Lecturer on Horticulture, University of California; Horticultural Editor PACIFIC RURAL PRESS, San Francisco; Secretary California State Horticultural Society; President California State Floral Society; President S. F. Microscopical Society.

Contents.

PART I: GENERAL.—The Climate of California and its Local Modifications; Why the California Climate Specially Favors the Growth of Fruits; The Fruit Soils of California; The Wild Fruits of California; California Mission Fruits; Introduction of Improved Fruit Varieties.
PART II: CULTURAL.—Clearing Land for Fruit; The Nursery; Budding and Grafting; Preparation for Planting; Planting the Trees; Pruning Orchard Trees; Cultivation; Fertilizers for Fruit Trees and Vines; Irrigation of Fru Trees and Vines.

S. F. Market Report

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Oct. 15, 1890.

General trade in farm products has been fairly active the past week, with a strengthening tendency in nearly all lines. Money continues fairly easy. At the East the money market is growing easier, which is reflected in a more active grain market. The wheat market at the East is also improved by nominal freights to Liverpool. The English wheat market is advancing, The following is to-day's cablegram:

LIVERPOOL, Oct. 15.—Wheat—Steady. California spot lots, 7s 2½d to 7s 5½d; cargoes off coast, 37s 3d; just shipped, 37s 3d; nearly due, 37s 3d; cargoes off coast, firm; on passage, quiet but firm; Mark Lane wheat, steady; French country markets, steady; wheat and flour in Paris, steady; weather in England, unsettled.

Foreign Grain Review.

LONDON, Oct. 13.—The *Mark Lane Express*, in its review of the British grain trade for the past week, says: English wheat is 5s below August prices, and undersells imported wheat. Foreign wheat is selling freely. Californian recovered 9d of the September decline and others 3d. This, in the face of colossal imports, indicates the strength of the market. The large quantity on passage only menaces trade for the next three months. Contracts for later delivery are small, and before winter is over there may be a deficiency rather than an excess. Maize is offered at 23s. At to-day's market, wheat was steadily held; Californian was 6d better on the week. Maize was firmer. Barley had fair sale. Oats were slow. Good barley and fine flour, especially American patent and straight, closed dearer.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.
Thursday	7s4½d	7s5½d	7s5½d	7s6½d	7s6d	7s6d
Friday	7s4½d	7s5c	7s5½d	7s6d	7s6d	7s6½d
Saturday	7s4d	7s5½d	7s6d	7s6½d	7s6d	7s6½d
Monday	7s4½d	7s5½d	7s6d	7s6½	7s6d	7s6d
Tuesday	7s5½d	7s6½d	7s7d	7s7d	7s7d	7s6½d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	37s3d	37s3d	37s3d	Firm.
Friday	37s3d	37s3d	37s3d	Quiet.
Saturday	37s3d	37s3d	37s3d	Steady.
Monday	37s3d	37s3d	37s3d	Steady.
Tuesday	37s3d	37s3d	37s3d	Quiet.

Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

Day.	Oct.	Nov.	Dec.	Jan.	May.	June.
Thursday	104½	105½	106½	107½	110½	...
Friday	106½	107½	108½	109½	111⅛	...
Saturday	104½	106½	106½	107½	109½	...
Monday	105½	106⅜	107½	108½	110⅜	...
Tuesday	105½	106½	107½	108⅜	110⅜	...

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

Day.	Oct.	Dec.	May.	June.
Thursday	99	102½	106⅞	...
Friday	100½	103⅛	107½	...
Saturday	99⅛	102⅜	106⅛	...
Monday	100	102	106⅜	...
Tuesday	100½	103¼	107⅜	...

NEW YORK, Oct. 15.—Wheat—$1.07⅞ for cash, $1.06⅞ for November, $1.08 for December, $1.11¼ for May, and $1.04 for July.

CHICAGO, Oct. 15.—Wheat—$1.00½ for November, $1.03¼ for December and $1.07⅜ for May.

Eastern Wool Markets.

NEW YORK, Oct. 10.—The wool markets are still in active condition. Buying is mainly for immediate consumption, and very little speculation is noted. As the new Tariff bill will completely shut out many lines of foreign goods, manufacturers are preparing to supply the demand which must soon arise. The importations for the past few weeks have been unusually large, as dealers were anxious to secure as large stocks as possible before the Tariff bill went into effect. The foreign market continues very firm, and advanced prices are well maintained. Dealers here are easily obtaining 42c ₩ lb. for the best grades of Australian wools. The demand for carpet wools shows considerable strengthening, and values are advancing.

Honey

NEW YORK, Oct. 13.—The weight of honey is too much for the grade of tin used in the cans. Resoldering interrupts trade, and is no guarantee for safe further shipment after landing. The market is as before.

Hops.

NEW YORK, Oct. 13.—Hops are in more general demand; good shipments abroad. The new States offer few choices as yet. California and Pacific have had the chief run of trade all the week, and the quality is unusually satisfactory. State, new, prime to choice, 45@47c; common to good, 40@43c; 1889, good to prime, 30@32c; common to fair, 25@28c; 1888, 15@20c; old Olds, 8@15c; Pacific Coast, new, prime to choice, 38@40c; low grades, 36@37c; 1889, 30@33c; 1888, 15@25c; California's old Olds, 8@15c; 750 German arrived. Exports, 1288.

Crop Reports.

WASHINGTON, Oct. 10.—The October estimates of the yield per acre for the entire breadth of cereal crops, computed by the Department of Agriculture, are as follows: Winter wheat, 10.8 bushels per acre; spring wheat, 11.5; wheat crop, 11.1; oats, 19.8; barley, 21; rye, 11.8. The condition of corn is 70.6 instead of 70.1 as last month. Buckwheat is 90.7 instead of 90.5; potatoes are 61.7 instead of 65.7; tobacco is 84.4 instead of 82.4. There is practically no change in the general condition, except a reduction of four points in potatoes and an increase of two points in tobacco.

The effect of winter frosts upon wheat is shown by the lower rate of yield to have been severe. Some of the higher rates in the principal States are: New York, 15.2; Pennsylvania, 12; Ohio, 12.5; Michigan, 15.2; Illinois, 11.5; Missouri, 11.2; Kansas, 13.5; California, 12; Oregon, 15.

Crops show a very low yield throughout the South, where the acreage is small. In the Ohio valley the variation in the yield in different counties, as on farms in the same country, has some extraordinary range, from five to twenty-five bushels, and in extreme cases from one to thirty bushels. One county in Illinois claims the best crops in years and another poorer crops than were expected. The Rocky Mountain areas made good averages in spring wheat on limited areas. Dakota's yields vary from a bushel or two to 25 bushels and make an average of nine bushels per acre. Minnesota returns 12 and Wisconsin 12½ bushels. The estimated yield of oats is 19.8 bushels, which is the lowest ever reported, probably reducing the aggregate product more than 200,000,000 bushels.

Local Markets.

BAGS—The market is dull at 6½@7c. Importers look for better prices after the turn of the year. They claim that not enough can be manufactured on this coast, while the increased duty (2c per bag) will compel them to advance prices.

BARLEY—The market is very strong under a good demand and strong holding. On Call, trading has been light. The following are to-day's Call Board sales:

Morning Session: No sales. Afternoon Session: Buyer season—100 tons, $1.48½ ₩ ctl.

BUTTER—The market is exhibiting more strength for gilt-edged in rolls. Sales are reported at 36c to 37½c a pound. Other grades are in oversupply. Pickled butter continues to go out freely. The market shows a firmer tone.

CHEESE—Mild is in fair demand at full prices. There is an over-supply of old, sharp cheese, which keeps down the more choice mild.

EGGS—The market has made a sharp advance, closing very strong. Strictly choice fresh laid selected eggs are wanted. Eastern are coming in more sparingly.

FLOUR—The market is quiet but steady. The export movement is increasing.

WHEAT—The market for sample parcels is dull, but large holders are not selling. All that is being placed comes from speculators. In futures, trading is quiet, but there appears to be a firmer feeling. The following are to-day's Call Board sales:

Morning Session: Buyer 1890—300 tons, $1.36; 1700, $1.35⅞. Buyer season—200 tons, $1.44; 500, $1.44⅛; 200, $1.44¼ ₩ ctl. Afternoon Session: Buyer season—100 tons, $1.43⅞ ₩ ctl.

Cereals.

The Liverpool *Corn Trade List* says: The Russian wheat crop is turning out very unsatisfactory, and some reports go so far as to say that the yield is, after all, very little better than last year, when the crop was officially estimated at 172,000,000 bushels, while at one time it was thought that the crop might equal that of 1888, viz., 312,000,000 bushels. This is a wide margin, and there is perhaps almost as much exaggeration in the one estimate as in the other. As, however, the Minister of Agriculture now considers that the crop will not exceed an average, it may be approximately estimated at 216,000,000 to 224,000,000 bushels, thus giving 72,000,000 to 80,000,000 bushels to export.

The London *Agricultural Gazette*, Sept. 29th, reports as follows: In South Australia heavy rainfall occurred during the greater part of August; warm weather was then, Aug. 20th, wanted for the wheats, which, however, were said to be of robust habit, good color and well rooted. In Southern Russia, the Danubian provinces, Italy, Switzerland and some other parts of Southern Europe, welcome rainfalls have occurred, and wheat-sowing is said to be progressing favorably. In Western Europe, especially in France, there has been, as a rule, sufficient moisture for the planting of wheat. In India, the wheat pits are about being opened, and supplies are expected to increase at the ports, particularly at Bombay.

The local wheat market has held quiet but firm. Farmers are virtually out of the market, and when exporters come in as buyers, they will have to pay higher prices. The absence of ships is against us, but freer arrivals are expected after the year. The coal-miners' strike in Australia is against vessels receiving cargoes from there for this port, and to come in ballast they would have to get more for wheat charters. With inward cargoes, the charters for outward cargoes of wheat are less, but without inward cargoes or cargoes for ballast only, then the charters for outward cargoes of wheat are higher. This is better illustrated at the East. The *Mark Lane Express* under date at London, of Sept. 29, in speaking of the high freights on wheat from Austria-Hungary to England, owing to the high protective duties of the former country causing high outward freights, says: "Grain freights from the Atlantic seaports of the United States are free, vessels taking the stuff for ballast so as to avail themselves of the high freights and large passenger traffic from Liverpool to New York. The brisk freight or heavy shipments from Liverpool to New York is due to importers in the latter country getting all the goods they possibly can before the increased duties under the McKinley tariff go into effect." It is quite likely that outward freights from New York will be higher from now on. The price of wheat at Chicago and New York was advanced to around $1.75 per cental by the cheap outward freights, while here with better wheat, buyers "haggle", over paying $1.35 for the better grades. English advices report that the farmers in that country and on the continent are free sellers of wheat, selling more than at this time last year, but notwithstanding which prices do not shade off much.

Barley has held to strong prices throughout the week under a free demand and strong holding. Continued clear weather is largely in favor of the grain, owing to its admitting of all kinds of outdoor work requiring more or less teaming. The supply of barley is light, and before the beginning of a new crop year it may be exhausted. The English barley crop is light and "off color."

Oats are strong at full prices. The strength exhibited by barley is in favor of oats, owing to more feeding of the latter due to the higher cost of the former. The grade of oats this year is said to average better than usual.

Notwithstanding receipts are free, corn shows a strong tone, with a slight advance obtainable for desirable parcels.

Rye is steady, as is buckwheat.

Feedstuff.

Dry weather is causing a stronger market for feedstuff. Another advance has been made in bran, middlings and rolled barley. An increase is reported in feeding.

Hay shows more strength, with higher prices obtainable for all grades. The demand is free while the supply to draw from is light. This is particularly the case with the better grades. The strength of the market proves the correctness of the RURAL PRESS' position early in the season. We then stated that higher prices would prevail before the rains set in.

Fruits.

Berries are firm under lighter receipts.

Peaches, plums and figs are going out. Quotations will be withdrawn after this week. Good-keeping pears move off fairly well. Apples are easier under heavy receipts and forcing sales of defective consignments. More of the better kinds and good keepers are being shipped to China, Japan and Mexico.

Grapes show a firmer tone, with an advance for the more choice good keepers. Clear, dry weather has admitted of more drying; besides this, all the moldy and otherwise defective grapes have been marketed—put on the market at the best obtainable prices. This necessarily lessened the supply. Wine grapes are a turn better. The supply is said to be short, causing some wineries to bid up so as to get stock.

Melons are weaker. Cooler weather is restricting the consumptive demand.

Dried fruits are essentially unchanged. Dried grapes are quite firm under a good inquiry. There is considerable bear talk about prunes, but with the French markets higher we cannot see how Californian will rule lower. Plums are firm. Peaches are not offering so freely, yet buyers are disposed to bid down. Apples are quiet, but there is a good, healthy tone. Pears are steady, as are nectarines and figs.

The raisin market is reported strong, with well-known brands fetching top prices. Some buyers are trying to depress the market, but so far without effect. The European markets are reported strong. The cry of large damage by rains to our crop is entirely wrong. The truth will bear telling at any and all times. Had the rains continued a few days, or had cloudy, damp weather prevailed, then the damage would have been large, but neither occurring the loss is small. Heavy shipments are being made overland.

Parties are reported to be contracting for new crop oranges.

Live-stock.

Bullocks show a stronger tone. The condition continues first class in all respects. Mutton sheep are steady. Grain-fed hogs are strengthening The demand is improving. The horse market is dull. Milch cows are more inquired for.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4½@4¾c ₩ lb; dressed, 7@8c ₩ lb.; heavy, 3¾@4c ₩ lb.; dressed, 6½@7½c ₩ lb. Stock hogs, 3¼@3½c ₩ lb.

BEEF—Stall fed, 6¼@—c ₩ lb.; grass fed, extra, 6@—c ₩ lb.; first quality, 5¼@5½c ₩ lb.; second quality 4¾@5c ₩ lb.; third quality, 4c@— ₩ lb.; bulls and thin cows, 2@3c ₩ lb.

VEAL—Small, 6@8c ₩ lb.; large, 4@6c.

MUTTON—Wethers, 7½@8c ₩ lb.; ewes, 7@7¼c ₩ lb.; lamb, spring, 9@10c.

Vegetables.

Garden truck is becoming scarcer, causing a slight appreciation in prices.

Onions are very strong at another advance. There is a good home and shipping demand.

Potatoes are higher, with a good, strong tone at the advance. Receipts are increasing, so is the demand. The shipping inquiry shows a steady gain. With rainy weather receipts are expected to fall, which, it is said, will cause still better prices. Sweet potatoes are lower.

Cabbage is lower. Marrowfat and also Hubbard squash are steady.

Miscellaneous.

Exports the past week by sea were as follows. Flour, bbls, China, 8271; Japan, 2007; Honolulu, 1897; Panama, 300; Central America, 3245; Mexico, 305; South America, 350. Wheat, ctls, Dublin, 45,504; Honolulu, 230; Havre, 69,110; Cork, 40,750. Barley, ctls, Honolulu, 1316; rolled barley, lbs, Honolulu, 95,158. Apples, bxs, China, 330; Honolulu, 800; Japan, 285; Mexico, 267. Beans, lbs, China, 11,637; Japan, 5070; Honolulu, 21,412; Victoria, 2226; Panama, 2884. Dried fruits, lbs, China, 490; Japan, 2110; Honolulu, 3775; Central America, 406. Canned fruits, cs, Japan, 99. Hops, lbs, China, 129; Japan, 246; Japan, 768. Brandy, gals, Honolulu, 6171. New York, 1307. Bran, sks, Honolulu, 3638. Wine, gals, Honolulu, 10,388; Mexico, 1445; New York; 60,990; Central America, 665. Raisins, bxs, Honolulu, 210; Mexico, 109. Potatoes, sks, Honolulu, 978. Onions, sks, Honolulu, 302; Panama, 100; Mexico, 111.

Beans are irregularly strong. Receipts are increasing and so is the demand. The crop at the East is said to be short.

Poultry is barely steady, overland receipts being against the market. Dressed turkeys are putting in an appearance.

Wild ducks, geese and hares are strong at a slight advance. Quails are lower.

Honey is coming in quite freely, but all received goes into distribution at unchanged quotations.

Hops are strong, with few to be had from first hands. The bulk offering from second hands has been placed.

Wool is reported quiet, but firm, for the better grades.

In nuts, the market is reported easier here, but stronger at the East. For some kinds of nuts the market rules very strong, with a slight appreciation for one or two kinds.

From the *Commercial News* of Oct. 15th the following summary of tonnage movement is compiled:

	1890.	1889.
On the way to this port	273 244	207,411
On the way to neighboring ports	20,880	9,565
In port, disengaged	8 332	39,818
In port, engaged for wheat	67,128	77,696
Totals	369,584	334,490

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to Oct. 8, 1890, the following are the exports from this port:

	1890.	1889.
Wheat, ctls.	2,686,447	2,949,044
Flour, bbls.	317,118	309 222
Barley	120,754	415,402

Dried Fruits, Etc.

The quotations given below are for average prices paid. Something very fancy fetch an advance on the highest quotations while poor sells slightly below the lowest quotations.

Prices named, unless otherwise specified, are for fruit in sacks. Add for 50-lb. boxes 1c per lb., and for 25-lb boxes 2c to 1c per lb.

BEST RAM TOO!—It appears that in the awards for sheep, at the late State Fair, our old friend Andrew Smith of Redwood City got away with first premium for best Shropshire ram, any age, as well as for all other Shropshire exhibits. It was not so reported, in the list published last week, and both he and we desire to note the correction which is certified by Secretary E. F. Smith of the State Board of Agriculture.

THE PACIFIC BUSINESS COLLEGE, as may be seen by reference to our "educational" advertisements, still holds out varied inducements to those who would perfect themselves in penmanship, stenography, typewriting, bookkeeping and the many different branches, a knowl edge of which is desirable to those engaging in mercantile pursuits.

PACIFIC COAST WEATHER FOR THE WEEK.

California Fruits East.

CHICAGO, Oct. 9. — The Porter Bros. Co. sold seven carloads of California fruit to-day at auction at the following prices: Tokay grapes, $2.35@2.70 per full crate, 90c@$1.65 per half crate; Black Morocco grapes, $1.65 per half crate; Cornichon grapes, $1.30; Salway peaches, $1.25@1.45; Georgia's Late peaches, $1.30@1.40; Muscat grapes, $2.50 per full crate, 75c@$1.35 per half crate; Verdelle grapes, $2.40; Blue Malvoise grapes, $1.55 per half crate.

The Montgomery Auction Co. sold to-day for account of the Earl Fruit Co. California fruits as follows: Salway peaches, $1.25@1.50; Muscat grapes, $1.20 per half crate, $2.35@2.25 per full crate; Tokay grapes, $2.45@2.40 per full crate, $1.35@1.25 per half crate.

CHICAGO, Oct. 11.—The Porter Bros. Co. sold four carloads of California fruit to-day at auction at the following prices: Tokay grapes, $2.65@2.80 per full crate; 70c@$1.10 per half crate; Muscat grapes, $2.75 per full crate; Cling peaches, 65c@$1.50, the bulk of them in very bad order; Winter Nelis pears, $1.30@1.40 per half box.

The Montgomery Auction Co. sold to-day for account of the Earl Fruit Co., the W. R. Strong Co. and others, California fruits as follows: Beurre Clairgeau pears, $3; Winter Nelis pears, $2.25; Vicar pears, $2.25; Easter Beurre pears, $2.70, Beurre Diel pears, $2.45; Glout Morceau pears, $2.45; quinces, $2; Tokay grapes, $2.55@2.25 per full crate, $1.20@1.15 per half crate; Muscat grapes, $2.15 per full crate, $1.10 per half crate.

The grapes were more or less moldy, owing to the recent rains. Some in bad order sold for less. The rainy weather, the large quantity of fruit and the day being Saturday, had a depressing effect on the market.

NEW YORK, Oct. 11.—Evaporated peaches are neglected, Cha ago and Philadelphia seeking the trade here. Apricots are strong at 18½@19c in sacks; 19@20c for boxes. Prunes are in good offering, with sales slow and easier at 13½@14c. Layer raisins are wanted at $2.50@2.75; loose quiet, at $2.10@2.25 for good marks.

NEW YORK, Oct. 11.—Fresh fruit has a steady sale at good prices. Many Tokays turn out soft and musty, which the cheap trade, however, repack and use. Sold 52 cars at auction. Peaches per package, 80c@$1.80. Quinces, boxes, $2.65@2.99. A few Bartlett pears in boxes, $5; Winter Nelis, boxes, $2.10@3.55; half boxes, $1.40@2.10; Glout Morceau and Easter Beurre, halves, $1.70@2 20; wholes, $2.95@4.10; Duchess, $2.70@3.10; Beurre Diel and Beurre Hardy, $4.10@4.90. Others, $2.10@4.40. Prunes, $2.25@3.60, the latter German. Plums, $2.25@2.35. Tokay grapes, double, $1.85@5.70, single, $1.10@2.75. Cornichon, single, $1.50@2.35, double, $3.10. Muscat, packages, $2.65@3.35. Others, 60c@$1.90. The California Fruit Union sold three cars at auction. Peaches, $1.20@1.55; Beurre Clairgeau pears, $3.12@3.37; Tokay grapes, single, $1.50@1.85, double, $3.25@3.31; Muscat, double, $4.25, single, $1.35@1.99.

New York will have a steam-heated pier this fall for Florida oranges, with a capacity of 1500 boxes.

CHICAGO, Oct. 13.—Porter Bros. sold five cars of California fruit to-day at the following prices: Quinces, $1.85; Bartlett pears, $3; Tokay grapes, full crates, $1.75@2.60, half crates, 50c@$1.30; Muscat, half crates, 55@85c; Black Morocco, half crates, $1.10@1.60; grapes were in poor order; Coe's late Red plums, $2.05.

CHICAGO, Oct. 13.—The Montgomery Auction Co. auctioned California fruit to-day for account of the Earl Fruit Co. and the W. R. Strong Co. and others, at the following prices: Winter Nelis pears, $2.15; Beurre Clairgeau, $3.30; Beurre Diel, $2.55; d'Alencon, $2.55; White Doyenne, $2.35; Easter Beurre, $2.20@2.25; Vicar, $2.20; Glout Morceau, $2.55; Pound, $2.20; quinces, $1.75.

NEW YORK, Oct. 13.—The *Commercial Bulletin* reviews the prune situation at home and abroad and says: At the prices quoted for the new crop of Turkish prunes for shipment, importers hesitate to forward orders. Sultanas for forward delivery are quoted at 8@8½c for four sizes. French are in strong position abroad and bids of 45f have been made and declined, 46f being quoted as the inside rate for four sizes. Spot goods are not obtainable below 10¼c, while to arrive 10c is asked. Sales of 50s and 70s for shipments have been made at 59f, but 60f are asked for additional quantities. Of California we notice a sale of one carload of 50s and 60s, to arrive, the price being reserved.

CHICAGO, Oct. 15.—The California dried fruit market so far this week has been quiet and offerings are moderate. Peaches, unpeeled are selling at 13 @20c ₱ lb; peeled, 30c; apricots, good to choice, 16@20c; dried grapes, 5½@6c; raisins, loose Muscatels, ₱ box, $1.80@2; London Layers, $3.15@2.50; prunes, ungraded, ₱ lb, in sacks, 10@12½c; in boxes, different sizes, 10½@13c. In green fruits there is more doing. Peaches average $1.25@1.50 ₱ box; pears are ranging from $1.50 to $2.50 ₱ box for small Butters; $3.75@4 for Clairgeaus and Hardys; Quinces, $1.75@2; grapes, bf cases, Tokays and Muscats, $1@1.50.

Fanciers' Monthly.—The *California Cackler* has recently been purchased by Chas. R. Harker, for years editor of the New York *Poultry Bulletin* and author of a number of interesting articles in the Rural Press. Mr. Harker is well known everywhere to fanciers of thoroughbred fowls, dogs and pet stock. The *Cackler* will be greatly enlarged and improved, and hereafter will appear as the *Pacific Coast Fanciers' Monthly*. It will be published at San Jose, Cal., and be a finely illustrated magazine, especially interesting to those who keep poultry for pleasure or profit or indulge in blooded dogs, fowls, pigeons, cage birds, etc.

California's Stallions.

I beg to announce that, with a view of perpetuating the forms and characteristics of the leading stallions of California, I am issuing a series of lithographic likenesses. Each portrait issued will be an acknowledged likeness, the result of a close study of the horse and an artistic treatment of the subject. In order to secure for the series an immense advertising value, from a breeder's point of view, 4000 copies, at least, of each portrait will be issued.

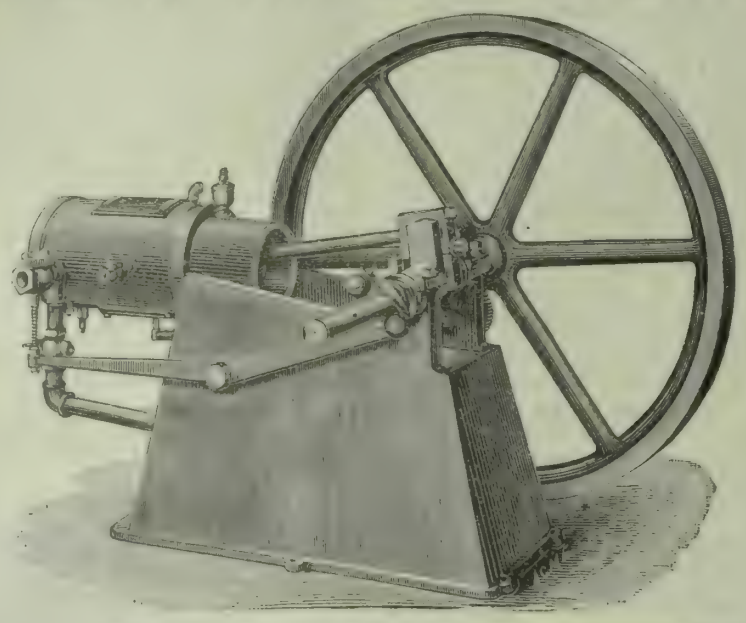
Terms, $100 for first issue of 100 copies. In quantity, for advertising purposes, copies will be furnished at low rates.

H. Boyd, Artist.
268 Golden Gate Ave., San Francisco.

Not Partial to Gamblers.—Just before the final adjournment of the 51st Congress, President Harrison vetoed a bill to prohibit book-making and pool-selling in the District of Columbia for the purpose of gambling. The President's objection to the bill is that it does not prohibit book-making and pool-selling, but on the contrary, permits it in the case of the Washington Jockey Club and other clubs owning race-tracks. If that form of gambling is to be prohibited—and the President thinks it should be—the prohibition should apply to all places and persons.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos, $1; 10 mos., $2; 15 mos., $3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.



The Mississippi Constitutional Convention last week adopted a section which forbids the Legislature authorizing any lottery, nor shall the sale of any lottery tickets be allowed in the State.

For Sale.—Valuable land in Tulare county artesian belt. 160 acres, 1½ miles southwest of Tulare city; 480 acres, 7 miles southwest of Tulare, with large flowing artesian well, well-finished two-story horse, large barn, etc.; 160 acres, 2 miles southwest of the above; 480 acres 3 miles southwest of Pixley and about 4 from Alila. For sale by owner in lots to suit at low prices, low interest and very easy terms. For further information, address LAND OWNER, Box 2517, S. F., or A. T. DEWEY, No. 220 Market Street, San Francisco, Cal.

Swedes in Vermont.—The experiment of colonizing the town of Peru, Vt., with Swedes is reported to be a success, and work in that line will be extended with the hope of reclaiming deserted farms.

Buggies, Buckboards, Spring Wagons, Surreys and Road Carts. Write for our new catalogue. Baker & Hamilton, San Francisco and Sacramento.

Truman, Hooker & Co's Vineyard Cart.

FARMER'S VINEYARD CART.

Side-boards can be taken off. Wheels high. Tires wide. Strong, serviceable and extremely low in price. Tires 3 to 4 inches wide. Hollow iron axles and solid iron axles. Especially adapted to vineyard and farm work, *with wide tires, narrow truck.* Light, strong, and made of the best material. Measures 4 feet 6 inches from point of hub to point of hub, which enables it to be used in any place on a vineyard or farm where an ordinary cart or wagon cannot; and the side-boards being high, it carries a larger load than a cart. Write for prices.

THE

PACIFIC GAS OR GASOLINE ENGINE.

PATENTED JUNE 17, 1890—NOS. 430,504, 430,505, 430,506.
Also in Great Britain and other foreign countries.

Starts Instantly Without the Necessity of Boiler, Fire or Experienced Engineer.

The engine uses from 20 to 25 cubic feet of coal gas, or about one-eighth (1/8) of a gallon of gasoline per hour per horse-power. It can be used for pumping purposes, running printing presses, small factories, elevators, jewelers' lathes and polishers; dairymen's, agricultural, mining and wood-working machinery; well-boring and all other purposes requiring cheap and convenient power. Persons having but little space will find this the most suitable of all motors.

USE IN BOATS.—The Company make a specialty of ENGINES FOR SMALL BOATS AND LAUNCHES, and claim there is no engine in the market their superior for this purpose. Boats so fitted require no licensed engineer or pilot, as is required by law for all vessels propelled by steam power.

ELECTRIC LIGHTING.—The engines are PARTICULARLY ADAPTED, and cannot be equaled for operating small electric light plants, either arc or incandescent.

STATIONARY and MARINE ENGINES

From 3/4 to 15 horse-power.

OVER 100 IN ACTUAL OPERATION.

READ THESE TESTIMONIALS.

ALAMEDA, April 8, 1890.

PACIFIC GAS ENGINE CO.—GENTLEMEN: Permit me to add my testimonial to the many you have received indorsing your engine. As you are aware, mine was a Regan engine which gave me considerable trouble. I had to remove the head and raise the tappet valve every time I wanted to start the engine. I sent you the engine; you removed all the Regan appliance except the cylinder and stand. You put in your appliances, head, sparking device, inlet valve, and, in fact, changed it to the Pacific Gas Engine, which now works splendidly. I have not had to remove the head for any cause since you made the change (over two months). It gives me no trouble; my boy, 14 years old, attends to it.

The change from the Regan to the Pacific is a decided improvement. I can also get a third more power since the change, and I cheerfully recommend your engine as being simple, effective, and cheap. Respectfully yours,

B. S. HILL, S. W. Cor. Encinal Ave. and Morton St.

MAYFIELD, March 26, 1890.

PACIFIC GAS ENGINE CO.—We have given your little 1-H. P. engine a splendid advertisement. A fire broke out at 2:30 o'clock this morning, in a tenement house on my premises. I started the engine, connected the hose, and by its use saved at least $3000 worth of my property. I saved my blacksmith shop, lying 12 feet from the burning building, my barn and my dwelling. Three times the fire started in these buildings, and I extinguished it every time. The engine never faltered, and threw water between 50 and 60 feet high. The whole town was astonished, and they acknowledged that I saved at least $20,000 worth of property.

A fire department is being organized here, and I think they will have one of the engines on a truck for fire purposes. *They cannot be beaten.*

Hoping that all of your customers will be as well pleased with the engine as I am, I remain, Yours truly,

JOS. P. PONCE.

The Whole Country Needs Fertilization

ADMONITION TO FARMERS!

GUAYMAS, MEXICO, September 9, 1890.

E. B. CUNNINGHAM, ESQ., Agent Mexican Phosphate and Sulphur Company—DEAR SIR: In answer to your question as to the value of phosphates for worn-out lands, I will state that it is my opinion the [illegible] settled portions of California afford a good field for the use of phosphates. These lands have been cropped for years without any restoration of the chemical constituents necessary for an abundant [illegible] therefore show plainly that they need assistance artificially to produce crops good in quantity and quality, let the crop be whatever it may.

Take, for instance, San Joaquin and Santa Clara valleys, and what do you see? Many crops that are so imperfect in quantity and quality that the eye at once detects the defect. The only relief that can be resorted to must be infused into the soil to replace the chemical properties that have been extracted by previous crops, and the writer is of the opinion that a liberal supply of phosphates will accomplish [illegible]

The attention of the cultivators of the soil is sharply turned to rotation of crops, hoping thereby to wealth out of their lands without fertilization. Some have turned their attention to beet cultivation soil worn out by other crops. Beet or other seeds will not grow successfully unless the soil will nourish them.

This summer I saw several crops of beets on excessively cropped lands, the majority of which showed that there was something wanting to complete the plants to ample size and in quantity that should be expected of sugar beets under favorable circumstances. If a good crop is not obtained, there is deficiency in profit. It costs as much to cultivate soil deficient in chemical properties as it does if ample nutrition was in the soil. Under the former condition a deficient crop is certain, while under the latter condition he may reasonably expect an ample crop with profit.

Fields often are allowed to go to weeds, supposing thereby to enrich the soil. This is an uncertain method and not profitable. Your weeds have grown up and seeded; the dead stems can only add a limited addition to fertilize the soil, while the seeds of the same will cause much expense to exterminate them from the future crops. Besides, while thus only weeds as a crop, no profit was realized, while if a supply of phosphates had been applied to the soil, a profitable crop of beets or corn would be had. Besides, the weeds would have been exterminated during the cultivation of the said crop. I am, Sir, your obedient servant,

EDWARD PALMER, M. D.

THE MEXICAN PHOSPHATE AND SULPHUR CO.

Manufacture three grades of this Superior Fertilizer of the following analyses:

GUARANTEED ANALYSIS.	Brand [A] for Sugar Cane, Sugar Beets, Etc.	Brand [B] for Grain, Gardens, Lawns, etc.	Brand [C] for Fruits, Vineyards, Etc.

THE CELEBRATED

CLIMAX SPRAY PUMP

Is now manufactured only by R. S. CHAPMAN, he having purchased all rights for same. These pumps have been greatly improved in material and workmanship, and are the best and most economical machines in the market today. The Climax No. 1 (represented by this cut) is the cheapest reliable sprayer made, and is especially adapted for effective work in the average orchard.

THE IMPROVED CLIMAX NO. 2

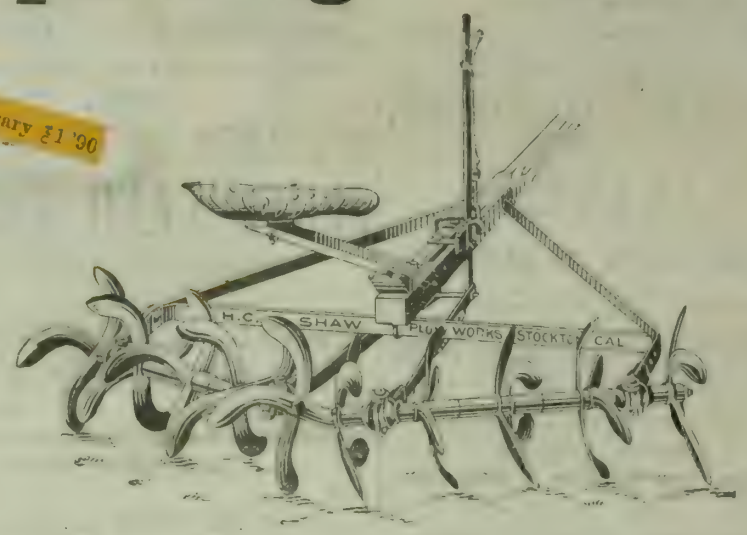
Is a double pump mounted on a 50-gallon barrel and equipped complete with two lines of hose, spray tips, extensions, shut-off valves, etc. This outfit has just been improved and perfected for the season of 1890-91, and is especially desirable in large orchards where economy in material and labor is necessary. Send for descriptive catalogue and testimoniale. Address all communications to

R. S. CHAPMAN,

18 California Street, San Francisco, Cal.

THE BEST FENCE YET!

Cheap, Durable, Portable and Safe.



THE SPALDING HUMANE WIRE FENCE is composed of eight No. 12½ galvanized steel wires, woven into four cables of two wires each; interwoven every five feet is a corrugated iron stay or guard, and held in place by wire staples, thereby holding the cables firmly in place, preventing them being spread apart and letting stock through. The stays or guards are corrugated and an inch and three quarters in width, making the fence as visible as a boardfence, which is a very essential point. Write for circulars and prices. 195 La Salle St., Chicago

THE "TRIUMPH"

—ALL METAL—

Spading Harrow.

The Best Pulverizer in the World!

JUST THE THING FOR WORKING SUMMER FALLOW LAND.

Specially Adapted for Orchards and Vineyards.

FOR TWO HORSES. Works the soil about six feet wide. Angle of teeth adjustable to work the soil at desired depth. THIS HARROW is something entirely new. IT IS THE GRANDEST ACHIEVEMENT of its inventor, C. LA DOW, who is the recognized authority on Harrows, there being but few leading Harrows at the present time not built under his patents. We have made exclusive arrangements for its sale and it can be obtained only through us or our agents.

THE NAME "SPADING" refers to its action on the soil. The action of each cutter is like that of a small spade, lifting and turning the soil from a depth of four to six inches, doing more perfect work than is possible with any other Harrow in the world. THE BLADES are made from spring steel, in operation vibrating and shaking off sticky soil. IT NEEDS NO SCRAPERS to clean the revolving cutters.

Considering the immense amount of labor done, the draft is very light, as the pulverized soil passes through the gangs of revolving cutters, being left smooth. THE GANGS are so arranged that the most uneven ground is thoroughly harrowed and left level. IT LEAVES NO FURROW or ridge; when the field is harrowed it is all left smooth.

The Golden State

LATEST IMPROVED

WINE AND CIDER PRESS.

This is a Compound Screw and Lever Press, is very powerful, strong and durable, and does not easily get out of order. It is easily worked by one man, who stands in one place and moves the lever up and down, the same as a pump handle. This manner of operation is much easier than the old way where the operator is compelled to walk back and forth.

CALIFORNIA STATE LIBRARY

Arizona Experiment Stations.

Agricultural Experiment Stations are to be located and equipped in Arizona on some such plan as adopted by Prof. Hilgard for the pursuit of the work in this State. There will be the central station on the grounds of the Territorial University at Tucson, and there will be outlying stations at various points.

We recently had the pleasure of a visit from Prof. F. A. Gulley, Director of the Stations and Professor of Agriculture in the University. He is a young man of wide experience in experiment and investigation, and thoroughly in earnest in his purpose to do everything he can for the development of the agricultural resources of his new country. The main station at Tucson is away from all irrigating ditches, and it is proposed to supply ten acres with water by means of a surface well and a centrifugal pump. It was once intended to sink an artesian well, but the project was abandoned as being too venturesome. This ten-acre plat will be filled with specimens of all the vegetable life that are designed to be studied, with a view to their adaptation to the local climate and soil.

The Phœnix *Republican* says that 10 or 12 acre plats are desired in several parts of the Territory for the purpose of extending the usefulness contemplated for the work.

In the Salt River valley, Prof. Gulley thinks that cotton will yet prove a profitable crop, and intends to devote especial attention to the cultivation of its different varieties. Semi-tropical products of the soil will be amply experimented with, as well as plants of the colder north.

We shall be glad to hear of the other sites selected for the branch stations and to aid the enterprise as far as possible by enlisting the support and interest of our readers in that important part of the coast.

Nurseries and the Census.

Among a number of special investigations being made in the Agricultural Division of the Census, is one of "Nurseries." Few persons have any idea of the tens of thousands of acres and millions of dollars of capital invested, and the large number of persons who find employment in this work of growing the young fruit and forest trees, and the shrubs and vines that go out to increase the products, the comforts and attractions of millions of homes in our country. Many of the large nurseries are now located west of the Mississippi river, among which may be mentioned one of 400 acres in Nebraska, of which 85 acres are devoted to baby forest trees alone, each acre containing 300 000 to 400,000, or some 30,000,000 to 40,000,000 trees in all. They sell at from 50 cents to $1.50 per thousand, according to kind, quantity and quality.

As has been previously stated in the RURAL, Mr. J. H. Hale, Special Agent of the Census, who has these matters in charge, is now in California in pursuit of his work. He will find large nurseries here, as well as in the great Central West, though they are devoted to fruit rather than forest tree propagation. Mr. Hale is visiting the various parts of the State in pursuance of his work, and last week was in the flourishing fruit region of Yuba and Sutter counties. No doubt many of our readers will have opportunity of meeting him and assisting in his work.

A Bearing Olive Tree.

Bearing olive trees are familiar objects in a few regions of California, but in other regions of the State and in distant parts where the RURAL circulates, few people have seen a mature tree. It is, of course, a question perhaps as to what is the mature age of a tree which has such a long life as the olive, but if maturity means bearing profitable crops, a 16-year-old tree is well entitled to such distinction, for by that age it will have paid the grower several times the cost of its growth and training.

A NEW CALIFORNIA SEEDLING PEACH—PHILLIPS' CLING.

The tree shown in the engraving is one of the oldest trees on the Quito olive and vine farm near Los Gatos, in Santa Clara county. This farm is one of our foremost oil-producing establishments, and its future is great, for there is a large acreage of younger trees and of trees recently grafted over into improved varieties. The tree shown is of the Mission variety, and it has been given what is called high pruning—such as meets Mr. Cooper's idea of beauty and utility in a tree, for he practices high pruning on his fine place in Santa Barbara. Other growers, however, believe in lower training, though the olive is usually grown higher than ordinary orchard trees. Across the foreground of the engraving is an olive branch—possibly one dropped by the dove when it was bearing its welcome burden to old Noah. We may, however, regard its introduction in the RURAL this week as a sign that the flood of political jargon is about over, and that after another week the country will be again saved by the election of a new Governor and Legislature.

A SIXTEEN-YEAR-OLD OLIVE TREE ON QUITO FARM.

The Yosemite Annex.

We alluded last week to the establishment of a new national park to be named "Sequoia" from the grand native trees, which it will protect from the inroads of timber-cutters. Perhaps all may not be aware that the United States Government has arranged for another national preserve in California, by a law setting apart 48 townships of land adjoining the Yosemite as a national park. The nominal area of the reservation is 967,000 acres, being 36 miles in the greatest extent north and south and 48 miles in east and west lines. But all this area is not included, because of a clause inserted later which reserves from the provisions of the Act all of the present Yosemite grant now owned and controlled by this State, and also all lands for which patents have been issued to bona fide settlers under the land laws. This leaves the Yosemite proper under its present control. The adjoining park in the vast area above mentioned will be under the direct control of the Secretary of the Interior.

The lands set apart for this vast park are townships 1 and 2 N., in ranges 19, 20, 21, 22, 23, and 24 E.; townships 1 and 2 S., in ranges 19, 20, 21, 22, 23, 24 and 25 E.; and townships 3 and 4 S., in ranges 19, 20, 21, 22, 23, 24, 25 and 26 E., M. D. M.

This park area includes the watershed for all the wonderful falls of the Yosemite, the picturesque Hetch Hetchy Valley and a valuable sugar-pine forest of about 80,000 acres, besides immense tracts of other timber.

A New California Peach.

We give herewith an engraving of a new California Seedling peach which is likely to take high rank among our valuable local varieties. It appeared as a chance seedling in the famous Abbott & Phillips orchard in Sutter county, and its merit was instantly recognized by Mr. Joseph Phillips, one of our foremost fruit men, who submitted the peach to local canners and secured their emphatic approval. The writer had the pleasure of examining and testing the peach at Mr. Phillips' place last year, and was assured that its discoverer had not put too high an estimate upon it.

The peach was first given the name Phillips' Cling in the book "California Fruits and How to Grow Them," where, on page 308, the following brief description is given: "Fine, large, yellow cling, no color at pit, which is very small. Exceedingly rich and high colored. Described by Mr. Skinner, superintendent of the Marysville cannery, as the best peach he ever used."

Mr. J. T. Bogue, the enterprising Marysville nurseryman, was quick to see the value of this new peach of Mr. Phillips and secured the right of propagation, and he offers the trees in his circular for 1890–91, which has just been issued.

The engraving, which was prepared by the Dewey Engraving Co. directly from specimens of the fruit, shows well some of the characteristics of the variety. Its clean, globular form and fineness, as well as the exceptional smallness of the pit, as compared with the bulk of the peach, are well brought out. Its richness of color, fine-grained, dense flesh and full sweetness and flavor are other characteristics which are possessed in a notable degree by the variety. It ripens in the Marysville region the last of August.

CORRESPONDENCE

Correspondents are alone responsible for their opinions.

From Humboldt County.

NUMBER LI.

EDITORS PRESS:—At Garberville we were glad to again meet with a wagon-road, as we were somewhat tired of our journey through the Elk ridge country over pack trails. Owing to the mountainous nature of the country, wagon-roads are scarce and a large part of the freighting is done by pack trains. It is quite worth a visit to this county to view a pack train of mules laden with bags of wool weighing from 150 to 200 pounds each, two of them being securely lashed upon each animal. Lumber, machinery and merchandise of every description is "packed" upon mules. E. Parker has a large train of mules and does a regular freighting business from Shelter Cove to the interior.

Leaving Garberville, we turned to the westward by a well-kept mountain-road, and an eight-mile journey found us again at Briceland and ready for a survey of the coast section of the county south of Eel river. However, before we leave we must again observe that this section of the county has a most healthful and delightful climate, and is destined to become one of the great fruit-producing districts of our State, and we believe that intelligent prospecting would develop some extensive coal mines here, as coal has long since been discovered in various places near Garberville, on the east branch and at Briceland, and is found in several localities between here and the place of the recent developments of coal mines in Mendocino county. The coal does not show in large quantity near the surface, and it is possible that a large outlay of labor and capital will be necessary to a satisfactory development. The formation is sandstone and appears to have a great depth, which must be penetrated before a large bed of coal could be reached; yet we are confident of the existence here of large coal-beds.

People here are hopeful that a railroad will be built to the new coal mines in Mendocino county, as from that point a road could easily be constructed to connect with the Eureka & Eel River road, 22 miles south of Humboldt Bay, and thus form a through route to San Francisco and the interior of the State. The road would necessarily pass near here and open a market for fruits and other farm products, which is the only thing necessary to make Southern Humboldt a very desirable country to reside in. Excellent fruit lands now sell for from $8 to $12 per acre, and the advent of a railroad would cause a very material increase in land values. There is also a large acreage of Government lands, but such lands are mostly rough and heavily timbered; yet a large part of this land would yield good fruits if cleared and properly cultivated, and if connected by rail with a market, the tanbark and other merchantable timber would, perhaps, nearly or quite defray the expenses of clearing.

There is an abundance of large game. Deer are somewhat plentiful. I have just finished a supper of fat buck! Black and brown bears, panthers, etc., afford amusement for the hunter and his hounds; and the hunter for small game can satisfy his murderous propensity on grouse, jack-rabbits, squirrels, quail, etc.

T. B. L.

Ventura Notes.

EDITORS PRESS:—The weather here is delightful now and farmers are more cheerful in hopes to secure the entire crop of Lima beans.

In riding through Santa Clara valley, one sees many bean-floors and farmers at work threshing out their crops, or, in Ventura parlance, "tramping."

The owners of threshing machines claim they are not making expenses, the straw is so heavy and beans so light. Some of them are charging as high as 40 cents per cwt.—double the usual price. All over this fruitful valley the beans lay piled in blackened, melancholy heaps, suggestive of approaching winter.

Here and there the corn yet stands in the fields, its dry, blade-like leaves turned gray and making sad music in the autumn wind. Sometimes one finds it cut and in shocks as in the Eastern States. There was but a small amount of corn planted the past season, but the yield per acre promises well and will bring a good price.

Hay was short both as to yield and the number of acres seeded. Prices range from $10 to $15 per ton; but we do raise something besides "corn and beans" and fruit. Mr. Chrisman, 2½ miles east of Ventura, has raised some mammoth sweet potatoes; one bunch of ten he showed me which weighed 15 pounds. These were raised in one hill and attached to one stem.

A potato from another hill measured 20 inches in length, but people won't buy such large products, so Mr. C. remarked. "What is the use of having rich land if one cannot sell the produce?" Buyers prefer medium-sized vegetables, *not* curiosities.

Our Supervisors have taken a table at the Chamber of Commerce exhibit at Los Angeles, making an appropriation sufficient to continue the display for six months. We were shown some mammoth apples that were to be sent down, also walnuts, beans, popcorn, and several varieties of flowers. Most of the things sent for exhibition, in our humble opinion, should be average in size and quality. Californians are quite apt to put the "best foot foremost." Why not?

Mr. L. E. Mercer, one of Ventura county's beemen, is collecting material for exhibition at the Los Angeles Fair, which opened Tuesday. The exhibit is large and of great variety.

La grippe is showing itself again, but not so universally as last season. M. E. D.

Ventura.

SHEEP AND WOOL.

The Sheep at the Oregon State Fair.

A writer for the Portland *Rural Spirit* gives a description of the sheep exhibits at the Oregon State Fair, including notes of what the Oregon breeders are doing, which will interest our wool-growing readers:

There were 156 sheep and 17 head of Angora goats of all kinds on the grounds, exclusive of a lot of he goats brought in for sale near the middle of the week from California.

The sheep may be divided as follows: Sixty-eight merino, 48 Cotswolds and 24 Shropshires. This includes a few grades of each class.

There were some half-dozen Cotswolds and two merinos sold on the grounds.

There can hardly be said to have been competition among the exhibitors, and some of the premiums were not taken for lack of sheep. Two of the pure-bred merino classes, 2 and 3, were covered with competitive entries and that of graded fine wools, for wool and mutton. These were all representatives of the flock of D. M. Guthrie and John Minto—the fine wool and mutton sheep of Messrs. Halley and Savage being an outgrowth of the latter flock.

Mr. Minto showed in Classes 2 and 3, which, formerly listed as Spanish and American merinos respectively, are now called American and cross-bred merinos, the rule being the latter shall be a combination between the French and Spanish families. This cross-bred class was dropped from the lists in 1889, but is reinstated at the request of the North Pacific Sheep Breeders and Wool-Growers' Association. Mr. Minto, who, as our readers know, has been the advocate of this cross as a means of improving the mutton-making qualities of the merino, had a full exhibit in the list (the rams all hornless) and received all the awards.

Mr. Carey took a new departure as a breeder. He has heretofore shown the merino of the Vermont type carefully prepared. He had his best sheep of this kind at this fair, but it was remarked they did not show as careful preparation as last year. The fact is, Mr. Carey became a convert to the ideal Mr. Minto has advocated and has been working to realize for the past 28 years, and had on exhibition at this fair a fine young ram of the National Dickenson Delaine Mutton-wool merino, registry lately established. This young ram is accidentally hornless, which adds to his value in the Carey's vein, and is otherwise a fine example of the points claimed for the family. He was, however (improperly, as we think), shown in the class of merinos, based on the Vermont type, calling for a very different scale of points, and, as the judges seem to think, with many others, that the horns must go, this smooth-bodied, well-grown yearling, verging close upon two years old, took the blue ribbon in the American merino yearling contest, beating even his owner's horned yearling, which was properly entered.

The Committee on Awards made the following remarks:

"In passing our judgment on your exhibit of sheep this season, we were very much pleased to find that several very fine specimens of fresh blood had been imported recently, which we esteem of great importance; at the same time we do not overlook the unremitting energy of John Minto in seeking to improve his merinos by mating different varieties in order to secure both stamina of constitution and staple of wool, both of which we believe he has attained."

The Cotswold Victory.

The premium offered for the best ram of any age or breed for wool and mutton was won by the Cotswold ram Dexter 3036, owned by David Craig of Macleay, Or. He had in competition a Shropshire and a Devon long wool. The ram Dexter is a grand type of the Cotswold sheep. He was the largest sheep on the fair grounds and a great attraction at the pens. Mr. Craig informs the *Spirit* that the demand for Cotswolds was never better than at present, selling more freely and at better prices than usual, and that the Cotswolds offered for sale at the State Fair were all sold. The Cotswolds have been in Oregon for a long time, and they have proved to be a good, hardy sheep, raising nearly all their lambs, giving a large carcass of meat and showing a heavy fleece of long, staple, lustrous wool.

The Wool-Growers' Association.

The North Pacific Sheep-Breeders and Wool-Growers' Association re-elected the officers of last year: John Minto of Salem, president; James Withycomb, Jr., of Hillsboro, secretary; H. H. Savage, Salem, treasurer.

The association thanked the State Board of Agriculture for the line of new pens erected and asked for two more such lines, resolved in favor of more stringent legislation in behalf of sheep husban dry and determined to make an effort to institute registries of the thoroughbred flock of the State.

HORTICULTURE.

The Robe de Sergent Again.

EDITORS PRESS:—Regarding a letter from Mr. Felix Gillet read at the September meeting of the State Horticultural Society, and wherein Mr. John Rock and myself are mentioned, permit me to say that it is worse than unprofitable to carry on a discussion with this gentleman, because he either does not read or does not understand what has already been written and also because he is never present at our meetings, and in this instance at least is playing at cross-purposes.

Pardon the following quotation from his letter:

"At the time that we started in California (six years ago), the discussion of that prune question with a view of straightening up our prune nomenclature, and when we were yet in doubt whether we had the true d'Ente or Robe de Sergent of the French *under the name of Petit d'Agen or French prune*," and so on.

The Robe de Sergent, by which I mean the prune now generally accepted as such in Santa Clara valley and elsewhere, has no analogy whatever with Petite d'Agen or French prune, or with what Mr. Gillet has repeatedly sent down to our meetings as the true d'Ente or French prune. Neither Mr. Rock nor myself have ever made any such claim for it. I imported it from Messrs. Transon Freres, Orleans, France. One of the firm has spent some time in California, and while I was in Europe last spring they offered to send with me to the south of France a young man in their employ. They do an immense business in this country and are, perhaps, as competent as Mr. Gillet in judging of the best varieties of prunes grown in their own country.

The prunes which Mr. Gillet has repeatedly sent to the State Horticultural Society meetings are nothing more nor less than our common, every-day French prune, or Petite d'Agen, and which may not be superseded after all. I can call the secretary or any members present to testify that the samples I showed at August meeting from my own orchard and which two years ago I showed from the orchards of S. H. Shaw of Sonoma and H. L. Gibbs of Calistoga *were larger* than those sent down by Mr. Gillet, and precisely the same prune.

At the Fruit-Growers' Convention held at Sacramento some years ago, Mr. W. H. Aiken exhibited French prunes from many different localities, all of which were as fine or finer than Mr. Gillet's best, and if Mr. Gillet will go to Santa Cruz next month I am sure he will there see a duplication or improvement on what I have mentioned. The vast valleys and plains of California do not all stand still while Mr. Gillet continues his very laudable researches.

To return to the Robe de Sergent, it is the name by which it has become known in California, although, as I have frequently said, I do not think it is the correct name. As a nurseryman as well as orchardist, I am the servant of the public in this matter, and for the last three years I find there has been a greatly increasing demand for this prune, and almost entirely from the Santa Clara valley, the great prune center of the State. They surely know something about the prune there. What is the reason for this demand? In the words of Dr. Kimball of Haywards, "they sold for 3½ cents more per pound than the French." I carried a limited stock of this variety in my nursery for several years and sold scarcely a tree. It was not known and was bearing in but a few orchards.

To show further that Mr. Gillet does not know this prune, he says "it ripens two or three weeks earlier than the French." Of the samples I took to the August meeting, the French prunes were riper than the Robe de Sergent, neither has the wood any resemblance to the Duanes Purple, as he states.

I should have stopped, Messrs. Editors, when I remarked that this discussion is without profit, and so it will continue to be, I am afraid, until Mr. Gillet will bring his prunes to our meetings and be willing to admit that there are prune-raisers to be met with occasionally outside of Nevada county.

The Robe de Sergent is a distinct variety of prune originating in France. It is no more a "type" of French or Petite d'Agen than Sonoma Seedling (Cook's) apple is a "type" of Skinner's Pippin because both originated in California. LEONARD COATES.

Napa, Cal.

The Cuthbert Raspberry Again Ahead!

EDITORS PRESS:—By this mail I send you specimen branches plucked at random from a patch where thousands just like them are growing and fairly weighting down the bushes with the tremendous winter crop which they are just beginning to bear.

I send boughs heavy with ripe fruit and fruit in all stages of progress down to the fairy-like white blossoms, *so thickly set* that one wonders how it will be possible for the vine to bring so much on to perfection, and *still they do it* every time!

The other day, just for curiosity, I counted on a branch not more than 18 inches long 350 berries from bloom to ripe berry!

Last year I imported every new red raspberry to be had of any Eastern grower. This year they grew and fruited right alongside of the Cuthbert, with the same soil, care and cultivation, and again the unrivaled Cuthbert red raspberry has proved herself unmistakably the "Queen of the Market." L. U. MCCANN.

Santa Cruz.

[The specimens received by mail bear out the description which the writer gives of this well-known variety.—EDS. PRESS.]

Peaches—Vine-Knot.

EDITORS PRESS:—I would like to inquire, through the PRESS, which peach is the most profitable bearer, the Early Crawford or the Foster, and which needs the least thinning, and which resists the curl-leaf the best. I would also like to ask if there is a way to get rid of black-knot on old grapevines.—INQUIRER, *Los Gatos.*

[We would like comparison of views and experiences on both these points. The Foster is, according to our information, earlier than the Early Crawford, superior to it in firmness and color of flesh, and less red at the pit, which is also smaller. Both are practically resistant to the curl-leaf. As to bearing and thinning, our experience is too narrow to warrant conclusion. What say others?

If a vine is not too badly knotted, it can be helped by paring or chiseling off the knots and covering the exposed surfaces with paint or grafting wax; but some old vines are too thoroughly diseased to be recuperated in any way. EDS PRESS.]

Date Palms and Citron Trees.

Prof. E. W. Hilgard, Director of the University Agricultural Experiment Stations, has received the following letter from Prof. H. E. Van Deman of the Division of Pomology of the U. S. Department of Agriculture, concerning the date palms to which allusion has been made in previous issues of the RURAL:

Prof. E. W. Hilgard, Berkeley, California—DEAR SIR: I have this day started the imported date trees mentioned in our previous correspondence by way of the Southern Pacific railway. We have been keeping them here about a month longer than was expected, because we found it very difficult to destroy the scale insects which came with the plants from Africa. The Entomological Division has been treating them with kerosene emulsion and finally a spraying of resin solution. It is now thought that the insects are all killed, but I will warn you to be on lookout and if anything of the pest mentioned should appear, you will know what to do.

I have sent a full set of all the varieties to the station at Tulare in care of Mr. Julius Forrer, the foreman. The names of the trees are as follows: Amhat, Nakleh-el-Pashs, Seewah, Hazaneh, Zeb-el-Abed, Sultaneh, Amreeyeh, Rasheedeh, and one male plant. Also, Deglet Nour, Rars and M'Kintichi.

To the station at Pomona were sent nine trees, being one each of the following varieties: Amhat, Nakleh-el-Pasha, Seewah, Hazaneh, Zeb-el-Abed, Sultaneh, Amreeyeh, Rasheedeh, and one male plant. It is not necessary to give you any directions regarding their planting, because yourself and Mr. Klee, who will no doubt supervise the planting personally, know perfectly well what to do. I would merely suggest that the male plants be put in the center of the groups.

There are three varieties of which I had but three plants each, and one set of these went to New Mexico, another to Arizona, which of course only permits the sending of one to your State, and I thought that Tulare was the proper place to send them.

I also sent to Pomona a box containing citron trees, which I obtained from Catania, in Sicily. These are the choicest varieties that could be found there, and were budded at my special order. There are six trees of Cedro Vero, which is a variety bearing rather small fruit, but very good in quality; two of Testa di Turco; two of Pereltone and two of Limonziana, making 12 trees in all. These you will know best what to do with, but I suppose that you will set them out at Pomona and propagate from them. We think that they are entirely free from insects, as they have been kept here under strict watch since last spring.

I have had numerous applications for plants of both the date and citron, but of course it was impossible to supply them, and I have now already turned over several of these applications to you and will continue to do so. I think the date trees have been wisely placed both in your State and in Arizona and New Mexico.

One colony of the plants is at National City, California, one at Yuma, Arizona, another at Phœnix, and another at Las Cruces, New Mexico. A few of the tubs contained double plants or rather two plants, and I have thus been able

to order a division made in such cases, and these extra plants, four female and one male plant, will be sent to Indio from National City and placed in the care of the Southern Pacific railroad there. I know that you will wisely control the distribution of the young plants which may be grown; but in the cases where colonies have been placed in the hands of private individuals, an agreement has been made in writing and properly certified, giving this department entire control of the distribution of the young plants. They have been procured at public expense and are the property of the people, and shall be placed in their hands. Trusting that the plants will reach you in good condition, I am, H. E. VAN DEMAN,
Pomologist.

Washington, D. C., Oct. 11th.

AGRICULTURAL ENGINEER

A Californian in Holland.

Dr. W. M. Ryer, owner of Ryer island and well known in discussion of tule-land reclamation, writes from Holland to the *Evening Bulletin* as follows:

Within the boundary of the State of California are large tracts of swamp and overflowed lands which, when reclaimed and subjected to the cultivation they are susceptible of receiving, will by their products become capable of supporting a population equal in numbers to that which now inhabits the entire State. To many persons this statement may appear extravagant, and to others, who have doubts upon the practicability of reclaiming and cultivating these tracts of land, it may seem a declaration which should be followed by the proofs. The misfortunes which have attended the efforts to reclaim the swamp lands of California present many good reasons to doubt a result so important, and if it is not shown to be more from the inefficiency of the means used than from the impracticability of reclaiming this land, then those who doubt do so wisely.

At this time the swamp and overflowed land of California is either in a condition as profitless as when first surveyed or is imperfectly reclaimed and carelessly cultivated. To go upon these dismal swamps and look at them as they are in a natural state, or in the so-called condition of reclamation, it becomes difficult to bring the mind to the belief that upon land exactly the same in the quality of its soil and in its relation to the floods of the rivers and the tides of the sea, there now is maintained and has existed for centuries as high and refined a civilization as can be found among the nations of the earth. In relation to these waste lands of California, it may be said, "What has been done may again be done when like conditions exist." Upon swamps originally like the overflowed land in the Sacramento and San Joaquin valleys and on the margins of the bays of San Francisco and Suisun in the centuries past, a people founded a nationality whose record is among the proudest for deeds of dauntless courage on the fields of battle and for daring and enterprise on the seas.

To give any portion of the military or naval history of this remarkable race is not within the line or intention of this article; the desire is to briefly direct your attention to the mighty works of civil engineering and patient labor done on the lowlands of the Netherlands to illustrate what may be done on the lowlands of California.

The Manner of Reclamation.

The entire Kingdom of the Netherlands contains 12,650 square miles. This is an amount of land equal to a strip of country 42 miles wide and 300 miles long. Such an extent of land could be taken from the San Joaquin and Sacramento valleys and leave a marginal surplus. The number of the population, as estimated upon the last census of 1886, is at this time 4,800,000 people. The larger part of the entire State is protected from the storms and tides of the North Sea and from the currents and overflow of the river Rhine and other rivers of lesser magnitude by sand dunes and by dikes. The land thus protected from the ravages of the sea and rivers is drained by canals, whose water is pumped by windmills and by steam-power into the rivers or the sea, which at many places have an elevation of from 15 to 30 feet above the level of the canals. Do not understand that the greater portion of the reclaimed land in Holland is of a level so low as these figures would indicate, for these depths are only found in such "Polders" as the Haarlem, the Beemster, and perhaps a half-dozen like reclamations.

The last reclamation of importance was made in the construction of the North Sea Canal, extending from Amsterdam westerly to the North Sea, a distance of about 18 miles. This work was commenced by the construction of an immense dam of 1½ miles in length, across an estuary of the Zuyder Zee, known as the "i j" (pronounced 1). In the center of this dam were made five stone locks, three of which are adapted to the passage of vessels and two are for the regulation of the water in the canal. At the North-sea entrance to the canal there are three locks of granite, brick and iron, which act as barriers to the waters of the ocean and permit of the entrance and exit of the largest steamships engaged in commerce between Amsterdam and other seaport cities. This great work was commenced in 1865 and finished in 1876. The canal extending from Amsterdam to the Helder, through which the commerce of Amsterdam was formerly conducted, became insufficient as the tonnage of modern vessels increased.

To realize the importance of this great enterprise, imagine a dam built across the Bay of San Francisco from the drydock or Potrero Point to the nearest shore of Alameda, and at a distance of three-quarters of a mile from the city shore, and in the Bay of San Francisco, five enormous locks of granite, whose foundations are 40 feet below the surface of the water. Now see with your mind's eye two long levees or dikes whose foundations sink nearly 40 feet below the water level, and constructed as jetties are when made at great depth, but watertight; these levees or dikes running parallel to each other at a distance of 300 feet and extending a distance of 15 miles toward San Jose, and in the middle of the bay.

Now fancy, or bring your imagination to picture, the largest steamships which enter the Bay of San Francisco steaming through this canal, and all the water now in the bay on either side of the canal pumped out, and the bottom of the bay transformed into dry land, upon which an industrious and frugal people have built towns and happy homes, and have cultivated the land into pasture and grainfields.

The steamships which pass from Amsterdam to the Atlantic ocean course along a canal whose waters are, for long distances, 20 feet above the land on both sides of it. This land was, 20 years ago, the holding-ground for ships' anchors; it is now cultivated into productive fields of grain or is devoted to pasture for cattle and has upon it thriving villages. The immense quantity of water which the bay contained was pumped into the ship canal after the dikes were completed, and by this channel they were discharged into the sea. The land thus recovered from the ocean was sold to the farmers for about $450 per acre, and it thus paid about one-third of the cost of the canal. The city of Amsterdam paid about one-fifth of the cost of the canal, the balance was paid from the National Treasury. As a work of water engineering this canal and the approaches to it from the North sea and the city of Amsterdam, rank among the highest of modern achievements.

To fully appreciate the engineering ability demonstrated by the works of Holland engineers in the construction of dams, dikes, jetties, etc., you should go upon those which are exposed to the storms of the North sea, which at times rage with all the violence of the Atlantic or Pacific oceans. Those who doubt the practicability of reclaiming the marsh lands of California should stand upon the dikes and dams of the Netherlands and the parts of North Germany contiguous thereto when the sea breaks during storms, with all the violence seen at Seal Rock or the entrance of the Bay of San Francisco, upon the outer side of those dams and dikes, while on the inner side, and lower than the natural surface of the sea, the industrious and happy people pursue their usual course of life, having confidence that no danger exists behind such barriers.

Unfortunately, practical water engineering, as taught in Holland, is not taught in any of the collegiate institutions of America. Certainly none of the graduates of these institutions have demonstrated any special knowledge of this subject in the works in California. With works constructed as they are in Holland, the swamp lands of California would be cultivated without fear of overflow, and the product of this cultivation would contribute immensely to the wealth of the State.

Canals of Irrigation and Drainage.

After the land is securely diked, the next work of importance in the reclamation is the drainage and the irrigation. As the largest portion of the reclaimed land in Holland is below the river or sea level, it becomes necessary to dig canals to drain it and to raise the water from these canals to such channels as will carry it to the sea. Holland is a country where the rainfall occurs in every month of the year, and it is more abundant than in California, so that both rainfall and seepage require lifting to higher levels.

In the "polders" or lands reclaimed from the water, the canals are made at distances from 400 to 800 feet from each other and usually parallel. The end sought is to drain the land when too wet, to irrigate when too dry, and to partition the land into fields, the canals acting as fences and as resources for manure, for the vegetation which grows in the water is raked out, put in piles, rotted and spread on the land to enrich it. The reclaimed land of Holland is as productive in grain, vegetables and pastures as the best found in Europe, and seems to have lost but little of its riches, even where cultivated for centuries. This is due to the depth and richness of the soil and the application of manure taken from the canals and the beds of peat. The division of the farms into fields by the canals enables the farmer to confine his cattle on one field, while the others are reserved for the harvest of hay, grain or other products.

The Holland Windmill.

Among the structures illustrated by paintings and engravings until they have become associated with the name of Holland, and come before the mind when it is directed to this country, are the windmills. Comparison of their unique and graceless outlines are made with modern windmills much to the credit of the latter, especially so when the valuable services rendered by the former are lost sight of.

The Holland windmills are usually built upon piles driven into the ground until a firm foundation is reached. They are either round or many-sided, with a base of from 25 to 50 feet in diameter, decreasing in dimensions to their summit, and are of a hight of from 40 to 60 feet. The fans are of great length, usually from 15 to 30 feet, always four to each mill, and made by crossing at right angles two very large timbers of from 30 to 60 feet in length. The fans are made oblique by a framework of light slats, so crossing as to support the sail. Over this frame a canvas sail is drawn when required for use and withdrawn when it is desired to have the mill motionless. The mills are so constructed in the interior that each revolution of the fans will cause, by a system of cogs, many revolutions of an Archimedean screw pump, which is placed at its lower part in the canal of supply, and at its upper part to the canal of discharge, at an incline of about 40°. These screws are from four to eight feet in diameter, and are so incased to confine the water that in a fair wind a great volume of water is raised from the lower to the higher level.

Before the use of steam pumps these mills were a necessity in the reclamation of the swamps of Holland, and as they are very effective and are less costly in their workings than steam machinery, they have continued to keep in a cultivable condition the larger portion of the land. These mills were and are now used as saw and grist mills, and for these purposes they do the work required well. For the simple lifting of water it is doubtful whether modern science has discovered anything better than the Archimedean screw, whether propelled by wind, water or steam; and it is also doubtful whether there are any more effective windmills in existence, or any more capable of resisting the storms and tempests than the windmills which are so prominent in the landscapes of Holland, and which so often suggest the ludicrous to the traveler.

As valuable for the purpose of drainage as are the windmills, it must not be understood that all the improvements of modern steam machinery have been omitted. On the contrary, the steam pumps used in pumping out the waters of Haarlem lake and the bay known as the "i j," at the time of their reclamation, are models of effective machinery.

THE VINEYARD.

Mr. Dresel's Experience with Resistant Vines.

Julius Dresel of Sonoma, who has had long experience with resistant vines, gives the *Index-Tribune* an account of his success as follows:

We are now in the midst of our vintage and every one may judge for himself how dreary an aspect the vineyards present around Sonoma, a place famous all over the United States for the best wines in California. I therefore think it opportune to make some remarks about that strange sight of an intelligent community listlessly standing by, waiting for something to turn up, while the vineyards, once the pride of our eyes, fall dead, acre after acre, from the extended flats at the mouth of our lovely valley clear up to the tops of our lofty hills. Strange indeed!

Finally, something happy really turns up. The prices for grapes actually rise from 30 to 50 per cent. Zinfandel bring $15 to $17 and Gutedel and Riesling $16 to $20. Cabernet Sauvignon is in demand for even $27, but not to be had. Besides, there is good reason that similar prices will prevail for the next few years and better wine prices may follow in consequence.

With $15 and $20 per ton the wine-grower can make his occupation a profitable one, and with this the main objection against replanting is void. The phylloxera has certainly lost some of its terrors since the resisting American stock has been planted and grafted with entire success on a stretch of over 400 acres between Haubert's and Rufus' vineyards.

Twelve years ago Dresel & Co. began to introduce Lenoir from Texas (at $40 per ton) and Riparia, Herbemont, Elvira and other resisting stock from Missouri, all of which were dropped in favor of Riparia on account of its good growing qualities and remarkable adaptability to all kinds of soil. Riparia did equally well on the hillsides and flats, in sandy or clayish as well as in loamy soils.

In grafting, its junction with the scion presented no difficulty. Stem and graft developed about evenly and bear abundantly to the present day red or white grapes of French or German origin, of high flavor or of neutral character. At present, dead vineyards are more worthless than naked land. By renewing them with resisting stock the value of the land may be raised to $300 and more per acre. Therefore I advise replanting. Cuttings are cheap. Lenoir and Riparia may be had in Sonoma and Napa. They should be planted in the nursery for one year, remain two years in the vineyard, then grafted in the third year during March, April and May, and in the fifth year they will bring a fair crop. Cleft grafting is quickly done. Anybody can learn it easily enough. An experienced hand can finish from 150 to 200 in a day.

The most important thing to observe in grafting is: Cut the stock even with the soil, or better, half an inch above it, and then heap the soil in a mound around the graft to protect it against wind and sun. After the graft has taken, say in September, remove the mound and any roots that may have grown from the scion. Now the vine is perfect. If the grafting has been done below the surface of the soil, it will be necessary every year to dig around the plant and remove all roots that will form on the scion, or else these roots will draw the nourishment from the leaves to the detriment of the resistant roots below. Phylloxera will then appear, kill the upper roots, and the vine becomes sickly or dies.

I expressly state that we met, apart from the costs, no serious drawback in this replanting experiment of our 150 acres, and assert that it would be a tedious search to find a single vine that has died. On the other hand, we will be pleasantly remunerated this year by the sale of 50,000 gallons of wine raised exclusively on American stock.

In plain view of these facts, how is it possible that so many of my fellow-wine-growers in Sonoma valley persistently decry my happy success in replanting, spreading the ridiculous report that the resistant stock in our vineyard was dying out as fast as the remnants of the old plantations? Is it not a curious freak of human nature to belittle a promising result instead of sympathizing with an experiment that might redound by imitation to the general benefit of our devastated valley?

Colonel Gardner of the Census Bureau, when taken through our vineyard, was astonished at what he called a wonderful crop of grapes in so young a vineyard, and he made a corresponding report to Washington about the success of resisting stock at Sonoma.

For those who still doubt the correctness of my statements, I refer to the testimony of so experienced viticulturists as Messrs. D. D. Davisson, O. W. Craig, Chas. Kohler and John O'Brien of Sonoma and I. DeTurk and L. Burris of Santa Rosa, who have visited our vineyards for investigation, and left convinced, as I am myself, that our fellow-wine-growers could do no better than replant dead vineyards with American resistant stock at their earliest convenience.

Eastern Grapes on Our Southern Coast.

EDITORS PRESS:—In the RURAL of Aug. 30th, H. S. Harvey of Hueneme asks why the hardy Eastern grapes are not raised here, such as Concords, Delawares, Marthas, etc.

I have seen no reply, so will give a bit of my experience in the culture of a few varieties:

1st—*Iona*, which is first class as to flavor, a good grower and a fair producer.

2d—The *White Niagara*, a rank grower, good flavor and heavy yielder for an American grape.

3d—The *Brighton* is good flavor, strong grower and produces very well; red in color, similar to Iona.

4th—*Salem*, which is of the *best flavor*, good grower, but so far a very shy bearer.

5th—*Delaware* is a smaller grape, sweet and good flavored, but not a good producer. Red in color, similar to Salem.

6th—*Empire State*, a rank grower, similar in color to Niagara, but smaller and produces much less.

7th—*Prentiss*, a white grape of fair flavor, a good grower, but refuses to give me much fruit.

8th—*Worden*, a fine black grape, nice flavor and productive. Does not grow as fast as some of the other varieties.

9th—*Moore's Early*, similar to Worden, but some earlier.

I have some other varieties, but so little difference in flavor and appearance it is not worth the while to make any note of them.

My first choice is Iona; second, White Niagara; third, Worden.

The American grapes do not stand close pruning like the Muscats, etc. They have a *wild* habit of growth, good to cover a trellis, rocks or trees.

All have a little *twang* of the wild grape, very pleasant to the taste. Are not so subject to mildew as Mission or Muscats.

O. N. CADWELL.

Carpinteria, Cal., Oct. 12, 1890

[This record of experience is very valuable. Will other growers take part in the discussion? EDS. PRESS.]

ELECTRICITY IN FISHING.—It has long been known that light has a strong influence in attracting fishes in deep water. Some very interesting experiments have recently been made in the use of the electric light, which, different from other lights, can be lowered to great depths in the sea. In the course of these experiments, it has been found that the electric light has a large future before it in the fishing business, and particularly in deep-water fishing. At present the cost of miles of line and netting required for a complete fishing plant is very considerable, cumbersome and unwieldy, the latter especially in bad weather. Instead of extensive nets each fishing boat with a small electric-light plant and a few hand-nets would be able to accomplish much more than would be possible with the present cumbersome outfit.

ELECTRICAL PRODUCTION OF CAUSTIC SODA.—Caustic soda and chloride of lime (bleaching powder) is now produced from salt by means of electricity more readily and cheaper than by the old methods.

PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

Thoughts of the State Grange.

EDITORS PRESS:—It is with pleasure one reverts to the recent gathering at Watsonville of so many of the prominent agriculturists of the State, accompanied, as they were, by the gentler members of the household, to cheer and brighten the week's vacation afforded by the annual convocation of the Patrons of Husbandry.

That these yearly socials are growing in interest and popularity goes without saying, and to say that the last one excelled all former meetings in these two essentials, is merely to note the progress making throughout the rural districts by the people most in need of fraternal culture.

The men and women are yet of middle age who would have marveled during their youthful years at such a cultured congregation of farmers and their wives and children as were recently assembled at Watsonville, and to whom the various exercises and duties were a matter of course, carried out with the ease and ability of veterans.

Were this ease and grace all the fruits gathered from our noble Order, the harvest would be ample for the toil involved; but it makes us all akin, and awakes and strengthens a sympathetic tie to which we were strangers a quarter of a century ago. That there is much yet to learn cannot be gainsaid, and this is no truer of the adult than it is of the unfolding mind of the youth who takes his position on the stage of action while his predecessor is approaching the exit.

I am sure every Patron present, like the writer, was proud of the fact that he was a member of the Order, proud of the noble men and women of the State Grange, and last but not least, of the good people of Watsonville, whether within or without the Grange. To the latter it was a week's severe labor, but it was a labor of love; a sacrifice tendered with open hearts and hands; an offering that can no more be blotted from memory than the home of our childhood. My pen is inadequate to do justice to the occasion, and our friends must accept the will for the deed. I cannot see how the social feature could have been improved upon, and will therefore not dare to make a suggestion.

As to the business of the Grange, there is always room for improvement; and while the recent meeting was better in this respect than the last, ay, better than any former occasion, something more can be done to render the business easier, speedier and more satisfactory to all concerned.

The scheme of standing committees to hold from session to session was a good one, giving them ample time to digest the business intrusted to them, for in the Grange, as in all deliberative bodies, the chief work is performed in the committee-room. But these are of no consequence unless they receive work to do which should come from the subordinate Granges as they spring up during the year. Such questions should first be sent to the Master of the State Grange and by him distributed to the several committees. Such a course would facilitate business very much and give more time for social enjoyment. Again, no sessions of the Grange should be held in the forenoon of the two first days of the meeting. This would give committees the much-needed time to prepare their work, and the afternoon and evening meetings would be enjoyed by all and would afford plenty of time for the business in hand. After the first two days, three sessions a day could be had without hindering committee work.

No new business should come before the Grange the last two days of the session except by unanimous consent. This would prevent hasty legislation, except on very meritorious questions.

The work of framing bills to be presented for State legislation should, in my judgment, be abandoned. It cannot be done as it should be, then why attempt it? The Grange should content itself by instructing, by resolution and otherwise, the public servants as to its wishes on the several topics of public concern. Bills may and should be prepared by committees, and by them urged into laws. The plans here briefly outlined if adopted would, it seems to me, enable the State Grange to transact more business, in less time, and do it better, and the work would not interfere with the social feature, which no one desires to curtail. Fraternally. G. O.

Yuba City, Oct. 21, 1890.

Sacramento Pomona Grange.

Sacramento Pomona Grange will meet with Enterprise Grange on the first Saturday in November at 2 o'clock sharp. All the officers and members are requested to be present. The meeting will be conducted in the fourth degree, and all fourth-degree members are cordially invited. Grangers, come to this meeting. Come together, talk together, and let us see what benefit the Grange has been to us, and how we can make it more beneficial.¶

A. A. KRULL, Sec'y.

The Farmers' Defensive Movement.

At the late session of the National Farmers' Congress at Council Bluffs, its President, Hon. R F. Kolb of Alabama, said: "Under this banner are marshaled the disciplined veterans of the Grange, side by side with enthusiastic recruits of the sub-alliances, all animated by one holy purpose in a united effort for home and country. This great defensive movement of the farmers has already inaugurated a peaceful but profound revolution, as important and beneficial in its effects and results as those achieved at Yorktown or Runnymede. This revolution to-day extends from the St. Lawrence to the Gulf, and from the Atlantic to the Pacific; has a deeper and more enduring power behind it than is generally credited, and it is one that may truly be termed an 'irrepressible conflict.' Partisans may revile, the press may ridicule, hirelings may prevaricate and the slaves to money may scoff and seek to belittle, but the great masses of the people are aroused to the dangers which threaten their liberty, to the power that contracts finances, and, by control of money, regulates wages and dictates prices for the fruits of your labor and the products of your toil. The situation is understood. The problem is comprehended. The remedy is well known. The irrepressible conflict between organized capital and the producers and laborers is on hand. It will abide with us until a solution shall be had. It will be the controlling idea, the overshadowing purpose in politics, until it shall be settled. * * *

"The South is with you in heart, in sympathy and in action; and with our prejudices abandoned, the bitterness and acrimony of the past forgotten, and a stern determination to join hands and efforts in this great conflict for self-preservation and disenthrallment, there can be no doubt that the three million producers and laborers will march to the same music, with the same grand inspiration and the same holy purpose, and with guidance from on High, that the day is not far distant when patriots from one end to the other of this grand and glorious country can rejoice that the Government of the people, for the people and by the people, has been reassured with equal rights to all and special favors to none."

The Barbecue.

On Wednesday, the visiting Grangers were treated to an old-fashioned barbecue by the citizens and members of the local Grange. The responsibility of cooking the meats, beef, mutton and pork was placed upon Robert Johnson, who was assisted by his sons. A trench was dug in the lot adjoining the opera-house, and when the viands were served, the Grangers went into ecstasies over the cooks and their cooking. The barbecued meats were served in the plaza. Four long tables, with a seating capacity of 450 people, were spread, and with true Californian hospitality, food was provided for double the number of guests.

The tables were guarded by the Watsonville Cadets, while their sister organization, the Zouaves, a company of public-school girls, costumed in dainty white gowns, set off with scarlet turbans, waited upon the guests. It was a magnificent spread—solid and substantial—and savory enough to make even a dyspeptic reporter's mouth water. The viands were served on wooden plates, and there was an abundance of Martinelli's celebrated Pajaro Valley cider to wash down the feast. The banqueters' appetites were sharpened by the cheery strains of the Watsonville band, and their ears tickled by the singing of a chorus of school children.

A. P. Roache officiated as Master of Ceremonies, and announced the first toast, "The Grange and Its Objects," which was responded to by Senator Johnston of Sacramento. Other toasts were responded to, in brief, pithy speeches, as follows: "The Honest Granger," B. A. Osborn; "All the Worthy Ceres of the Union," Mrs. N. A. Sanders of San Jose; "California," Walter Greer of Sacramento; "Why is the Grange Non-partisan?" C. J. Cressey of San Jose; "All the Worthy Floras," Miss Matie Johnston of Sacramento; "The Foundation of Our Order," S. T. Coulter of Santa Rosa; "Equality for All," Thomas McConnell of Elk Grove; "All Worthy Pomonas of the Union," Miss Rosa Ostrom of Wheatland; "J. A. Brigham, the National Worthy Master," E. W. Davis of Santa Rosa.

Like the reception, the barbecue, in the language of an honest Granger, "took the bakeshop."—*The Rustler, Oct. 11.*

National Grange Session.

Official Announcement.

WASHINGTON, D. C., Oct. 14, 1890.

Dear Sir and Brother:—In accordance with the provisions of its Constitution and the resolution adopted at the session of 1889, the twenty-fourth session of the National Grange of the Patrons of Husbandry will be held in the city of Atlanta, Georgia, commencing on "the first Wednesday after the second Monday in November" (12th), at 11 o'clock A. M.

Accommodations for the National Grange have been secured at the Kimball house ($2.50 per day) and at the Markham house ($2 per day), including heat and light. By order of the Executive Committee. JOHN TRIMBLE,
Secretary National Grange.

What Is Nationalism?

Or, An Independent View of Nationalism.

[Written for the RURAL PRESS.]

One of the editorial notes in a late issue of the San Francisco *Bulletin* says that the "Nationalist fad prevails in Los Angeles."

1st. The Nationalist idea is quite generally abroad in the land and is by no means peculiar to Los Angeles.

2d. We shall soon discover that it is less a "fad" than a coming fate which is being forced upon us by the onward trend of events, whether we like it or not, and can no more be resisted, or even avoided, than mountain streams and rivers can resist or avoid reaching the ocean. The rapidly growing and relentless tendency to combine the energies and forces of both nature and human nature is of itself and in its own way settling the matter for us by constantly, and without asking our permission, finding expression in larger aggregations, not only on the part of capital and private corporations, but of labor and labor organizations. This principle must, like "the brook," "go on forever," and the human institutions which move along its surface must continue to move or sink to the bottom until imperfect or fragmentary combination is at last swallowed up and assimilated by the general aggregation, governed by the popular will and in the interest of the whole.

3d. While it is true that between this end and all monarchical forms of government there is an organic, irrepressible and uncompromising conflict, it is equally true that it is the only logical and complete answer to the instinct and demand for a government of, for and by the people.

Hence, while this force is naturally calculated to overturn monarchies and thrones by violence, it is through the very elasticity of our institutions and through the normal workings of their central doctrine far more likely to be peacefully absorbed and made all-potent and controlling in our nation through evolution.

4th. How is this to be accomplished—after Bellamy's or some other plan? Whenever a combination has the power and disposition to control State and National legislation and uses that power for selfish ends and to the detriment of the State and the general public, war is virtually declared between that combination and the Government; in other words, the people. Of course the war may consist of battles in the air and the clouds and be bloodless, but it is war nevertheless, and war that cannot cease till one party surrenders horse, foot, cannon and commissary stores, or till both parties are like the "Kilkenny cats"—rendered powerless for good or evil.

Perhaps we have not yet reached the point of actual active war between private pools and the people; but unless the public is either a big knave, coward or fool, we are certainly approaching that end when great corporations control our elections, and when Wall street boldly pools and corners silver in order to pick the pockets of the people by compelling Government to pay a cent more per ounce than it is really worth and to then—after the U. S. Treasurer has made his purchase—allow the metal to drop back to its market value. That Wall street has done this very thing within a few days, no one pretends to deny; and that Jay Gould and his associate pirate, Col. Jim Fisk, did a far more criminal thing in the gold market a quarter of a century ago is still a "Black Friday" memory that can be proved by our national records. And that there is any remedy for these and kindred evils, except the national absorption of all great private corporations and the Government control of our mines and finances just as fast as their conduct comes in conflict with the public welfare, no thoughtful man will attempt to prove or claim.

This, as far as it goes, will be Nationalism; and this is just what the united voice of labor, including the farmers, is beginning to demand all over the country.

5th. Corporate greed, no matter whether pitted against a few "strikers" or against government, never knows when it has got enough nor when or where to stop. If Wall street is allowed to swindle the combined people through their servant Windom, to the extent of one cent on each ounce of silver, who or what short of the nation itself is to limit Wall street's demand?

That which is true of the Wall-Street silver-pools is equally true of all great corporations and combines, inspired by the one sole purpose to get all they can and divide it among private parties.

6th. This war between the great private aggregation and the nation, if not already declared, is, in spirit and fact, already upon us. The Boss Buckley idea, which is just now incarnated in the saloon monopoly, must, by the natural law of progress, sooner or later extend from the great city and single State to the General Government; and then it will either control the nation—as Buckley is said to control San Francisco, if not California—or the nation must capture, convict and "convert" it and set it to work for the general good, as New York did Boss Tweed and as Minnesota did Cole Younger. And this will, to all intents and purposes, be Nationalism.

Whether Bellamy's proposed and peculiar methods are to accompany the principle when in operation, is of minor consideration, and for the people themselves to decide. This will regulate itself when the time comes, as all other great changes do. National systems, no less than the human system, are, if alive, constantly undergoing change, and the questions of inward diet and outward dress must be determined by the necessities and demands of the subject.

Just now, there is a widespread feeling that private corporations are not supplying the general public with proper rations and convenient clothing, saying nothing about certain unsatisfactory rules and regulations they have cunningly imposed upon Uncle Sam for the management of his large family.

By a singular coincidence other families across the sea are in a similar state of unrest and discontent. The cause of this is that through various educational influences, the common people, especially in Christian countries, are growing out of their childhood into a sense of their rights and responsibilities.

Guns, bayonets and "strong governments," so called, are powerless to prevent this growth, which must and will find legitimate and adequate expression, no matter what incidental change in governmental ideas, or what inconvenience, or even suffering, may be involved.

It is not in a special but broad sense that the writer is a Nationalist. He is rather an evolutionist, no less in a social than political and spiritual sense—as the three are one—ready to work with all organizations, or outside of any, whenever people are found honestly and intelligently striving for higher human conditions, believing that "all roads" perseveringly traveled in this spirit ultimately lead to the one grand general result, and that with this result we shall at last all be satisfied, unless it may be a few foreordained "kickers," who, if walking on their two feet, insist upon being permitted to travel on their heads and two hands while they "kick" to get back on their "pins," and who, if put back, are never even then satisfied till they can lie down on their backs and hitch along horizontally while they look up and "kick" and swear at the "spots on the sun."

San Francisco. JAMES G. CLARK.

Substantial Progress.

No better argument can be given of the healthy condition of the Grange than the state of its finances. By reference to the Treasurer's report, it will be seen that there is a balance in the General Fund of $648.26, and $1200 29 in the Lecture Fund—a total of $1848.55, now in the Grangers' bank to the credit of the State Grange. This is an increase of over $800 in the last year. It is expected that much of the Lecture Fund will be expended in securing and keeping competent organizing Lecturers in the field to revive and encourage Granges and stimulate an interest in the Order throughout the State. The Grange is alive and growing, and at no time has the Grange's influence been more needed than now. Ignorance, oppression and corruption is on every hand. The wholesome and educating influence of the Grange can do and is doing much to purify our Government and to create a love for that noblest of pursuits—agriculture. O.

Semi-Annually Is Good Enough.

EDITORS PRESS:—The $105 deposited to the credit of Granger V. Roache is to draw interest at the rate of six per cent, compounded, *semi annually*—not *quarterly*, as stated in last RURAL PRESS I. C. STEELE.

Pescadero, Oct. 20, '90.

BRO LEONARD RHONE, Master Pa. State Grange, writes: "We have done very good Grange work in Pennsylvania this year, having organized 83 new Granges and reorganized 24, adding over 7000 members. Still New York leads us in the number of new organizations."

THE thanks of the State Grange are due the Watsonville papers and the Santa Cruz *Surf* for their true and efficient reports of the session. Special mention is made of Miss Raymond of the *Surf*, whose daily articles were thoroughly appreciated.

NATIONAL GRANGE MEETING.—The National Grange will meet in Atlanta, Ga., the 12th of next month. Bro. S. T. Coulter, P. M., Sister Coulter and some other representatives of the Order are expected to go with the W. M. from California.

State Horticultural Society.

The next meeting will be held in the hall of the State Board of Horticulture, 220 Sutter St., S. F., on Friday, Oct. 31, at 12:30 P. M. It will be the Annual Meeting and election of officers will be held. The subjects for discussion will be: "Orchard Fertilization," introduced by President Hilgard; "Abnormal Growth of Vegetation," by Dr. Gibbons, and a general discussion on "Orchard and Vineyard Cultivation." All interested in these subjects are invited to attend. E. J. WICKSON, Secretary.

CANADIAN EGGS FOR ENGLAND.—A test consignment of Canadian eggs is reported to have reached London Oct. 21st, in excellent condition. They bear comparison with Normandy eggs. Several cases found buyers at 10 shillings per 100. The top price for the best eggs on the market is 11 shillings.

The Sixth District Fair.

Written for the PRESS by CLARA SPALDING BROWN.]

The eleventh annual fair of the Sixth District Agricultural Association opened at Los Angeles on Tuesday morning, the 14th inst. It was a success in all its departments, although the date this year was so late that it was not possible to exhibit all the varieties of fruit that are raised abundantly within the district.

The display of farm products, manufactures, art and fancy-work, etc., was in the Chamber of Commerce rooms on Main St. The secretary of that organization, H. Jay Hanchette, was the busiest man in town, as he superintended the arrangement of the exhibits, aiming (as he was overheard to say) "to please everybody."

Twenty-five localities in Los Angeles, Orange and Ventura counties were represented. Every available bit of space in the large hall was occupied by the permanent exhibit of the Chamber and the entries for the fair.

Westminster and Orange county in general filled two long tables near the entrance, connected by a pyramid of apples and placarded, "No Irrigation." There were big watermelons, muskmelons, potatoes that would make a "son of Erin's" mouth water, Hubbard and crookneck squashes, plates of large, handsome apples, sugar beets, red peppers, tomatoes and onions of generous size, and other proofs of the richness of Santa Ana valley soil. Beside one of the tables was a row of such pumpkins as "Peter, Peter," must have kept his wife in. Westminster pumpkins have always been famous for their size. Among the exhibitors on these tables were Frank Cook, P. Mefford, Larter Bros., John R. Davis, A. C. Junkins, U. Penhall, O. J. Buck, G. W. McKisson, J. H. Glines, Wm. Mallet and Josiah McCoy. A case of beautiful hand-made horseshoes was shown by J. B. Browne of Santa Ana, adorned with blue ribbons won at the Sacramento State Fair and the Orange County Fair of this year.

Geo. W. Ford, a nurseryman of Santa Ana, exhibited baskets of improved soft-shell walnuts, the paper-shell and common hard-shell walnuts and two-year-old walnut trees; also one-year orange buds.

Ventura county had one table of miscellaneous exhibits and another covered with honey, hives and bees from the apiary of L. E. Mercer & Sons. This was by far the largest exhibit of honey in the hall. Mr. Mercer, who had charge of the tables, informed me that it was nothing compared with what he intended to exhibit at the Chicago World's Fair, and that Ventura county proposed to maintain a permanent display hereafter in Los Angeles. Mr. Mercer showed a scale hive in which 350 pounds of honey were made from April until June, the largest amount in one day being 18 pounds, on the 17th of May. He also showed an active swarm of bees with their summer's work, amounting to 186 pounds.

The only dates in the hall were on the Ventura table, and the largest display of grapes was from that county. The lateness of the season and the recent unfavorable weather has made the grapes of this section rather scarce. N. W. Blanchard of Santa Paula sent wrapped lemons, Lew Walker showed plums, and others entered apples, peaches, sugar beets, corn, potatoes (one of a white variety weighed 4¾ pounds), gypsum from the Ojai valley, etc. C. Kenney of Sespe had a frame supporting noble clusters of grapes. Mrs. Mercer exhibited a rose-sprout that grew 14 feet in four weeks beside her house in Ventura.

A long table filled with fruit dried and preserved by the Baker patent process, was exhibited by the Pasadena Drying and Packing Company. There were figs, peaches, apricots, pears, French prunes, plums, etc., in piles and boxes, cans, etc. The fruit in cans does not have to be sealed. If it does not make sufficient juice of its own, it is covered with water that has been subjected to the same process as the fruit and will keep indefinitely. Pickles of all kinds, tomatoes, watermelons, almost anything eatable, can be thus preserved and retain their natural flavor. It is claimed that the dried fruit is one-quarter heavier than that which has been evaporated or sun-dried, and superior in quality. Mrs. W. R. Baker made a large display of jellies.

Pasadena Highlands does not irrigate and challenges any other section as to the result. The largest exhibitor was E. Dane, who showed pomegranates, grapes, Hungarian prunes, plums, Salway and Heath cling peaches, eight varieties of apples, orange quinces, Kelsey's Japan plums, Eureka lemons, White Smyrna figs, also California black and brown Ischia figs, Rose of Peru and Muscat grapes, pea beans, Canada flint corn, and a fine array of dried fruit in boxes.

Philbrook and Stetson of Pasadena exhibited orange and lemon juice in bottles, tomato catsup, plum pudding and mincemeat in cans, and canned beans warranted to surpass those of Boston. E. A. Bonine, Pasadena, entered spiced fruit and marmalade.

Artesia showed a table full of products raised without irrigation. John F. Branch, manager, called attention to some mammoth ears of Illinois dent corn, a variety which was introduced here by him 15 years ago. At first, it matured in 90 days, as it does in Illinois, but now it takes much longer. He also showed yellow Iowa dent corn, King Philip corn, and red, black and white popcorn. Some Osage orange apples were curiosities. Walnuts were sent in by S. Dievendorf; onions of several pounds' weight by J. W. Miller. On the table were the citron of commerce, peanuts, apples, Winter Nelis and other late pears, chestnuts, seedless Sultana and Rose of Peru grapes, and a hill of six sweet potatoes whose weight aggregated 38 pounds.

Duarte exhibited boxes of lemons and limes, a pyramid of Valencia late oranges, orange wine made by Mr. Merrill, which took the first premium at the citrus fair last spring, marmalade, jelly and canned fruit put up by Mrs. S. A. Crane, dried plums and prunes by Bliss Bros., and 10 pounds of comb honey from the apiary of W. W. Bliss.

The Pomona Wine Co. showed port, claret, Zinfandel, white wine, etc.; R. F. House, pickles; the Pomona National Hose Coupler Co. an improved coupler for fire-plugs and for ordinary hydrants, also an improved lawn-sprinkler. Ira F. White & Son, who have just patented the "Suicide" gopher and mole trap, a double-ender, announced that they would be ready to supply the trade the latter part of November. This trap appears to be a great improvement on all others, as it cannot be covered up from behind.

Vernon made a good showing of apples, nuts, lemons, pears, pomegranates, etc. E. L. Henck of Vernondale exhibited giant blackberries. The Buena Park Canning Co. displayed canned milk and coffee. J. C. Whitaker, of same place, barley, corn, pea beans and peanuts.

C. O. Coffman of Rivera showed large watermelons, and Jas. Root made a fine display of pressed figs and of apples.

E. P. Norwood, Cucamonga, entered raisins, Italian chestnuts, soft-shell almonds, walnuts and pampas plumes.

Alhambra was represented by W. L. Phillips with quinces and pomegranates, and A. B. Kingsley with pears.

On the Fruitland table were the largest egg plants on exhibition—monsters; a specimen of gumbo, cabbages, grapes, peanuts, apples, pears, tomatoes, oranges, big beets and pumpkins, quinces, peaches, persimmons, etc.

Whittier's sugar beet *beat* them all, standing a good six feet above the table. A large can of sorghum, dried fruits, canned goods, cut flowers, apples, quinces, corn and walnuts made an attractive exhibit from this settlement, which always takes pride in showing what can be done by a new community in this climate.

H. Burlingame of Gardena had a miniature bale of alfalfa, on which a card stated that the ground where it was raised produced seven crops a year, averaging two tons per acre.

Cheeses were shown by Anderson Rose, Ballona; Mitchel & Harsman, Downey; J. W. Patterson, Artesia. Butter, by Sessions & Bigelow, Los Angeles, and T. J. Kearns, Downey.

Cahuanga's table had overhanging it a large banana tree, bearing two fine clusters of fruit. All the fruits now in the market were represented; among them some boxes of ripe guavas. Here and on the Pomona table I found a fig called the New Pacific, which was highly spoken of. It looks somewhat like the White Smyrna, after being dried, is waxy and rich, a heavier fig than the Smyrna. Jas. Root of Rivera also showed this fig dried.

John Bangle and T. J. Kearns of Downey displayed soft-shell walnuts and mammoth apples. H. D. Engelhardt, Glendora, dried fruit; R. Baldridge, Covina, strawberries.

Reaching nearly to the ceiling was a cluster of cornstalks 22 feet high. Several other clusters measured 15 feet and over. The largest of the many big pumpkins weighed 225 pounds and was from the University, a suburb of Los Angeles.

Norwalk had the honor of producing the largest watermelon, a 97-pounder.

O. N. Wilson exhibited honey and fruit from his ranch in the San Fernando valley. Two young ladies entered raw silk and cocoons.

Owing to a regulation forbidding names of exhibitors to be put upon the cards until after the premiums were awarded, I am not able to give credit to every one.

Exhibits were made on the stage and in the gallery by the Los Angeles box factory, Olive Milling Co., L. A. Paint Co., L. A. Cracker Co., Baker Iron Works, broom factories, etc. There were stoves, pianos, mantels, harnesses, pottery, woodenware and samples of other industries.

The art room was crowded with pictures and other rooms with bric-a-brac, curios, and mineral specimens.

There was considerable fancy-work on exhibition, but not so much as at some of the previous fairs. Very little bread and cake was entered.

At the Park.

To many people Agricultural Park was the chief attraction. Here were the blooded horses, the cattle-pens and the poultry exhibit. The attendance each day was very good. Several interesting races occurred each afternoon and good music, balloon ascensions, a ladies' tournament and other diversions added to the pleasure of the occasion.

The stock exhibit was superior to any heretofore made in the southern part of the State. The herd of Guernseys owned by Sessions & Bigelow of Los Angeles was supposed to be the only one in Southern California, but it is reported that there are a few head of this breed owned by a Mr. Cox in the northern part of San Diego county. Eastern dairymen consider the Guernsey the coming cow, as she is larger than a Jersey, a larger milker, and produces as rich a quality of milk. The skin of the Guernsey has a creamy tinge, especially at the end of the tail.

Sessions & Bigelow also exhibited Berkshire swine, among them a five-months-old boar that took first premium at the Sacramento and Oakland fairs. C. A. Coffman, Ranchito, breeder of Berkshires, had a fine lot on exhibition.

C. B. Woodhead, Santa Fe Springs, showed Jersey, Durham and Holstein cattle; J. D. Durfee, El Monte, a large herd of Jerseys; Horace Locke, Los Angeles, Jerseys and graded stock.

E. Younger & Son, San Jose, brought their celebrated sweepstakes herd of Durhams here, said to have won more premiums and gold medals than any herd in the State. They have the largest single exhibit of cattle on the grounds.

Every stall in the horses' quarters was filled, all the classes being well represented. There were thoroughbred stallions, dams with colts, mares and fillies, roadsters, drawing and carriage horses, Shetland ponies, etc., from the stables of J. W. Robinson of Edgemont Park, J. Gries of Compton, F. Estudilla of San Jacinto, C. A. Durfee, Elias Williams, J. W. Gardner, N. A. Covarrubias and L. Snodgrass of Los Angeles, A. Rose of Ballona, J. C. Newton of Farmdale, Capt. A. B. Anderson of San Gabriel, Isaac Keene of Pasadena, J. G. Denman of Norwalk and others.

There was a fine lot of racers, owned by L. J. Rose of Sunny Slope, E. J. Baldwin of Santa Anita, J. G. Hill of Ventura, Matt Storn, the Chino ranch and other breeders. The fastest trotting time up to the date of this writing was made by Lucy R., owned by Walter Maben, who won a heat of the 2:28 class race in 2:22¼. She was the winner of the race. There was much good running done.

Mr. S. Tyler of Pasadena, superintendent of the poultry exhibit, said it was the finest show of the kind ever seen in Southern California. Though not so large as some previous ones, the collection of fowls was more valuable. Mr. Tyler, who was the largest exhibitor, was awarded the premium for best display and a number of first premiums for special varieties. There were Golden, Silver and White Wyandottes, Light Brahmas, Buff Cochins, Plymouth Rocks, Pekin ducks, Toulouse geese, Silver-spangled Hamburgs, Houdans, Langshans, Brown and White Leghorns, Partridge Cochins, White-faced Black Spanish, White Minorcas, White Holland turkeys, Golden Seabright bantams, Indian game chicks, Black-breasted Red games, Golden Duckwing games, pigeons of different varieties and rabbits. The exhibitors were S. Tyler, Isaac Keene, L. S. Syme, T. Kern, W. H. Dwight, G. C. Clapp, all of Pasadena; A. C. Ruschaupt, C. F. Paul, J. D. Mercer, E. R. Terwilleger, W. H. Syme, W. H. Lyons, all of Los Angeles.

Glimpses of the Fairs.

Arroyo Grande.

The *Herald* for Oct. 11th says: "Yesterday evening witnessed the closing of the most successful fair that Arroyo Grande has ever held," and the bare enumeration of the various displays of cereals, vegetables, fruits, flowers, fancy-work, etc., with the premium list, fills nearly four columns, in which the familiar names of E. Leedham and J. V. N. Young, W. H. Findley, C. Grieb, J. S. Brooks and others often recur.

We notice, among the striking exhibits, that C. E. Carpenter had the largest watermelon, weight 58 pounds; G. O. Taylor had six squashes, the largest of which weighed 220 pounds, and the other five 825 pounds. T. H. McClure showed a 31-pound turnip; Leedham, a 50-pound cabbage; J. V. N. Young exhibited 24 varieties of apples, which were exceedingly fine, and several others pressed him closely. D. F. Newsom had a good display of lemons, quinces and almonds, but we could not do justice to the different exhibits unless we named them all, and for that, space is wanting.

Hollister—San Benito County.

San Benito county's first annual fair opened most favorably on the 8th, says the Hollister *Advance*. The races were well attended, and the pavilion exhibit of the county's resources, though gotten up on very short notice, was superb. One of its features was a collection of products of orchard, vineyard and farm, designated generally as the *Free Lance* exhibit, gleaned from all portions of the county and marvelous in variety and quality. The display of fruits, vines, wines and brandy made by Supervisor Palmtag was remarkable. G. F. Mitchell's butter and cheese, and Mesdames J. H. and Geo. Shaw's exhibit of canned, preserved and dried fruits attracted no little attention. D. H. F. McPhail made a wonderful display of minerals, comprising 144 samples from the cabinet of Prof. Frank B. Abbe of San Juan, cinnabar from the New Idria and Gipsy mines, coal from the Trafton and Matthews mine, etc. There was also a fair show of fancy breeds of poultry. Visitors from abroad were surprised at the excellence of the exhibition as a whole.

Sonora—29th District.

The 29th Agricultural District, embracing the counties of Calaveras and Tuolumne, held its first fair at Sonora, Oct. 2d to 4th. The exhibits of live-stock were numerous and of a high grade, while the display of farm products and fruits in Opera hall was such as to surprise all visitors. The receipts at the hall were over $1300. A new pavilion and race-track will be built for next year's fair. The directors are greatly complimented for th unselfish, untiring and successful work.

Quincy—11th District.

From the Quincy *National's* extended report of the fair held at that place Sept. 22d to 27th, we gather that the show of horses, especially colts, far excelled that of '89, while the array of Durham, Holstein and Jersey cattle, both from Plumas and Lassen, was an exceedingly fine selection. The annual address was delivered at the courthouse Friday evening, by Hon. J. D. Goodwin, to a throng of appreciative hearers. The display of fruit, etc., at the pavilion was generally conceded to be the finest yet made in the district. Especially commended were the apples, pears, peaches, plums, prunes and potatoes from Lassen county, the corn from Genesee valley, and the parsnips, squashes, watermelons and muskmelons of Lassen and Plumas. The exhibit of canned small fruits, jellies and jams was very extensive, and the varied display of tastefully designed and finely executed needlework was praised highly.

Yreka—10th District.

The 11th annual fair of the Mount Shasta Agricultural Society began at Yreka, 2d inst. There was a very creditable display of live-stock. The agricultural products on exhibition excelled any previous display at that place. The attendance was large and the fair successful financially.

Susanville—Lassen County.

The first annual fair of Lassen county opened at Susanville, Oct. 6th. The *Advocate* of the 9th says: "The attendance has been much larger than was expected; the gate receipts have been correspondingly high, and the general interest of the public from all over the county shows that the idea of a Lassen fair for Lassen county was a good one. We have made a splendid start....The stock exhibit is very good, including over 200 entries and showing some of the finest breeds in the State."

At the schoolhouse, which was used as a pavilion, there were 1350 entries, embracing large, heavy wheat and barley, oats and rye; alfalfa six feet tall; a magnificent hop-vine loaded with fragrant blossoms; potatoes, cabbages, apples, pears, plums, etc., not only big, but close-grained, solid and full of flavor; "rose-scented butter, all sorts of preserves, luscious fruits in jars, jellies and jams, fancy cakes, good home-made bread and biscuits and all the thousand and one delicacies which are the pride of the good housewife, or of the good girl who hopes some day to be a wife;" besides ornamental plants, needlework and pictures.

At the track, in addition to the races, nine ladies gave a beautiful exhibition of graceful riding.

Nevada City—17th District.

The fair for the 17th Agricultural District opened this year on Tuesday, Sept. 23d. The *Tidings* of fair week says: The pavilion at Nevada City is attracting much attention, and the general expression is that it is one of the best exhibitions yet given in the county. The mercantile displays are very handsome, while the fruit and vegetable display was never excelled. The mineral exhibit was very comprehensive, and the needlework and art departments well filled.

Among the many entries of field and garden products, we notice that J. M. Hales had 12 varieties of cultivated grasses and eight of grain; J. R. Balch, five varieties ornamental grasses, broomcorn, peach melon, stock beets; J. F. Kidder, sweet corn, potatoes, cabbage, tomatoes, watermelon, carrots, parsnips, cucumbers, beets, summer squash, pumpkins, green peppers, egg plants, celery, ocher, cauliflower, beans. Henry Hansen and Mark Thornton also made varied showing of vegetables.

In the horticultural department, we name but a few characteristic displays: S. N. Stranahan, 15 varieties apples, 2 of pears, plums, figs, grapes, 17 of dried fruits, nuts; A. C. Gillespie, 54 varieties apples, 22 of peaches; Mrs. E. D. Bridges, 72 varieties apples, 9 of nuts, 11 of dried fruits; John R. Balch, 22 varieties apples, 6 of pears, 12 of peaches, 3 of grapes; Paine & Twitchell, 23 varieties grapes; W. B. Stuart, 12 varieties pears; J. H. Niles, oranges; S. Allison, 10 varieties apples, pears, 13 of grapes; N. G. Segerstrand of Pet Hill, a fine representative display of fruit, both green and preserved, pears, apples, figs, etc. Some Orange-cling peaches from the Spenceville region, shown by Messrs. Woehler & Pietszch, were 10½ inches in circumference. They were grown on trees about 20 months old which have never been irrigated.

Aug. Combe of Bear river showed a quantity of French chestnuts from limbs that he grafted into black oak trees four years ago.

Fine displays of jellies and fruits in glass were made by Mrs. Stranahan, Mrs. Bridges and several other ladies.

At Glenbrook park, while the races were but "just passable," there being few horses of great speed or reputation present, the parade of live-stock, particularly thoroughbred cattle, was the best that has ever been made in the county, representing Jerseys, Holsteins, Durhams, Ayrshires and graded stock of the different breeds. The stock was much admired for its general superior appearance. The larger part of the cattle were from the farms of H. B. Nichols and Richard Noell, whose enterprise in importing and raising the best breeds has had a stimulating influence upon farmers and dairymen until now the county can make an excellent showing in this line.

[*Continued on page 363*]

Song.

[Written for the RURAL PRESS by DAGMAR MARIAGER.]

Words cannot tell the beauty found
The humblest flowret's eye within,
Nor of the common cricket's sound
Portray the melody therein.

Nor rhymes can circle all the grace
Within the solemn sea-gull's wings—
Yet words and rhymes must stand in place
To aid the one who sweetly sings.

The words, the rhyme, and song combine
To thrill the nerves with joy's sweet might—
Pervade the soul with a divine
Keen ecstasy of calm delight.

Santa Barbara.

Death.

[Written for the RURAL PRESS by DAGMAR MARIAGER.]

You ask me what 'mong Nature's many gifts
I hold most dear and get most solace from—
What means the silver on the great clouds' rifts,
By which I many sorrows overcome?

I've friends, and other foes, who suffer do
Much self-inflicted, and of needless pain,
Were mankind to the Golden Rule all true;
And so I think the end a precious gain.

'Tis sleep, that wakeless sleep that we call death,
That cruel blessing which my child befell;
Knowing my *all* would ne'er again draw breath,
My anguish yet could not my joy expel.

Santa Barbara.

Fused by Fire.

Ebenezer Parsons, commonly called Eben, had taken advantage of a stormy day in the midst of the haying season to take his horses to be shod, and also some tools to be repaired or sharpened, and was now on his way home. The farm-wagon path, worn into ruts, between which the short young clover grew courageously, ran for some distance alongside of the picturesque vine of bush-hidden rail fence that separated the parson's land from that of the Buckleys until it reached a spring whose almost icy cold water bubbled joyously out from a gravelly hillside, and ran down in a slender, purling stream until it became lost in the Hitchcock swamp. From the spring the farm road turned sharply to the left, and up the hillside between two of Eben's own fields, to the low, broad, sloping-roofed farmhouse, old in days, as we count age in this country, but stronger than many new houses, and far more picturesque beneath its wide-branching elms, and half-hidden in a wreath of lilacs, syringas, snowballs, June roses and leafage of that beautiful utilitarian, the hopvine.

The rain had almost ceased and Eben did not in the least mind the light drizzle which had wetted his red flannel shirt until it clung tightly to his lithe, firmly-knit and graceful figure. Comfortably riding along, guiding with one hand the horse beneath, and with the other leading, or pretending to lead, the second horse, which would have followed his mate as well without a touch, Mr. Parsons was in especially good spirits, for he had had a day of rest, and heard all the neighborhood news, and exchanged opinions on the prospects of the crops and conditions of the herds with his brother farmers, and come to the conclusion that on the whole, his own business was likely to prove as prosperous as that of any of the others, and had perceived with satisfaction, as he rode by it, that Jason Buckley's corn was a trifle less promising than his own, having been planted on a low bit of land, too cool and wet for corn during this cool, wet summer.

"Yes," said Eben to himself, turning in the saddle and resting his sinewy brown hand on the sleek back of the dapple-gray horse he was riding, while he scrutinized the corn-field—"Yes, Jason's corn looks mighty yeller and minchin'. He'd orter ha' put hisn on th' upland as I did mine. Git up Balder, old feller! What ye standin' here fur, nippin' 's if ye hadn't tasted grass in a week?"

So, content with himself and his circumstances, and smiling as he thought of the welcome he would surely get when he reached his own door from his comely wife and glad-hearted children, he went on whistling a stave or singing a catch until he came to a turn in the road by the old spring.

The sight of this spring, so innocent and smiling, like a child's happy face, always brought a frown upon handsome Eben's sun-browned features, for it had been the subject of dispute for sixty years or more between the ancestors of Jason Buckley and his own. The Parsons asserted that in the lifetime of Grandfather Parsons—who was a mild-tempered, meek sort of a man, a deacon in the church and superintendent of the Sunday-school, a man "altogether too good for service," as Eben said—the spring had undoubtedly belonged to the Parsons. But old man Buckley, who held in slight esteem his neighbor's business qualities, and thought the Lord ought not to have trusted him with the care of so much of this world's goods, had set covetous eyes upon the ever-flowing and almost ice-cold spring, so useful a place to stand the churn to make the butter firm in hot weather, and so handy to water the cattle in winter when all the ponds and streams were frozen over, and had so crooked his rail fence around it that it now lay within the Buckley inclosure.

Deacon Parsons, holding literally to the admonition to give the coat where the cloak has been taken, refused to take any steps for the recovery of the spring, until at last old man Buckley held it by right of possession.

The son of Deacon Parsons, who succeeded to the inheritance of his father, had proved to be of different stuff; was by no means a meek sort of man, in fact. Having his father's strong ideas of right and wrong, but none of his humility, and being assured that eternal justice always lay on whatever side of any controversy he had taken his stand, he had not hesitated to "make it warm" on all possible occasions for old man Buckley's son George, who had bought the rights of the other heirs to his father's estates and held himself entitled to the spring, which he had been taught or had taught himself to believe had never belonged to the Parsons.

"Ef old Parsons had a right to the spring, why'n thunder didn't he make his right good when he had a chance?" said George Buckley. And so the controversy had gone on during this second generation, and was now continued in the third, in the persons of the handsome Eben Parsons and the stout-hearted and strong-fisted Jason Buckley.

Arrived at the spring, Eben had stopped and let down a link of the fence to allow his horses to drink there, as he always made a point of doing upon every occasion when his neighbor was not in sight. To have done this in the presence of Jason would have been most unwise, for the latter would have sued his neighbor for trespass, though he could not probably have recovered more than "one cent damages." Eben had a wholesome distrust of the law, and was in no wise minded to give his substance into the hands of lawyers.

Close by the spring, but just within the boundary of the Parsons land, in an elbow of the rail fence, stood a fine elm tree of a truly "remarkable size for its age," as Eben said, with honest pride, for he had planted the tree in his boyhood, and he was not yet forty-five.

Eben had allowed his horses to drink, and had slaked his own thirst at the spring, when he mounted his horses again, leaving the fence down, by way of a mute assertion of his rights before he noticed that around that beautiful elm tree, just above its roots, was a broad white band, where an ax applied by a practiced hand had removed the bark, completely girdling the tree. Hence the wrathful astonished question apparently addressed to the horses, for no other animate thing was in sight, "Who's done this?"

Not much need was there for inquiry. Who could have done so mean a thing but Jason Buckley? And good-hearted Eben, now as angry as any man well could be, astonished his horses by his whip and a style of language they had never heard from him before.

It was not discovered precisely who had done the cowardly deed, but Jason Buckley's oldest son had been seen with an ax in hand very near the spring, which was still shaded by the magnificent elm so beautiful in its full green leafage, but doomed to last but this short summer through, as we sometimes see a fair and stately woman, gracious and lovely in her beauty, who her physicians know has but a few months more to live.

Hard enough had been the feelings between the two families before, but from this July evening could be dated the beginning of lawsuits which, instituted or continued on one pretext or another, fattened the village pettifoggers for several years, and bade fair to endure as long as the two families should be able, by hard and incessant toil, to make money enough to pay for the costly luxury of legal fights.

So trivial was the usual nature of these lawsuits that the announcement that "there's another o' them Parsons-Buckley temper suits 't the town hall t'-day" hardly sufficed to attract the loungers from the group around the store or on the postoffice steps, but the feeling these persistent lawsuits indicated and cultivated had grown to be so bitter that it would hardly have surprised one in the township to have heard of personal encounters and bloodshed.

The lawsuits had continued, and the property of the two families had about equally suffered, while their mutual animosities had seemingly taken the natural lovableness out of their natures, even going far to deface the manly beauty of the once so comely heads of the two families.

Their children—all boys—went to the same school; all attended the same simple village entertainments; they were of the same political party; and even were—to the great sorrow of the more devout brethren—members of the same church. Yet were the two families never known to exchange a greeting or a word of any kind, although it was surmised that Mrs. Buckley and Mrs. Parsons would have been glad to be "neighborly," had they followed their own desires. The men of the two families could not bring themselves to treat courteously those of whom they believed so ill, and though their old-fashioned training had force enough to make them remember the courtesy due their teachers, or hosts, or to the church they attended, hence their long, unbroken silence, full of undying animosity.

Then came the civil war, and Eben Parsons, still handsome and strong, though hair and beard were snowy white, came with his three stalwart sons to join the ranks of the three months' men. Jason Buckley, still sturdy and fine-looking in his grim old age, came with his three broad-shouldered boys. In the same regiment, even in the same company, they went through their three months' duty, and then all enlisted "for the war."

On the march, by the campfire, on lonely picket duty, or in battle shock, nowhere did Parsons exchange with Buckley a single word save those of absolute official necessity.

During those terrible months of ditch digging in the Chickahominy swamps the two old men each saw a son sicken and die. Side by side they silently and sternly watched the last conflict which their boys could ever wage. They nursed alternately, each trusting the other fully with the care of his dearest, but they spoke no word.

Among the awful carnage of Fredericksburg each of the old men again lost a son. Still neither broke the ice of the long silence by speech; but while for years it had been known that neither old man had willingly even glanced at the other, some of their old neighbors began to notice that at times, by bivouac fire or on the weary march, the one stricken father would gaze at the other, when that one wasn't looking, with an expression that might have been deemed one of sympathy. Some thought, too, that the rugged old faces were softening, were becoming more gentle and kindly—that a new and sweeter light sometimes shone through the eyes which so long had sparkled with unholy hate. But that was all.

The two remaining sons had broken through their mutual reserve and became at first civil and then friendly, and at last inseparable friends, and the old men had seemed to take no notice. For all one could see, they knew nothing of the changed relations between the two young men, which yet was not concealed from them in any way. If known to them, the fathers certainly did not seem to resent it, as once they would have done.

After Gettysburg, the old fathers looked into each other's eyes in mutual anguish of foreboding.

"Jason," said Eben, hoarsely—"Jason, where be our boys?"

"Eben," said the other, with trembling tones, "I d'n know, but we must look."

And with lanterns and canteens the two men wandered over that hard-worn field raising the trampled wheat that hid a death-cold form, turning a stiffened corpse that had fallen face downward, giving a lift to some poor fellow who still had life enough to crave for help, and so on through all the dreadful hours, clinging to hope yet fearing the worst.

In the gray morning, down under the guns they had fought so bravely to hold, lay the two silent forms. The head of one was pillowed on the broad breast of the other, whose cold, white hand lay lovingly upon the dew-damped chestnut curls of his friend.

For a moment no word was said, no motion made, but then, as with a common impulse, both fathers knelt and kissed their boys. Each gave a glad inarticulate cry, for each had felt beneath his lips the faint flickering stir of life receding, but not yet quite departed.

A search party, with a surgeon at its head, heard the cry so full of hope and anguish, and with rough tenderness and intelligent, if hasty, care that men who have faced death and wounds learn how to give, the two boys came back to life they had so nearly forsaken. And there on the bloody field of Gettysburg two solemnly glad old men turned toward each other with a holy light beaming from their weather-beaten faces as coming dawn of day beamed upward from behind the wooded hilltops.

"Jason, what's the old spring wuth?"

"Nothin', Eben, jest nothin'! Let's fill it up."

"No," said Eben, "that would be throwin' away the Lord's gift. Let's each on us gin the spring an' a good strip o' land along it to the ole church, to sell for the poor or do anything else it wants to."

"Agreed," said Jason, adding after a moment's pause, "an' neow I want to tell ye, Eben, as I'd orter ha' told ye long ago, that 'twaen't none o' me nor my boys that killed that elm tree. We was too proud to say so when ye all thought so mean of us."

Poor Eben groaned, but put out his hand, and after their long but cordial clasp of mutual appealing and forgiving, all their hearts and mind went to saving of their boys.

After weeks in the hospital the sons went home on leave, and astonished all their townspeople, not more by carrying out the instructions of their fathers of conveying to the church the disputed spring and many a broad acre of fruitful land therewith than by their own inseparable companionship.

Eben and Jason fought side by side, talking little in words, but saying much in the eloquent language of kindly deeds and sympathetic looks, both to each other and to the comrades.

"Yew an' Eben's made up, hain't ye, Jasón?" said a neighbor, now also in the ranks.

"Yes," said Jason; "the Lord had to smite us sore afore we could see that justice an' our wills wasn't al'ays one an' the same."

"But we be brethren neow at last," said Eben, "as becomes them that loves the Lord."

That night occurred one of the nameless skirmishes which cost so many lives, and in the morning the two gray heads were found side by side, and the toil-hardened hands of the two men were clasped as if from the cold dark earth they had wanted to enter heaven together.

"I knowed their time had come last night," said the old neighbor, as he helped to lay them in their grave. "I knowed they'd got to be good at last."

"Not so," said another; "they've gone now where goodness lasts forever."—*Harper's Bazar.*

A Housewife's Reflections.

[Written for the RURAL PRESS by MRS. J. HILTON.]

I had just got home from a week's camping trip and was almost tired out trying to get things in their usual trim Monday afternoon, and was beginning to wish I could get into the wagon and leave all dirt and disorder behind, as we do at the camps, when the RURAL came. I just opened it for one peep, when I saw Lupa's kind invitation; didn't I catch hold of her hand and go with her into that wonderful circle of redwoods instanter? Yes ma'am, I did, and I shut my ears to the varied appeals from babies and husband, who wanted something the moment mamma was seated. I have never, with my own eyes, seen a live redwood tree, but the live-oaks are a never-failing source of delight to me, and I can exclaim, as an old Californian did when he first caught sight of them after crossing the plains: "There, Mrs. Hilton, are the live-oaks. They seem just like a brother to me." I can imagine how those grand, stately redwoods call forth the poetical thoughts of Lupa, and I thank her and you, dear RURAL, for giving us far-away sisters the chance to go hand in hand with her in her rambles.

I thank God often for the gift of the PRESS, the blessed books and papers. Dear, dear, what should we be without them! No matter what disagreeable work I have to do, I can do it easily when I know that I have a nice book or paper to read as soon as I can sit down, and by exchanging with my neighbors I generally have plenty to read. It is comical what a diversity one does get in that way, and I read them all—novels and magazines of all kinds; histories I read, too, but how sick they make me with the inevitable wars and cruelties! I am thankful that I did not live in those old times, though we have been bad enough, goodness knows! Detective stories showing wonderful power some have of finding out things and the ever-interesting autobiographies fill up the spaces that the papers do not reach, and then what fun to get hold of a book or paper in another language. It is like finding a large sack of hard-shell nuts, and when we get the hard word cracked and the meat picked out, just as like as not we cannot digest it. One winter I did not let myself read hardly anything but Spanish, and I got lots of enjoyment from it; but I have not used my knowledge lately, and I find I have forgotten some of it.

I wish some sister who cares enough for it would write to me in Spanish. I would answer to the best of my ability.

I was asked the other day what I thought was the reason why some got no rest from a camping trip. I thought the reason was because they did not leave their cares behind, and they tried to do too much, that is, have things nearly as possible as they do at home. Now I cannot get rest that way, and I think I am very much like my neighbors.

What do you think about it, friends? I know some people who say it makes them so tired to go and spend the day away from home that they wish they had not gone, and I presume they are tired, for they are often thinking and speaking of things they ought to be doing at home, and again they go so seldom that they get unduly excited. If any one who reads this ever feels that way, take my advice and go out more, and don't think of your home or work at all. It is no merit to be always at home and say, as I have heard some say: "Oh, don't wait for me to call; I never go out." That is dreadful selfish, giving your neighbors to understand that you take so little interest in them that you will not leave your own fireside for them. What would the world be to-day if all did that way? And why should it not be your duty to help others outside of your own fireside as well as others do?

Well, dear sisters, I have wandered far from the place I started from, but my mind has caught what my body has been doing lately. So I will leave you all to get back by your own roads, only wishing that as you have wandered with Lupa and me, you may have found as much rest and pleasure as I have.

Chaff.

MANY men fall in love and claim to have lost their hearts, whose experience afterward convinces them that they lost their heads instead. —*Atchison Globe.*

FIRST CITIZEN (at a street row): Is that man lying in the ambulance one of the fighters? Second citizen: No, he was passing at the time and tried to stop the fight. There go the fighters walking off now.—*Boston Herald.*

"WHY do you call that group of middle-aged ladies on the piazza anatomists?" "Because they are always cutting up people."—*Boston Gazette.*

Young Folks' Column.

A Boy's Camping at the Coast.

Many of our young people will read with interest the following account, which one of our young readers gives of his recent experience:

DEAR PAPA:—I am sorry I delayed so long in writing to you, but I have not been very well since I got home.

Now I am going to tell you all about our trip. Charles, Martin and I started two days before mamma and the rest of the party. We camped the first night at a place called Tipp's Creek, about 12 miles from the coast.

The next morning we got started shortly after sunrise and arrived at the coast about 10 or 11 o'clock. As soon as we struck the coast we took off all our clothes except our shirts, waded into the water and dug some clams. We then drove down the beach about three miles to the place where we were to camp. We ate our lunch and went to work, pitched the tent, cut brush and built a house to eat in and made a table. Martin went to the blacksmith shop and got some pieces of wagon-tire and dug a hole in the ground and put them across it for a place to cook on, and by that time it was night.

After breakfast the next day we found that a sailboat was going out to sea, so we rigged a crab's claw and line and I went out in the boat. There were eight of us, Mr. Knight and Mr. Fowler among the number. We ran out about four miles and caught some nice rockcod. I was pretty sick, but not sick enough to "heave Jonah." We got back about noontime, and then we went and got some straw for the beds and caught a couple of crabs at the wharf. About 2 o'clock, mamma, grandma, Mr. Payne and his daughter came.

The next day we took a boat and went three miles up the bay to White's Point, a ledge of rock extending into the bay, where we spent the day fishing. We caught thirteen rock cod, three black perch, two smelt and about two dozen crabs.

Every day we had something to do. When we fell short of amusement we would put on our bathing suits and go up the beach to take a surf bath or catch surf fish. It is needless to say that Martin excelled the whole party at fishing. One day he caught nineteen to my six and Charlie's three.

Behind our camp there was a large sandhill covered with brush that was just full of "chemise" rabbits, a smaller and poorer rabbit than our cotton-tails, while to the left and about half a mile off was a clump of willows with a patch of sagebrush above it. There was most always a flock of quail in the willows, and Martin and I used to take Rowdy, his dog, and chase them out of it into the brush and then shoot them as they "raised." One night we each fired eleven shots and each killed nine birds.

About a mile north of the camp there was a shallow lake which we were told was full of carp; but as we had no seine, we could not get any of them. Martin and I went up there one day, and as we came back we struck the creek where the road crossed it about half a mile from camp; beside the road there was a hole shaded by willows in which Martin said there was likely to be a good trout or two, so he cut a mustard stalk, and as he always carried a hook and line with him, he was soon ready to fish, I having caught some grasshoppers and crickets. Out of that hole he caught three fine trout, and between that and camp he caught twenty-two more.

Next day he and I hitched up his horse in the cart and went seven or eight miles up the creek. He fished back down the creek and caught one hundred and forty-seven trout, and I drove along the road and stopped at a few holes and caught three. We found one hole in which there were about a hundred small salmon, but of course they would not take the hook. I arrived at camp about 3 o'clock, but Martin did not get in till sundown, having spent the whole day in cold water between knee and waist deep.

That night we made some balls of sacking and wire, and soaked them in coal oil; Mr. Botts, the man who keeps the station or store on the beach, rigged a crane for his boat, and he and Mr. Short, from Paso Robles, and Martin and I went to spear flounders, dogfish, shovel-nosed, short-sting rays, or anything we could find.

We rowed all over the bay, but did not find the right mud bank until we were coming home, and our torches were nearly burnt out, when Martin speared a ray that very nearly upset the boat. Martin was kneeling on the bow of the boat, the ray dragged him backward into the middle of the boat. The spear had no rope tied to it, as it should have had, so Martin could not let go of it and it whirled round and round in his hand like a drill until it cut quite a piece of flesh out of his hand. At last the ray stopped fighting and Mr. Botts and Martin got him very nearly to the top of the water, when he made one more effort and tore the spear out of his back and got away. Botts said he was four or five feet broad and must have weighed two hundred pounds, it being the largest he had ever seen. At last our torches burnt out and we rowed home, thoroughly tired out and went to bed.

Martin swam very nearly across the channel, which was a quarter of a mile wide, but Mr. Payne, who rowed across beside him, got scared and thought he was going to be carried out to sea, and hauled him into the boat, but Martin was not satisfied and tried it again another day. I took the boat and kept it about ten feet below him all the way across, so that if he should get a cramp he would not be in any danger. I had a pretty tough row to get back, as the tide was running out like a mill tail and we were half a mile from camp, but I did it, much to mamma's surprise.

A couple of days before we came home we all went out to Moro Rock in a sailboat, and Charles, Miss Payne and I went to the top of the rock (500 feet high), while Martin and Mr. Church, the owner of the boat, fished off the rocks. Charles carved his name on the flagstaff on top of the rocks, while I carved my name and Miss Payne's on a board and nailed it to the top of the staff. When we came down and the fishermen returned, we had a fine sail around the bay. Mr. Church stopped the boat at the head of the bay and he, Martin and I went hunting for about half an hour. We shot eight cotton-tails and a dozen quail. When we came back Charles took a picture of the boat with Martin and I on the little landing, Martin holding the game and I a couple of enormous bullheads which they had caught. When we came to dress the fish we found an abalone, shell and all, in the stomach of one of them. Mamma kept the shell as a curiosity.

Another day, Charles, Martin and I went out to sea in Church's boat. We three caught 24 fish and the four others in the boat only caught four. Martin and I made the catch of the day, he getting seven rockcod, two bluefish and an eel five and a half feet in length, and I caught one bullhead and eight rockcod, one of which weighed nearly eleven pounds. Martin's eel weighed about twelve pounds and had a head like a bulldog and a mouth which was covered, roof and all, with strong teeth. He had to be speared before we could get him into the boat. We had to skin him with a pair of pincers, but he was fine eating just the same.

We caught a lot of surf-fish the day before we started for home to take with us. On the morning of our start for home, we got up early and got the wagon all loaded and started about eight o'clock. As we went along the beach, we dug some clams and I shot some curlews and snipe. We climbed all the mountains the first day, stopping at York's to get some wine and take a picture of the century plant, and that night camped at the foot of the last mountain.

In the morning Charley took some pictures and then we packed up and started—the two wagons in one direction and Martin and I went in another. We stopped at Martin's uncle's house for two nights, and on the third morning we started for San Miguel. We did not have very good luck, having shot only seven dozen quail. I had only been home a couple of days when Martin came after me to go deer hunting with Frank and him. We went and staid three days and Frank shot one deer. After the deer was first shot he ran about three miles, but as we had two deer hounds we followed the track and Frank broke the deer's neck at the next shot. Next morning we cut the deer up and started for San Miguel, shooting four dozen quail on the way. I got the best ham and it was just as much as we could eat before it spoiled.

We found a hanging-nest of bees in the mountains out of which we got about ten pounds of white honey and left an equal amount of black honey still hanging there.

We had camped just above the Botts ranch and were told to help ourselves to as many peaches, grapes and watermelons as we wanted, and between the fruit, venison and honey we lived high, though I have paid for it all since I came home, having had a stomach trouble ever since.

I guess I will stop now, as this letter is quite long enough. Your affectionate son,

PITT FAULKNER.

Bessie's Accident.

It was haying-time at Farmer Stone's every one on the place, from the burly farmer himself to the big dog Gruff, seemed to be imbued with the spirit of enterprise. The women fluttered about with a little more anxiety on their faces than usual, for there were extra men to feed and no extra hands in the kitchen. The children helped in their usual way by running and screaming and tumbling in the haymows and begging permission to climb on the loads of hay. Gruff had his hands, or perhaps I should say paws full, running ahead of the horses and uttering encouraging little barks, as much as to say, "Come on, come on!" Even the kittens and chickens had a lively time of it getting out of the way of the great loads of hay that kept coming into the barn, with the noisy stamp of hoofs and cheery shouts of "Whoa, Bill!" and "Hi, Charley!"

One sunny day, about noon, they brought the last load in from the bog meadow, and somebody left the bars down. (I do not know who it was, but presume it was the same somebody that has been doing improper things from time immemorial, and has never yet been brought to justice.) Now, the cows were feeding in an adjoining pasture; and Bessie, the pet of the herd, thought she would investigate this new territory. She went on and on, meeting no difficulty at first; but after awhile she found a place that would not bear her weight, and when Tom, the hired man, came to bring the cows home, after some searching, he found Bessie half-buried in the mire. She was bellowing piteously, and Tom cut a stout switch and began to beat her and shout excitedly at her, once in awhile giving her a vicious kick. Soon the children, attracted by the noise, appeared.

"Stop, stop, Tom! You must not kick our Bessie," shouted little Walter.

Then he ran to the barn for his father, who soon appeared with spades to dig out the poor beast. Thoughtful little Hester also returned, bringing with her some apples to coax her pet with. Bessie had been the children's pet from the time she was a wee calf and could but just stand on her four shaky legs, and she liked nothing better than to have the children around her, smoothing her shiny coat. She would look at them with an almost human affection in her beautiful eyes, and would try to poke her nose into their pockets in search of apples. Now, as she saw her little playmates, she gave a fresh lunge and an encouraged bellow as much as to say "You will help me, I am sure." Farmer Stone bade Tom throw away his whip and gave him a spade instead. Together they dug the moist earth away from the poor animal. Hester held a bright apple in an inviting way before her, and Walter said: "Come Bessie, pretty Bessie," as he held out a handful of salt to her.

Thus encouraged, she would make every effort to free herself; and after an hour's hard work they had the satisfaction of seeing her step out of her perilous place on to more solid earth, and Bess went home, the center of a triumphal procession.

"Don't you think it was too bad for Tom to whip her so?" said Walter, as he tenderly smoothed down her glossy coat where it had been ruffled by the blows.

"Yes," said his father; "but that is the notion some people have. If an animal does not do their wishes, they do not stop to consider whether there is a reason for it or not, but begin to beat the horse, cow, dog, or cat. I do not mean to say that at heart they are cruel and unfeeling. They are simply thoughtless, and have not been brought up in a way that would cause them to stop and consider that a dumb beast may suffer as well as a human being."—*Emma Howard in Christian Register.*

Domestic Economy

BREAD PUDDING.—Put in your pudding dish a layer of breadcrumbs (stale bread is best), over this sprinkle a little sugar and a few bits of butter, then a layer of canned berries, another layer of crumbs and then berries until the dish is nearly full. Beat one egg with a pint of milk, pour over the pudding and bake slowly three-quarters of an hour. It is often made without the egg, but that is an improvement.

BAKED APPLE ROLLS.—Roll biscuit crust out very thin; on this spread apples cut very thin and fine; roll the dough so that it will form a smooth roll, and place in a narrow, deep tin; add a little water, sugar and butter and bake. Serve in slices and spread with butter and sugar, or make a liquid sauce of creamed butter and sugar, a beaten egg, and a pint of boiling water poured over the egg, sugar and butter; flavor to taste.

CRAB APPLE JAM.—Cut the apples in two or three pieces, and when the kettle is full, cover with water. Cook one hour, or until very soft. Strain off the juice for jelly, and put the pulp through a sifter. To four bowls of pulp add two bowls of sugar, and cook together slowly for three hours. Spices may be added, if desirable. When stiff, place in stone jars and cover with paper. To the juice add about two-thirds as much sugar as juice, for this jelly becomes firm easier than any other, and it is a waste to use more sugar than necessary.

POUND CAKE.—Take one pound of butter, one pound of sugar, one pound of flour, ten eggs, two tablespoonfuls of rose water. Beat the sugar and butter together as light as possible, then add gradually the rose water and about one-fourth of the flour; whisk the eggs until very thick, then stir in the butter and sugar gradually, then the remainder of the flour, a small quantity at a time. Beat all well together. Line your pan with white paper, put in your batter, smooth the top with a knife, and bake in a moderate oven about 2½ hours.

COOKING CHICKEN.—Housekeepers do not always understand that a chicken, after the animal heat leaves the body, is not fit for food in less than 24 hours. During this time the muscles are stiffened by the rigor that succeeds directly after the departure of animal heat in all animals, and are tougher than they are at any time previous. In Virginia and many parts of the South, cooks kill and dress poultry with great rapidity, and plunge the pieces of chicken, while they are still warm with animal heat, into the frying kettle. This secures the tender, succulent dishes of fried chicken which are justly the pride of the old Virginia cook. There is something repulsive to the Northern housewife in serving up a fowl that was perhaps a few moments before strutting about, the pride of the yard. An equally good and tender dish of chicken may be attained by keeping the fowl till the muscles relax and it is in prime condition for food. In fact, only by the rapid process of frying can a chicken be cooked done before the muscles stiffen. This the Southern cook knows, and she never attempts to fricassee or roast a fowl that has not been hung at least 24 hours.—*New York Tribune.*

Good Health

The Health of the State.

The monthly report of the State Board of Health is before us, from which it appears that mortality reports received during the month of September from 85 different localities throughout the State, with an estimated population of 705,309, give the number of decedents as 920, being an annual mortality at the rate of 15 6 per thousand, which is a considerable decrease from the previous month. The mortality from cholera infantum has in a marked measure decreased, as also have diseases of the respiratory organs.

Prevailing Diseases.

Reports of sickness from 98 localities throughout the State continue to indicate a very favorable condition of the public health. It does not appear from any of them that epidemic disease of any description is present anywhere in the State. Bowel disorders are quite prevalent, as might be expected at this season, when fruit is indulged in without regard to quantity, and very often to quality. The cooler weather of the month past has had a beneficial effect in lessening the frequency and fatality of summer diarrhea in children.

In regard to diphtheria and croup, the report says that a serious outbreak occurred in the Protestant Orphan Asylum at Sacramento, in regard to which the report says: "We cannot too earnestly impress upon the authorities that each case of such disease is a public danger, against which the public, as represented by its local sanitary authorities, is entitled to be warned by proper information, and we believe that where an institution like the orphan asylum is the seat of epidemic contagious disease, it is the duty of the local sanitary officer to visit such institution and have it properly disinfected under his personal supervision. Such disinfection should not be intrusted to those ignorant of the precautionary duties required, or left to the chance of a superficial sprinkling of carbolized water about the room as a sufficient remedy to destroy the germs of the disease. We believe that much of the diphtheria that exists is dependent upon insufficient disinfection where a case occurs. The germ we know is most tenacious of life, and except the most skilled disinfection is exercised, will continue to live and propagate its hateful existence for an indefinite period of time. We should therefore require all health officers to see to this matter themselves, and know that through their exertions all ordinary precautions have been taken to insure immunity to the public under their charge."

Typhoid Fever and Milk.

Typhoid fever appears to be increasing in many localities, in regard to which the report says: "Its prevention simply requires perfect cleanliness about persons and premises, and constant watchfulness in regard to the sources of supply for drinking water. All suspected water should be boiled. Numerous instances are recorded when typhoid fever has been spread from the rinsing of milk-cans with water apparently pure but really infected with the germs of typhoid fever capable of infecting the milk. We have no doubt that many of the cases of typhoid fever which have baffled our research for their origin have arisen in this way. Most of our dairies have their water supply from wells sunk in the cow-yard where they receive the drainage from the polluted soil. It is a matter of history that cattle themselves suffer from a disease analogous to typhoid fever if not the identical disease itself. It would, therefore, be an act of prudence on the part of our health officers to visit our dairies and examine the source of their water supply and the means used in keeping the milk from pollution. Milk from an unknown or a suspicious source should be heated to the boiling point before using, as thus is effectually destroyed not only the germs of typhoid fever but likewise the germs of consumption, which are very commonly conveyed through milk taken from tuberculous cows."

THE ART OF BREATHING.—In each respiration an adult inhales one pint of air. A healthy man respires 16 to 20 times a minute, or 20,000 times a day; a child 25 or 35 times a minute. While standing, an adult respiration is 22 times a minute; while lying down, 13. The superficial surface of the lungs, *i. e.*, of their alveolar space, is 200 square yards. The amount of air expired every 24 hours is about 10,000 quarts. The amount of oxygen absorbed in 24 hours is 500 litres (about 744 grams). The amount of carbonic acid expired in the same time is 400 litres (911.5 grams). Two-thirds of the oxygen absorbed in 24 hours is absorbed during the night hours, from 6 P. M. to 9 A. M.; three-fifths of the total is thrown off during the day. The pulmonary surface gives off 150 grams of water daily in the state of vapor. An adult must have at least 360 litres of air in an hour. The heart sends 800 quarts of blood through the lungs every hour, or about 5000 daily. The duration of inspiration is five-twelfths of expiration, seven-twelfths of the whole respiratory act. During sleep, inspiration occupies ten-twelfths of the respiratory period.

THE Interstate Commerce Commission estimates that there are in this country 704,743 employes in the actual operation of the rail ways, or 459 to each 100 miles of road.

The Week.

The markets contest interest with politics and will soon be the absorbing topics. We have often alluded of late to the eastward potato movement, and yet the fact that 5,000,000 pounds of spuds went eastward in September is a clearer indication of the disposition of foods to fly from us this year than reports of the frequency of Eastern inquiries. So great a movement so early in the season will give the prophets good data for depicting later operations. It is clear that the whole coast will be taxed to supply the eastward drain, and prices will be proportionally high. The Eastern shipment of fruits for five months shows a gain of about 50 per cent over last year's record for the same time. These are statistics which can hardly be called dry. They furnish solid comfort for our producers.

The season is drawing on. Fortunately there has been a succession of bright, dry days which have favored the ingathering of the late fruits, and the vineyards are, in some regions at least, doing better than was anticipated. We shall soon be ready for a good soaking rain, but with the memory of last year so fresh, people will beseech the weather clerk to draw it rather mild this year.

Corporate and Co-operative Orcharding.

Naturally there is a wide disposition to plant fruit trees this year. This is to be expected from the attention called to this industry by the immense shipments which have been made this year and the very satisfactory returns which have been, as a rule, realized therefrom. There is a continuation of the disposition toward individual enterprises which has been noted for the last decade, though such disposition is perhaps wider and deeper than even in our best previous years. This fact has been frequently mentioned in the RURAL, and the people now running about from one nursery to another to seek trees shows that forecasts have not been greater than the facts as now being developed.

There is also now coming to the surface a wider disposition toward co-operative or corporate orcharding than we have known of before. Co-operative planting, in which experienced fruit-growers have secured large tracts of fine fruit land and planted it either in joint ownership or in individual tracts, which, being adjacent, have been operated under a single system of planting and cultivation, has been in progress several years, and some of the most promising orchard areas of the State have been developed in this way. The advantages of this plan are many and the safety great because the partners in the enterprises are acquainted with the business and have learned by years of experience just how to use their time and money to the best advantage.

There is another style of co-operative enterprise which has been sometimes practiced and oftener projected, in which a number of city people or others unacquainted with the fruit business have purchased and planted, having to trust to hired foremen or superintendents who are supposed to furnish the necessary experience and knowledge to shape and conduct the practical features at least of the enterprise. This is a good way to proceed, providing it is possible to secure the requisite push, wisdom and devotion on the part of the foreman or superintendent. With such help, it is quite possible to develop paying fruit properties, and to realize for the co-operating subscribers the advance in land value which follows wise planting, as well as the profit which will come from the fruit sales if the thing is well conducted. There is, however, a weakness in such a scheme, from the difficulty of securing proper foremen or superintendents. Men are liable to be either lazy, or unwise, or careless, or ignorant, and those who have none of these failings can usually do so well in building up enterprises for themselves that they do not care to enlist for current wages and build up profits for other people. Our advice has always been, to those planning such enterprises, to go very slow unless they have full assurance of the enlistment of a good manager, because without such aid it is a great deal easier to secure a poor orchard than a good one.

The disposition to proceed by the organization of a corporation is the latest phase of our orchard progress. Corporations have been for some years in operation in some large vineyard properties, and if they have not been very profitable it has perhaps been due to the generally unsatisfactory outcome of wine-grape enterprises which has resulted for the last few years, but which, it is hoped, is now happily over. We have heard it hinted that there might be purchases of some of our most profitable orchard properties by corporations possessing foreign capital, and certainly the properties mentioned are apparently well worthy the attention of foreign capital seeking profitable investment. There is also a local disposition to merge old orchard enterprises in corporations having local capital, as for example the announcement that the famous Briggs orchard, near Marysville, may take this course. This property has been vastly improved during the past few years, and is so far as we know a promising field for corporate enterprise. Another enterprise is one proposing to begin upon new ground, and in which such well-known fruit men as A. T. Hatch and Gen. N. P. Chipman are named as projectors. Their plan as described in an exchange is as follows:

To organize an orchard company to plant 1000 acres this winter on the richest river bottom-land of the Sacramento in Tehama county, three miles from Red Bluff and near a railroad station.

The land and climate are peculiarly adapted to fruit and no irrigation is required, as the average rainfall is 28 inches.

Messrs. Hatch and Chipman propose to plant the 1000 acres in peaches, apricots, nectarines, prunes, Bartlett pears and almonds, and the work will be personally supervised by Mr. Hatch, who himself is practically the best authority in the State on those kinds of fruits.

The present market value of the land is $100 an acre, and it is rich, sandy-loam, river-bottom soil. The originators propose a company of 100 shares, of which they will take 54 shares and sell the remaining 46 shares, seven of which have been already taken in this city. Each shareholder is guaranteed the equivalent of ten undivided acres of this tract planted to fruit six years old in full bearing, and land fully paid for at a cost to each shareholder of $200 per acre.

It seems perfectly feasible to accomplish such a thing at the cost mentioned under good management, and certainly $200 as the cost per acre of six-year-old orchard leaves a fine return for the money in the amount which such property may be expected to sell for if one desires to realize at the end of six years, or an excellent permanent investment if one desires to retain his interest.

We make these hurried notes thinking they may interest all who are thinking of developing the value of the vast area of good lands still unplanted in this State, for there is no reason why wise enlistment of capital in co-operation or in corporation in orchard planting should not prove of great value in the progress of the State and in the prosperity of individuals.

Orange Imports.

It is announced that the new tariff law will cut off the imports of Tahiti oranges, usually made at this port. A *Chronicle* reporter who interviewed recent arrivals from the islands, writes that one of the most important industries of Tahiti is the exportation of oranges to this city and to New Zealand. These two markets have heretofore received all the orange cargoes from the islands. The passage of the McKinley bill has raised the tariff on oranges 75 cents a thousand, and the allowance previously made for decayed fruit has been abolished. The result is that no more shipments of Tahiti oranges will come to this port. The increased tariff will not seriously affect the natives, however, because their shipments to New Zealand will be doubled. The officers of the City of Papeete said that the tariff would not affect the cocoanut shipments, but that henceforth Tahiti oranges would be scarce in this city.

The New York *Fruit Trade Journal* makes the interesting statement that under the new tariff a duty of 30 per cent ad valorem will be charged on the wholesale market value of the foreign orange box itself, made of foreign wood, while boxes of American wood will be admitted free. This addition was put in order to encourage the export of fruit-boxes from this country. Italy already draws considerable of her supplies from Bangor, Me., and Petersburg, Va. The duty on foreign wood will induce Italy to import still more of our fruit-box shooks. This clause will affect the Valencia packing more than the Sicily, as it is doubtful if Spain will import American shooks. Valencia oranges, in consequence, will have to pay, besides the 50 cents per case duty, an additional 10 to 15 cents per case, against the past duty of about 25 cents per case, or an increase of about 150 per cent.

AMERICAN HORSE SHOW.—The Second Annual American Horse Show will be held in the Exposition building at Chicago, Ill., from Nov. 1st to 8th inclusive. The secretary, Mr. Edw. C. Lewis, informs us that there is every indication of its being the best horse show ever held in the United States. Entries have already been made from most of the leading importing establishments.

LOCOMOTIVES AT JERUSALEM.—It seems queer to read that three American locomotives, made in Philadelphia and intended for the new railway from Jerusalem to Jaffa, have arrived at the City of David.

A CHICO PUMPKIN.—The State Board of Trade has received from Rancho Chico a pumpkin over nine feet in circumference and weighing 211 pounds, which attracts great attention from passers-by.

QUERIES AND REPLIES.

Yield of Sorghum Syrup Per Acre.

EDITORS PRESS:—A friend handed me a copy of your valuable journal, in which I see a Mr. Swayze claims to have one acre of cane that will yield 800 gallons per acre. If there is no typographical error, the statement is wrong and misleading, as 300 gallons is among the biggest yields known, and 200 gallons per acre is the largest the writer has any personal knowledge of, while 150 gallons per acre is a good yield and will pay the rancher better than anything he can raise. Sorghum syrup well made is healthy and will always command a fair price and find a ready sale. While the writer was editor of the St. Peter *Herald* (Minn.), he took pains to encourage cane-raising and also to find out about the average yield, and the best record was five acres of good ground produced 1008 gallons. One-half acre in this State will give a rancher sufficient syrup for family use and pay his taxes, and he will have a little spending money left, that is, if he makes a good article. I have raised sorghum here for three seasons and this year will have about 225 gallons of very fine syrup. I planted on May 28th. Had I planted on the first of April I would now have 500 gallons instead of 225.—J. BLACKISTON, *Placerville.*

Experience With Rice and Sugar Cane.

EDITORS PRESS:—I notice in your issue of Oct. 18 h, "Rice-Growing Suggested," by Horace D. Dun. I am familiar with rice and sugar cane growing in the Southern States, and I tried both here, and also cotton, and I find, after a limited experiment with all, that the dry climate does not suit rice and tropical sugar cane; but cotton does well, and I believe, on certain kinds of land well adapted to it, it would be a profitable crop. Tropical sugar cane and rice need a humid atmosphere and warm nights. They seem to spend all their energies tillering here, though rice matures. I could not give rice the Carolina culture, *i. e.*, flooding.—J. H. BOWDIN, *Colusa.*

Sorghum Cane for Milch Cows.

EDITORS PRESS:—Can you or any of your readers give us any information about feeding sorghum to milch cows? Will they eat it, and if so, is it good for them?—SULPHURET, *Riverside.*

The improved varieties of sorghum are excellent feed for milch cows and are largely used in this State and elsewhere for that purpose. We should like to have accounts from readers as to the growth and use of sorghum for this purpose.

Compressed Hay.

EDITORS PRESS:—Please inform me through the RURAL what the article is which is called "compressed hay" in the weekly price-list of domestic produce.—W. M., *Aptos.*

By compressed hay is meant hay which is pressed more firmly than the ordinary baled hay, and it is given this form for shipment long distances by rail, as less space is required by a given weight.

DEADLY CATERPILLARS.—The Philadelphia *Press* gives an account of a man, 32 years of age, who recently died of blood poison caused by the bite of a common green caterpillar. He was bitten upon the neck as he lay on the grass. The same paper tells of a young lady, 21 years of age, living in Philadelphia, who was at the time in a dangerous condition from the bite of a green caterpillar, which she received while sitting under a grapevine. Severe illness, and even death, is sometimes caused from the bite of a fly. In all such cases, death, or severe illness, is caused by blood poison superinduced by the bite; and it is supposed that insects, usually harmless, whose bites are thus dangerous, have recently come from feasting upon some decayed and poisonous meat or other substance whence the poison virus is taken.

THE San Francisco Bridge Company has been awarded contracts for the building of three bridges on the Canadian branch of the Great Northern over the Skagit, Stillaguamish and Snohomish rivers. The contracts are conditioned for the completion of the bridges by December 1st. They are to be truss structures, and the total cost will be nearly $150,000. The Snohomish bridge will be 1700 feet, the Stillaguamish 400 feet and the Skagit 600 feet.

STAMBOUL, driven by Goldsmith, trotted against time at Napa, Oct. 18th, and beat his record of 2:12¼ in splendid style, coming under the wire in 2:11½. This famous stallion, son of Sultan, was bred by L. J. Rose of Los Angeles, who sold him to Mr. Hobart for $40,000. At Cambridge City, Indiana, on the 21st, the stallion Nelson again lowered his record, making the mile in 2:10¾.

ASHLAND, Oregon, has a new system of waterworks, just completed at a cost of about $50,000, and owned by the town, which has issued bonds to the above amount.

The Beet-Sugar Industry.

SECOND PAPER.

Varieties of Sugar Beets.

EDITORS PRESS:—The beet root is a hardy biennial plant indigenous to the south of Europe, long under cultivation in France, Germany, Belgium, Holland, Scandinavia, Russia and England, and more recently introduced into Canada, the United States and New Zealand. A great many varieties are known to cultivators, but the most important to the sugar-maker is the White Silesian, sometimes regarded as a distinct species and exhibiting several forms. Grown to perfection, the Silesian beet is pear-shaped, shows very little above ground and penetrates about 12 inches into the soil. The two chief varieties are distinguished by one having a rose-colored skin and purple-ribbed leaves; the other a white skin and green leaves. Both are frequently seen growing together in the same field and do not exhibit any marked difference in their sugar-producing qualities.

The selection of the seed deserves the greatest attention on the part of the beet-grower. Experience has shown that roots rich in sugar transmit their richness to the next generation, while seed from light, ill-shaped roots poor in sugar produce inferior roots.

In France great care has been taken by Vilmorin, the celebrated seedsman of Paris, in the selection and crossing of beet, and Vilmorin's improved beet, which by some is regarded as a special variety of the Silesian, is justly esteemed for its sugar-yielding qualities.

Good sugar beets are pear-shaped in form, should weigh from 1½ to 3 pounds each, and should have a smooth skin. They should be white and firm, flesh delicate and uniform in structure and with a clean, sugary flavor. Good beet roots are considerably denser than water, and should sink rapidly.

In the accompanying cuts, reproduced from a recent report of the Department of Agriculture, can be seen the five improved varieties of beets and the White Silesian, which is shown at Fig. 1.

Fig. 2 represents the Imperial, a good variety analyzing 12 to 14 per cent sugar and returning from 39,600 pounds to 44,000 pounds of roots, and 5720 pounds of sugar per acre.

Fig. 3 is the "Green-neck," is more gross, better formed and smoother than the preceding. It will give 52,800 pounds of roots and from 6000 pounds to 8000 pounds of sugar per acre. It titrates 11 to 14 per cent. This is less cultivated at present, preference being given to the following:

Fig. 4 is the Red-neck, a vigorous beet and a heavy cropper. It yields from 60,000 pounds to 66,000 pounds of roots per acre, is of regular form and titrates from 11 to 13 per cent of sugar, equal to 7000 pounds to 8000 pounds per acre. The foliage is vigorous and abundant. The neck is small and it stores well. It is most highly esteemed among French growers.

Fig. 5 is Vilmorin improved white, educated directly from the Silesian white, and is the richest of all in sugar producing—containing from 15 to 18 per cent in Europe and from 18 to 20 per cent in California. The juice is extremely pure. The returns to the acre are small, ranging from 30,000 to 40,000 pounds.

Fig. 6 is the Grey-neck. It is the most productive root, yielding as high as 72,000 pounds per acre; but is the least producer of sugar, therefore is not esteemed by the sugar-maker.

The Vilmorin beet is more highly esteemed in Germany because the beet-root is there taxed by the Government. In France the Red-neck is highly esteemed, as it is more reliable and gives large crops of roots and produces a good sugar crop. This variety should do well in California, as it has a vigorous growth of leaves, thus affording protection for the soil during the driest season of the year.

Composition of the Roots.

Internally, the beet root is built up of a number of concentric rings, formed of a much larger number of small cells, each of which is filled with a juice consisting of a watery solution of many bodies besides sugar. These include several crystalloid salts, such as the phosphates, oxalates, malates, and calcium; the salts of potash being by far the most important. Beet juice contains also several colloid bodies (albuminous [nitrogenous] and pectinous compounds) as well as a substance which rapidly blackens on exposure to the air.

The sugar present in fairly ripe beets is crystallizable, and when perfectly pure is identical in its properties with crystallizable cane sugar.

Beet roots do not contain any uncrystallizable sugar, and the molasses produced in beet-sugar factories is the result of changes which cannot be entirely avoided in extracting the crystallizable sugar from the roots.

Climate.

The mean temperature of the European beet-growing districts, where beets may be successfully cultivated, ranges from 62° to 65° F. The formation of sugar is favorably influenced not so much by heat as by dry weather and unclouded sky during the months of August and September. Hence the root succeeds far better in the north of France and Germany than in Central France or Southern Germany, where the summers are longer and warmer. Observation shows that a bright dry August favors an increased secretion of sugar in roots to a far greater extent than a hot summer, and nothing is so conducive to heavy crops as an abundance of rain during the first two months' growth of the plant.

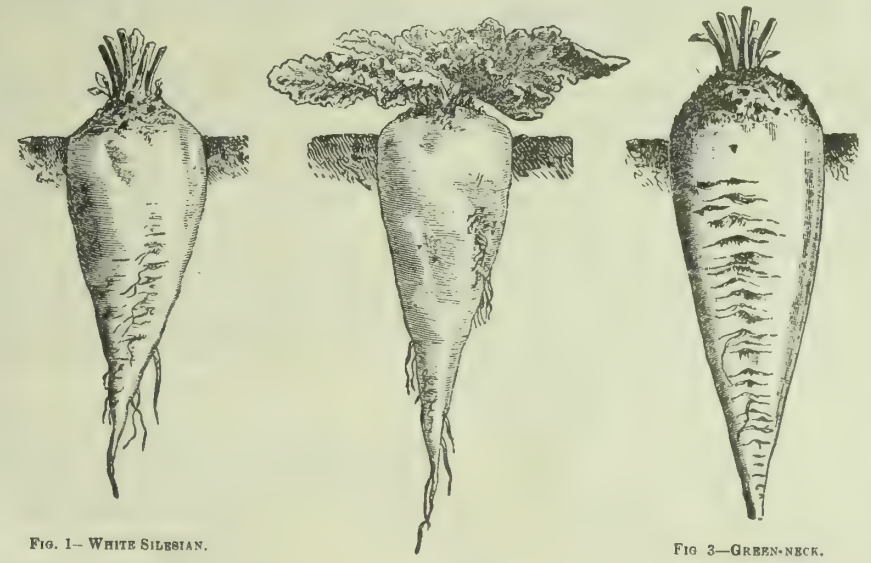

FIG. 1—WHITE SILESIAN.

FIG. 2—IMPERIAL.

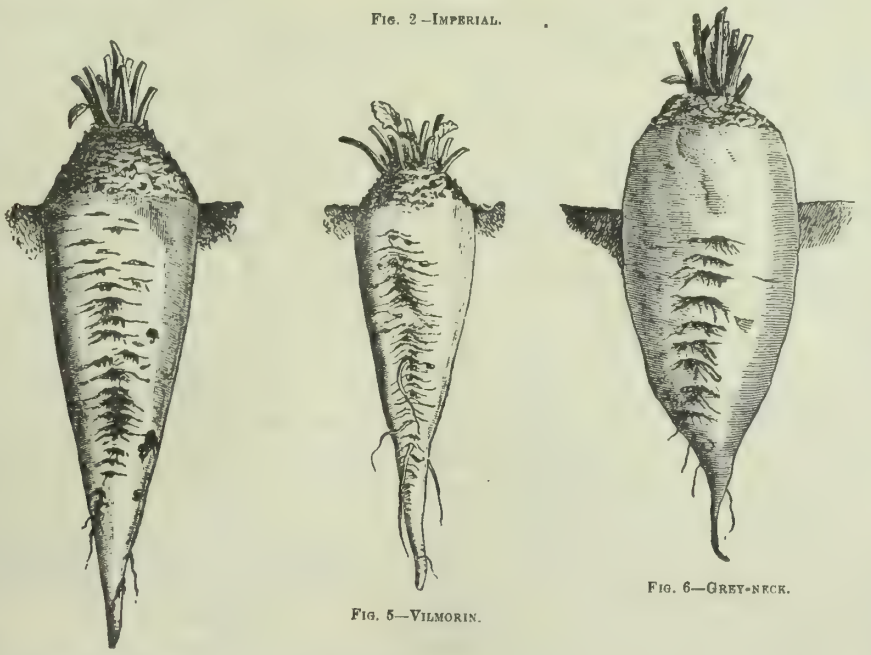

FIG. 4—RED-NECK.

FIG. 5—VILMORIN.

FIG. 6—GREY-NECK.

STANDARD VARIETIES OF THE SUGAR BEET.

Harvesting.

The Pacific Coast above all other countries is the most favored in this branch of the industry. In all of the old beet-root countries, the planter must watch his crop and as soon as ripe the beets must be taken from the soil and delivered to the factory, where they must be stored away and protected from the frost until such time as they can be worked up. This entails an expense of 66⅔ cents per ton. In California the beet-roots can remain in the soil until wanted by the factory, providing they are not allowed to receive enough rain to cause the second growth. Unripe beets cut across with a knife rapidly change color on the surface laid bare by the knife, turning first red, then brownish, and finally quite dark. If the newly-cut slices of beet turn color on exposure to the air, the ripening process is not completed. If, however, the newly-cut slices remain some time unchanged, or if they turn only slightly reddish, it may be assumed that the beets are ripe enough to be taken up.

B. B. CHANDLER, Mechanical Engineer.
Alameda, Cal.

EXPLORING PARTIES.—A bill introduced in the House of Representatives provides that the Secretary of War be authorized to send an expedition to the interior of Alaska for the purpose of making a thorough exploration and survey of that Territory, with a view of ascertaining its resources and capabilities. It is proposed that the party sent out should locate near the center of the Territory, and from that point as a base, push expeditions into all parts of the interior. The party is to remain not less than three years. In this way a thorough knowledge of the topography and other features of the country may be gained. An appropriation of $100,000 is asked. Another exploring party, under charge of Prof. Lumholtz, a Norwegian explorer, famous among geographers by reason of his expeditions in Australia, is about to explore Lower New Mexico and Arizona under the direction of the American Geographical Society of New York. About a dozen scientists, archæologists, botanists and zoologists will accompany him. The special object of the expedition is to examine the remains of ancient civilization, antedating, it is said, that of the Aztecs, and existing principally in the Gila valley, in the northwest part of Arizona. The peculiar habits of the Zuni and Navajo Indians will also be investigated.

CANNED CORN COMING.—A dispatch from Hoopeston, Ill., heralds a trainload of 20 cars of canned corn, leaving that point Oct. 21st for San Francisco by the Santa Fe route. The sides of each car are covered with banners advertising one of Illinois' great industries. The train will move in the daytime only. The Western Packers' Association says Hoopeston cans more corn than any other one town in the world.

THE LOTTERY BOYCOTTED.—The United States Express Co. has issued peremptory orders to all agents not to receive money, tickets or lists of drawings from the Louisiana Lottery Co., nor in any way assist in the transaction of lottery business.

FLORIST AND GARDENER.

Fall Show of the State Floral Society.

The fall exhibition of the California State Floral Society will be held on Nov. 6th, 7th and 8th, in the new Academy of Sciences building, south side Market street, near Fourth, San Francisco, Cal. The following is the official announcement of regulations and premiums:

Rules and Regulations.

1. All articles for exhibition must be properly entered, and be ready for examination by 5 o'clock P. M. on the day of opening of the exhibition.
2. All flowers and plants entered for premiums must be properly labeled, so far as practicable.
3. The Flower Exhibition will be open for three days.
4. Only members of the society in good standing can compete for schedule premiums.
5. Plants offered for competition must have been the property of the exhibitor for at least three months prior to the date of opening of the exhibition.
6. Flowers offered for competition must have been grown by the exhibitor, excepting Class C.
7. No cards of a business nature will be allowed in the exhibition until after the premiums shall have been awarded.
8. The Committee of Judges is authorized to award suitable prizes for any meritorious exhibit not named in the premium list.
9. No prizes shall be awarded for any articles on exhibition unless they possess points of superiority.
10. In no case can any article placed on exhibition be removed until after the close of the exhibition.
11. Any plant or flower placed in a collection competing for a certain premium must not be duplicated in a collection competing for any other premium.
12. Exhibitors of plants and cut flowers will be classified as follows: I. Amateurs who do not employ skilled labor. II. Amateurs who do employ skilled labor. III. Professionals.

Premium List.

Class A—Cut Flowers.

1. Open to Amateurs Who do not Employ Skilled Labor.—Chrysanthemums, best and largest general collection, gold medal. Chrysanthemums, best 12 blooms, general collection, silver medal. Roses, best and largest general collection, bronze medal. Dahlias, best collection, $2.

2. Open to Amateurs Who do Employ Skilled Labor.—Chrysanthemums, best and largest general collection, silver medal. Roses, best and largest general collection, certificate of merit.

3. Open to Professionals.—Chrysanthemums, best and largest general collection, silver cup. Chrysanthemums, best 24 blooms, general collection, silver medal. Chrysanthemums, best 12 blooms, general collection, $5. Dahlias, best and largest general collection, bronze medal. Roses, best and largest general collection, $5. Best and largest general collection of cut flowers, $5.

Class B—Plants.

1. Open to Amateurs Who do not Employ Skilled Labor.—Chrysanthemums, best six pot-plants in bloom, $10. Ferns, best six plants, $3. Assorted, best six pot-plants, certificate of merit.

2. Open to Amateurs Who do Employ Skilled Labor.—Chrysanthemums in bloom, best 24 pot-plants, general collection, silver cup. Chrysanthemums, flowering plants in bloom, best 12 pot-plants, silver medal. Chrysanthemums, best six pot-plants, general collection, certificate of merit. Best 12 pot-plants, general collection, bronze medal. Specimen plants, best two, $3.

3. Open to Professionals.—Best and largest collection in bloom, gold medal. Chrysanthemums, best 24 plants in bloom, general collection, silver medal. Chrysanthemums, best 12 plants, general collection, $10. Chrysanthemums, best six plants, general collection, $5.

Class C.

Open to All Members of the Society.—Flowering plants, best 24, silver medal. Foliage plants, best 24, $10. Ferns, best collection, $5. Best group of palms and decorative plants, $25. Specimen plants, best six, $5.

Committee of Arrangements, Timothy Hopkins, W. B. Ewer, Mrs. M. S. Sperry, Mrs. T. L. Walker, Mrs. E. M. Crane, Mrs. W. E. Loy.

For particulars address Mrs. T. L. Walker, Secretary, Postoffice Box 145, Oakland, Cal.

SILK OUTPUT FOR 1889.—The London *Times* gives the estimated production of silk throughout the world last year at 11,706 tons, as against 11,548 tons in 1888, 11,888 tons in 1887, 10,594 tons in 1886 and 9002 tons in 1885. The average of the four years from 1885 to 1888 was 10,748 tons. The 1889 crop was rather above it, although scarcely any silk was produced in Syria and other parts of the Levant.

LARGE PECAN ORCHARD.—F. A. Swinden of Brownwood, Texas, has an orchard of 11,000 pecan trees—the largest orchard of the kind in the world. The average yield of a full-grown tree is about 14 bushels a year, which sell for from $2 to $4 a bushel.

Agricultural Notes

CALIFORNIA.

Alameda.

Fast Horse.—Livermore *Herald*, Oct. 16: A. T. Hatch has purchased of Louis Schaffer of this place, the latter's two-year-old Sidney colt, "Sidney Roy," for $4000. The colt has been under training by Sutherland, at Pleasanton, and recently pulled a road-cart a half-mile in 1:13½.

Butte.

Cats Killing Gophers.—Oroville *Register*: On Butte creek, a few miles this side of Chico, a farmer has some trained cats that catch gophers. These cats live almost exclusively in the fields and make their living catching the gophers. The latter are very destructive to the roots of the alfalfa, so that each cat that is a good gopher-catcher is estimated to be worth $20 to the farmer. They are proving so valuable to him that he has recently purchased a number of additional cats in Chico, and says this is the cheapest and most effective way of ridding his fields of this pest.

Sorghum Syrup.—Oroville *Register*, Oct. 16: We were presented this week with a can of syrup made from sorghum grown at Moore Station. This sorghum was raised by Witherow & Henderson, who had about 30 acres planted this season. The land averaged about 135 gallons of syrup per acre and will bring the enterprising growers a little over $100 an acre. Sorghum requires a soil that is warm in summer, one where the temperature does not fall below 60 or 75 degrees during June, July and August. Heat makes it mature rapidly and it does not suffer from drouth. It will produce three crops of forage in one summer and the seed will amount to some 20 bushels. The bottom lands along the Feather, Butte creek and Honcut are well adapted to this plant, and it is a profitable one to grow. The cost of a mill for crushing sorghum is not great and the making of syrup is neither difficult nor tedious.

Colusa.

Summer-Fallowing. — Willows *Journal*, Oct. 18: Since the last rains the farmers have been busy sowing their summer-fallowed lands. There will be a large amount of summer-fallow this year from the fact that the rains held on so late last spring that the farmers were compelled to leave a large acreage in this condition.

Fresno.

Grape Syrup.—Fresno *Expositor*, Oct. 15: A new enterprise is about to be started in this city which will add considerably to its material welfare. This is the establishment of a grape syrup factory. The grape syrup is used for building up light wines, and, to some extent, for medical purposes. Thus, a claret bringing in the market 9 or 10 cents a gallon, can be converted into port or sherry by aid of the syrup and be sold for 35 or 40 cents. There is a good demand for the syrup. The price of the syrup ranges from 50 to 70 cents a gallon, and the demand for it is very steady. After awhile they expect to manufacture a table syrup which will compare favorably with other syrups now in use for that purpose.

Bean Yield.—Selma *Irrigator*, Oct. 15: H. B. Cole has about 15 acres of pink beans on the Hodges place, six miles north of town. He says they will yield about 2500 pounds per acre and are worth four cents per pound.

Humboldt.

Large Fruit Drier.—Eureka *Standard*, Oct. 16: G. C. Barber of Grizzly Bluff has erected a large fruit-drying house on modern principles. It has a capacity of curing 50 boxes of apples per day. He intends to dry nearly all his own fruit and will also buy large quantities from his neighbors for drying.

Lassen.

Sample Products.—Susanville *Advocate*, Oct. 9: In passing through the pavilion we took occasion to make a few measurements of some of the prominent articles: Potatoes—Blue Centennials, 18 by 14 inches in circumference. White Perfection, 20 by 12 inches. Peerless, 18 by 15 inches. Dakota R ds 19 by 11 inches. Burbank Seedlings, 18 by 10 inches. Cabbage—Marblehead, 4 feet 5 inches in circumference. Flat Dutch, 18 inches in diameter. (One Marblehead weighs 60 pounds, solid as a rock, white to the heart.) Cauliflower—Late Paris, 39 inches in circumference. Watermelons—Iron Clad, weight 50 pounds. Muskmelons 18 inches in diameter. Onions—White Naples, 19 inches in circumference. Red Wethersfield, 18 inches in circumference. Beets—Blood Turnip, 26 inches in circumference. Sugar, weight 30 pounds. Squash—Hubbard, 60 pounds. Mammoth, 90 pounds. Egg Plant—Purple, 22 by 17 inches in circumference. Eggs—Langshan, 7 by 9 inches. Turnips—Red top, 3 feet 5 inches in circumference. Tomatoes, 18 inches in circumference. Apples—30-ounce Pippin, 18 inches in circumference. Bell Flower, 15. English Queen, 14. King of Tompkins Co., 19. Gloria Mundi, 19. Newtown Pippin, 14 Grimes Pippin, 14. Alexander Red, 15. New York Pippin, one pound.

Los Angeles.

Plucking Ostrich Plumage.—Santa Monica *Outlook*, Oct. 15: During the past two weeks the birds at the ostrich farm have been relieved of their beautiful plumage. The work required to pluck these birds is no child's play. It takes two brave, expert men to catch one of these vigorous "kickers." The men carefully approach the bird, taking pains to keep from before it, which is the direction it strikes, and then throw a sack over its head. As soon as this is done, the ostrich at once gives up, and it is forced into a box and relieved of its feathers

Vegetables for Texas.—Los Angeles *Express* Oct. 16: A source of surprise is the fact that the railroads are carrying green vegetables from Los Angeles to Texas. Sixteen carloads of potatoes and other vegetables went to Texas points on Thursday over the Southern Pacific.

Planting Lemons. -- Pomona, Oct. 18: Several of the fruit growers at Duarte, who have learned how to properly cure their fruit and have kept a good share of the crop until August, have had very handsome returns for the time and investment. They had also the same returns last year. Two of the Duarte lemon-growers inform us that by saving their fruit until July, they have made as high as $21 a tree. One man has realized in clean cash since May 1st over $750 from 48 trees, planted on half an acre of land. This year he planted about 700 more lemon trees.

Orange Crop Prospects.—Pomona *Progress*, Oct. 16: The average seedling orange groves in this valley are bearing the largest quantity of oranges ever known in them. There are very few seedling orchards that will not produce a full crop. We have visited many orchards during the past week, and have been astonished at the great weight of green fruit hundreds of the trees are bearing. The older orchards in Pomona are well worth a visit by any one interested in the bearing quality of an orange tree. The report comes from Riverside that seedling trees there are going to bear most abundantly. The Navel orange crop was injured by the heated spell of two days last May, but it is amazing how thousands of young Navel trees in this valley are bearing a heavy weight of fruit now. Very many orchardists, who were sure they would have no Navel orange crop at all this year, wonder how they could ever have been so deceived. A large number of fruit-growers have told us that their young Navel trees are now as well filled as they should be with oranges.

Toads and Young Orange Trees.—Alhambra *Review*, Oct. 17: Mr. Osborne, who has a thriving seed-bed, observed that his little orange trees seemed to be dying out in patches. Failing to find any other cause, he caught one of the numerous toads that had taken possession of the inclosure, and upon dissecting it found several young orange leaves in its stomach. Other toads were tried and convicted upon the same evidence.

Apple Is King.—Downey *Champion*, Oct. 18: The Downey depot is full of the old standby. The apple crop in this section is heavy and the quality of the finest. Prof. Baker has 22 men picking and packing, and the station is the busiest place in town. A number of carloads have gone forward and a number of cars on the side track are now being loaded. Most of the fruit will go into cold storage in Los Angeles for the present.

Monterey.

Stamping Out Glanders.—Salinas *Democrat*, Oct. 18: Dr. A. E. Buzard, the veterinary surgeon employed by the Board of Supervisors to assist in stamping out glanders in this county, returned Wednesday from a nine-days' tour of inspection. He examined the horses in Pine valley, found one afflicted with glanders, and had it destroyed. Several in this region had been dispatched by their owners before he got there. In Peach Tree valley, two were discovered, condemned and destroyed. At Hardscrabble, near Lowe's Station, another case of a virulent type was found and destroyed, together with its halter, bridle, etc. In the San Antonio, or Jolon, region, which was then visited by the doctor and a thorough and careful examination made, no cases of glanders were found, and it is Dr. Buzard's opinion that the disease has never found a lodgment there.

Sacramento.

Fruit Going East.—Sacramento *Bee*, Oct. 17: A great deal of fruit is going East from Sacramento at this time, in spite of the lateness of the season, coupled with the unusual rains that followed so closely on the heels of summer. The principal shipments now consist of grapes and pears. The amount of the former still in the State is large, and should the rains hold off and frost not appear, shipments of grapes will continue up to Christmas.

Santa Barbara.

Fruit Notes.—Lompoc *Record*, Oct. 11: The choicest Baldwin apples we have ever seen came from the Mitchell farm in Santa Rita, where the apple comes to rare perfection. Mr. Mitchell will put out 4000 winter apple trees the coming winter, 1000 of which will be Baldwins. Let every man in Santa Rita find out what kind of fruit his land is best suited for and then plant it in unstinted quantities. We will soon have facilities for shipping our fruit East equal to the most favored parts of the State. It takes six or eight years to bring an orchard to profitable bearing.

San Diego.

Large Wheat Farm.—S. D. *Union*, Oct. 16: Mrs. Ramona Place Wolf of Little Temecula rancho, accompanied by her daughter, Minnette, leaves for home this morning. The recent acquisition of the great Temecular grant adjoining her property by the company of San Francisco capitalists, she says, is a great thing for that section. They have sent down men and teams to begin the work of improvement, intending to plant 4000 acres to grain this winter, and steam plows are to be used. Barns and other farm structures are being put up, and a large two-story house is being erected. The lumber and other supplies were all purchased in this city. The Indians of Pitchango, which is near the grant, have all been employed in clearing the grant, a heavy growth of live-oak, elder and willows having to be removed.

Irrigation on the North.—San Diego, Oct. 16: The region from San Jacinto to Winchester will be put under the irrigation system of the Lake Hemet Water Company. J. D. Schuyler, consulting and constructing engineer for the company, has returned from Hemet valley, which lies 20 miles above San Jacinto in the mountains. He says that work is being started on the dam. At Perris, Chief Engineer Brown of the Bear Valley system, who is its principal stockholder, told him that they had sold $400,000 worth of the Alessandro tract, San Jacinto valley, and were now about putting in pipe to connect it with the Bear valley system in San Bernardino county. They had just closed a contract with the Perris irrigation district to sell it all the surplus water from Bear valley.

Raisin Damage.—San Diego, Oct. 16: An El Cajon raisin-grower said that the raisins that had been stacked were not damaged five per cent, and had been delivered to the buyers without any reduction being demanded. Of those not stacked, about 35 per cent would be lost. With a bright sun now, he thought a good many might be saved, as the grapes that had not begun to shrink when the cloudy weather began had not yet suffered. Some of the vineyardists have practiced turning their raisins after a shower, but only as soon as they had had the benefit of two or three hours' sun, and when very wet have given them a second turning in six or eight hours. All such raisins are now in good condition, with no suggestion of rot.

San Luis Obispo.

Bean Harvesting.—Arroyo Grande, Oct. 11: Quick work is being made in the bean harvest, and the work is more than half done. The yield ranges from 30 to 60 sacks per acre. The good crop, added to the high price of beans, will make this about double ordinary seasons.

Shasta.

Fruit Orchards.—Anderson *Enterprise*, Oct. 9: C. A. Richmond is so greatly pleased with the growth his trees made this season that he will plant ten acres adjoining his present orchard to French prunes during the coming planting season. Henry Abbott has purchased 30 acres in the Bellevue tract. He will erect a neat picket and rabbit tight fence around the whole and plant it to peaches of three varieties—the Seller Cling, Susquehanna and Muir. Henry Alexander will commence the clearing of the balance of his 50 acres of land just below town, on which he has now a beautiful 30-acre orchard, and will plant for the coming season from 13 to 15 acres more.

Proposed Irrigation District.—Anderson, Oct. 9: A representative gathering of 40 men, nearly all of whom are residents of the proposed Happy Valley Irrigation District, met at the Cloverdale schoolhouse last Saturday afternoon and showed that their intention of forming a district under the Wright law now meant business. There is little question but a two-thirds' vote can easily be secured for its organization after once it is submitted to the electors.

Sonoma.

Apple Yield.—Santa Rosa *Republican*, Oct. 16: D. & S. Woodworth of Stony Point have harvested 4000 boxes of apples of the Spitzenberg variety from a small orchard of young trees. From three acres they gathered 2200 boxes.

Sutter.

Preparing for Outdoor Work.—Y. C. *Farmer*, Oct. 17: Farmers are buying and repairing their farming machinery for the winter, and notwithstanding the talk of dull times, we notice a large amount of the latest improved implements and machinery being taken from the stores to supply the demand on the farms.

Levee Work in No. 70.—Y. C. *Independent*, Oct. 10: The work of repairing the broken levees of No. 70 is progressing satisfactorily. The plucky land-owners of that district have a big job on their hands, but they are determined to do the work in a substantial manner. The directors now have their force of men at work in the two upper breaks, called the Mathews and the Ramsdell breaks. These two breaks are of about equal extent, each being about 450 feet long. The base of the new levee at the Ramsdell break will be 186 feet, and its hight 26 feet. At Mathews' the base will be 158 feet and the hight 26 feet. Lon Summy is superintending the work with 50 men at Mathews', and J. W. Howlett at Ramsdell's with 45 men. Sixty-five Stockton four-horse scrapers and 25 Climax wheel scrapers are being used. It is estimated that, with the present force, it will take about six weeks to complete the work at Ramsdell's. In about three weeks a part of the force now at Mathews will be put on the back levee, which was badly washed, and it will take about three weeks to put this in good repair. On the river levee there is a large break between the farms of J. K. Wood and David Wheeler, and the road was badly damaged at that point. Eb Jones has the contract for repairing the road and is pushing the work. The farmers all along the river are repairing their private levees. The land-owners of No. 70 and along the river are entitled to a great deal of credit for the courage they have manifested in this matter and their determination to preserve their homes at whatever cost.

Tulare.

Wheat Crop.—Visalia *Times*, Oct. 16: Grain-dealers have been figuring on the wheat product of this county, and some of the estimates have been very wild. The *Times* has made its own estimate, from the best information at hand, and places the yield of the entire county at 130,000 tons. This exceeds the big crop yield of 1884 by 40,000 tons, and will still leave this county the banner wheat-raising county of the State. Ten per cent of the crop will be retained in the county for seed, while the remainder will be shipped to tide-water.

Vacant Land.—Visalia, Oct. 16: There are 35,000 acres of land tributary to this city that are peculiarly adapted to the cultivation of potatoes, onions and cabbage, yet these products are imported to this place year after year. These lands are also susceptible to the cultivation of peaches and prunes, but there are not 1000 acres of the land that is planted to trees. At least two-thirds of this land is yet in a wild state, never having been turned by a plow.

The Champion Prune Tree.—Hanford *Sentinel*, Oct. 16: Some weeks since an item concerning a prune tree in the Briggs orchard, near Visalia, that yielded 1102 pounds of fruit, went the rounds of the press. It was certainly a large yield, but it left a Lucerne valley tree to beat it. C. M. Blowers, near Grangeville, has a prune orchard in which there are all told 40 trees. This orchard bore him this year 28,200 pounds of fruit, an average of 705 pounds to the tree. There was one tree among the number from which was picked the enormous yield of 1140 pounds. Mr. Blowers' orchard is seven years old.

Ventura.

Bean Yield.—Ventura, Oct. 17: Frank Lambardo raised 500 sacks of Lima beans, averaging 72 pounds to the sack, on 18 acres of land on the Olivas tract, a few miles east of town.

Apple Profit.—Ventura *Free Press*, Oct. 17: Mr. Smith has sold his apple crop to the W. R. Strong Co. of Sacramento, and has already shipped 400 boxes of various varieties out of an estimated total of 1000 boxes. Mr. Smith has 28 trees of the Bellefleurs variety. From these the parties who purchased the crop gathered 264 boxes, netting him an average of $7 to the tree for the fruit as it hung unplucked. Thirteen of the 28 averaged over $9 per tree. As apple trees are planted about 70 to the acre, the 28 Bellefleurs have realized to Mr. Smith the neat sum of $196 for two-fifths of an acre.

Yolo.

Contagious Disease Among Horses.—Woodland *Democrat*, Oct. 18: There is a disease which resembles epizootic or distemper which has attacked a number of horses, and in some instances has proven fatal. D. R. Clanton has about 150 head of horses and colts in his pasture, and the most of them have the disease. One or two, we are informed, have died. They are badly swollen about the head, eyes and neck. In some instances the swelling is only in the throat, then again it will be found on one side of the head, and in other instances their eyes will be so badly swollen that they can hardly see. R. H. Newton has a colt that has contracted the disease and is in a bad condition. There has been no remedy yet advanced, but the usual methods resorted to in cases of epizootic or distemper should bring relief in these cases. Farmers and stablemen should be especially careful about their own stock and all transient stock, so that the disease does not spread any more than possible.

Scarcity of Cars.—Woodland, Oct. 18: Fruitmen are just at present experiencing quite an inconvenience through the inability of the railroad company to furnish the number of cars required to ship their fruit East. The car famine is prevalent throughout the fruit counties, and is caused by the unusual number of large shipments of fruit East this season. The fruitmen are not alone in their troubles, but stockmen and other shippers are also in the lurch. Some are hauling their hay to Sacramento, rather than wait for cars.

Yuba.

Alfalfa Killed.—Marysville *Appeal*, Oct. 17: On the south side of Simpson's lane, about half a mile east of the city levee, Mr. Klockenbaum cleared a patch of an acre or more, several years ago, and sowed it to alfalfa. Last year four or five crops were cut from the patch, but the high water of last winter killed nearly all the plants and buried most of them under sand. The alfalfa on a cleared tract of eight or ten acres or more, south and east of the Buckeye mill, was likewise winter-killed. Alfalfa could be profitably grown on the Yuba bottoms if they could be protected from floods, as the roots of the plant soon reach down to the original soil. On the bottom-lands of the Feather above Marysville there were thousands of acres of alfalfa killed by the high water of last winter.

Fruit Notes.—Marysville, Oct. 18: It is surprising to many people visiting the canneries to learn of the quantity of canned goods that is put up here every year in a country where the orchard and vineyard industries are comparatively in their infancy. There are a few old orchards, but fruit-growing has but lately begun to assume some magnitude. From appearances, and the talk among land-owners in this vicinity, however, it is plain to be seen that fruit-raising is the coming industry of Sutter and Yuba counties.

PAPER BARRELS.—Much study and experiments have been given to the production of a thoroughly practical paper barrel. It is thought that this result has been most successfully reached by an English company whose barrels are now largely used for the carriage of gunpowder, mining fuses, fruit, flowers, molasses, paint, cement, matches, chemicals, dyes, asbestos, sugar, size and extract of meat. The materials used in making the barrels are waste paper, cardboard and (for the better quality) old sacks. When cardboard is used it is soaked or boiled for six hours and afterward treated in the same manner as the other raw material. This is carefully sorted and put into a rag engine or beater, where it is beaten and torn to pieces by a series of knives for about an hour and a half. It is afterward mixed with water until a pulp of uniform consistency is gained. This is rolled, joined, shaped and dried, and the barrel is finally covered with hoops. Before the tops and bottoms are put in, the barrels are painted with a waterproof composition, made of linseed oil and rosin for ordinary-purpose barrels, and with a special varnish where they are used for food products. The standard size made is 16½ inches in diameter by 28 inches long. The price at which these barrels can be produced enables them to compete favorably with wooden barrels; a barrel costing 34 cents in wood can, when made of paper, be sold for 28 cents. One great feature is that there is no waste with the process, all "wasters" being beaten up into pulp again.

TREES SIX HUNDRED AND FIFTY FEET HIGH. "What do you think of trees 650 feet high?" said Prof. F. O. Plummer to the editor of the Olympia *Tribune*. "They are to be found," continued the professor, "that high in the unsurveyed townships near the foot of Mt. Tacoma; and what is more, I have seen them and made an instrumental measurement of a number with that result. There are lots of trees near the base of Mt Tacoma whose foliage is so far above the ground that it is impossible to tell to what family they belong, except by the bark. Very few people know or dream of the immensity of our forest growth. I wish that some of our large trees could be sent to the World's Fair at Chicago. We could send a flag-pole, for instance, from 300 to 400 feet long."

HOW TO SWEEP A WOODEN FLOOR.—We don't use a leaky old sprinkling-pot to sop the floor all over in puddles when we sweep. No, sir! We have wet sawdust, and I put a row of it across one end of the store and sweep that right along to the other end, just like a regiment marching across a ten acre lot. It catches all the dirt and carries it along. If it gets a little dry, I add some more. Some folks scatter sawdust all over the floor, but Mr. Vanders says that's no good; that the reason for using sawdust is to avoid wetting the floor all over and to have something that will absorb the dust.—*Cin Enquirer*

THE CONSTRUCTION OF RAILWAYS in the United States thus far this year, is summed up by the *Railway Age* as being 3782 miles, distributed among 212 lines. Nine Southern States lead in this report with 1443 miles on 65 lines. The total increase of track-laying over that for the same period of last year is 470 miles. The entire new mileage for 1890 is placed at 6100 miles.

The great Dr. Boerhaave left three directions for preserving the health—keep the feet warm, the head cool, and the bowels open Had he practiced in our day, he might have added: and purify the blood with Ayer's Sarsaparilla; for he certainly would consider it the best.

IN THE MANUFACTURE OF SHOVEL-HANDLES, it is said that a large proportion, usually about 75 per cent, are split or broken in the process of bending, which loss has led to the invention of a handle-bending machine. The saving effected may be estimated from the fact that in a trial lot of 25 dozen put through the machine only one handle was spoiled.

HOW TO KEEP FLIES FROM PICTURE-FRAMES. Boil three or four onions in a pint of water; then with a gilding-brush go over the frames of your picture and chimney glasses, and rest assured that the flies will not alight on the articles washed with the solution. It will do no injury to the frames.

AN English visitor to the St. Louis market recently was so struck with the superiority of American-made horseshoes that he ordered an entire carload for shipment to London. This is the first direct shipment of horseshoes from St. Louis to England.

Ayer's Pills, being convenient, efficacious, and safe, are the best cathartic, whether on land or sea, in city or country. For constipation, sick headache, indigestion, and torpid liver, they never fail. Try a box of them; they are sugar-coated.

Two True California Stories.

"Augusta Dane, 'or the Influence of Circumstances," and "Mary Morton, or the Result of a Fashionable Education." By J. Vinton Webster, Past Master California State Grange. These two stories attracted considerable attention during their publication in the *California Patron* in 1881 and 1882. Published in book form. Being unusually interesting, they have been favorably received, and a limited number only are for sale. Printed in large, clear-faced type, and bound in cloth. Price, $1, postpaid; to subscribers of this journal, 60 cents. Address the publishers of this paper.

LINCOLN'S MELANCHOLY.

His Sympathetic Nature and His Early Misfortunes.

Those who saw much of Abraham Lincoln during the later years of his life, were greatly impressed with the expression of profound melancholy his face always wore in repose.

Mr. Lincoln was of a peculiarly sympathetic and kindly nature. These strong characteristics influenced, very happily, as it proved, his entire political career. They would not seem, at first glance, to be efficient aids to political success; but in the peculiar emergency which Lincoln, in the providence of God, was called to meet, no vessel of common clay could possibly have become the "chosen of the Lord."

Those acquainted with him from boyhood knew that early griefs tinged his whole life with sadness. His partner in the grocery business at Salem was "Uncle" Billy Green of Tallula, Ill., who used at night, when the customers were few, to hold the grammar while Lincoln recited his lessons.

It was to his sympathetic ear Lincoln told the story of his love for sweet Ann Rutlidge; and he, in return, offered what comfort he could when poor Ann died, and Lincoln's great heart nearly broke.

"After Ann died," says "Uncle" Billy, "on stormy nights, when the wind blew the rain against the roof, Abe would set thar in the grocery, his elbows on his knees, his face in his hands, and the tears runnin' through his fingers. I hated to see him feel bad, an' I'd say, 'Abe, don't cry;' an' he'd look up an' say 'I can't help it, Bill, the rain's a fallin' on her.'"

There are many who can sympathize with this overpowering grief, as they think of a lost loved one, when "the rain's a fallin' on her." What adds poignancy to the grief sometimes is the thought that the lost one might have been saved.

Fortunate, indeed, is William Johnson of Corona, L. I., a builder, who writes June 28, 1890: "Last February, on returning from church one night, my daughter complained of having a pain in her ankle. The pain gradually extended until her entire limb was swollen and very painful to the touch. We called a physician, who, after careful examination, pronounced it disease of the kidneys of long standing. All we could do, did not seem to benefit her until we tried Warner's Safe Cure; from the first she commenced to improve. When she commenced taking it she could not turn over in bed, and could just move her hands a little, but to-day she is as well as she ever was. I believe I owe the recovery of my daughter to its use."

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

"Battle of Gettysburg."

The celebrated Panorama of the Battle of Gettysburg and Museum, corner Market and Tenth Streets, San Francisco, is a wonderful production. It has captured the entire State, doing a great deal of good. There is no better way of passing an hour or so, and in studying American history, than by visiting this Grand War Panorama. If any of our readers have not seen it, it will pay them well to do so.

Arizona Everbearing Strawberry.

BY PLANTING QUITE A NUMBER OF THE LEADing varieties of Strawberry together for five years, I have produced a variety unlike any of the former. I have picked the fruit daily since April 20th to the present time, October 18th, and the vines are still full of bloom and berries. Roots are long and stand the drouth well. The berries are large, fine flavor and high color, and resemble the Jessie in shape somewhat. I am prepared to furnish them in small lots at $1.50 per doz., postpaid. R. E. FARRINGTON, General Nurseryman, Phœnix, Arizona.

Texas Farming and Grazing Lands

The Texas and Pacific Land Grant.

Charles J. Canda, Simeon J. Drake, William Strauss, Proprietors. Comprising 3,450,667 acres of Selected Lands, situated in **Forty** different counties in Texas, is now in market. Average price of good farming lands about Three Dollars per acre on ten annual payment terms. Interest, six per cent per annum on each deferred payment as it becomes due. For maps, circulars, and descriptions of the counties, write to

Glimpses of the Fairs.

(*Concluded from page 355*)

Geo. Seville exhibited both Berkshire and Essex swine, and there was a considerable display of poultry.

A large morning crowd witnessed the ladies' tournament, in which there were seven participants. Rev. D. D. Bowman delivered the annual address—an able effort—which was very favorably commented upon by those who had the pleasure of listening to it.

Salinas—Seventh District.

The fourteenth annual fair of the Monterey Agricultural Association, District No. 7, which opened at Salinas City, Sept. 30th, is rated by the *Democrat* as "a grand success," reflecting credit upon the management.

On entering the pavilion the first object to meet the eye was a collection of farm products, huge pumpkins, monster potatoes and mammoth beets—the largest of the pumpkins tipping the beam at 200 pounds or more. Then came a grain display from half-a-dozen farms—wheat, barley and oats of excellent quality; sugar beets from the Spreckels ranch at Castroville; stalks of corn from Natividad, towering to within two feet of the ceiling and loaded with good roasting ears.

The display of fruits was accounted the finest ever made since the forming of the association. San Miguel canyon filled two tables with apples, pears, peaches, plums, prunes, grapes, quinces, almonds and many varieties of dried fruits. Corral de Tierra showed some 18 varieties of apples, 5 of pears, large bunches of grapes, several plates of plums, prunes, quinces and displays of nuts, watermelons, tomatoes, corn, and cabbage.

From the Fair View district R. N. and W. Windsor brought 17 varieties of apples, all remarkably large, beautiful and tempting, 5 varieties of pears, 3 of plums, 4 of prunes, and several pods of Chinese beans, each pod measuring 18 inches in length. Mrs. H. Blinn contributed almonds, dried prunes, apples, peaches and plums in boxes and a magnificent assortment of preserved fruits and jellies hermetically sealed in glass and tin. Geo. Boekenoogen's part of the Fair View exhibit comprised 14 varieties of grapes, as fine as can be seen in the State; almonds, chestnuts, plums, prunes, apples, quinces, pears, peaches, persimmons, figs, oranges, tomatoes, peppers and a monster watermelon.

S. Black of Blanco showed vegetables, fruits and grains. His display of spuds embraced Jersey Blues, Minnesota Reds, Ohio Premiums, Peerless, Minnesota, Burbanks, English Flushes, Early Ohios, Oregon Blues and Early Roses.

Several Salinas orchards furnished exhibits of apples, and there was a superb output of canned fruits and jellies.

The display of foliage plants and flowers in bloom by Mrs. S. F. Dixon surpassed all its predecessors, and the cut flowers furnished by her and Mrs. J. B. Hickman enlivened the hall with their bright and varied colors and perfumed it with their fragrance.

The annual address, by Rev. Joseph Emery, is spoken of as an able effort.

At the park, premiums were awarded to numerous thoroughbreds, roadsters, all-purpose and draft horses, one carriage team, a single saddle animal, a goodly number of M. Lynn's Durhams, and a solitary boar.

Shropshires at State Fair.

The following letter has been received the present week:

EDITORS PRESS:—In your issue of Oct. 18th was a statement giving your old friend, Andrew Smith, credit of taking all the premiums on the Shropshire sheep at the late State Fair. This is not true. I saw Mr. Edwin F. Smith (Sec'y State Board of Agriculture) this morning, and he showed me a copy of the statement sent, which is quite different from what you published, and he says he never sent such a statement. I took the sweepstakes on the best Shropshire ram and five of his lambs, defeating Mr. Smith's sheep of Redwood City. Yours truly,

Sacramento, Oct. 20, 1890. J. H. GLIDE.

The paragraph to which Mr. Glide and Secretary Smith take exceptions was intended to convey the idea that Andrew Smith was awarded all the *first* premiums (not "all premiums") for Shropshire sheep exhibited at the late State Fair, which the writer then understood to be the purport of the certificate from the Secretary, specifying the five first prizes taken by the Redwood City exhibitor. We desire to make such statements in strict accordance with the facts, and are always ready to make needed corrections.

SUPERIOR FENCING.—The Judson Manufacturing Co., office 14 & 16 Fremont street, have engaged extensively in the manufacture of wire and picket stock and rabbit-proof fencing, for farms, orchards and vineyard. They have new machines which make a fence that will not sag. They put in five strands of steel wire, so that it will turn Durham cattle. It is painted red, to preserve the wood, and their prices are much lower than such fence without these improvements has ever been offered at before. See their advertisement and prices on page 367.

"WORTH MORE THAN $100."—M. G., of San Ardo, in renewing his subscription Oct. 17, 1890, writes: "I would not be without the RURAL PRESS for twice its price. It has been worth more than $100 to me this last year."

The Building of Cities.

A very interesting indication of the relative progress of different cities throughout the country is furnished by the totals of the building statistics. The totals of structures erected in 1889, with their cost in 15 of the leading cities, with some allowance for local conditions, are a very good measure for the growth and enterprise of the different communities.

In this showing Philadelphia maintains the lead, having put up 11,965 houses, while New York comes next with 6722. But in considering the cost of the buildings, New York is far ahead, having put $75,912,816 into new buildings, while Philadelphia's total of cost is but $26,000,000, and is exceeded by Boston as well as New York. These are the two cities whose new structures exceeded 5000. Following these are six cities where between 4000 and 5000 houses were built, and six more whose totals are between 2000 and 4000, in the following order:

	No. Houses.	Cost.	Average.
Chicago	4,931	$25,065,500	$5,083
Brooklyn	4,500	25,679,405	5,706
Boston	4,431	32,400,000	7,312
Minneapolis	4,355	8,737,281	2,006
Washington	4,048	6,165,715	1,523
Cleveland	4,007	4,401,854	1,098
St. Paul	3,756	7,939,493	2,113
St. Louis	3,544	9,765,700	2,755
Pittsburg	3,241	8,000,000	2,468
Denver	2,741	10,807,377	3,942
Omaha	2,498	4,663,735	1,803
Cincinnati	2,104	4,143,214	1,969

In giving this comparison its proper value, it should be remembered that there are other things shown in it than the number of new buildings built. The total of cost shows the aggregate investment more clearly than the number of buildings, while the average cost of each building gives a better idea of the standard of architecture in each city than either of the other two. New York, while second in the number, is far ahead both in the total investment and in the average cost of buildings, which was $11,293. Philadelphia, while first in number and second in total cost, has an average for each building of but $2172, which gives it the eighth place on the list in that respect. Pittsburg has to take the eleventh place for number of houses, rises to the ninth for total investment, and its average cost of $2468 gives it the eighth place. While Cleveland is credited with 4007 houses against Pittsburg's 3241, her low average cost of $1098 brings the total investment down to $4,401 854, or a little more than half of Pittsburg's.—*Pittsburg Dispatch.*

PAPER FLOWER POTS.—Westcott & Co., seed merchants of 507 Clay St., agents for the Pacific Coast, send us specimens of paper flower-pots manufactured by F. W. Bird & Son of Walpole, Mass. They are cut, folded and interlocked in such a way that they are safely handled and when plunged in the soil will decay so as not to interfere with the root growth of the plant into the soil. The arrangement is ingenious, and if the pots can be furnished cheaply enough they will no doubt serve a good purpose in plant-growing.

CALIFORNIA FRUITS

A Great Event

In one's life is the discovery of a remedy for some long-standing malady. The poison of Scrofula is in your blood. You inherited it from your ancestors. Will you transmit it to your offspring? In the great majority of cases, both Consumption and Catarrh originate in Scrofula. It is supposed to be the primary source of many other derangements of the body. Begin at once to cleanse your blood with the standard alterative,

Ayer's Sarsaparilla

"For several months I was troubled with scrofulous eruptions over the whole body. My appetite was bad, and my system so prostrated that I was unable to work. After trying several remedies in vain, I resolved to take Ayer's Sarsaparilla, and did so with such good effect that less than one bottle

Restored My Health

and strength. The rapidity of the cure astonished me, as I expected the process to be long and tedious."—Frederico Mariz Fernandes, Villa Nova de Gaya, Portugal.

"For many years I was a sufferer from scrofula, until about three years ago, when I began the use of Ayer's Sarsaparilla, since which the disease has entirely disappeared. A little child of mine, who was troubled with the same complaint, has also been cured by this medicine."—H. Brandt, Avoca, Nebr.

Paper cover, Price.....25 cts.

Brudder Gardner's Stump Speeches and Comic Lectures.—Containing the best hits of the leading Negro delineators of the present day, comprising the most amusing and side-splitting contribution of oratorical effusions which have ever been produced to the public. The newest and best book of Negro comicalities published. 160 pages. Bound in illuminated paper covers. Price.....25 cts.

Burdett's New Comic Recitations and Humorous Readings.—A new volume of comic and humorous selections, compiled by the celebrated humorist, James S. Burdett many of which have never before been published in book form. In addition to the new and original pieces here contained, this book has the advantage of *bringing together into one volume* all of the very best selections of a comic nature which have hitherto attained a wide popularity through the public representations of the most renowned humorists of the day. It is the newest, handsomest and choicest book of its kind. Price.....25 cts.

The Candy Maker.—A Practical Guide to the Manufacture of the various kinds of Plain and Fancy Candy. The fullest directions are given for getting up the most exquisitely beautiful looking candies, as well as the most alluring to the palate; while equal attention is given to all the plainer kinds, so universally liked by the "little ones." Every Direction, every Recipe, every Concoction of which Sugar, Spice and Essence are the ingredients, is given in such a plain way that a child can understand them. Large 12mo. Price.....50 cts.

Wilson's Ball-Room Guide and Call-Book.—The most complete published, containing full and requisite information for the giving of Receptions, Parties, Balls, etc., with clear directions for calling out the figures of every dance, together with thirty-eight pages of the latest and most fashionable copyright music, and containing nearly one hundred figures for the "German." Bound in illuminated board cover, with

Bound in illuminated paper cover, Price.....50 cts.

Dunbar's Complete Hand-Book of Etiquette.—This work presents, in a clear and intelligible manner, the whole art and philosophy of Etiquette. Among the contents are: Bodily Deportment, Speak Grammatically, Self-respect, Pedantry, Social Characters, Traveling, Useful Hints on Conversation, Forms of Invitation, Letters of Introduction, Bridal Etiquette, Ball-room Etiquette, etc., etc. Bound in Boards, cloth back.

Price.....50 cts.

Carpenter's Manual.—Instructs in the use of tools and the various operations of the trade, including drawing for carpenters, forms of contracts, specifications, etc., with plain instructions for beginners, and full glossary of terms used in the trade. Also gives plans and specifications for building a number of frame houses. Illustrated.

Price.....50 cts.

Ropp's Commercial Calculator.

A Practical Arithmetic for Practical Purposes, containing a complete system of useful, accurate and convenient tables, together with simple, short and practical methods for rapid calculation.

Bound in Cloth, Price.....25 cts.

A portion of the above works will be sent from our office direct, while some will be ordered from other publishing houses, requiring some two weeks longer time.

N. B. The above prices include the prepayment of postage by us.

The Whole Country Needs Fertilization

ADMONITION TO FARMERS!

GUAYMAS, MEXICO, September 9, 1890.

R. B. CUNNINGHAM, ESQ., Agent Mexican Phosphate and Sulphur Company—DEAR SIR: In answer to your inquiries as to the value of phosphates for worn-out lands, I will state that it is my opinion the lands of the older settled portions of California afford a good field for the use of phosphates. These lands have been cropped for years without any restoration of the chemical constituents necessary for an abundant crop. They therefore show plainly that they need assistance artificially to produce crops good in quantity and quality, let the crop be whatever it may.

Take, for instance, San Joaquin and Santa Clara valleys, and what do you see? Many crops that are so imperfect in quantity and quality that the eye at once detects the defect. The only relief that can be resorted to must be infused into the soil to replace the chemical properties that have been extracted by previous crops, and the writer is of the opinion that a liberal supply of phosphates will accomplish this.

The attention of the cultivators of the soil is sharply turned to rotation of crops, hoping thereby to get wealth out of their lands without fertilization. Some have turned their attention to beet cultivation in soil worn out by other crops. Beet or other seeds will not grow successfully unless the soil will nourish them.

This summer I saw several crops of beets on excessively cropped lands, the majority of which showed that there was something wanting to complete the plants to ample size and in quantity that should be expected of sugar beets under favorable circumstances. If a good crop is not obtained, there is deficiency in profit. It costs as much to cultivate soil deficient in chemical properties as it does if ample nutrition was in the soil. Under the former condition a deficient crop is certain, while under the latter condition he may reasonably expect an ample crop with profit.

Fields often are allowed to go to weeds, supposing thereby to enrich the soil. This is an uncertain method and not profitable. Your weeds have grown up and seeded; the dead stems can only add a limited addition to fertilize the soil, while the seeds of the same will cause much expense to exterminate them from the future crops. Besides, while thus only weeds as a crop, no profit was realized, while if a supply of phosphates had been applied to the soil, a profitable crop of beets or corn would be had. Besides, the weeds would have been exterminated during the cultivation of the said crop. I am, Sir, your obedient servant,

EDWARD PALMER, M. D.

THE MEXICAN PHOSPHATE AND SULPHUR CO.

Manufacture three grades of this Superior Fertilizer of the following analyses:

GUARANTEED ANALYSIS.	Brand [A] for Sugar Cane, Sugar Beets, Etc.	Brand [B] for Grain, Gardens, Lawns, etc.	Brand [C] for Fruits, Vineyards, Etc.

S. F. Market Report

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Oct. 22, 1890.

In farm products, the past week did not present any features calling for particular mention. Continued dry weather is having a marked influence on feedstuff and two or three other articles.

The wheat market at the East and also abroad has exhibited more strength, with an advance established in prices. The following is to-day's cablegram:

LIVERPOOL, Oct. 22.—Wheat—Slow. California spot lots, 7s 4½d to 7s 7d; cargoes off coast, 38s; just shipped, 37s 9d; nearly due, 37s 9d; cargoes off coast, strong; on passage, very firm; Mark Lane wheat, firm; French country markets, firm; wheat in Paris, steady; flour, firm; weather in England, fine.

Foreign Grain Review.

LONDON, Oct. 20.—The *Mark Lane Express*, in its review of the British grain trade for the past week, says: There is a small inquiry for English wheats and prices have declined 6d. Foreign wheats are tending toward firmer prices; fine Whites are 6d better. Barley is weak under large arrivals and prices are 6d lower. Oats and corn are steady. At to-day's market English wheats were firmer; there was a recovery of 6d for best sorts. Foreign wheats were also stronger at 6d advance. Californian and Indian flour were very firm, especially good American.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.
Thursday	7s6d	7s6¾d	7s7½d	7s7d	7s7d	7s7d
Friday	7s6d	7s7½d	7s8¼d	7s8d	7s8d	7s7¾d
Saturday	7s7d	7s7½d	7s8d	7s7½d	7s7d	7s7d
Monday	7s6d	7s7d	7s7½d	7s7½d	7s6¼d	7s6¾d
Tuesday	7s6½d	7s6½d	7s7½d	7s7¼	7s6½d	7s6¾d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	37s3d	37s3d	37s3d	Steady.
Friday	37s6d	37s6d	37s6d	Firm.
Saturday	37s6d	37s6d	37s6d	Strong.
Monday	37s9d	37s6d	37s6d	Quiet.
Tuesday	37s9d	37s9d	37s9d	Higher.

Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

Day.	Oct.	Nov.	Dec.	Jan.	May.	June.
Thursday	106½	107	108	108⅞	111	...
Friday	107½	107⅞	108⅝	109⅜	112⅛	...
Saturday	107½	107⅝	108⅝	109⅜	111⅞	...
Monday	108¼	108⅝	109⅜	...	112⅝	...
Tuesday	108⅜	109⅛	110	111½	113	...

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

Day.	Oct	Dec.	May.	June.
Thursday	100⅞	103⅝	107½	....
Friday	102	105	109	....
Saturday	101⅞	103⅞	108	....
Monday	102⅛	105	109¾	....
Tuesday	103¼	105⅞	109⅝	....

NEW YORK, Oct. 22.—Wheat—$1.10⅛ for cash; $1.10 for December and $1.13 for May.

CHICAGO, Oct. 22.—Wheat—$1.02¾ for October, $1.05 for December and $1.09 for May.

Eastern Wool Markets.

BOSTON, Oct. 17.—Wool is steady. Sales of all kinds for the week, 4,716,000 lbs. Territory wool is in good demand and sells on a scoured basis at 60@62c ₱ lb for fine; fine medium, 58@60c; medium, 55@57c. California is more active; spring, 17@24c; fall, 13@18c; Oregon, quiet.

NEW YORK, Oct. 17.—*Bradstreet's* will say tomorrow: Wool is still moving freely; the market is in sellers' favor, and dealers show great eagerness to advance prices still higher. Manufacturers are said to be well supplied with stock. It seems hardly possible for sales to reach the figures of two weeks ago for some time to come, nevertheless, at the rate manufacturers of worsted and dress goods are turning out cloth, there is a light possibility of great weakening in the demand for wool. It is expected in most quarters that prices will hold firm for several months. At Boston there is a better demand for California wools, as large quantities have changed hands during the past week. Fine Territorial wools are still selling with a slight advance in prices. Ohio and Michigan are very firm, with dealers' stocks much reduced. Australian wools are selling well and are rapidly gaining favor. The condition of the foreign markets affects them more than any domestic supplies.

All classes of wool received liberal attention here and eastward. Manufacturers are confident of the coming support of woolen goods and are still drawing supplies from interior points. Manufacturers secured over 4000 bales at the late London sale. The deal causes no comment, owing to the present condition of stock.

The Russian Grain Trade.

ODESSA, Oct. 17.—The marked and steady decrease in the export trade in Russian grain is attracting the serious attention of the Government. The total shipments from all Russian ports for the first six months of the year only reached 257,000,000 poods (one pood is equal to 40 pounds, or 36 pounds English, and 63 poods are equal to one ton) against 310,000,000 poods in 1889. Russian economists are awakening to the fact that American, Indian and Egyptian grain is driving the Russian product out of the market.

The Corn Crop.

CHICAGO, Oct. 21.—The *Farmers' Review* will say this week that careful examination of estimates furnished by correspondents reveals the fact that the corn crop is turning out somewhat better than was expected. The crop in Michigan and Wisconsin is larger than last year, in Minnesota and Dakota almost as large. The other States, especially Kansas and Nebraska, show a considerable shortage. In several counties in Kansas and Nebraska corn is nearly a total failure. The *Review* gives estimates on the production of Illinois, Indiana, Ohio, Kentucky, Missouri, Kansas, Wisconsin, Michigan, Iowa, Nebraska, Minnesota and the Dakotas, and says that after deducting from the gross product a large percentage of unmerchantable corn, the estimate of the total amount marketable in the States named is 825,925,253 bushels. The condition of the crop in the remaining States not covered by the report is estimated at about 85 per cent of the average.

Hops.

NEW YORK, Oct. 20.—Transactions in choice Oregon hops are announced here at 40@41c. Cable advices say remarkably good offers are made in London for Pacific hops. The prices made in this State for last week's sales for State hops were 40@41c. Big growers hold firmly still.

NEW YORK, Oct, 19.—In local hops the business was light. About 2400 bales went abroad from here and Baltimore, largely Pacific. State, new, were quoted at 40@47c; last season's 25@32c; previous growths, 8@20c; Pacific, new, 36@40; last season's, 30@33c; previous season's, 8@25c.

BAGS—The market is reported unchanged.

BARLEY—Receipts continue free, and so does the demand. In futures, trading has been active at better prices. The following are to-day's Call Board sales:

Morning Session: Buyer 1890—200 tons, $1.45; 100, $1.45⅛; 100, $1.45½; 100, $1.45⅜; 200, $1.44⅞; 100, $1.45¼. Buyer season—100 tons, $1.50⅜; 100, $1.50¾; 100, $1.51; 100, $1.51¼; 200, $1.51½; 100, $1.51; 100, $1.50¾. May—100 tons, $1.42; 100, $1.42½ ₱ ctl. Afternoon Session: Buyer 1890—100 tons, $1.44¼. Buyer season—100 tons, $1.51¼; 100, $1.51½. May—100 tons, $1.42½ ₱ ctl.

BUTTER—The market is stift, with dealers able, at times, to get an advance over top quotations for gilt edged. Pickled and firkin or keg butter are going out more freely.

CHEESE—The market is strong for the more choice mild grades.

EGGS—The market has made another up move, but at the close is weaker, owing to more Eastern coming to hand.

FLOUR—The market is firm at full prices.

WHEAT—The sample market has been quiet, but toward the close there appears to be more doing. The market has a strong tone, In futures, trading has been quite free. The fluctuations were only slight. The following are to-day's Call Board sales:

Morning Session: Buyer 1890—800 tons, $1.36⅝; 600, $1.36¾. Buyer season—300 tons, $1.45¼; 200, $1.45⅜ ₱ ctl. Afternoon Session: No sales.

Market Information.

Cereals.

The local wheat market has ruled very strong throughout the past week, and this too in the face of strong bear talk and movements from buyers. The latter hold to the opinion that lower prices will obtain just before tax-paying day. We have seen buyers mistaken before, and it may be that they will be in this instance. It will not take much more of an advance at the East to give a profit in shipping hence to Chicago and New York. The quotations there are in bushels, while ours are in centals, or 100 pounds. It now looks as if the coal-miners' strike in Australia will be settled at an early day, when vessels from there will begin to put to sea. The engaged tonnage in port has a carrying capacity of 116,000 tons, which, when dispatched, will make the shipments of wheat (flour reduced to wheat) aggregate over 400,000 tons, and not half of the season passed. Oregon foreign shipments are quite free.

Continued dry weather causes a very strong tone to prevail in the barley market, which is supplemented by a good demand and light supplies. Many of our exchanges report the supply nearly exhausted in their immediate section, against liberal stocks held at this time in 1889. The high prices are against any decided export movement, yet there is some going out. Some barley is coming to hand from Washington.

Oats are very strong at full prices. Receipts are not large, while the demand is active. The higher prices ruling for barley and ground feed are in favor of oats. The supply up North is reported below the average at this season of the year.

Corn is easy, but not quotable lower. To press sales, lower prices would have to be accepted. The crop is said to be large, but even in this case, we do not see any reason for prices to go lower in the face of higher markets for ground feed, barley and oats.

Rye is barely steady. The demand is only fair.

Feedstuff.

In ground feed the market shows more strength at a slight advance in bran, middlings and barley. Continued dry weather is in favor of the selling interest.

Hay continues to be in good demand from feeders. The supply in the country is said to be light, particularly of the better grades. Dealers pay $19 under protest. If the rains hold off much longer the market will be apt to show still further strength.

Live-stock.

Bullocks are steady with a firm tone. Supplies are being drawn chiefly from Nevada and Arizona. Mutton sheep are lower. Hogs are firmer. Packers are taking more freely. Horses and milch cows are unchanged.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4½@4½c ₱ lb. dressed, 7@8c ₱ lb.; heavy, 4@4½c ₱ lb.; dressed, 6½@7½c ₱ lb. Stock hogs, 3¼@3½c ₱ lb.

BEEF—Stall fed, 6½@—c ₱ lb.; grass fed, extra, 6@—c ₱ lb.; first quality, 5¼@5¾c ₱ lb.; second quality 4¼@5c ₱ lb.; third quality, 4c@— ₱ lb.; bulls and thin cows, 2@3c ₱ lb.

VEAL—Small, 6@8c ₱ lb.; large, 4@6c.

MUTTON—Wethers, 7c ₱ lb.; ewes, 6¼c ₱ lb.; lamb, spring, 8@9c.

Fruits.

Strawberries continue to come in sparingly, but owing to the lateness of the season do not fetch any better prices.

Pears are slow, as are quinces. There continue heavy receipts of apples, and unfortunately for the market a large proportion are wormy or otherwise defective. Choice, perfect, good-keeping apples are freely taken for shipment to Australia, China and Japan.

Grapes have been coming in quite freely, necessitating slightly lower prices to close out pressing consignments. The situation makes correct quotations hard to give. Wine grapes are slightly firmer.

The dried-fruit market is easy for peaches and apples. Apricots are well cleaned up. Pitted plums are scarce and higher. Prunes are barely steady. Some dealers are under the impression that after the turn of next year the market is likely to improve, but in the meantime it will be slow.

Dried grapes are doing better.

Raisins are moving off quite freely. The market is strong, but no higher. It now looks as if the crop will go into consumption at good prices.

Vegetables.

The market is about bare of corn, summer squash and cucumbers.

Onions are strong under light receipts and a good demand. The light supply in Oregon is in favor of the selling.

Potatoes continue in good demand for both shipping and home. The free shipments overland are an important factor in keeping values up. Choice, good keepers are wanted to fill distant orders, and for such a slight advance on outside quotations is obtainable.

Miscellaneous.

Poultry has held to steady prices under fairly free receipts from the Central States.

The receipts of beans have increased, causing some shading in prices.

Peanuts are coming in freely, causing lower prices to obtain. Brazil and other nuts are unchanged.

Hops show more strength. Sales are reported as high as 40c a pound.

Wool is steady at full prices. The demand appears to run chiefly on luster goods wools.

Overland shipments in last month aggregate as follows, in pounds: Beans, 2,237,740; brandy, gals, 225,600; canned goods, 18.723,990; potatoes, 4.804,880; fruits, dried, 10,710,360, green, 17,559,840; raisins, 3,478,780; honey, 625,370; hops, 1,643,600; mustard seed, 255,520; onions, 105,440; vegetables, 945,020; wine, gals, 5,010,300; wool, grease, 605,050, pulled, 125,420, scoured, 564,210; nuts, 15,000.

Exports by sea the past week aggregate as follows: Flour, bbls, 325. Wheat, ctls, Hull, 57,396; Liverpool, 64,979; Cork, 125,648; Rio de Janeiro, 63,825. Barley, ctls, Honolulu, 1052. Rolled barley, ctls, Honolulu, 755. Beans, lbs, Victoria, 4770; Sydney, 2550; Honolulu, 4218. Dried fruits, lbs, Victoria, 4022; Sydney, 958; Auckland, 3750; Brisbane, 2875; Townsville, 625; Dunedin, 2750; Honolulu, 400. Bran, sks, Honolulu, 887. Hops lbs, Sydney, 1770; Dunedin, 5104; Suva, 3010. Onions, sks, Sydney, 174. Hay, bls, Honolulu, 664. Wine, gals, Honolulu, 400. Apples, bxs, Sydney, 3318; Auckland, 995. Corn, ctls, Sydney, 3045. Canned fruits, cs, Auckland, 295. Raisins, bxs, Sydney, 616; Auckland, 550; Melbourne, 400; Wellington, 150; Brisbane, 950; Nelson, 125.

From the *Commercial News* of Oct. 22d the following summary of tonnage movement is compiled:

	1890.	1889.
On the way to this port	249,525	207,411
On the way to neighboring ports	20,880	9,565
In port, disengaged	12,410	36,465
In port, engaged for wheat	72,890	76,580
Totals	355,705	330,021

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to Oct. 15, 1890, the following are the exports from this port:

	1890.	1889.
Wheat, ctls	2,860,484	3,349,935
Flour, bbls	317,118	309,222
Barley	122,070	488,085

Rope.

Baling, Duplex, lb	11
" Manilla, lb	14
Twine, for hops, balls, tarred, lb, Manilla	15
" " grape vine, balls, lb "	15½
" " " coils, lb "	15½
" spring, lb "	1
" binder (650 ft. to lb), lb	15

Duplex twine 3c per lb less.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

California Fruits East.

CHICAGO, Oct. 16.—The Montgomery Auction Co. sold to-day for account of the Earl Fruit Company six cars of California fruit as follows: Full crates Muscat grapes brought $1.50; hf-crates, Muscat grapes, $1.75; full crates of Emperor grapes, $1.85; crates, Cornichon grapes, $1.90; Salway peaches, $1.55; Easter Beurre pears, $2.30; Lawrence pears, $2.20; quinces, $1.75. The weather is bad. It is raining hard. Grapes are in bad order and there are heavy receipts.

CHICAGO, Oct. 17. — The Porter Bros. Co. sold six carloads of California fruit to-day at auction at the following prices: Quinces, $1.75@1.80; pears, Winter Nelis, $2.10@2.15; d'Alencon, $2.40 @2.45; Diel, $3; peaches, 80c@$2.85; Tokay grapes, full crates, $3.25; Muscats, very poor order, $1.05@1.20; Cornichon, $2; hf-crates, 90c@$1.

CHICAGO, Oct. 17.—The Montgomery Auction Co. sold to-day for account of the Earl Fruit Co., grapes, Muscats, hf-crates, $1.90@1.95. The grapes were very moldy.

NEW YORK, Oct. 17.—A trade paper reports California canned fruits more closely sold up than ever before at this season of the year. Some brands of peaches and apricots are entirely out of first hands. Some entire lines are also reported closed out.

CHICAGO, Oct. 18. — The Montgomery Auction Co. sold to-day for account of the Earl Fruit Co., Tokay grapes, hf-crates at $1.90; Beurre Clairgeau pears, $3.05@3.30; Glout Morceau, $2.95; Easter Beurre, $2.20@2.45; Vicar, $2@2.20; Beurre Diel, $2.45@3; Lawrence, $2.25; Cornichon, $1.80. The weather is bad; raining hard.

Porter Bros. Co. sold four cars California fruit: Tokay grapes, full crates, $2.60@2.80; hf-crates, $1.15 @1.65; Muscats full crates, $1.25@2.15; hf-crates, 75c@$1.20; Black Morocco, full crates, $1.45@ 1.65; full crates Cornichon, $2.65; Emperor, full crates, $2.30; all in poor order.

WASHINGTON, Oct. 18.—The following is an editorial paragraph in this evening's *Star*, which explains itself: "What is the poison of the Eastern States seems to be in 1890 the meat of California. Her 10,000 carloads of fruits of various kinds on a liberal valuation of $10,000,000 make almost half the value of her last year's crop. With the failure of the fruit crop in the East, this snug item fits in well, and to the peculiar satisfaction of the fruit-raisers of the Pacific Slope and their friends. California fruit is fast coming permanently to the front, not simply to make good Eastern losses, but also to supply a constantly increasing demand."

NEW YORK, Oct. 18.—The *Commercial Advertiser* says it is interesting to note that as cherries are shipped from California in April, the Golden State furnishes us with fresh fruit during each month of the year.

Almeria grapes are now coming into market in large quantities. A recent letter from Almeria says the quality has never been finer and the bunches have averaged large. So far, about 50,000 barrels have been disposed of at very good prices. Last year 140,000 barrels were sent to New York. It is probable that about 150,000 will come this season.

NEW YORK, Oct. 19.—Fresh fruit holds a good demand and the supply of grapes is very attractive. Pacific pears were the valuable feature, and the market was active, as buyers seemed to be used to high prices.

Thirty-four cars sold at auction. Easter Beurre pears at $1.60@2.90; halves, $1.30@2.50; Winter Nelis, $1.35@1.90; wholes, $1.80@3.85; others, $1.90@4.70, including Commerce at $3.25 and Duchess at $3.30. Quinces sold at $2.60@2.80; peaches, hf-boxes, 20@90c; boxes, 85c@$1.60; Tokay grapes, single, 75c@$2.75; double, $1.30@5.05; Cornichon, $4.80; single, $1.40@2.95; Rose of Peru, 65@95c; Muscat, $1.30; double, $2.45@2.75; Morocco, $1.40@3.15; others, 80c@$1.70.

Nine cars sold at auction: Peaches, $1.20 per box; quinces, $2.12; Commerce pears, $1.60@3.55; Glout Morceau, $3.12@3.65; Winter Nelis, $1.90@ 2.75; halves, $2.10@2.15; others, $1,70@3.75. A carload of Natoma grapes brought $3.45@4 25; other double, $3.50@3.62; single, $1.60@2.15; others, $1.60@3.55.

NEW YORK, Oct. 20.—Sgobel & Day, agents for the California Fruit Union, auctioned to-day six carloads of fruit. Grapes, double crates, Tokays, $3@ 3.50; Morocco, $3.25; Emperor, $3.25; Terra, $2.55; single crates, Muscats, $2.50@1.15; Tokay, $2.40@ 1.45; Cornichon, $2.20@2.05; Morocco, $1.80@1.35. Pears, Barry, $3.35; Glout Morceau, $3.87½. Coe's late Red plums, $2.05. Boxes quinces, $2.85.

CHICAGO, Oct. 20.—The Montgomery Auction Co. sold to-day for account of the Earl Fruit Co., W. R. Strong Co. and others: Tokay grapes, full crates, $3.05 to $3,50; hf-crates, $1.25 to $1.50; Cornichon, full crates, $2.70; hf-crates, $1.45; Black Morocco, full crates, $3.35; Muscats, full crates, $1.75; Glout Morceau pears, $2.50 to $2.75; Easter Beurre, $2.25 to $2.30; Winter Nelis, $2.30; Beurre Diel, $2.75; Duchess, $2.75; late Red plums, $2.05. Some fruit in poor condition sold for less.

NEW YORK, Oct. 20.—It is reported that the California canned fruit sales in England to Americans, who reimported them to the United States, have reached such proportions that the English markets are practically bare. Those who reimported made good profits.

The position of Valencia raisins here is said to be disappointing, as the cost of the goods now on the way under the new tariff will exceed the quotation now made here for these goods in a variety of instances. California prunes are still held at higher figures than the French article, and are in light supply. Following are the comparative figures for the four sizes: French, 10¼c; California, 12¼@12½c.

NEW YORK, Oct. 20.—Fruit is more abundant now than during the summer. The market is, in fact, glutted. New York State is supplying a large quantity of Concord grapes, and the crop promises an enormous yield. Prices are low in consequence, about 4 cents per pound among the jobbers. Apples, too, are plentiful. The fruit is coming from Nova Scotia on the east to Missouri on the west, and from the Hudson river sections. California continues to supply the East with almost every variety of her delicious products. Peaches are cheap. On Saturday one auctioneer sold 11 carloads of fruit, including 5000 boxes of peaches.

CHICAGO, Oct. 22.—The California dried fruit market is quiet but steady; changes from last prices are very slight. California green fruits continue in good supply and the feeling was weak. Considerable stock, both of pears and grapes, is common and has to be sold low. Prices range as below: Peaches, $1.25@2, as to quality; pears, Winter Nelis, $1.25 @2.50; Vicar and Easter Beurre, $1.75@2.25; Muscat grapes, hf cases, 75c@$1; Tokay, $1@1.25; Cornichons, $1.25@1.50.

Hops.

NEW YORK, Oct. 22.—A carload of California hops has been sold at 38c, and 100 bales choice California at 42c. Buying is fairly active in the interior of this State for export account at 45@50c.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos, $1; 10 mos., $2; 15 mos., $3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

PLEASANTON STOCK FARM CO., }
PLEASANTON, ALAMEDA CO., CAL., April 29, 1890. }

This is to certify that during the fall, winter and spring of 1889 and 1890, I had fed to the horses under my charge a ton and a half of Manhattan Food, and I consider it the best article of the kind I have ever met with or used. I consider it so valuable an adjunct to feeding that I shall always keep it on hand, and heartily recommend it to all owners, breeders and trainers of valuable stock. ANDY MCDOWELL, Trainer.

Housewives, Attention!

Two *new* first-class Sewing Machines for sale cheap. Will be sent direct from warerooms if desired. Address, H. F. D., Box 2517, San Francisco, Cal.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

FOR WEEK ENDING OCT. 14, 1890.

438,223.—WASHING MACHINE—M. K. Biser, Los Angeles, Cal.

438,593.—INSECTICIDE—Giles & Brown, National City, Cal.

438,251.—WIND ENGINE—John Harder, S. F.

438,417.—STICKY FLY PAPER—E. Krull, S. F.

438,482.—CHURN—E. D. Middlekauff, Stockton, Cal.

438,273.—TRICYCLE — A. E. Miller, Sprague, Wash.

438,355.—VERGE WIRE FOR CLOCKS—J. M. Miller, Vacaville, Cal.

438,360.—HARNESS—J. R. Phelps, Sacramento, Cal.

438,177.—PIPE TONGS—J. M. Pray, Los Angeles, Cal.

438,178 — SKIRT-MEASURING APPLIANCE—J. F, Prizgint, Los Angeles, Cal.

438,362.—TIRE TIGHTENER—G. C. Richards, Sissons, Cal.

438,243. — WRENCH — H. Scheatzka, Bothell, Wash.

438,259.—CABLE RAILWAY—J. C. Shelley, Stockton, Cal.

438,449.—THROW OFF FOR CABLE-GRIP—T. W. C. Spencer, S. F.

438,455.—LAMP-SHADE SUPPORT—O. F. Wegener, Seattle, Wash.

The following brief list by telegraph, for Oct. 21, will appear more complete on receipt of mail advices:

California—John W. Gentry, assignor of one-half to J. Jacob, Oakland, railway-cable grip; John Hatch, San Francisco, safety device for elevators; Enoch Lawson, assignor of one-half to P. Leprohon, San Francisco, pipe coupling; William J. Herson, Stockton, assignor of one-half to C. D. Harson, churn; David D Jones, assignor to W. C. Anderson, San Jose, fruit-dipping apparatus; John Kueffer, San Francisco, assignor by mesne assignments to American Indicator and Improvement Company of California, automatic mechanism for station indicator in railway cars; Morris Lachman, San Francisco, sewing-machine; Ernest E. Lommatzsch, San Francisco, toy target; Abraham Morris, San Francisco, child's bed-lounge; Albert S. Morton, Suisun, wine-cooler; Chester W. M. Smith, San Francisco, metallic railway-car; Gottlieb Spicess, San Francisco, razor-strop; John C. H. Stutt, San Francisco, assignor to American Bell Telephone Company, Boston, Mass., telephone.

Oregon—John I. Hansen, Portland, stippling and stenciling brush; Mathias Jensen, assignor to Jensen Can-Filling Machine Company, Astoria, soldering machine.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

An Advertiser Testifies.

OFFICE PACIFIC GAS ENGINE CO., }
S. F., Oct. 21, 1890. }

To the S.F. Agent of the Pacific Rural Press, care Dewey & Co., Publishers—DEAR SIR: We are glad that you persuaded us to advertise in the RURAL PRESS, as it resulted in a large number of inquiries—no less than seven in one mail. We can trace at least three sales to this source, and have several more in prospect.

We have had inquiries from Florida, Cuba, Central America, New Mexico and Mexico.

We consider the advertisement a very good investment. Yours very truly,

PACIFIC GAS ENGINE CO.,
A. L. SERGEANT. J. F. DALY, Sec'y.

[This is only one of many evidences we have of the superiority of our paper as an advertising medium.—PUBS]

BERKSHIRE SALES.—Phil M. Springer, Secretary American Berkshire Association, Springfield, Ill., sends the following transfers of recorded Berkshires: Menlo Regent 24595, by J. S. Conner, Santa Clara, Cal., to F. H. Burke, S. F., Cal.; McGlauflin 24617 and Miss Bruce 24618, by Alex. A. Arnold, Galesville, Wis., to Geo. McGlauflin, Spokane Falls, Wash.; Nick 24797, by R. C. Halley, Salem, Or., to N. Baeson, Corvallis, Or.; Mollie Dun 24798, by R. C. Halley to H. Dan, Corvallis, Or.

Couldn't Spare It.

W. N., inclosing a remittance from Los Angeles, says: "Myself and family have been constant readers of the RURAL PRESS for more than 17 years, and we would be at a loss now without it. Every improvement makes it better."

Political Announcements.

[Notices admitted in this department are not necessarily endorsed by the editors or publishers of this paper.]

ATTENTION is called to the announcement of the American Party ticket and comment on the last page of this paper. Let every voter read, investigate and hold fast to that which is good and patriotic. Stand by your principles and hew to the line, every lover of this glorious country. Show your true colors at the ballot-box every time.

J. R. HEBBRON of Salinas is the Republican nominee for member of State Board of Equalization of the Fourth District. He has been a farmer in this State for 35 years and a member of Salinas Grange since 1874, and should receive favorable consideration from the fair-minded voters of his district.

ATTENTION is called to the announcement of Judge E. M. Gibson as candidate for Judge of the Superior Court of Alameda county. He is an old soldier, member of Temescal Grange, P. of H., and has been a popular Superior Judge for years.

— FOR —

JUDGE OF THE SUPERIOR COURT,

E. M. GIBSON,

OAKLAND, - - CALIFORNIA.

PATENTS!
DEWEY & CO'S
Scientific Press Patent Agency
OLDEST ABLEST. SAFEST. BEST. 220 Market St., S.F.

Injurious Insects of the Orchard, Vineyard Field, Garden, Conservatory, etc.,
—WITH—
Remedies for their Extermination.
BY MATTHEW COOKE.
Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price $4, postpaid. For sale by DEWEY & CO., publishers, 220 Market St., San Francisco.

HARNESS!
Take care of your HORSE. Civilized Man advances rapidly and the Horse will "Keep up with the Band" if well cared for. Horse Boots, Robes, Blankets, etc. Saddles, $5 to $75 each. Harness, $8 to $250 per set. American and English Saddlery Goods.
W. Davis & Son,
No. 410 MARKET STREET,
Between Sansome and Battery, SAN FRANCISCO.

Poultry and Stock Book
Niles's new manual and reference book on subjects connected with successful Poultry and Stock Raising on the Pacific Coast A New Edition, over 100 pages, profusely illustrated with handsome, life-like illustrations of the different varieties of Poultry and Live-Stock. Price, postpaid 50 cts. Address PACIFIC RURAL PRESS Office, San Francisco, Cal.

WANTED—A Cheap Second-Hand Washington PRINTING PRESS
For Experimental Purposes.
I. A. HEALD, 108 Main St., San Francisco.

THE JUDSON FENCE. BEST, CHEAPEST STOCK AND RABBIT FENCE ON EARTH. 65 CENTS PER ROD, CARLOAD LOTS.
Five Steel Wire Cables, Oregon Pine Pickets, Boiled in Red Chemical Paint to Preserve the Wood and Color the Fence. Four Feet High, 2½ Inches between Pickets. Rabbit Proof, 70 Cents. This is the COMING FENCE. Address JUDSON MANUFACTURING CO., 14 and 16 Fremont St., San Francisco.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

GANG-PLOW FRAME.—Alfred F. McMillan, Benicia, assignor to the Benicia Agricultural Works. No. 435,367. Dated Sept. 2, 1890. In the construction of gang-plows it is customary to unite the beams together by means of intermediate strips, braces, or plates of iron, which are bolted through the sides of the adjacent beams by bolts or nuts; but with the strains which ordinarily are brought upon the plow frame through the plows, which are supported from each beam, these braces become loosened and the frame loses its rigidity. This improved frame is especially applicable to that class of plows having two or more parallel iron beams to each of which a plow is connected. The patent consists in the combination with the beams of a gang-plow, of diagonal plates extending across the beams in pairs, one above and one below, with spurs or projections fixed in the beams and extending into corresponding cavities in the bars, with bolts and nuts whereby said nuts are clamped to the beam.

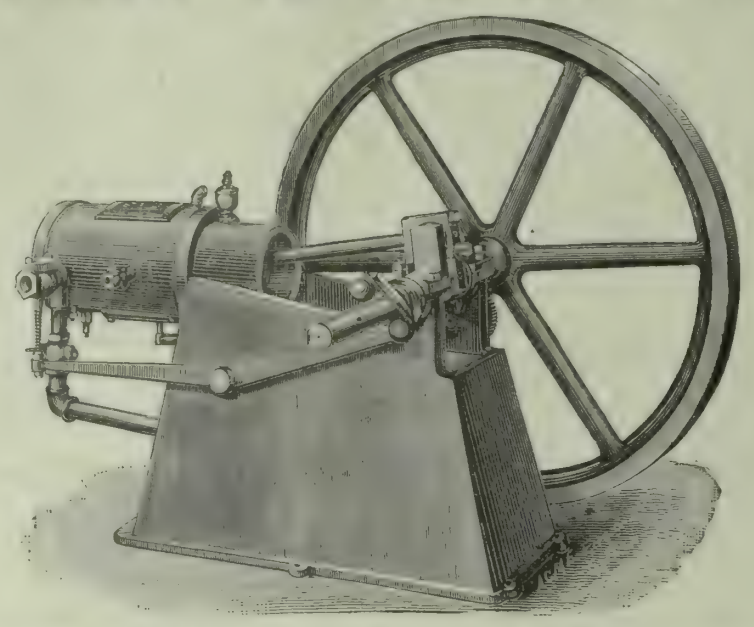
CHECK-BIT.—Harris G. Cox, San Jose, Cal. No. 437,576. Dated Sept. 30, 1890. The object of this invention is to provide an improvement in that class of supplemental bits known as "overdraw-checks." The especial feature is the two connected bars of the bit, extending transversely across the horse's mouth, with swivel attachments for the rear bar and nose strap connection, which attachments allow the front portion of the bit to drop down and relieve the mouth of the animal from pressure as long as the head is held in the proper position.

FLOWER-POT.—Amanda J. Byrne, Tuscarora, Nevada. No. 437,565. Dated Sept. 30, 1890. The object of this invention is to construct a pot which shall be light, durable, tight and capable of being opened so as to remove the contents at will. It consists of two metallic sections, each forming one-half the pot, hinged together on a vertical line at one side and having means for securing the meeting edges on the opposite side and a circular bottom, one edge of which is fixed to one of the halves and the other adapted to fit in a groove or channel in the opposite half so as to make a tight joint when the parts are closed together.

HOSE-COUPLING.—Andrew T. Gilbert, Salem, Oregon. No. 437,890. Dated Oct. 7, 1890. The object of this device is to provide a simple and effective coupling which will admit of its ready connection to join two pieces of hose, or to connect the hose with the hydrant. It consists of two opposing pipes having heads, one of which fits into the other, engaging lugs on one side of the heads, and a swinging link and hook with which it engages on the other side of the heads, said link being carried by and tightened by an eccentric headed lever pivoted to one of the pipe heads.

HARNESS TOOL.—Henry Egbers, S. F. No. 437,888. Dated Oct. 7, 1890. This tool belongs to the general class of combination tools, but is especially adapted for use in connection with the handling of leather and articles and apparatus made therefrom. It will be found useful in repairing harness, belting, and in riveting and lace-cutting. The instrument combines a series of different sized punches, which are carried in the back of one of the jaws, and each can be readily taken out and placed in position to operate; a rivet-cutter between the two jaws, a strip cutter with guard and gauge on the body of the tool, an awl formed by the sharpened end of one handle, an anvil carried in the end of the other handle, and a hammer formed on the back of one of the jaws.

NEWSPAPER AGENTS WANTED.



Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

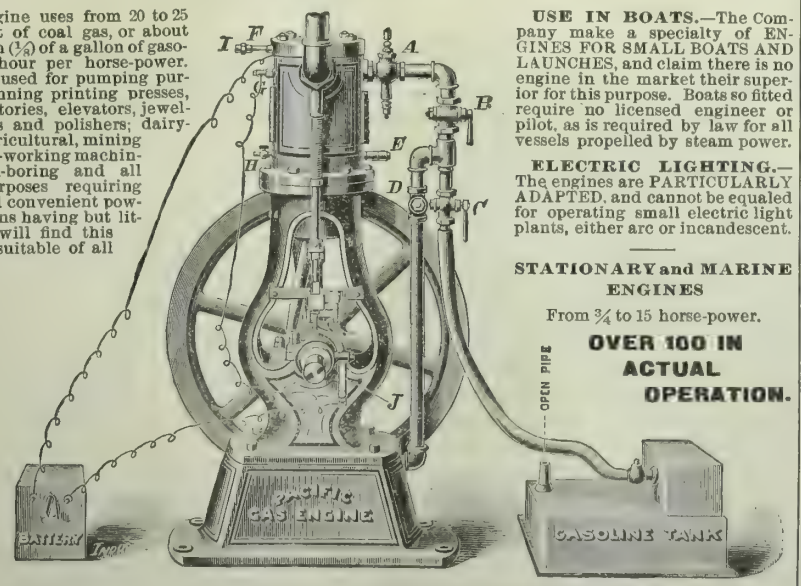
CHILES & GODFREY,
Davisville, Cal.



THE

PACIFIC GAS OR GASOLINE ENGINE.

PATENTED JUNE 17, 1890—NOS. 430,504, 430,505, 430,506.
Also in Great Britain and other foreign countries.

Starts Instantly Without the Necessity of Boiler, Fire or Experienced Engineer.

The engine uses from 20 to 25 cubic feet of coal gas, or about one-eighth (⅛) of a gallon of gasoline per hour per horse-power. It can be used for pumping purposes, running printing presses, small factories, elevators, jewelers' lathes and polishers; dairymen's, agricultural, mining and wood-working machinery; well-boring and all other purposes requiring cheap and convenient power. Persons having but little space will find this the most suitable of all motors.

USE IN BOATS.—The Company make a specialty of ENGINES FOR SMALL BOATS AND LAUNCHES, and claim there is no engine in the market their superior for this purpose. Boats so fitted require no licensed engineer or pilot, as is required by law for all vessels propelled by steam power.

ELECTRIC LIGHTING.—The engines are PARTICULARLY ADAPTED, and cannot be equaled for operating small electric light plants, either arc or incandescent.

STATIONARY and MARINE ENGINES

From ¾ to 15 horse-power.

OVER 100 IN ACTUAL OPERATION.

READ THESE TESTIMONIALS.

ALAMEDA, April 3, 1890.

PACIFIC GAS ENGINE CO.—GENTLEMEN: Permit me to add my testimonial to the many you have received indorsing your engine. As you are aware, mine was a Regan engine which gave me considerable trouble. I had to remove the head and raise the tappet valve every time I wanted to start the engine. I sent you the engine; you removed all the Regan appliance except the cylinder and stand. You put in your appliances, head, sparking device, inlet valve, and, in fact, changed it to the Pacific Gas Engine, which now works splendidly. I have not had to remove the head for any cause since you made the change (over two months). It gives me no trouble; my boy, 14 years old, attends to it.

The change from the Regan to the Pacific is a decided improvement. I can also get a third more power since the change, and I cheerfully recommend your engine as being simple, effective, and cheap. Respectfully yours,

B. S. HILL, S. W. Cor. Encinal Ave. and Morton St.

MAYFIELD, March 26, 1890.

PACIFIC GAS ENGINE CO.—We have given your little 1-H. P. engine a splendid advertisement. A fire broke out at 2:30 o'clock this morning, in a tenement house on my premises. I started the engine, connected the hose, and by its use saved at least $3000 worth of my property. I saved my blacksmith shop, lying 12 feet from the burning building, my barn and my dwelling. Three times the fire started in these buildings, and I extinguished it every time. The engine never faltered, and threw water between 50 and 60 feet high. The whole town was astonished, and they acknowledged that I saved at least $20,000 worth of property.

A fire department is being organized here, and I think they will have one of the engines on a truck for fire purposes. *They cannot be beaten.*

Hoping that all of your customers will be as well pleased with the engine as I am, I remain, Yours truly,

JOS. P. PONCE.

FILED WITH COUNTY CLERK OF THE CITY AND COUNTY OF SAN FRANCISCO.
Cal State Library 21 '90 66591

FOR

1 GOVERNOR, JOHN BIDWELL.
2 LIEUTENANT-GOVERNOR, BEN MORGAN.
3 SECRETARY OF STATE, WM. S. LYON.
4 CONTROLLER, M. C. WINCHESTER.
5 TREASURER, GUY E. GROSSE.
6 ATTORNEY-GENERAL, CHAUNCEY H. DUNN.
7 SURVEYOR GENERAL, WM. L. DIXON.
8 CLERK OF SUPREME COURT, J. D. SPENCER.
9 SUPERINTENDENT OF PUBLIC INSTRUCTION, D. LAMBERT.
10 CHIEF JUSTICE OF SUPREME COURT, WILLIAM H. BEATTY.
11 ASSOCIATE JUSTICE OF SUPREME COURT, CHAS H. GAROUTTE.
12 ASSOCIATE JUSTICE OF SUPREME COURT, RALPH C. HARRISON.
13 ASSOCIATE JUSTICE OF SUPREME COURT, UNEXPIRED TERM, JOHN J. DeHAVEN.

JUDGE CHARLES H. GAROUTTE

Stands before the people without reproach. If letters of commendation and approval may be accepted as evidence of popular approval, the Americans and Republicans builded better than they knew when they named Judge Garoutte for a seat on the Supreme bench. The Judge and his many friends must notice with no small degree of pleasure that though charges are made, complaints uttered and fault found with nearly every other candidate, no one has been able to find a flaw in his social or official record. He is a Native Son whom all respect and of whom the State is proud. His strongest commendation is found in the fact that he is most warmly esteemed where he is best known. His friends are many, and all are earnest and sincere. For the past six years he has been Superior Judge of Yolo county.

GENERAL JOHN BIDWELL,

The American candidate for Governor, is an old and tried Californian. He has lived here for nearly 50 years. There is no shadow or stain upon his social, political or business record. While other candidates go about explaining this or that act of their lives, Gen. Bidwell has nothing to explain; nothing to answer; nothing to excuse or palliate. His life has been so unblamable, so upright and so morally correct that fault-finders can find nothing at which to carp. Yet since 1849 he has been prominently before the public. He has held many official places, many responsible offices, and from each he has come with credit to the people and honor to himself.

EVERY COUNTY COMMITTEE should take care to have a place on the tally-sheets for the AMERICAN record, so that our votes may not be counted as scattering.

COUNTY COMMITTEES will be furnished the names of the nominees for Supreme Judges on application to the State Secretary.

IF you cannot get an American ballot, make one of an old party ticket. Scratch POND or MARKHAM and DEL VALLE or REDDICK, and write on the margin the names of BIDWELL and MORGAN. You need only change nine names thus to give yourself a full American ticket.

IF you feel that you ought to vote the American ticket and cannot find an American ballot, scratch an old party ticket and write in the names of the American candidates. It will take but a minute's time, and you will feel all the better for voting your principles.

SEE that your tickets are the right width, length and color, and the names of the candidates printed in regular order.

THE man who is afraid to vote for what he believes to be right is helping those who would take from him the privilege of voting at all.

HON. BEN MORGAN,

American candidate for Lieutenant-Governor, is rapidly growing in popularity. He is able, honest, manly and American. The Humboldt Co. *American Flag* publishes the statement of a well-informed and very conservative gentleman to the effect that Mr. Morgan's vote will exceed 30,000. It is certain that thousands of Democrats will not vote for Del Valle, and as they will not support the Republican candidate, it is fair to presume they will vote for Mr. Morgan. Mr. Ruddick, the Republican nominee, is a man of small caliber and least popular where he is best known. It is stated that in many localities he will run a long way behind his ticket. Dunn, Democratic nominee for Controller, an ardent Roman Catholic, is using his influence for Del Valle, and as he is now Controller, he is enabled to throw quite a number of Republican votes in Sacramento against Mr. Ruddick. Mr. Morgan is by far the most fitting candidate for Lieutenant-Governor, and if the voters of the State are wise, he will be Lieutenant-Governor.

WILLIAM S. LYON,

American candidate for Secretary of State, is one of the most thorough of Americans. He is active, energetic and earnest. He is an American because he believes we must maintain our American institutions if we would maintain our national existence. He has carefully studied our history and marked the tendency of the two old parties to yield political control to the foreign-born element, if it will only sustain a few of the leaders in office. He realizes that when the American people will no longer assert themselves as a people, the liberties that are the rewards of a government by the people are menaced, and will ultimately be lost. Mr. Lyon is Head Forester of the State Board of Forestry, and as such he has proven himself an efficient and faithful public servant. He is well and favorably known throughout the State. He is a resident of Los Angeles, where all are his friends.

STAND by the public school. Do not vote for a man who is not for free education. Vote for D. Lambert, American nominee for State Superintendent of Public Instruction.

DON'T forget that if you scratch one candidate's name and don't write the name of another opposite, or the words "no vote," the scratched name will be counted.

A VOTE for principles is never lost. The first Free-soil or Republican candidate for President received less than 7000 votes in the whole United States, but those he did receive were cast by men who voted for principle. If you believe in the principles of the American party, prove that you do by voting for American candidates.

Platform of the American Party of California.

ADOPTED AUGUST 4, 1890.

WHEREAS, Believing that the time has arrived when a due regard for the present and future prosperity of our country makes it imperative that the people of the United States of America should take full and entire control of their Government to the exclusion of the revolutionary and incendiary horde of foreigners now seeking our shores from every quarter of the world; and recognizing that the first and most important duty of an American citizen is to maintain this Government in all attainable purity and strength, we make the following declaration of principles:

Resolved, That all law-abiding citizens of the United States of America, whether native or foreign-born, are political equals (except as [illegible]ded by the Constitution), and all are entitled to and should receive the full protection of the laws.

WHEREAS, There are at least 17 States in this Union wherein persons are allowed to vote at all elections, without being citizens of the United States; and whereas such a system tends to place the management of the Government in the hands of those who owe no allegiance to our political institutions; therefore be it

Resolved, That the Federal Constitution should be so amended that the Federal and State Governments shall be forbidden and prevented from conferring upon any person the right to vote, unless such person be a citizen of the United States.

Resolved, That the naturalization laws of the United States should be unconditionally repealed.

Resolved, That the soil of America should belong to Americans; that no alien non-resident should hereafter be permitted to acquire real estate in the United States; and

WHEREAS, Tracts of millions of acres of land have heretofore been acquired and are now owned by subjects of foreign Governments, which, under existing laws, may be transmitted, intact, from generation to generation, thus enabling foreigners to build up and maintain immense landed estates in this country; therefore

Resolved, That we favor an amendment to the Constitution of the United States prohibiting non-resident aliens from transmitting real property by will; and render forever incompetent all persons whomsoever from taking real property from non-resident aliens by devise or descent; and

WHEREAS, By reason of the lax condition of the State and National land laws, in reference to the disposition of the public land, aliens, resident and non-resident, have been enabled to acquire, and have acquired, vast tracts of the public lands, and have thereby deprived American citizens of their birthright; now, therefore, in order to prevent the continuance of this great evil, be it

Resolved, That we demand that the National and State land laws be so amended that no persons except native-born citizens shall be permitted to enter or purchase any public land from the State or National Government.

Resolved, That the ownership of land by resident aliens should be limited in area and value.

Resolved, That we favor educating the boys and girls of American citizens as mechanics and artisans, thus fitting them to fill the places now filled by foreigners, who supply the greater part of our skilled labor and thereby almost entirely control all the great industries of our country, save, perhaps, that of agriculture alone; and in order to accomplish the object here stated, we demand that the State establish free technical schools, wherein American boys and girls may be taught trades and thereby become skilled artisans and mechanics.

Resolved, That we believe in equal and just taxation, and to accomplish this necessary reform we favor a uniform reduction of taxes on the real estate of the cultivator of the soil, and the imposing of advanced rates on property coming under the head of luxuries;

Resolved, That we are in favor of fostering and encouraging American industries of every class and kind, and to that end would protect our home productions and manufactures and inaugurate and maintain a system that will not only exclude the competitive cheap labor productions of other countries, but will also exclude the cheap laborers of other countries and prevent them coming here to compete with American workingmen; but we denounce the so-called issue of protection vs. free trade, as used by the Democratic and Republican parties, as a fraud and a snare, and we charge that the consideration which these parties manifest for the rights of American labor is a sham and a pretense. The best "protection" is that which protects the labor and life-blood of the Republic from the degrading competition with, and contamination by, imported foreigners; and the most dangerous "free trade" is that in paupers, criminals, communists and anarchists, in which the balance has always been against the United States.

WHEREAS, One of the greatest evils of unrestricted foreign immigration is the reduction of the wages of the American working man and woman to the level of the underfed and underpaid labor of foreign countries; therefore, we demand that Congress pass an immigration law whereby a per capita tax shall be levied upon and collected from all immigrants coming to the United States; and that such tax be made large enough to restrain further immigration from all foreign countries; and that all persons not in sympathy with our government should be prohibited from immigrating to these United States.

The Public School.

We regard the American common-school system as one of the chief factors in the formation, and one of the principal powers for the perpetuation of our republican form of government. In a government "of the people, by the people and for the people," intelligence is one of the principal elements of safety, and a common-school education should be made compulsory by law. Education is a sacred debt which the present generation owes to the future. The common schools must continue to be the nurseries of citizenship where our youth shall be taught the common branches, the history, the principles and the spirit of American institutions, and where the highest standard of excellence as regards moral, mental and industrial education shall be maintained; and from which shall be rigidly excluded all sectarian and denominational teaching, in order that children of all nationalities molded by them shall become Americans.

The common schools must be protected from all assaults, native or foreign, sectarian or ecclesiastical; and all private schools must be under State inspection, and teach the English language as a preparation for intelligent citizenship. The American flag ought to float over every school building in the land as an object-lesson in patriotism for childhood, and as a symbol to the world that we consider these buildings the arsenals of our strength.

As an important step in defense of the common-school system of education, and the perpetuation of the separation of Church and State, we join with other citizens in seeking to incorporate in the Constitution of the United States a sixteenth amendment embodying the following prohibitions:

"No State shall pass any law respecting an establishment of religion, or prohibiting the free exercise thereof, or use its property or credit, or any money raised by taxation, or authorize either to be used for the purpose of maintaining or aiding by appropriation, payment for services, expenses or otherwise, any church, religious denomination or religious society, or any institution, society, or undertaking, which is wholly or in part under sectarian or ecclesiastical control."

Resolved, That after the year 1898, no person shall be allowed to exercise the right of suffrage unless he can speak, read and write the English language intelligently.

Resolved, That the American party recognizes in the *saloon* the great agency by which corruption in politics is fostered and the power of *the bosses* maintained; and hereby pledges itself to work honestly and earnestly for the restriction of the evil to the narrowest possible limit.

Resolved, That the American party believes in and will do its utmost toward maintaining a pure ballot-box, and to that end we are in favor of an election law which embodies the features and principles of the Australian ballot system.

Resolved, That the American party believes in a free and full expression of the people upon all questions of public interest, and for the better attainment of this end, we favor the enactment of a law by which any question of general import, upon the petition to the Governor of three per cent of the total vote cast at the last previous election, shall be submitted to the electors at the next general election for their approval or rejection.

Believing that the industries of America demand an increase of circulating medium, therefore be it

Resolved, That the American party hereby declares itself in favor of the free coinage of silver.

Resolved, That we are heartily in favor of the bill introduced in the Senate of the United States by the Hon. Leland Stanford, providing for loaning the money of the Government to agriculturists at low rates of interest, taking as security therefor the land of the borrower, and we earnestly urge upon Congress the passage of this bill.

A list of States in the American Union in which persons are allowed to vote at all elections without being citizens of the United States, to wit:

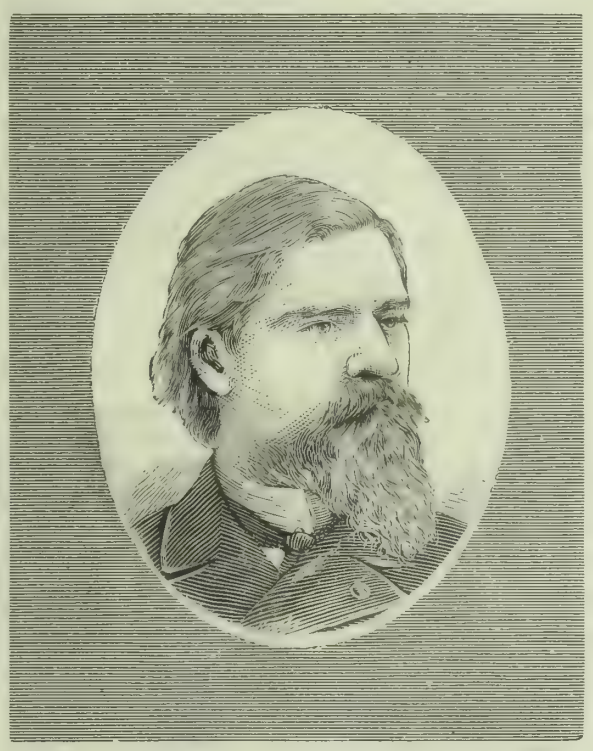
Alabama,	Iowa,	Nebraska,
Arkansas,	Kansas,	North Carolina,
Colorado,	Louisiana,	Oregon,
Florida,	Michigan,	Texas,
Georgia,	Minnesota,	Wisconsin,
Indiana,	Missouri,	*North Dakota*,
		South Dakota.

[North Dakota and South Dakota have been admitted to the Union with Constitutions that permit aliens to vote at all elections, thus increasing the number to nineteen.]

REFERENCE NOTE.—The above list is compiled from "Hill's Manual for 1882," and is published in the *North American Review* for March, 1887, and will be found in the *North American Review*, bound vol. 144, p. 306.

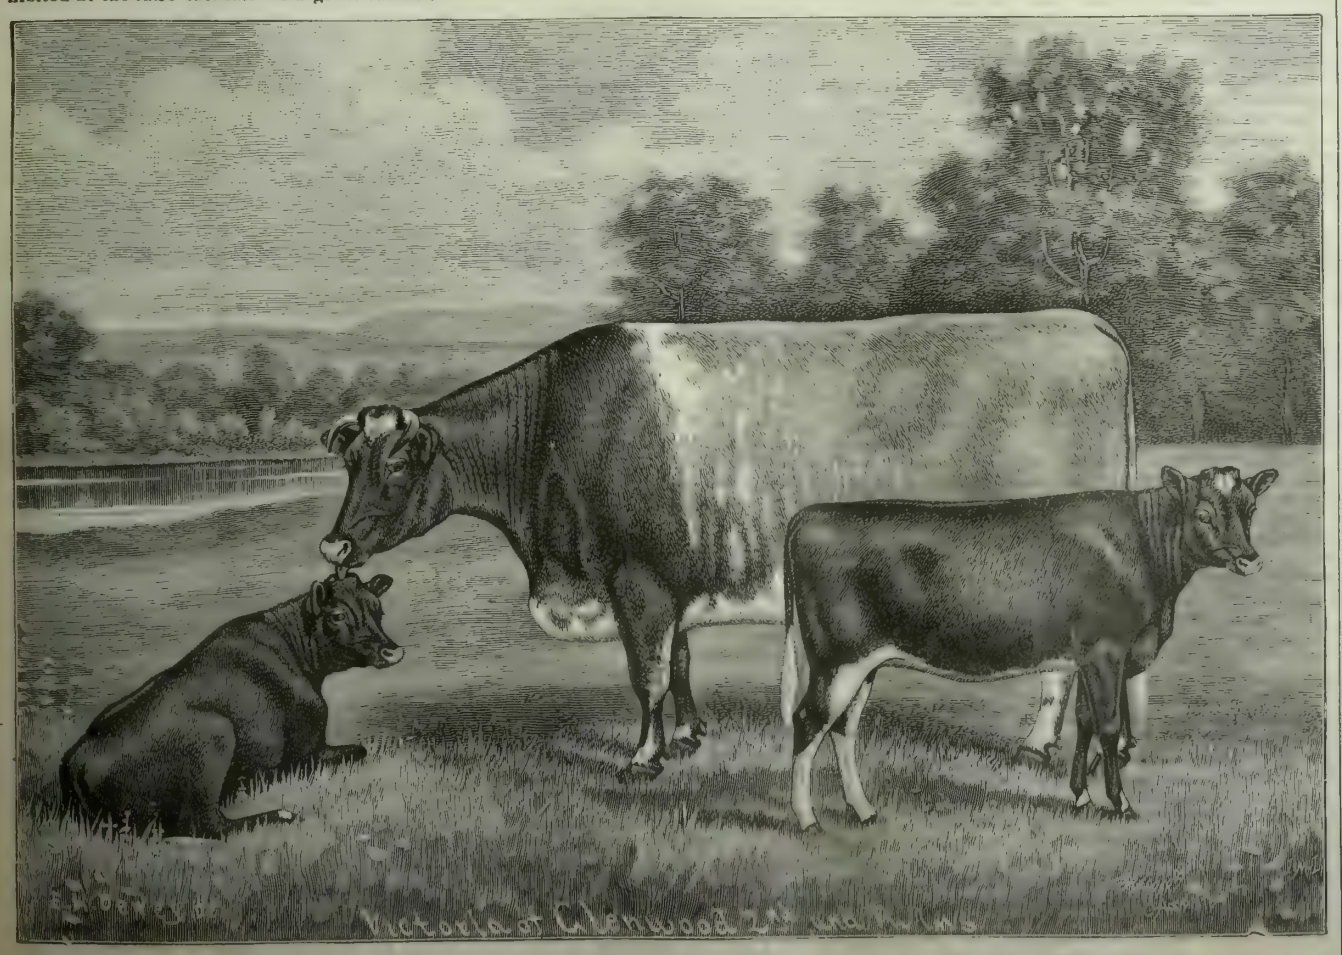
PACIFIC RURAL PRESS

TWENTY-PAGE EDITION.



Vol. XL.—No. 18. SAN FRANCISCO, SATURDAY, NOVEMBER 1, 1890. DEWEY & CO., Publishers, Office, 220 Market St.

A Family Group.



The affection of the lower animals for their young furnishes some of the most interesting observations to those who enjoy studies of animal life. The artist does well to suggest it in his sketch of a regal Shorthorn dam and her twin calves, which appears upon this page.

The animals are Victoria of Glenwood 2d and her twin offspring, and they are members of the Hickory Park herd of Shorthorns owned by C. M. Sanger & Son, Waukesha, Wisconsin. There is, however, a local California interest in the herd, for Mr. C. M. Sanger is identified with California industries, and when in this State usually makes his home at San Leandro, so that he has a wide acquaintance in this State.

The cow Victoria Glenwood 2d, a five-year-old roan, bears her twin calves to imported Giltspur. The *Breeders' Gazette* says that this cow was one of the seven head of Sittyton (Cruickshank) Victorias sold at the Cummings sale of June 10, 1886, for a total of $4180, an average of nearly $600 each, and is a daughter of that fine old matron Imp. Victoria 51st, one of the rare, deep-fleshed, heavy-milking cows that first gave the Sittyton cattle their wide reputation in the West. Her sire, Royal Duke of Pleasant Ridge 36889, was also fashioned in that same low and heavy mold, and Mr. Dewey's drawing indicates that the cow in question is possessed of much of the substance of her sturdy Scotch ancestry. She is an own sister to the dam of that excellent bull Prince Victoria of Hickory Park 94481, and standing at the head of the herd the Messrs. Sanger exhibited at the fairs this fall with great success.

COLONEL GEORGE R. DAVIS, DIRECTOR-GENERAL OF THE WORLD'S FAIR.

A GROUP FROM THE HICKORY PARK HERD OF C. M. SANGER & SON.

Few, if any, families in the Shorthorn Herd-Book can claim a lineage richer in the blood of first-class cattle than is shown by these Victorias. From "the Beautiful Lady Maynard" down to Champion of England and subsequent Sittyton sires, the pedigree displays the names of animals distinguished alike for good breeding and high character as individuals. Of this tribe was the great Linwood sire Imp. Baron Victor, one of the most successful herd bulls ever used in the West; but no branch of the family can justly be ranked above those descending, as do the Victorias in the Hickory Park herd, from the famous importation made some 15 years ago by Mr. Robert Milne of Lockport, Ill.

The Director of the World's Fair.

We recently stated that the World's Fair enterprise, having been properly officered, may now be considered as well upon its course. By the courtesy of the *Morning Call* we are enabled to present on this page a portrait of the chosen Director-General upon whose efforts much of the success of the undertaking will depend.

Colonel Geo. R. Davis, Director-General of the World's Fair, was born at Three Rivers, Palmer, Mass., Jan. 3, 1840, and educated in the public schools, and at Williston Seminary, where he graduated in 1860. Entering upon the study of law, he was admitted in due course, but in 1860 forsook his chosen profession to join the Union army. He enlisted in the Eighth Massachusetts Volunteer Infantry, and soon became a captain. At the close of the contest he became a resident of Chicago, still retaining his interest in military matters. He took a leading part in the organization of the local militia, and was made commander of the First Regiment of Infantry, Illinois National Guard, and senior colonel in the State service. In 1876 he was nominated for Congress by the Republicans of his district and defeated, though running largely ahead of the Presidential ticket. Two years later he was more successful and was elected. He was re-elected in 1880, and again in 1882. At present Colonel Davis holds the position of Treasurer of Cook county, of which Chicago is the seat.

BEET SUGAR ON THE MISSOURI.—A meeting was held at Sioux City, Iowa, Oct. 23d, for the purpose of securing pledges from the farmers of sugar beets. H. T. Oxnard, the Grand Island, Nebraska, sugar manufacturer, made a proposition to put in a plant at South Sioux City, to cost $500,000, for a bonus of $150,000, in cash and real estate, and a guarantee that 2000 acres of beets would be raised in the vicinity next year. There was no trouble in getting pledges for the required number of acres, and the very next day a committee started for Grand Island prepared to put up a guarantee bond for the bonus.

CARING FOR CATTLE.—At the recent meeting of the American Humane Association at Nashville, the subject of cattle transportation was taken up. During the past year a special agent was appointed to travel over the different roads to see that animals are properly treated and watered in transit. The chairman stated that there were 3000 improved cattle cars in use west of Chicago, but none east of that city.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Alessandro.

EDITORS PRESS:—To-day, Oct. 15, 1890, ought to be marked in the history of San Bernardino county as Alessandro Day. For several months past it has been known that a company of Eastern capitalists were preparing to put the Alessandro tract on the market in small parcels suitable for fruit farms, but the work was done so quietly that few had any idea of its extent. Having first secured an option on the Alessandro tract, they proceeded to secure an option on the Make tract of 10,000 acres, running across the valley from east to west, and lying to the north of the Alessandro tract. These, with some railroad lands which they have bought, make the amount up to about 21,000 acres of as fine fruit land as can be found in Southern California. They then made a contract with the Bear Valley Co. for water for their lands and were then ready to begin selling, which they seem to have found no trouble in doing, as they have sold to date options on 6180 acres, and the parties met to-day at the company's headquarters in the valley, about 11 miles northeast of Alessandro, to select their lots. It was estimated that 450 people partook of the free lunch furnished by the company, and about 50 others who had provided for themselves were present. The Redlands Brass Band discoursed sweet music while the gentle voice of the clerk was heard calling the numbers of the options, and the lucky holders were calling the numbers of the lots desired. This sounds something like the boom times of '86-7, when the brass band, free lunch and auctioneer were heard all over the land, but with this difference: Then they were buying city lots for a speculation; now they are buying 10 and 20 acre tracts for actual cultivation. A contract is let for laying a two-foot pipe to bring water on to the land by March 1, 1891, and the tunnel is now being dug to bring it through the San Timoteo hills between Redlands and the valley. A large canal will follow. Business men are taking hold of these lands, as it has been demonstrated that there is no surer investment in this country than in good fruit lands *with water*.

The lands are being sold so cheap that it is claimed they will soon double in price, and everybody seems to have the utmost confidence in the future of the valley. The Perris people have also formed a district under the Wright law and are to get water from Bear valley. Many have lived on hard-tack and hope, waiting for these times, and it is to be hoped that their desires may be realized and they can get up out of the drudgery and small pay of grain farming.

A town site has been laid off on the eastern end of the tract in sight of San Jacinto lake and city, as well as Alessandro and a large portion of the western end of the valley. It is called New Haven, after the early home of F. E. Brown, the engineer of the company.

L. S. LYMAN.

Alessandro, Cal., Oct. 15, 1890.

Ventura Notes.

EDITORS PRESS:—At present writing the weather is warm and dry—fine for threshing beans. The valleys in the eastern part of Ventura county are now enjoying (?) an east wind. Beans have been going into the warehouses pretty lively the past few days. If favorable weather holds until the middle of November, the farmers will secure their crops and be ready to cultivate the land for the coming season's products. The weeds show green even now as you look across the mellow fields.

In a five-mile drive yesterday we took an inventory of some of the things going into Ventura market. First a load of "golden pumpkins," which are really squashes, but they are "golden" in one sense, as they bring coin this season. Next come loads of beans, sacked and marked with the owners' names, and then a wagon piled high with bales of hay. How complacent that driver looks! and well he may, for that wagon-load of sacked walnuts will weigh quite heavy in silver dollars. A cloud of dust ahead of us caused some curiosity—a veritable "pillar of cloud," for it was darkness to us on the hither side. On nearing, it proved a drove of very prosaic cattle, being driven from the hills to the slaughter-pen. There are plenty of cattle in Ventura county, and much fine stock, too; but no one as yet has taken hold of the dairy—that is, to make butter and cheese. There are two farms near Ventura where cows are kept and milk is supplied to customers twice a day from milk-wagons sent into the town. One of the gentlemen, Mr. L. M. Lloyd, keeps about 250 head on the range back of his delightful valley home. The cows are brought from the hills, milked a short time, and then allowed to run at large again. Probably some 40 or 50 cows are milked during the year. Mr. Lloyd does not attend to this business himself, but with true Southern generosity allows his children to reap the benefit of the business. The stock is graded through introduction of Holstein blood. The owner likes the Holsteins for their milking qualities, although his first object in keeping stock is not for dairy produce but for beef. This enterprise of carrying on a dairy is a new one to Mr. Lloyd, but he calls it reasonably profitable. The cows graze during the entire year and are never fed at all. Mr. Lloyd also raises draft horses, which he finds profitable.

We are indebted to Mr. and Mrs. Lloyd for many courtesies. They have a model home in every sense, furnished with every convenience. Mrs. Lloyd finds her mission in her family, and her children are a true crown to a royal womanhood. It seems truly a delight to meet a refined, cultivated lady who finds the home field broad and rich enough, without the modern frenzy to plow and harrow in the world's vineyard.

When that drove of cattle passed by leaving us choking and blinded with dust, we continued on our way with true California stoicism where dust is concerned, and soon saw two wagons containing vegetables of many sorts, while perched on the seat of each vehicle was the usual "heathen Chinee," without whom a California landscape would seem unfamiliar. Dried fruits by the ton passing to various shipping points is a not infrequent sight. What country on the globe furnishes more variety in a given area than Ventura county? pray tell me. We have given barely a glance at a few.

M. E. DUDLEY.

THE APIARY.

Where to Keep Honey.

EDITORS PRESS:—Too much cannot be said of the importance of proper caring for honey after it is taken from the hives. I am afraid that a great many producers do not give their surplus honey the attention that it requires by proper ripening and the grading and selection of packages for both comb and extracted honey.

Remember that one of the greatest secrets in the honey business is to have it thoroughly ripened before placing it on the market. It does not pay to use second-hand pails and cans for packing and shipping extracted honey. The man who has his honey put up in new cans, with a bright, attractive label, will make five sales to where the man who has used old cans will make one.

All extracted honey should be graded. In our part of the State we have three different grades—the white, amber and dark—ranging in price from 1 to 5 cents per pound. Comb honey should also be graded into two or three different grades. After grading and scraping the propolis from the sections, it should be put in section or shipping cases and kept in a warm honey house.

Never under any consideration keep honey in a cellar or even in a room where the temperature changes so much as to cause dampness to settle on the surface of anything. If you do, the aroma and exquisite taste of the honey is destroyed and it is spoiled.

A great many of the ranchers who keep bees in California, and who know very little about the business, after taking off their surplus honey carry it to the cellar, under the impression that there is the proper place to keep it.

After the flavor is destroyed and the honey acquires a disagreeable taste, it is no wonder that a great many people say they do not like honey.

A great many bee-keepers have quite a time disposing of their honey, and I think that it is mainly because it has not been properly ripened or has been kept in a damp place.

Of course after a bee-keeper sells one crop of this unripened honey, the chances are that he will have a hard time in disposing of his next season's crop, no matter if it is thoroughly ripened.

I remember once in my early apiarian career that I took a lot of honey from the hives as soon as the cells were ready to cap. The honey, as I afterward learned, was gathered from the hollies, and honey from that source usually requires a month or six weeks to ripen in.

The honey when first gathered was not fit to eat, and I put it all back. After that I allowed all honey to ripen in the hives, or in tanks, after it had been extracted, before we attempted to use it.

An old man once asked me why the honey obtained from bee trees in the winter-time was always superior to any honey he ever bought or had taken from hives. I told him the reason probably was that the honey he bought in the stores and that he had taken from the hives was not as well ripened as that taken from the bee trees.

The most essential requisites for ripening honey are warmth and dryness; and this is especially necessary from the time the honey is stored in the hive until it is fully ripened. In Southern California they ripen their extracted honey in large tanks, holding from one to several thousand gallons, and in most cases the honey is ripened out in the open air. A screen of some kind is fastened on the top to keep out bees and insects, and if I am correctly informed, they leave the honey in those tanks from two weeks to two months. To an apiarist of small means, who has only a few colonies and wishes to ripen his extracted honey, I would advise him to buy a few stone crocks or jars, for they answer the purpose well. In storing comb-honey in a honey-house, be sure to keep it several inches above the floor, because in rainy and cold weather the honey seems to draw moisture, and the honey becomes thin and watery and sometimes acquires a sour taste.

When you have finished canning all your extracted honey, have it so placed that the sun may shine on it as much as possible.

Grizzly Flat, Cal. S. L. WATKINS.

Bee Diseases.

EDITORS PRESS:—I am glad to see in your issue of Oct. 11th that the president of the California Academy of Sciences has corroborated my opinion (given in the RURAL PRESS of July 6, 1889) that the ergot or black smut, commonly known as the ergot of rye, is undoubtedly the cause of the hitherto unnamed bee disease in California, which I first made known as above, as "Claviceps Apium."

I shall be glad to hear from any apiarist who has this or any other disease among his bees this season, and I will gladly give my opinion and remedies for the various diseases through the columns of the RURAL PRESS.

While on the subject of diseases, I may mention that I have lately read an article, which is at present going the rounds of the bee papers, taken from the Ontario Government Bulletin, stating that foul brood is caused by the rotting of uncared-for brood or chilled brood, which has died in the cells. As this statement is likely to cause an erroneous impression, I wish to say that chilled brood and foul brood are totally different, and although chilled brood is very often mistaken for foul brood, yet the former can never produce the latter disease unless the foul-brood germs are present.

Foul brood is the production of a very infectious disease germ, which (like smallpox or scarlet fever in human beings) can only be reproduced from a like disease. I am surprised that in this enlightened age such false "information" should be published by so high a source, and more surprised still that some of our leading bee journals have not contradicted the above statement ere it has been so widely diffused.

WM. STYAN.

San Mateo, Oct. 14 1890.

Honey in Monterey County.

Mr. C. S. Swenson is the leading apiarist of Monterey county. At the recent district fair held at Salinas City, he exhibited sections of honey in the comb and extracted honey that was pronounced by experts the clearest and finest in flavor of any they had ever seen.

He informed a RURAL reporter that this sample was selected from 260 stands, and while the larger part of it was equal to sample shown, he expressed his opinion that the crop this year was the best that he had ever made. He took the first premium and several parties made arrangements to secure some of the honey in comb and extracted.

THE FIELD.

The Beet-Sugar Industry.

THIRD PAPER.

Harvesting (Continued).

EDITORS PRESS:—Like any other crop, the farmer should plan well the harvesting of his beet crop. The method adopted in this country is to provide a plow-beam with two subsoil plows, one on each side of beam and directly opposite. The upright frame or standard of each plow should incline outward and the points inward, the object being to give good space for the tops of beets to pass freely between the two plows under the plow-beam and still have the points close under the beets. By this means the soil, together with the beets, is raised about two or three inches and dropped back into place; the beets are thereby loosened and can be easily picked up and topped. In topping the beet a large knife is used, and any part of the beet that has grown above the ground should be cut off. Care should be taken that the beets are as clean as possible and for this purpose should be left on top of the ground exposed to the sun for one day, so as to dry them as much as possible.

Cost of Crop.

J. B. Hudson, one mile from factory: First crop, 1888, 10 acres sown; cultivating and harvesting, $614 83; yield, 260 tons; value, $1306 96; net profit $692.13; per acre net, $69 21.

A. F. Richardson, two miles from factory: Eleven acres planted; cultivation and harvesting, $535.94; yield, 170 1-20 tons; value, $921.81; profit, $385 87, or $35 08 per acre net.

In the two above examples we have the experience of two farmers the first year with Vilmorin's improved white (Fig. 5 in last issue). In both cases the land was about the same and experience alone would equalize the crop.

Delivering Beets at the Factory.

Beets when delivered by the farmer should be well topped and cleaned, as only the well-developed beet-root will furnish any returns to the factory. In France, a stipulated price is placed on the beet-root per ton. In Germany, a fixed price is paid for beet-roots up to a certain per cent of saccharine, and for every one per cent over, an additional sum is paid. In this country both methods are practiced, but the former seems to be the most in favor with the farmer; the latter is more fair to both parties.

When the roots are delivered to the factory, after having been topped and cleaned, they are received by the yard foreman, who weighs them and then estimates the "tare" which is to be deducted for earth and bad trimming. It is on this estimate that the interests of the farmer and factory clash, and it is for the interest of both parties that the matter is well understood by the farmer.

Storing.

As fast as the beets come in and are weighed and estimated, they are stored in long bins provided with water ditches in the bottom. These bins should be about 30 feet wide and 600 feet long and 8 feet high in the clear. Beet-roots should not be piled any higher, as the weight will cause them to heat. A bin of this size would have a storing capacity of 3600 tons of beets and will be provided with two concrete ditches 10 inches wide, running parallel lengthwise through the bin and 15 feet apart, with proper grade to carry the beets into the factory by means of water.

Extraction of the Juice.

The first step toward the extraction of the juice is to clean the roots of all foreign matter. The roots are conveyed by water from the beet-bin into the wash-room, where they are raised into the wash-barrel, which is also provided with a stone compartment where all stones that may be attached to any of the roots are loosened and caught. This is necessary, or the beet-cutter would soon be destroyed. The beets, as fast as washed and stoned, are now conveyed into a bin located on the roof of the building. This bin should have a capacity of not less than 10 tons to keep up the supply in case of accident at ditch or beet-washer. From this bin the beets are drawn as wanted into a hopper located on scales and capable of holding just 1000 pounds, the hopper being provided with a self-register which will indicate the amount of beets used daily. This should tally with the receipts of beets at the office. The beet-cutter is located under the discharge of the scale hopper and receives the beets direct.

The cutter consists of a hopper, horizontal disk with knives, and vertical shaft with driving gear. By this machine the roots are sliced into thin ribbons and are conveyed directly to the "diffusion tanks."

The "diffusion battery" consists of 12 wrought-iron tanks, each capable of holding from one to two tons of beet-slices, and are arranged in a row or circular, as may be preferred. Each tank has a juice-heater connected and located by its side. The tanks and juice-heaters are all connected with three sets of pipes: 1st, hot water; 2d, "passover," and 3d, juice pipes with proper valves to each. The ribbon-like slices are conveyed into the first tank until full. It is then closed and the slices continue on to the next cell. The tank that has been closed is now filled with hot water and allowed to remain from eight to ten minutes. By this time tank No. 2 is filled and closed, the partly sweetened water from tank No. 1 is turned into tank No. 2, and hot water again fills tank No. 1. Tank No. 3 is now filled and closed and the twice-sweetened water enters No. 3, the once-sweetened water enters No. 2, and hot water for the third time enters tank No. 1.

B. B. CHANDLER,
Alameda, Cal. Mechanical Engineer.

(To be Continued.)

Pacific Coast Potatoes.

Throughout the entire country there is a growing scarcity of potatoes. In all the States east of the Rocky mountains, the potato crop has been in the aggregate comparatively a failure. Prices now are higher than has been the case for several years, and the indications are that they will go much higher. If the statements made by dealers be true, the scarcity may, before the winter is over, assume the aspect of a famine. In this State and all the Pacific Coast States, the yield has been larger than heretofore, but the demand on the market from the East is heavier than ever before, and in consequence prices are even now exceedingly high, with the outlook for a much greater advance. Dealers on the Atlantic Coast are receiving large orders from Europe because of the potato famine in Ireland, which they are finding great difficulty in filling. In all the principal Eastern cities prices are going up, and the States of Washington, California, Oregon, North Dakota and Minnesota are looked to to make up the deficiency in the yield. Nearly all the agricultural products in the States east of Minnesota have been far below the average this year. During the summer the fruit yield was so small that the Eastern dealers were compelled to call upon the fruit-growers of California, Oregon and this State to supply the market. When the present scarcity of potatoes became apparent, Nebraska and Kansas farmers found a rich market in the East. But even in those great potato-growing States, the yield has not been as large as in former years, and the supply was soon exhausted. Prices have already jumped to $2 a bushel in Nebraska, while in Kansas prices are rapidly reaching that figure. In North Dakota and Minnesota the yield has been fair, but by no means as large as was anticipated. The unusual demand from the East has already made such in-

roads upon the supply in North Dakota that the price has advanced to 60 cents a bushel, an increase of over 45 cents over the price of last fall.

The crop in the States bordering on the Pacific ocean has been to a certain extent a surprise. While a large yield was confidently looked for, it was not calculated that it would prove so abundant as it has. Particularly is this true of this State, where the yield has been larger than ever in the history of the State, and even more so than the most sanguine had hoped for. With an abundant yield it was supposed, a few weeks ago, that potatoes would be exceedingly cheap. The demand for the vegetable from the East was, however, soon felt in the market, and the crop has been becoming smaller at a rapid rate and prices have been advancing just as rapidly. Potatoes are now selling in this city at almost double the price that they brought last fall, when the prices were from $14 to $17 per ton. To-day $28 per ton is being demanded, and the prices are gradually going higher. The demand for local consumption is more brisk than a year ago, owing to the large increase in the population. California potatoes were expected to enter the local market, but that State has found a much more profitable field in the East and has found its own supply to be inadequate to meet the demand. California has a very large territory to cover in the potato market, and dealers from that State have already sent to both this State and Oregon to have their orders filled. Oregon has been especially fortunate in securing a bountiful crop and is at present receiving the largest share of the orders from California and from Eastern dealers direct, although this State is not being overlooked, as the advanced prices show.

Inquiry among local commission merchants yesterday, as regards the outlook for a big advance in the price, met with the statement that potatoes would sell at a "very high figure this winter."

Mr. Emerson, of the commission firm of Emerson & Wood, said: "The price will most certainly reach the top notch this winter. There is no help for it. The failure of the potato crop all over the country has been complete, and as the supply is far below the average and the demand as large, if not larger, than ever before, it naturally follows that the price will go up. I do not look for a sudden jump, but for a steady advance. Before the winter is over there is no telling what price potatoes will command. Washington has grown its largest crop during the present year, and this would have been sufficient to supply the demand in this State. The demand from other States, however, has been so extensive that large quantities have been sent away. We cannot turn to California, because California is practically in the same boat and is buying from Oregon."

Onions are also becoming quite scarce, and the indications are that in this city the prices will advance in a few weeks.—*Tacoma Ledger.*

Indications of Prosperity in California.

WASHINGTON, Oct. 17.—In its monthly report of the condition of the crops throughout the country, the Department of Agriculture issues an elaborate statement of the situation in California and Colorado. The following are extracts from that portion of the statement which relates more particularly to California:

"During a hasty visit of the Assistant Statistician to California and Colorado, enough was seen to show that the present year has been one of prosperity to the farming classes, as a whole, in those States. In no branch of rural industry has the year been one of bountiful harvests, but, on the contrary, crop failure in any line is not recorded, while the general advance in agricultural values has made crops of medium or even small volume of greater value in the aggregate than more abundant yields in former seasons.

"A larger monetary return to the producer from the smaller crop is a compensating fact not infrequently occurring in American agriculture. The loss falls upon the individual cultivators who are most unfortunate in location, meteorological conditions or methods of cultivation, while the benefit of higher prices resulting from scarcity accrues to the whole farming population as a class. In the States named, the general gain is accompanied by less than the usual individual loss under similar conditions, the crop shortages being general throughout the whole area rather than the result of local or individual disaster, yet the individual producer making the larger crop, of course, realizes the greater benefit.

"The winter on the Pacific Coast was one of the most severe known; the temperature was very low and the rain and snow were excessive. In the valleys of California, grain-sowing was interfered with, the seed-bed was cold, wet and heavy, and on large areas the plant was drowned out by spring freshets and overflows. Barley, as well as wheat, suffered from these unfavorable conditions. The wheat-fields of the State lie mainly in the Sacramento and San Joaquin valleys, and the conditions governing the cultivation and growth of the cereal are radically different in each valley.

"The precipitation in the Sacramento valley is generally abundant and the soil well able to withstand drought, but peculiarly susceptible to damage from excessive rains and resulting floods. On the contrary, the fields of the San Joaquin valley are more liable to injury from drought and capable of withstanding heavy precipitation with little damage. This adaptability to opposite meteorological conditions in the two grain centers renders a fair crop in one section or the other almost a certainty, and the conditions of the present season, while materially damaging the output in the Sacramento valley, insured good results in the greater portion of the San Joaquin. In Tulare and Fresno counties the yield is probably larger than last year, while in other counties of large production, estimates of the crop range from 25 to 75 per cent of the yield of last year.

"A consensus of local estimates might make the crop of the State from 70 to 75 per cent of that of last year, though the department will make no estimate until the close of the season. Definite estimates of the barley product are difficult to arrive at. Among the arable crops, it is second only to wheat, and its use is so wide and varied that no records of the crop's movement can be made. Large quantities of this grain are now annually shipped from the State both to foreign ports and to domestic markets east of the Rocky mountains.

"The advance in barley is heavy, but any change in wheat is toward lower prices. An excellent authority believes the rise in local freight rates is responsible for the wheat situation; but with the probable shortage of the world's supply and the certain diminished product of this country, it is apparent that higher values must probably soon rule in the California wheat market. The prices received by grain growers during recent years have scarcely been remunerative, and the present good prices for barley and the probable advance in wheat with the general prosperity attending other branches of agriculture, will materially assist this branch of agriculture in the State.

"The most remarkable results of the year have been in the fruit and vine industries of the coast. The fruit crop, as indicated by the department reports during the season, was one of only medium production, below the usual average or standard, both in quality and quantity, the hard winter and wet spring being unfavorable to full development. Under ordinary conditions, it would have been a year of discouragement, but the practical failure of all fruits east of the Rocky mountains created such a demand from new markets and so advanced prices as to make it a season of unexampled prosperity to the horticultural interests. As soon as it was apparent that the fruit crop of the East was a failure, early in the year, shrewd dealers throughout the country began to make arrangements to handle California products, and the overland shipments have been enormous, comprising the choicest products. The prices paid have been such as might be said to be larger than growers hoped to realize and the crop was large enough to give all interested in the industry the benefit of the exceptional values.

"The activity in fruit shipment extended to vine products, and many carloads of California's choicest table grapes reached a market heretofore held exclusively by the local product, creating a taste and demand which will continue hereafter even in less favorable years. The year has presented a golden opportunity for dissemination throughout the country of a practical knowledge of the fruits of the Golden State, and every advantage has been taken of it. A trade has been opened up which must continue with mutual benefit to producers and consumers of fine fruit despite distance and costly transportation.

"Records of total shipments to points outside of the State are not yet received, but San Francisco authorities on the fruit trade believe that it will be equal to 10,000 car lots, and a liberal estimate would make the value of these shipments perhaps $10,000,000—a value almost half as large as that of the State's exportation of wheat during 1889. Peaches have brought growers $80 per ton, with higher prices for choice varieties, and all grades, as a rule, have commanded from double last year's prices upward. Wine grapes are bringing better values than ever heretofore realized, the general prosperity of the year extending to all branches of horticulture and vine-growing. On the whole, the year will go into history as one of general prosperity for the agricultural interests of California."

Harrowing Wheat After Heavy Rain.

J. E. Kennedy of Alto, Washington, writes concerning the use of the harrow on crusted wheat-fields in a way that may be suggestive to our wheat-growers when the time comes for the treatment described, even though the conditions here are different:

A walk over the summer-fallowed fields east of the Cascades in the early spring, with a little examination, will show that the ground, no matter how well it was plowed and cultivated, has been battered down by the winter's storms and is quite hard comparatively; the better the soil is and the greater the admixture of clay it contains the harder it will be.

If there was a heavy snowfall, or much rain, the surface has run together and baked, as it is called, and the wheat plants, with their blades pinched and embrowned by their cold surroundings, present a sorry appearance. Then as the season advances and the heat brings freshening life into the plants, and they everywhere become green, the surface of the ground cracks, and these cracks deepen as the weather becomes drier and warmer. The whole field is then divided into a series of checks of irregular shapes, and the cracks deepen until in some instances I have measured them five inches in depth, each clod with its wheat plants sloping toward a center, if the term be permissible for so irregular shaped a body, and resting on a base, in many instances not larger than a dollar. I have examined a great many summer-fallowed fields in this valley year after year and rarely found an exception to the rule. True, in some fields the cracks were shallower than in others, depending on the nature of the soil, on its exposure to the wind, the varying amount of rainfall, etc., but their average depth I should judge to be, before the wheat is ready to ripen, over two inches.

It is almost incredible that under circumstances such as I have described, with the sun's rays and the searching wind actually penetrating the earth, in some instances below the roots of the wheat plants, any crop can be produced, and I am nearly sure that it would be impossible, save in a soil everywhere volcanic in the main and fitted to absorb and retain a greater amount of moisture than any other, for long before harvest the roots are not in contact with the moist earth, but they must be, nevertheless, constantly absorbing the ascending, invisible vapor from below till sun and wind, acting in unison, have completed the evaporation of the water stored beneath, to a considerable depth, when the wheat ripens. Of course there comes heavy rain in some seasons in June and the moisture is brought in contact with the roots for absorption in the ordinary way, when the yield will be phenomenal, but the rule is otherwise, and the surface moisture is exhausted comparatively early in the season, and all that falls afterward simply freshens up the fields, for it rarely penetrates to the roots.

When, early in the spring, the cracks begin to form, the ground should be harrowed and reharrowed. A single harrowing will fill the cracks with dust so as to prevent the access of the air to the ground beneath, and then they will not deepen; a double harrowing will thoroughly break the crust, and after that the ground will neither bake nor crust again, for the broken crust and the dust act as a mulch to a great degree.

Some wheat plants will of course be torn up in the process, and the whole field for a few days after it has been completed looks miserably, but the resultant growth and speedy after-effects are truly wonderful, and it is easy to provide by a little more liberal sowing for any possible loss or danger of the stand being too thin.

In a word, it is a thorough cultivation, the only one of which the plant admits with us who grow wheat on a large scale, and is, like all cultivation, beneficial, adding always a yield of several, sometimes many bushels to the acre over wheat not harrowed, causing a sturdier growth and producing a plumper berry. Like all the other operations connected with the growth of wheat here, the harrowing should be commenced as early in the spring as possible; when the cracks or checks begin to form is the best time, for the process is calculated to retard as much as possible the drying out of, and consequently to the conservation to a great degree of, the moisture which is absorbed by the plants instead of being wasted.

When few of the old settlers as yet resort to this remedy for breaking the crust and preventing the deepening of the cracks in the soil, the new ones may be pardoned if they shrink from the adoption of a remedy so heroic, and one they have never seen tried elsewhere. If the reasoning above set forth, and that contained in the previous article in regard to the beneficial effects of cultivation through which the surface of the soil itself becomes a mulch, be not satisfactory to them, let them try the experiment for themselves and take a small piece of summer-fallowed ground planted in wheat and harrow it once, and another plat of equal area adjoining it and harrow it twice, and compare the resultant yields with each other and with that of the ground not harrowed at all, and I think they will soon be convinced that the method herein pointed out is the best.

THE DISPOSAL OF GARBAGE.—When will our cities be brought to a realizing sense of the importance of the question relating to the disposal of garbage? Scores of our large towns and cities are continuing the process of creating hot-beds of epidemic and contagious diseases by filling up vacant lots with garbage, notwithstanding the fact that a perfectly safe and efficient means for its disposal has been invented and has proved a decided success. There is no question but that cremation is the only safe and proper way to dispose of the waste of our kitchens. If sufficient municipal discipline were exercised, every family could be compelled to dispose of its own garbage by burning it in the kitchen range, after each meal, thus saving thousands of dollars to the city. We know that it is possible thus to dispose of all waste from the kitchen as it is done in our own family, and the ashes from the range and furnace are used to advantage on the garden. But it would probably be impossible to impress on the minds of an entire community the importance of pursuing this plan, so that an ample crematory for each town and city would probably be the surest and most practical method to adopt. The large crematory has this advantage in it: in addition to the garbage may be dumped all refuse, such as broken crockery, old tin cans and everything which needs to be disposed of, and the slag which results makes a valuable fertilizer when pulverized, which may be sold to farmers. Thus the crematory may be made partly self-sustaining.

POULTRY YARD.

Alfalfa for Poultry.

EDITORS PRESS:—No greater problem presents itself to the average poultry-breeder than how and what to feed to secure the best results from his fowls. Volumes have been written on the subject, all of more or less merit, but by far the most of them less; and yet the solution is practically within the reach of all. No system of feeding will produce better results than an unlimited supply of alfalfa. It is the nearest approach to a perfect food that we have, and with a *little* dry grain (wheat or barley), morning and night, will make hens lay, if there is any lay in them. Of course the best results are obtained where the fowls are allowed to run on the alfalfa patch and pick what they want; but when this is not practicable it can be cut and given to them, when they will work on it industriously. If green alfalfa cannot be had, buy some No. 1 alfalfa hay, run it through a feed-cutter, soak it 12 or 24 hours, and mix in it a little bran and middlings. If cut fine enough, say one-fourth to one-half inch, the fowls may be given all they will eat up clean, but if cut in too long lengths, there is danger of it causing crop-bound.

As a duck food, alfalfa is invaluable; but ducks should not be allowed to run on it, as a flock of ducks will soon ruin a small patch of alfalfa. Cut up and fed to them, they eat it ravenously and thrive better than on grain exclusively. As an evidence of what can be done with alfalfa, I will give the following illustration: A neighbor has an acre of ground, one-third of which is taken up with house, etc. One-sixth is in alfalfa, and the other half of the acre he plows and sows every year to wheat or barley. He keeps an average of 125 fowls, old and young, which are allowed the run of these two places, all roosting in the one house. From these fowls he sells an average of $18 worth of eggs per month the year round, besides raising enough young stock to replace the old ones. All the grain fed is eight pounds of dry wheat or barley, morning and night, to the lot. No soft feed, meat, oyster shell or egg food is needed. The eggs have remarkably strong shells, and it is very rare that a soft-shelled egg is found. All that is necessary is a plentiful supply of sharp gravel, and a healthier lot of hens would be hard to find. As he generally sells broilers and old hens enough, together with the eggs used, to pay for the grain, his egg receipts are net profit, and this on two-thirds of an acre of ground.

I know of another instance where the fowls run on alfalfa in which the results are quite as good, while on an adjoining place, where there is no green food given, the fowls are an expense instead of a profit, very few eggs being obtained except in the regular laying season.

In alfalfa we have at once an egg-producing, healthy and cheap food, and one on which young stock thrive amazingly. It is easily grown when once started, and if land is well manured and given plenty of water, three or four crops may be cut each year.

Galt Poultry Yard. S. W. PALIN.

Cackles From the Cackler.

To make a cement floor for a poultry-house: Use Portland cement, broken stone and sand. Make a base of broken stone. Mix Portland cement and water to the consistency of cream and pour over the surface, spreading with a stiff broom. When hard, spread with fine gravel mixed with cement and water 1½ or 2 inches deep. Then a coat one inch deep of sharp clean sand (such as is used in mortar) mixed with equal parts of Portland cement, with enough water to make the mass like mortar. This will set strong in one or two days.

The domestic fowl changes its feathers and goes through the critical period called "molting" once a year. This may be said to usually take place during the months of July and August, although certain individuals may molt at any time from May to October, and even in the winter months, and fowls during this dangerous period should be well treated, as they are all more or less stupid and ailing. They should have an abundance of water, and will be benefited by putting in each drinking vessel a few drops of tincture of iron. They need good wholesome feed, care being taken that they are not overfed. One great trouble with many of the "there is nothing in chickens" poulterers is, they keep no records of "incomes" and "outgoes." There are not many who can tell what per cent they make on time and money invested in the business, simply because they keep no accounts. It is unjust, after using the eggs and eating the broilers, to accuse the hens of eating their heads off, unless you have positive proof. If every poultry keeper would keep careful account of cost of feeding his fowls and the return in eggs, we feel sure nine-tenths would be astonished at the result, and save many a faithful laying hen from an untimely death.

"It is dangerous to steal chickens in San Diego, for a recent dispatch from that city says that a well-to-do rancher of Otay, who received a charge of shot in his head and shoulders from a spring gun set in his neighbor's chicken-house, one dark night, some time ago, and was afterward arrested on a charge of chicken stealing, has been found guilty and sentenced to three months in the county jail, and to pay a fine of $250."

PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

Votes and Voters.

Ere another issue of the RURAL PRESS appears, the people will have chosen the officers who are to administer the laws of California for the next two years. The voice of the platform brawler will be hushed, and the discordant blasts of political trumpets will be heard but for a few days, while they do honor to the victorious candidates.

We shall then be able to see to what extent the farmer is to be heard in the administration, and how successful the political hirelings have been in their engineering. We shall see how many there are who have been howling about monopoly, corruption and kindred grievances, but who, on election day, will vote for men directly antagonistic to their interests.

If a watch is to be repaired, who thinks of taking it to a blacksmith? If a physician is needed, who employs a surveyor? But when it comes to the ballot, how many there are who prove their inconsistency by blindly following the dictates of the bosses!

The Grange is not a political body, but its members can exert an influence that will neutralize the alert schemes of political tricksters, who would foist men into positions through the political machines. They should unite in supporting those who are identified truly with public and farming interests—men who have reputations not clouded by past profligacy or present intrigue.

We can have good men elected if we will. When the political demagogue finds he is losing his power; when the professional politician becomes unpopular, he will readily change his tactics. Few men will pursue a dishonorable course unless money or power is the reward. So long as politics is a machine, just so long will its iniquitous proceedings be a flagrant outrage on our beloved country.

Yet politics is not all. The assumption that legislation can make a good social order out of any men to whom it is applied is the fundamental fallacy of communistic and socialistic doctrines. Not schemes, but men, must work the cure. A government is what the people make it, and if we hope to gain a pure, wholesome administration, we must sap the foundation of the evil. We must begin in the home—the most sacred and most important factor of our Government. Here and in the schoolroom we must instill into the hearts of the young the blessings of our civilization, and aid them to broaden their minds, strengthen their characters and make themselves better and nobler men and women.

It is a sorrowful fact that the great mass of the farmers of this State have this year been practically disfranchised from voting with any hope of success for the high principle of putting unquestionably our greatest and best men in the highest places of trust in this State. There is no hope of the election of men in the highest stations voted for who will say to oppressive trusts and corporations: "Thus far canst thou come and no farther! Thou shalt not abuse the rights of this people in our names!" Some, at least, of the worst elements in the community have had a hand, in both the "grand old parties," in making State nominations.

Australian Ballot Reform.

We may well be pleased with the favor the ballot reform is meeting. Planks favoring it have been incorporated in the platforms of all the political parties. The Federated Trades, the Grange and similar organizations have indorsed it, and it has become the chief theme of political orators and of newspaper editors. Yet when we get such a system, we must not think the end is accomplished—only one of the means. The best mortar or cement in the world will not make a firm wall if the brick or stone is inferior and crumbles. When we puncture our hand with a pin, no appliances will heal the wound. We must remove the intruder, then Nature will assist.

We have many good laws on our statute-books that are made dead letters through the indifference of the people. The trickster is ever ready to defeat the aim of the best of measures. The Australian Ballot law will be a long step in advance, but we must see that its provisions are not frustrated, and must continue the good work so well begun.

No Drones.

In '88, nine; in '89, ninety-three; in '90, one hundred and ninety. These figures show membership of Watsonville Grange. From the struggle of death to the vigor of the champion in two years. Do you want to know how to induce similar growth in your Grange? The key to the mystery was given in the Master's address when she said: "There are no drones in our busy hive." The ancients sought for the philosopher's stone, which was to change base metals into gold. Herein is the secret of all administrative success, whether in Grange, Sunday-school, Church, State, army or nation. *No drones.*

If a member cannot deliver an eloquent address, perhaps he can bring a pail of water. A sister may not be able to preside like Sister Roache, but she can bring a bouquet. The secret lies in making every one feel that his work is an essential part of the success of the Grange, and to make the Grange so useful that each shall easily recognize it as a vital element in the prosperity of the community. F. S. C.

To the American Farmer.

The passage of the Conger Lard Bill by a vote of 4 to 1 in the House of Representatives, after the most obstinate and bitterly contested fight ever made on a non-political question in the Halls of Congress, is a *grand triumph* for the farmers of this country.

Opposed by the most reckless and unscrupulous lobby that ever attempted to suppress the people's will, the Conger Bill was passed simply because the American farmer demanded it.

I congratulate you, brothers of the plow, that American Agriculture has the voice to speak and the power to be heard in spite of the monopolists' money and rascality.

When the true history of this contest shall be written, the wonder will be that the people's Representatives were so successful, but the lesson taught is that the American legislator is, as a rule, much better than he is given the credit of being.

Now, brothers, having fought the battle and won it in the House, it *depends upon you* to win it in the Senate. Our opponents think they can defeat us in this body, but if you *speak* and *act* and do so at once, they will be beaten as badly as they have been in the House.

With one accord, for agriculture, Patrons and farmers of all associations, let us unite in demanding the passage of the Conger Lard Bill.

Yours for Agriculture,
ALEX. J. WEDDERBURN,
Chairman Leg. Com., Va. State Grange.

Lights of the Farmhouse.

[Written by LILLIAN H. SHUEY of Temescal Grange and read before the last State Grange by SISTER S. H. DEWEY.]

I.

It is a soft October evening, and the moonlight shines down on the wide gray roof of an old farmhouse. To the right lies a small orchard yet green; and on the left a field of standing stubble bleached by the early rains stretches away into the misty distance. There is a radiance more than natural in the effulgence of the moon as it strikes the slanting roof.

O Memory! sweet and gracious,
Come wait beside my chair.
Your tongue can tell what hallowed spell
Unfoldeth softly there.
The light so fair upon that roof
Still lingers night or day;
It is the light, set forth aright,
Where Truth and Virtue stay.
It is the light of blameless lives
From petty trickeries proof.
No life can be from sin so free
As 'neath the old farm roof.
It is the light that falls alone
Where honor's soul is free—
Sin's long surcease—the sun of peace—
The light of liberty.

It shines nowhere so tenderly,
It shines nowhere so fair,
As now I see, through Memory,
Its soft light shining there.

II.

The scene changes; the moon rises higher in the heavens. Lights appear in all the windows of the house, showing it to be roomy and spacious. The lamplight streams out on to the wide verandas. Carriage-wheels are heard, and voices of laughter and welcome break upon the calm night air.

What time the harvest-fields were white
And rustling in their pride,
In tempting reach the mellowing peach,
Rich promises supplied.
We thanked the Lord and blessed His name,
And opened heart and hand.
What place on earth, more fit for mirth,
As this, our homestead land!
This is the light that shineth now
From this dear home so free.
All gather here; 'tis goodly cheer;
'Tis hospitality!
It is the light that searcheth out
Where want and care have birth;
The light that lives, the light that gives,
And cheers the sad old earth.

It shines nowhere so bounteously,
It shines nowhere so fair,
As now I see, through Memory,
Its glad light shining there.

III.

The October moon passes away, and a dark and rainy night in December comes into view. The undrawn curtains reveal under the dripping eaves a warm, cheerful room, where the family group are drawn around a well-lighted table before an open, sparkling fire. There are many books and papers.

The generous range of farm-life thought
These evening tasks confess—
The classic sage—the crisp, new page,
Yet fragrant from the press.
The shut-in leisure of the rains,
The quiet Sabbath nook,
Full time commands to teach all hands
The comfort of a book.
Nowhere can wisdom so avail,
From vain distractions proof,
Nowhere has thought such pure work wrought,
As 'neath the old farm roof.
The light of knowledge floods the house,
The radiance of each hour,
It ne'er grows dim; 'tis life within,
'Tis grace and joy and power.

In shines nowhere so gratefully,
It shines nowhere so fair,
As now I see, through memory,
Its rich light dwelling there.

December passes by. The storms beat on the sodden fields, the trees stretch their gaunt arms to the rain. The country roads are deserted. The family gather more and more into the cheer and comfort of its inner life. Family pride is more distinct than in urban civilization, and mother-love is the great central star.

The self-made pleasures of the farm,
Its isolated cheer,
Makes faith more pure, and trust more sure,
And home life doubly dear.
Each tale or legend best beloved,
Each romance of our race,
First laid its scene, or found its dream,
On some old country place.
Nowhere can home love shine so true,
From wild temptations proof;
Nowhere so sweet, so warm, complete,
As 'neath the old farm roof.
O mother-love, sweet star divine,
O'er life's dark journey set,
Through all my tears, through sorrow's years,
I see it shining yet.

It shines nowhere so faithfully,
It shines nowhere so fair,
As now I see, through memory,
Its sweet light shining there.

Yuba City Grange.

In a private letter from Bro. Ohleyer he says: "On Saturday next, Nov. 1st, Yuba City Grange will hold its regular monthly meeting. It will convene at 10 A. M., transact business, confer degrees and partake of a social feast. Bro. J. H. Hale hopes to return from the Northern Coast States to be with us, and Bro. Flint promised to come up from Sacramento to help us along."

Past Master Hale of Connecticut.

His Travels in Oregon and Points to Be Visited in California.

DEAR BROTHER DEWEY:—Having done the Sound country, Spokane Falls, Walla Walla, etc., I shall attend a Grange meeting with Bro. Russell at Vancouver, Wash., to-night, then meet with Bro. Hayes' Grange to-morrow, and spend Sunday with Bro. Boise at Salem. Then I shall return at once to California, working next week in Tehama, Butte and Yuba counties, and attend meeting of Yuba City Grange on Saturday, November 1st. Future plans are about as follows: About Newcastle and Auburn, Nov. 3d and 4th; Sacramento, 5th; Lodi, 6th; Stockton, 7th; 8th and 9th, Sacramento Co., with Bros. McConnell and Johnston; 10th and 11th, Livermore, Niles and San Francisco; 12th, Napa and St. Helena; 13th and 14th, Santa Rosa; 15th, 16th and 17th, San Jose; 18th and 19th, Horticultural meeting, Santa Cruz; 21st and 22d, Modesto and Merced; 24th, Fresno; 25th or 26th, Tulare. After that, while I have made no dates, my plans are to work along south through the State for a month or so. Of course my work will be in the country surrounding the points named. The dates and places named are where I expect to spend the night and receive mail. Therefore if there is anything in the way of Grange work or attending Grange meetings that I can do without materially interfering with my work, please let me know. I greatly enjoy associating with the many good Patrons on this coast. Fraternally, J. H. HALE.

The Dalles, Or., Oct. 24th.

Patrons and Farmers, Turn Out and Hear Him.

Bro. Hale is an eloquent and interesting speaker. He has good points to tell the Grangers and farmers of California, and is not slow in saying them.

While he may not be able to speak at many of the places named above, he will undoubtedly be willing and prepared to meet all who will gather at convenient points named for district or county meetings and give an afternoon or evening's speech if notified in season by those who will make proper announcement and advertisement of his coming.

Patrons or others wishing to hold such meetings should lose no time in corresponding with Bro. Hale direct or through the Secretary of the State Grange by letter, telegram or telephone, and make the announcement in each case as early as possible in the local papers, by hand-bills, etc.

Bro. Hale will visit the places named in the discharge of his duties as special agent of the eleventh census for the investigation of the nurseries, seed farms, truck farms, florists' establishments, and the production of semi-tropic fruits and nuts of the United States.

Those who meet him will do well to be prepared to give him ready information and aid him in making as full and reliable reports as possible.

Effect of Enterprise.

This was well illustrated in a late visit of the RURAL PRESS man to Smithville or (as Uncle Sam has it) Little Stony Colusa county. A little more than two years since, Mr. Smith sold a tract of 1500 acres at about $20 per acre, and we heard it rumored far and near that the buyer had shown the poorest judgment, in fact been "played as a tenderfoot." Since then the property has often changed hands, always at advanced values. The present owners have put up a fine mill, laid off a townsite, brought in irrigating ditches, sold some town lots, and only a few days since the original owner bought back a five-acre tract at *three hundred dollars* per acre.

The prophets of evil now claim that wheat to supply the mill cannot be raised in the valley which is somewhat shut in by foothills. One of the citizens made a good point on this upon being asked, "Where are you going to find the land to raise fruit after you have raised wheat to supply the mill?" He quickly replied, "We'll raise that on the other side of the land."

To appreciate the force of the remark, one needs to stand upon the scene and view Mt. St. John, Snow mountain, and all the great family of lesser peaks. Truly they can come as near to working both sides of their land as anybody.

Mr. Stillwell, the proprietor of the mill, tells me that they can save $400 to $500 per month in current expense over a steam-mill of like capacity. As they grind only 50 barrels of flour per day, that sum will pay for hauling wheat in and flour out either from Sites or Elk creek, and so place the mill at once level with a steam-mill at either of those places, even though no grain was produced in the vicinity of the mill.

The projectors of this enterprise are investigating the policy of adding a creamery, and either a cannery or a drier to their plant. They recognzie that the prosperity of a town depends upon the developed resources of the surrounding country. There are tracts adapted to alfalfa where it would be folly to sow grain, and orchards can nestle among the hills where a header could not be driven or turned. There is many a place where big red apples will grow with a flavor unknown in valleys, that were only a few months ago Government land. A good enterprise would be a fruit-house for buying and storing these apples, insuring a steady market and encouraging the planting. A good rustling nurseryman would also contribute largely to bring this about.

The history of this place is a fine object-lesson in the effect of enterprise. There is very little in sight yet of improvement, but enough to infuse confidence and inspire thrift in the balance of the community and stop the mouths of half the croakers.

F. S. C.

Farmers' Mutual Insurance Companies.

The resolutions adopted at the late session of the State Grange in favor of an Enabling Act by the Legislature for organizing Farmers' Mutual Fire Insurance Companies is a popular expression that will no doubt be supported by farmers generally. Such companies, insuring nothing but detached farm property, have been for many years successful in States east of the Rocky mountains, and have already saved the farmers millions of dollars. In no part of the United States are such organizations so much needed as in California.

TO MEMBERS OF THE ORDER.—As we are beginning a new Grange year, the Worthy Master requests all members of the Grange who have any suggestions for the Good of the Order to put them in print or send them to the chairman of some standing committee.

March Grange.

From General Deputy Daniel Flint.

I left Sacramento Friday, the 24th, at 3 o'clock P. M., for the above Grange, situated at Pennington, in northern part of Sutter county. In going to Marysville I had a pleasant chat with the debris strategist, Ohleyer and daughter, who were returning home from San Francisco.

Bro. Lam, Master of March Grange, met me at Live Oak and took me home with him in his buggy, a distance of about 10 miles. This ride was of great interest and afforded more food for thought than any one that I have taken for many a day.

Bro. Lam and myself kept up quite a chat all the way, but my eyes and attention were riveted on the panorama before me. We were passing within a few miles of what is familiarly called Marysville Buttes, but they are in Sutter county.

The moon was not quite full, but shining brightly on our backs, and "one star alone of all the rest" was in her full evening dress, poised just above one of the highest peaks, and I thought for awhile it would rest there as a beacon light to guide the wanderer and lost one through this great valley. Not a cloud could be seen and these ragged black peaks showed their clear-cut sides against the blue sky, forming a background which would be a rarity among the works of art. Who can approximate the thousands of people who have looked upon this pile of stone and earth and attempted a solution?

Is it an upheaval from the infernal regions as a resting-place for Noah's Ark? A stray glacier that took in more than it could pack and had to dump its load? The artificial mound of some prehistoric nation? The refuse matter from the quarry of the natives of the Atlantus?

As I cast a long, fond look at this grand sight, with that large, bright star gradually sinking out of sight, I thought of those beautiful and popular lines that the school-children used to sing 20 or 25 years ago, "Star, Star of the Evening, Beautiful, Beautiful Star."

As we approached Bro. Lam's house he could truthfully say, there is a light in the window for me, and dear ones watching and waiting.

Although late when we arrived, the Matron did not neglect to give us good cheer and a bountiful spread fit for the gods, and that was fully appreciated after so long a ride.

We arrived at the hall a little after ten o'clock, and almost the first I saw was Bro. Frisbie, wife and son. The gavel was tendered to me, but I most respectfully declined in favor of Bro. Frisbie, who instructed a sister in the third and fourth degrees in his usual able manner. Then came the feast, and it was such a one as none but Matrons are capable of presiding over—elegant, ample and appetizing. I had been to this hall before when Bros. Spilman and Nelson's faces and voices were so familiar to every Patron in the State, but now silent and gone.

I had the pleasure of exchanging the Patron's grip with Sister Spilman, whose motherly face gives token of the true heart within. I gave an address or talk of about half an hour, and I will guarantee if they will ponder over some of my suggestions and adopt them, that their Grange will be doubled in numbers in two months. Right in the midst of a large, prosperous farming community, the Grange is indispensable. Bro. Frisbie and others made remarks appropriate to the occasion.

Sister Frisbie gave an amusing recitation in dialect, which was well received.

This Grange is not large, but they make up in zeal, intelligence, and tenacity of purpose.

Bro. Frisbie always has an extra seat in his carriage, a chair at his table and a bed in his house, and those three extra things have frequently taken my measure and I have always pronounced them a splendid fit.

Although the ride was rather long, I was glad to accept the invitation with such agreeable company. I believe that Bro. Frisbie, wife and son must be somewhat related to the emblem of the Gate-Keeper, for they piloted us across trackless grain-fields and over barbed-wire fences while quite dark. They seemed to know how to pick a barbed-wire fence as easily as a burglar would a bureau drawer.

After getting over the rough fields, ditches and wire fences, the ride was delightful and cool, with smooth roads. The brother kept me over night and took me to train in the morning and sent me on my way rejoicing.

I believe Sutter county is destined to become one of the largest fruit-raising and fig-growing sections in the State. I formed a temporary acquaintance with some of the brother's samples, and I pronounced them of superior quality.

Bro. Hale on Farm Institutes.

As this gentleman is a leading worker all along the line of agricultural progress, he was called out at the State Grange on the subject of Farm Institutes. We are sorry that we have not a careful report of his remarks, as they were pointed and practical, but we summarize from memory.

Farm Institutes are modeled after the idea of Teachers' Institutes, or, in other words, are schools where farmers meet annually to compare the results of their reading and experiments. Papers are read by such as have become prominent in the specialties they represent. These gentlemen are then questioned by the audience, and in turn others are questioned until a valuable fund of information is developed.

The State makes an appropriation sufficient to cover the expense of enough organizers and lecturers to secure the end designed by the meetings. In Wisconsin, the system has been on trial with increasing popularity for many years, and her intensely practical Governor, W. D. Hoard, said to Bro. Hale that the increased wealth resulting to his State from Farmers' Institutes had returned their cost a *thousand* fold.

Upon this ground, our Legislature should be asked for such appropriation as is needed, not as a gift to a class, but as an investment for the public good, on the same ground as we would improve our rivers, sustain our schools, or encourage immigration.

Upon the question being raised as to its effect on the Grange, by one who evidently held that it was a scheme to have the State do the work of the Grange and so supersede our Order, Bro. Hale replied, "*It is the biggest scheme in the world to boom the Grange.*"

In explanation, he showed that the meetings would be managed by expert organizers, whose example would be valuable to Grange officers. Again, they would draw out the best talent in the community and encourage them to do their best to put their experience in such shape that its results would be assimilated. In proportion as the Grange learns to do this work will she prosper.

Again, it calls attention of the masses to the importance of meetings designed to assemble practical men for their business interests, and so favorably advertises the Grange as to bring in many valuable members who have not hitherto been reached.

We understood that in the State of Wisconsin, about 80 of these meetings are annually held, at an expense to the State of something like $15,000. There have been developed some 2000 leading farmers, who devote more or less time to the Institute work. We suppose this includes only such as are accustomed to take leading parts, as the meetings usually last for three days, are commonly crowded, and the aggregate annual attendance must run up toward the hundreds of thousands. Farm Institutes are prominent in New York, Minnesota and Michigan, as well as in Wisconsin, and there has been some movement toward making them National. F. S. C.

National Grange Commissioners.

Bro. Wm. Johnston, chairman of the National Grange Commissioners, read the following report at State Grange:

Worthy Master, Officers and Members of California State Grange: The Committee appointed by his Excellency, Gov. R. W. Waterman, in accordance with the bill passed by the Legislature for the reception and entertainment of the National Grange, report as follows:

The President and Secretary of the Commission met and received the members of the National Grange, P. of H., at Humboldt, Nev., Nov. 11, 1889, and escorted them to Sacramento, where they arrived Nov. 12th. On the evening of the 12th, the citizens of Sacramento tendered them a banquet of welcome. The session continued until the 20th of November, inclusive. Many courtesies were tendered by citizens of Sacramento, several of which were declined for want of time.

On Nov. 21st, the Grangers were escorted to the Folsom State Prison, where they were cordially received by Warden Aull and his estimable lady. They were shown through the prison and to the dam across the American river, returning to Sacramento for the night, much pleased with the freshness and beauty of the American River valley.

Nov. 22d, we started at 8 A. M. for Marysville, where we were met by the members of the Wheatland and Yuba City Granges and the citizens of Marysville, where carriages were provided to drive the party around the city and to some of the adjacent farms in Sutter county. A fine collation awaited them at the Agricultural Pavilion, which was served by the ladies. At 3 P. M., the party started for Chico, arriving at 5 o'clock, where they were met by the people of that place and were tendered a banquet, and entertainment at the hotels and private residences of citizens for the night.

On the morning of the 23d, they were driven around the town and through the grounds of Rancho Chico and other points of interest, and at 1 P. M. started for Vina, where they stopped at the vineyard of Senator Stanford, visiting the wine-cellars and stock barns. They left Vina at 3:30 P. M. for Tehama, where they crossed the Sacramento river and turned down the west of the Sacramento valley.

At Willows, the party were greeted with music and an impromptu reception in general—one of the pleasing features of the whole trip.

On arriving at Woodland, the party were taken in charge by the citizens of that place, and, after an entertainment of the inner man, were escorted to the Opera-house, where they listened to an essay on irrigation by Wm. H. Mills.

On the morning of the 24th, many took advantage of the courtesy of the local citizens' committee and rode out into the rich country surrounding Woodland. Others embraced the opportunity of attending church and taking a little needed rest. At 1 P. M., the party rolled for Santa Rosa, where they were taken in charge by the local Grange of that place; and after a bountiful spread had been justly disposed of, the party repaired to the Grange hall, where the praises of California soil, climate and her people were sounded full and strong.

Nov. 25th, we left Santa Rosa for Geyserville, Cloverdale and Ukiah, where we partook of the hospitality of the people of Russian river, and returned to Santa Rosa and thence to San Francisco, where we put up at the Palace hotel, where we remained two nights, giving one full day to the city and surroundings.

Nov. 27th, we visited Leland Stanford Jr. University, Palo Alto stock farm, and passing on to San Jose, took carriages for a drive over the valley, and took lunch at the Quito olive farm and returned to San Jose, where a banquet awaited us presided over by the genius of the grand and good citizens of the place.

Nov. 28th, we visited Del Monte, Monterey, and Pacific Grove, dining at the Del Monte hotel, and returning to San Jose, thence to Oakland for the night.

Nov. 29th, we left for Stockton, where we met with one of the warmest receptions, the full carrying out of which was prevented by an incessant storm of wind and rain.

Nov. 30th, at 4 A. M., we left Stockton for Merced, where we were warmly received, and breakfasted. The people here were prepared to give us further entertainment, but the time-table of the regular business of the railroad required that we leave at 10 A. M. for Fresno, where we lunched and in the afternoon rode through Fresno's far-famed raisin vineyards and were banqueted in the evening.

Dec. 1st, we breakfasted with the Patrons of Husbandry of Tulare, and took an excursion to Visalia, and moved on to Bakersfield, where we took lunch and were driven over about 60,000 acres of the Haggin & Carr rancho, returning to Bakersfield to a sumptuous banquet, which closed the hour of 10 P. M., when we took our departure for Los Angeles, where we arrived Dec. 2d, on schedule time.

Breakfasting at Los Angeles, under the care of the Board of Trade and other committees, we were then driven through the principal business and residence streets and to other points of interest, after which we visited Alhambra, viewing the (to the Eastern people) wondrous citrus groves of that place, and, after an enjoyable lunch and a pleasant interchange of sentiment, we returned to Los Angeles and moved south to San Diego (by way of Oceanside), where we put up at the Coronado hotel, under the entertainment of Kimball Bros. and Mr. Babcock.

On December 3d, the party crossed the U. S. line into Mexico, and, on return, lunched with "Betsey Snow," visited the Sweetwater dam and the orange groves along the route and returned to Coronado for the night.

Dec. 4th, we visited Riverside, thoroughly inspecting the vast area of citrus groves, and returned to Los Angeles, where, on the morning of Dec. 5th, the members were met by the Los Angeles committee and presented with a basket of oranges and a bottle of wine each, as a final parting tribute.

It was noticeable that, throughout the entire trip, every variety of fruit, from the orange to the apple, was grown in perfection at every point, and the visitors were thoroughly impressed that, as a whole, California has no equal. It would require a volume to give an elaborate report.

This, in connection with the financial statement, will show fully whether the action of the Committee was sincere and judicious.

Respectfully submitted, WM. JOHNSTON, Pres.
G. W. HANCOCK, Sec'y.

A Significant Inquiry.

A. T. Dewey, Esq., Secretary State Grange, S. F., U. S. A.—SIR: The inclosed newspaper cutting is from the PACIFIC RURAL PRESS, which paper I take regularly. I would like very much to obtain the instructions for organizing a Grange; in fact, if you have any pamphlets referring to the rise and progress of what are termed the Granges, I would take it as a very great favor if you would let me have some copies. If properly placed before our farmers I think your system of combination would take root here. Hoping for a reply by return mail, I remain yours faithfully, A. M. N.

Melbourne, Sept 30, 1890.

We welcome the above with pleasure. No doubt much good could be accomplished to the farming population of Australia by the establishment of the Grange in the province of Victoria as well as others.

We shall forward the author of the above letter copies of the Constitution and By-laws and such other printed matter as may be admissible, obtaining such information as he may desire. We also call the attention of Worthy Master Davis to the matter, with the view of his making definite inquiries at the coming session of the National Grange in regard to what authority could be given and assistance rendered to enable the farmers of Australia to transplant the Grange tree abroad in a safe manner to have it flourish upon the soil of Victoria.

After receiving the printed matter sent to Mr. A. M. N., we should be glad to have him correspond further. It is a pleasure to note among our foreign readers one who has a desire to extend the beneficent purposes of the Grange.

On the "Lope."

Antelope Grange is "livening" up nobly. The secretary writes: "At our last meeting the Grange acted on the petitions of 16 applicants, so we shall have a good class. The next meeting will be held in Maxwell, and it is possible the change to that place may be permanent." Fraternally,

G. F. MYRICK, Sec'y.

Visiting San Luis Obispo.

We learn by a letter that Past Master I. C. Steele left on the 25th ult. for a visit to San Luis Obispo. We hope he may be in good health and strength to speak to the Patrons in that section, as his words will always be favorably remembered.

VISITING THE EAST.—Bro. B. F. Walton of Yuba City, who has been East some time for the benefit of his health, was last heard from through Worthy National Grange Lecturer, Mortimer Whitehead, who writes, in Washington, Oct. 24th, viz.: "We enjoyed a call from Bro. Walton and daughter this week." We hope Bro. Walton will return fully restored to health, and that we shall have a report of some of the pleasant and interesting observations made abroad by himself and daughter, for the benefit of our readers.

SISTER L. CANFIELD of Boyd, writes: "I hope to get a few subscribers for your paper as soon as the farmers get their money for their wheat, but this being a part of the burnt-out district of last year, money is very scarce. The farmers should not lose hope, but should fortify themselves with a little more reading of the PACIFIC RURAL PRESS."

"From Manger to Throne."

[Written for the RURAL PRESS by S. K.]

"From Manger to Throne!" How sublime! Wha a theme
Is embraced in this title, which casts such a gleam
Of light o'er the advent which the prophets foretold
The world in the fullness of t me would behold!
'Tis the awe-striking story of God's promise to man
When in Eden's fair garden by sin he began
That life which was given him by a Power divine
Better uses to put to than to launch into crime.
'Tis the story of Jesus, the Babe that was born
In Bethlehem's manger that one blessed morn
Which in peace and good-will brightly dawned upon earth;
That morn when the Angels proclaimed loud His birth.
'Tis the story of miracles wrought by Jesus alone
From His birth in the manger to His filling the Throne
By the right hand of God, when He rose from the dead
After all that was mortal in life's blood had been sped.
"From Manger to Throne!" An inspiration divine
Surely 'twas that suggested this one simple line;
A title, indeed, to be claimed for his own
By him who has penned "From Manger to Throne."
Of traditions and landmarks that survive in the place
Where Christ gave His life for the whole human race;
Where, with love, mixed with sorrow for the woes of mankind,
He healed the sick, the lame, and the blind,
Will the story be found in "From Manger to Throne."
Not a story for those with hearts made of stone,
But for those who with feelings of gratitude yearn
Of His beautiful life more truths yet to learn.
Let all read and study this life that was given,
That we, poor sinners, may join Him in Heaven;
Let all ponder o'er it till all the world own
That the Babe of the manger is now King on the Throne.

Watsonville, Cal.

The Fellowship of Truth.

Truth shall keep the field at last,
She is not lightly overthrown;
But what of him whose lot is cast
To fight for truth alone?

Blind men shall proclaim him blind
In seeing what they cannot see;
And shouts of "Traitor" from behind
Shall hold him from his victory.

A lonely lot is his. And yet
Alone—he is not all alone;
Though others scorn him or forget,
Strong Truth is still his own.

And they who scorn and they who fear,
Blind age and boastful callow youth
Shall envy him, at last, the dear
Companionship of Truth.

—*I. O. Rankin in Overland.*

How Mrs. Jones Managed Her Husband.

On the public road just outside of Bridgeton, N. J., there lives a farmer and his wife, who may often be seen in town on Saturday afternoon, trading off butter and eggs for groceries. I believe they drive two white horses to a little carriage, and are what the world calls "pretty good sort of folks," but the world don't know anything about the awful time that rosy-cheeked, smiling-faced woman had getting her husband, Jedediah Jones, Esq., cut out to suit her own mind; because, you see, he had had a first wife, an easy sort of a woman, who let her husband do just as he pleased and never said a word back. There are very few such women nowadays, and when there are they don't live long, and so, of course, Rachel Jane No. One soon died, leaving Jedediah alone with all his faults to hunt up another good woman. Well, Jedediah had such an easy time with his first wife that he was in a powerful hurry to take another, believing all women to be angels.

Now the greatest fault this man had was poking his nose into something that was none of his business. His new wife called it "cot-bettying," and was determined to break him of it.

It was very annoying to a woman of such spirit as Sarah Ann Jones to have her husband leave his work outdoors, five or six times a day, to see what she was doing in the house. As the honeymoon wore off, it became more unbearable, until Sarah Ann at last determined she would have no more of it.

One day in particular he seemed more cotty than usual; in going out to his work, he stopped in the shed to turn the broom brush-part down, saying as he did so: "Sarah, don't you know any better than to turn a broom upside down? Rachel Jane never did such a thing."

"I am mistress now, and not Rachel Jane," said Sarah Ann as she stepped out to turn the broom up again.

He cast upon her a look of defiance which meant that war had commenced and we would see who came off conqueror.

Accordingly, much earlier in the day than usual, he came into the house and lifted off the lid of the dinner-pot to see what he was going to have for dinner.

"Humph," he grunted, "you bile your taters in too much water. You don't want more'n the bottom of that pot covered with water. Steam will do the rest," and he lifted up the pot and poured out half the water; but no sooner done than Sarah Ann slipped in more water, saying: "Who's biling these pertaters, you or me?"

Jedediah, thinking it best not to notice the fresh addition of water, began to gather up all the chairs and slip them, seats first, under the extension-table.

"I'll not have my chairs put out of sight in that way," said Sarah Ann. "You make the room look as empty as a barn," and she began scattering them about again, one near a little stand, another under a window, until the old cosy look came back, much to Jedediah's disgust, who went up-stairs, slamming the door behind him.

Mrs. Jones could hear a great deal of hauling and moving up above her, but thought it best, just then, to keep on getting dinner.

Mr. Jones soon came down, looking very red in the face, but triumphant, as he passed on out of doors.

I must go and see what he has been about, said Mrs. Jones to herself.

She found the bedsteads, bureaus, wash-stands, towel-racks and chairs all arranged on one side of the room, while the other sides were left entirely bare. She was so angry that it did not take her many minutes to get things back in their old positions, and down-stairs she went, in time to meet her husband coming in to dinner.

"Look here," she said with flashing eyes, "if I am not capable of managing this house, the quicker you get another housekeeper the better."

"I reckon a man has a right to have things in his own house as he sees fit."

"Then I suppose you will concede the same right to a woman when she neglects her own work to slip outdoors and help the managing there?"

"That's another thing," grunted Mr. Jones. "Rachel Jane and I got along like turtle doves; never had a quarrel in our lives."

"And you meddled with the indoor affairs when she was alive, just as you do now?"

"It was Rachel Jane's pleasure to let me have things just as I wanted them."

"No wonder she died, then; but I want you to understand, Jedediah Jones, that I'll have none of your interference in the house. You attend to your business and I'll attend to mine."

"I'll not be ruled by petticoats. Rachel Jane—"

"There, don't bring her up again. One thing I notice, you and Rachel Jane accumulated a very small portion of this world's goods, and I don't wonder, if you let your hay rot in the fields and your apples spoil on the ground, as you do now, to come to the house and oversee me. You have had your say and I'll have mine if you don't take my advice and leave me alone. No woman with any spirit would stand it."

It was almost a quarrel and each party finished the meal in silence.

Mrs. Jones tried to be even more careful with her housekeeping the next day than ever before, but all in vain. Mr. Jones came into the house and gave his orders just as usual.

"It is my turn now," said Mrs. Jones, as she tied on her bonnet and followed her husband outdoors early the next morning.

She paused before the woodpile, where he had stopped to saw a few armfuls of wood.

"Jedediah," said she, "you are sawing that wood entirely too short—a perfect waste of time."

Mr. Jones looked up and scowled. Mrs. Jones walked on, and, entering the barn, began to pitch more hay down to the horses.

"What are you doing there?" he called out angrily, his eyes having followed her.

"Mr. Jones, you don't give your horses half enough to eat, they're poor as snakes."

"The thunder they are!" shouted Mr. Jones. "Go in the house and mind your own business."

"I am going over to Joe Brown's first to see when he is coming after the corn in the south crib. The 'varmints' are eating it all up."

"Perhaps you are," said Mr. Jones, throwing down his saw and striding after her.

But she was far down the road, almost beyond shouting distance, and he feared attracting the attention of a milk-wagon that was just passing.

At quarter before twelve she came up the walk and found her husband sitting moodily on the porch.

"Well," she said, sweetly, "Mr. Brown is coming up after that corn this afternoon."

"Where is my dinner?" growled Jedediah.

"I have been so busy all the morning with your affairs that I am thinking we will both be obliged to put up with a cold bite."

"I'll break your ugly neck if you don't let my business alone."

"There is a law against that," said Mrs. Jones, coolly.

"Then I'll have a divorce, the sooner the better," said he, as he strode out to gear up a horse, to go in search of a lawyer.

But when that learned man was found, he advised Mr. Jones to let his wife alone in the house and he would come out all right, for divorces were not being granted in the State of New Jersey on such trivial causes, and so Jedediah paid the lawyer five dollars and went home a sadder but a wiser man.

"Let her have her own way and be hanged," he muttered early next morning, and from that day hence he never went into the house to direct or order, and to his surprise things began to wear a better aspect on the farm. He now had more time to attend to his own affairs, and Sarah Ann, left to herself, soon began to develop a wonderful capacity for saving. Mr. Jones, more to his surprise than ever, soon found that they were growing rich, while his wife grew rosier and rounder every day. Mr. Jones is now of the opinion that women are just as capable as men, especially in their own spheres, and that every sensible man ought to leave them alone.

And that is the way Mrs. Jones managed her husband.

An Odd Discovery.

[Written for the RURAL PRESS by M. M. S. P.]

In my reading, I lately came across a bit of information that seems to be authentic, and is certainly of considerable interest. It is relative to the stars in our flag.

The discoverer was, I believe, an English gentleman, and one who was sufficiently interested in the subject to visit the church at Brington, England, near Althorp, where is to be seen the memorial brass plate of the Washingtons.

This brass plate bore the arms of the family, the stars and stripes. On the tombs of other members of the family as far back as 1560, were found other brass plates all bearing the same design—the stars and stripes.

George Washington's great-grandfather, John Washington, brought with him to America when he emigrated, his family shield and crest. In due course of time, our great Washington of Virginia began to use this emblem of his family.

It was on the panels of his carriage, on two watch seals and on a bookmark. It is described thus: "Red bars, the five-pointed stars and the raven issuant out of the ducal coronet."

This must be a genuine account, as some of the commissions still preserved of officers who served in the Army of Independence, bear this seal.

It is not surprising that this emblem was chosen to be used by the country George Washington served so well and long

It was quite new to me to find that what we call stars were not originally so at all. They were intended to represent the rowels of spurs, or as they would be termed in speaking of heraldry, a science little known in our own country, "mullets."

Just fancy! Our glorious spread eagle was in the original design only a raven "issuant out of a ducal coronet."

"Issuant" is only the proper way of saying coming out of or on the rise.

Treasure Trove very pertinently says: "The whole concern has been on the rise ever since; the rowels of war have already been transformed into the stars of peace, and although the eagle allowed the ducal coronet to fall from its talons at the first flap, we Americans are proudly confident that our glorious bird will continue its upward course until it reaches the sun."

Lotteries.

The objection to lotteries is based upon morals as well as upon public expediency. *Lotteries continually invite the poor, and persons who are not well gifted with the moral sense and the quality of self reliance, to depend upon something else than their own efforts to take care of themselves.*

The lottery originated in corruption. The earliest legislative bodies of modern Europe protested against royal lotteries, and the first Assembly of the French Republic suppressed them as "an invention of despotism to make men silent about their want, by enticing them on with a hope which aggravates their distress."

Lotteries have been condemned in principle, though they are not as yet wholly suppressed in nearly every country in Christendom. In most of the States of the American Union they are forbidden by law. In England they have been prohibited since the reign of George II; in Belgium they were suppressed in 1830, and in France they are nominally forbidden, though the Government has permitted the element of chance to be introduced in the raising of money for certain semi-public purposes, as, for instance, the Panama Canal.

Lotteries have been well called schools of public demoralization. They introduce scandals and corruption in public life. Such scandals, involving charges of bribery of legislators, have lately arisen in Louisiana and North Dakota.—*Harper's.*

WOULD YOU?—Would you leave such legacies as the following? The *Christian Inquirer* gives it as the (unprobated) will of a drunkard at Oswego, N. Y.: "I leave to society a ruined character and a wretched example. I leave to my parents as much sorrow as they can in their feeble state bear. I leave to my brothers and sisters as much shame and mortification as I could bring on them. I leave to my wife a broken heart. I leave to each of my children poverty, ignorance, a low character and a remembrance that their father filled a drunkard's grave."

Hollyhocks.

'Mid drowsy sunflowers tall,
That rear their heads above the garden wall,
The stately hollyhocks stand,
With crimson flowers close along each stem
That glisten like the ruddiest ruby gem
Set in an emerald wand.

Upon their native ground,
Like troops of well-drilled soldiers are they found,
Nature's own body-guard;
And, clad in their bright scarlet coats-of-mail,
They for a time continue to prevail,
Unbroken and unscarred,

Till swiftly on the spot
Comes August, a commander fierce and hot,
Leading his army forth.
Tossing their yellow plumes high in the air,
A valiant host of golden-rods appear,
And prove superior worth.

O hollyhocks that grow
So far above your sister flowers below,
Ye seem, while there ye stand,
The spires of God's cathedral, vast and free,
That point forever upward hopefully
Unto the better land.

The moist-eyed buttercup,
Low at your feet, admiringly looks up,
With sense of awe profound,
While ye perform your mission pure and meek,
And with your golden tongues a language speak
More eloquent than words.

—*A. G. G. in Christian Register.*

An Eschatological Fable.

It was the evening of the last day of the world. The heavens had been rolled together like a scroll, the seals had been opened, the last trump had been heard. The righteous people of the earth had been gathered to the fold and the unrighteous had been sent down into the bottomless pit, divided into day shifts and night shifts, and set to work digging sulphur for the old serpent, who was chained for a thousand years. There was darkness upon the earth; the sun, covered with sackcloth and ashes, had sunk from sight, and the moon, a blood-red ball, was hanging low above the horizon. There was an awful silence. The earth had been turning slower and slower upon its axis, and there was reason to expect that it would soon stop altogether.

Alone in that vast solitude, with his haggard features dimly lighted by the crimson rays of the blood-red moon, with frozen tears upon his cheeks and a wild, hungry look in his eyes, sat one man upon a stone. The last man. The only man on all the deserted earth, waiting for the final throe when the world would become a defunct body, a dead sphere.

Suddenly there was a soft whirring of wings, and an angel sped down through the vast space of the infinite realm and alighted by the side of the forsaken man.

"Why are you here?" asked the angel. "Why did you not follow the procession when it left for the pearly gates of heaven?"

"Alas!" said the man.

"Why," said the angel, "did you linger here? Was it because you loved the earth?"

"No," said the man.

"Was it," continued the spirit, "because you were ashamed, or proud, or undeserving?"

"No! no!" cried the unfortunate man.

"Then," said the angel, "what was it?"

"Alas!" groaned the man. "I'm a country editor, and I was starved to death by my delinquent subscribers. I could not follow the procession. I was too weak. I—"

But the angel stopped him. Tenderly he took the editor under his arm and floated through space, up, up, until he reached the pearly gates. A whispered word to St. Peter and the gates flew open. There was a burst of celestial melody, and a ray of celestial light shot forth and shone through the voids of space. At the same time there came up from the bottomless pit a wail of awful agony—the old serpent was flogging the delinquent subscribers with his tail!—*G. V. Herald.*

A Righteous Judge.

A certain ignorant justice who does business up in Fulton county was elected over an able but very unpopular lawyer, and his first case was that of a prisoner charged with violating the fishery law. The complaint and warrant were defective; and this the defendant's lawyer took exception to in a masterly argument, winding up by moving the prisoner's discharge. "Is the motion seconded?" asked the justice. "It is," replied the prisoner. "Gentlemen," continued the justice, "it is regularly moved and seconded that the prisoner be discharged. All those in favor of the motion say 'Ay.'" "Ay," came from the prisoner and his counsel. "Opposed, 'No.'" Silence followed; after a short pause, the scales-holder said, "The motion is carried and the prisoner is discharged." And thereupon, to the surprise and amusement of all, court was adjourned.—*Amsterdam Democrat.*

AN EXAMPLE FROM HISTORY.—Freddy (studying American history): Papa, is there anything in what people say about 13 being an unlucky number? Old Sugge (English by birth): Yes, it seems so. Freddy: Well, how was it the Union was so lucky? It commenced with 13 colonies. Old Sugge: Oh—er—that was unlucky for King George.—*Munsey's Weekly.*

A Reason for Working.

Anna C. Wright, in a letter to the Chicago *Inter-Ocean*, writes:

There is a lady in our town who manages a profitable business which she established before her marriage to a leading business man. Contrary to custom, and also the expectations and perhaps the desires of her friends, she continued in her business after that happy event. Many years have gone by, yet she works as diligently as ever, and adds much to the luxury of her hospitable home by her earnings.

One day recently a friend rallied her upon her untiring industry.

"Well, why shouldn't I work?" she inquired quickly. "I'd rather work than practice self-denial. I can't beg or steal, and it is easier for me to work than to deny myself all the time. I suppose I'm extravagant. Anyway, I can't do without money." If that lecture had not been interrupted by a caller on business it would have been longer. Her questioner shook with inward laughter and wished she might hear more of the lady's reason for working. Is it not true that many people go through life practicing self-denial when work would bring self-gratification?

Self-denial for the purpose of helping others may be a Christian virtue, but self-denial, which is merely doing without things because one is too lazy or too proud or too incompetent to work for them, is a good deal more common than the other kind, and is utterly without excuse in the opinion of such people as this brisk business woman whose words are quoted here.

A Pointer.

The *Bundle of Sticks* is accountable for the following:

Wife—"This is a nice time of night to come home; are you not ashamed of yourself?"

Husband (pulling off his boots)—"Don't scold, couldn't get away a moment sooner. Had a big argument."

Wife—"Big fiddlestick."

Husband—"Fact, I assure you. What do you think? All the men at the Lodge in it. Question was which of us had the most amiable and beautiful wife. I beat them all. Described your beautiful eyes, silky hair, cheeks of roses, teeth of pearl, lips of cherries, temper like an angel. Offered to fight them all if they would not admit it. They gave in. So here I am, late I own, but victorious with the finest wife in the world."

Wife (with a sweet smile)—"You are a sad fellow, John, I am afraid you'll never be anything better. Let me help you trke off your coat, dear."

Chaff.

WICKWIRE: Mudge is not so hopelessly lazy as you think. There is considerable go about him. Yabsley: Yes; that's so. Lots of people have to go about him, because he is too lazy to get out of the way.—*Terre Haute Express.*

"You may say what you will, but Bismarck is the greatest man of this century." "Hu-s-h! Don't speak so loud. The mayor's sitting at the next table and you might hurt his feelings."—*Fliegende Blatter.*

SOME men manage to get out of a dilemma by drinking both horns.—*Binghamton Leader.*

AMY: There's a hole in your stocking as big as a dollar. Mabel: A gold dollar or a silver dollar? Amy: No; a paper dollar.—*Ex.*

I SAW Jack Dayton, a rather simple-minded neighbor of mine, nailing up a box which I knew contained articles which he intended sending by express. So I ventured the suggestion to Jack to place the much-abused "This side up," etc., conspicuously on the cover. A few days after that I saw Jack. "Well, Jack," said I, "did your goods get there safely?" "Every one smashed," replied Jack angrily. "Hang the express company!" "Did you put on 'This side up,' as I told you?" "Of course I did; and for fear they would not notice it on the cover, I put it on the bottom, too."

AN EFFICIENT SWITCHWOMAN.—For 40 years Mrs. Mary Carroll has been the switchwoman at the Central railroad junction of Macon, Ga., where several different railroad tracks meet. During this time she has always been faithful and efficient. She has never been the cause of an accident. Her tracks have always been set right. Her duties have been responsible, but the road has never incurred a dollar of breakage, a moment of delay, or the injury of a person on her account. She is, perhaps, the oldest and only switchwoman in the United States. There are hundreds of people who will recall seeing her in the little switch-house, at the junction, one mile from town. After so excellent a record, and so many years of capital service, in sunshine and storm, in cold and heat, the Central road has placed her in a less irksome position. She has been made gatekeeper at the shop of the road in that city.

YOUNG FOLKS' COLUMN.

A Halloween Party.

[Written for the RURAL PRESS by MAUDE S. PEASLEE.]

It was a cold, rainy Saturday in October. Outside, the rain came down in torrents, the wind blew and whistled angrily through the dry branches of the trees. Within, a bright fire blazed in the fireplace and danced on the gilt frames of the pictures upon the wall.

It failed, however, to brighten the faces of the two children who sat disconsolately at the table in the center of the room.

"One can't read all day long," growled Bert, as he pushed his *St. Nicholas* away from him and buried his curly head in his arms.

Bess agreed with him. When was she ever known to refuse him sympathy?

"If we could only go out of doors," she said in a very forlorn tone, "or go to see some one, it wouldn't be so bad. I just wish we hadn't been invited in the first place. I 'spise disappointments."

"We would have felt bad if we had been left out when the rest were invited, and I suppose the other boys and girls are as much disappointed as we are," said Bert with the unconscious philosophy of thirteen years.

Grandma, who had listened quietly, now said:

"How could you help being disappointed? I'm sure I should have felt it myself, if I expected as much pleasure as you did."

That was the loveliest thing about the dear old lady. She was always ready to sympathize with any one in trouble, from the little ones to her own sons and daughters who still brought many of their troubles to "Mother."

"You see," she continued, "its being a lawn party spoilt it all this time. Now I want to tell you about a party I had when I was a girl, a party at which we all had such a good time that I remember it yet."

Both the children brightened up at once. Grandma's stories were sure to be nice ones.

"I was older than either of you," she said. "I was just past my sixteenth birthday, but I had younger brothers and sisters who enjoyed it nearly as much as I did.

"It was on Halloween, the last night of October, the eve of All Saints' Day, when all the good fairies are supposed to be about ready to do one's bidding."

"Oh!" breathed Bessie in delight at the thought of a fairy story.

"It was only a superstition, dearie," said grandma, smiling, "only a notion that people had believed in so long that it seemed true. All my playmates and young friends were invited and it happened to be a clear night, which made it pleasanter, but I think the boys and girls would have managed somehow to be there, for many a frolic they had had in our large bright kitchen."

"What made you take them into the kitchen, grandma?" asked Bert in a tone of surprise.

"We were not there all of the time, dear. Of course I received my company in the parlor, but the real fun never began until we got out in that nice clean old kitchen with its well-scrubbed floor and its shining tins and saucepans."

"I guess it would have been nicer," said Bert reflectively.

Grandma smiled and continued: "The boys and girls came quite early, and glad we all were to see them. Mother entertained us for quite awhile with stories of Halloween parties she had been to when she was a girl, and also read us a few lines from the poet Tom Moore about the celebration of Halloween.

"When we went out in the kitchen we found on the floor two tubs filled with water, containing also a number of apples with bits of paper pinned to them floating about on the surface of the water. We afterward found that the tub for the boys had apples with girls' names written on the bits of paper, and the one for the girls was arranged the same way with boys' names. As the writing was turned downward, of course we could not see the names.

"It was great fun, for in order to get the apples we had to kneel on the floor and pick up each an apple with her teeth. They all had long stems, but it was not so easy as it seemed, since if we began to laugh and touch the apple anywhere without catching it with the teeth, down it bobbed under the water. When we had each an apple, we had great fun comparing the names. As only the names of those present were used, each boy had a partner for the evening. The girls kept their papers, for sometimes, you see, they didn't get the name of the boy who came to claim them for the games."

Bert and Bessie were much interested, and all disappointment over the lawn party was forgotten.

Grandma smiled down at their upturned faces and continued:

"Then we melted lead in an iron spoon, and dropped a piece for each one into a bowl of water. The queer shapes were supposed to indicate the profession each boy would follow, and the profession of the man each girl would marry. Sometimes it would seem to indicate that the girl was going to be an old maid. It was wonderful the things we would fancy we could see in those queer-shaped bits of lead.

"Afterward we roasted chestnuts in the hot ashes, each pair being named for some boy and girl. Sometimes they would roast quietly and happily together and again would pop suddenly apart. This the boys and girls called having a quarrel.

"The next thing was supper, and mother had baked a cake with a ring in it. The one who got that was to be married first. We each ate an apple at the table after naming it and counted the seeds just as you do now—'one I love; two I love; three I love I say; four I love with all my heart; five I cast away; six he loves; seven she loves; eight they both love; nine he comes; ten he tarries; eleven he courts; and twelve he marries.'"

"I wonder who made that up," said Bert.

"I think it is very old, dear," answered grandma. "After supper we girls wanted to try going down-cellar backward and looking in a glass while we ate an apple. Mother was afraid some of the boys would be mischievous enough to try to frighten us by looking over our shoulder, so she wouldn't let us try it.

"She said we might try unwinding the ball, and told us how to do it properly. The girls wanted me to try it first, so I went to the parlor window alone and threw the ball out, saying aloud as I leaned out, 'Whoever my future true love shall be, take hold of the end of this string with me.' I kept fast hold of the end of the string and waited. Just before I went in we had heard the whistle of the late train and some one spoke of it. I, however, had forgotten it, until now I heard footsteps coming nearer and the low laughing of two men."

"Oh!" exclaimed Bessie. "Wasn't you frightened, grandma?"

"Yes, dearie, I was, but only for a moment, for just then I recognized the voice of my oldest brother, who was a medical student. I rushed to the front door to let him in, and after kissing him was greatly embarrassed to be introduced to his friend, who gravely but with twinkling eyes handed me the ball I had thrown out with the string neatly rolled up. He afterward told me the ball had fairly hit him as he came up the walk. Their arrival only made more fun and maybe there was something in it, for he was very nice to me after that."

"I know," said Bessie, dancing about and clapping her hands. "It was grandpa; now wasn't it, grandma?"

"Yes," said the dear old lady with very pink cheeks, "and he likes to tell it yet himself. If you will be good children, I'll ask mamma to let you have a party just like it a week from to-morrow; that will be Halloween, you know."

Both the children were highly delighted, and it is only fair to say the party was a grand success and that no one enjoyed it more than grandma and grandpa.

His First Cigar.

Dr. Talmage tells in the *Ladies' Home Journal* how he smoked his first cigar and how he enjoyed the experience, as follows:

The time had come in our boyhood which we thought demanded of us a capacity to smoke. The old people of the household could abide neither the sight nor the smell of the Virginia weed. When ministers came there, not by positive injunction but by a sort of instinct as to what would be safest, they whiffed their pipe on the back step. If the house could not stand sanctified smoke, you may know how little chance there was for adolescent cigar-puffing.

By some rare good fortune which put in our hands three cents, we found access to a tobacco store. As the lid of the long, narrow, fragrant box opened, and for the first time we owned a cigar, our feelings of elation, manliness, superiority and anticipation can scarcely be imagined save by those who have had the same sensation. Our first ride on horseback, though we fell off before we got to the barn, and our first pair of new boots (real squeakers) we had thought could never be surpassed in interest; but when we put the cigar to our lips and stuck the lucifer match to the end of the weed, and commenced to pull with an energy that brought every facial muscle to its utmost tension, our satisfaction with this world was so great our temptation was never to want to leave it.

The cigar did not burn well; it required an amount of suction that tasked our determination to the utmost. You see that our worldly means had limited us to a quality that cost only three cents. But we had been taught that nothing great was accomplished without effort, and so we puffed away. Indeed, we had heard our older brothers in their Latin lessons say *omnia vincet labor*, which, translated, means if you want to make anything go, you must scratch for it.

With these sentiments, we passed down the village street and out toward our country home. Our head did not feel exactly right, and the street began to rock from side to side, so that it was uncertain to us which side of the street we were on. So we crossed over, but found ourself on the same side that we were on before we crossed over. Indeed, we imagined that we were on both sides at the same time, and several fast teams driving between. We met another boy who asked us why we looked so pale, and we told him we did not look pale, but that he was pale himself. We sat down under the bridge and began to reflect on the prospect of early decease, and on the uncertainty of all earthly expectations. We had determined to smoke the cigar all up and thus get the worth of our money, but were obliged to throw three-fourths of it away, yet knew just where we threw it in case we felt better the next day.

Getting home, the old people were frightened, and demanded that we state what kept us so late, and what was the matter with us. Not feeling that we were called to go into particulars, and not wishing to increase our parents' apprehension that we were going to turn out badly, we summed up the case with the statement that we felt miserable at the pit of the stomach. We had mustard plasters administered and careful watching for some hours, when we fell asleep and forgot our disappointment and humiliation in being obliged to throw away three-fourths of our first cigar.

PA: Have you seen with the microscope all the little animals that are in the water? Tommy: Yes, papa, I saw them. Are they in the water we drink? "Certainly, my child." "Now I know what makes the singing in the teakettle when the water begins to boil.—*Siftings.*

DOMESTIC ECONOMY.

Boiling an Egg.

"Isn't it strange," said a short, foreign-looking man the other day to some companions, while lunching together at one of the restaurants, "that not one cook in fifty, nor housekeeper either, knows how to boil an egg? And yet most people think they know this simple matter. They will tell you to drop it into boiling water and let it remain three minutes, and to be sure the water is boiling.

"Here is where the mistake is made. An egg so prepared is indigestible, and hardly fit for a well person, let alone one who is sick, to eat. The moment it is plunged into boiling water the white hardens and toughens. To boil an egg properly, put it in a vessel, cover with cold water, place over the fire, and the second the water begins to boil your egg is done. The white is as delicate as a jelly and as easily digested and nutritious, as it should be. Try it."

The information is worthy of consideration, since the speaker has occupied the place of chef at several of the largest hotels in the country.—*Chicago Tribune.*

FEATHER CAKE.—One egg, one cup of sugar, one tablespoonful of butter, one-half cup of milk, one and one-half cups of flour, one teaspoonful of cream of tartar and one-half teaspoonful of soda.

TURNIP PASTRY.—Boil thoroughly one-half dozen turnips, mash them up, adding a teaspoonful of cream and seasoning with salt and pepper. Put paste around this mixture, like a dumpling, and bake or steam.

COCOANUT CAKES.—Scarcely half a pound of loaf sugar to a large cocoanut grated; put into a preserving pan till the sugar melts. Form into cakes; put on white paper. They should be well baked in a very cool oven, and when cooked ought to be very pure white.

GINGER SNAPS.—One cup and a half of molasses, two-thirds of a cup of butter or lard, one teaspoonful of soda, one-half cupful of water, two tablespoonfuls of ginger. Mix soft, and roll very thin; bake in a quick oven. Put in the pan so they will not touch each other.

TO BOIL RICE.—Take one cup of rice, cover with cold water, and let it boil until the water is most gone, then add one cup of milk. When that boils, stir in one beaten egg, and season with lemon, vanilla or nutmeg. When done, serve with butter and sugar stirred to a cream.

CRAB APPLE JELLY.—Wash and wipe Siberian crab apples, quarter, but do not core, put in a kettle, and cover with cold water; cook until soft. Strain twice through a jelly bag. Put the juice on and boil twenty-five minutes. Add a pound of sugar to every pint of juice, with the juice of one lemon. Boil until it jellies.

GINGER SNAPS.—Bring one cupful molasses to a scald; mix together one cupful of sugar, ½ cupful of butter, one egg, a little salt and one teaspoonful of ginger. Stir 1½ teaspoonfuls of soda into the boiling molasses, pour over the other ingredients and add flour enough to make a stiff dough. Let it set a few minutes before rolling out.

BEEF TEA.—Cut two pounds of lean beef very fine with sharp knife. Pour a pint of cold water over it and let it stand for several hours in a double boiler on the back of the stove, where it will heat to the boiling point but not boil. When the juice is all extracted from the meat so that the meat is white, drain off the liquid and salt to taste.

QUINCE MARMALADE.—Pare, core and slice the quinces. Stew the skins and cores by themselves with just enough water to cover them, and when soft, strain through a jelly bag. Let this liquid cool, and when cool put the quinces into it. Boil, stir and mash as the fruit becomes soft, and when reduced to a paste stir in a small three-quarters of a pound of sugar to every pound of fruit. Boil fifteen minutes, stirring constantly. Put into small jars or glass cans. The juice of three or four oranges to every six pounds of fruit some consider an addition.

The Week.

Whether the weather or the political campaign has been the hotter during the last week no one has energy enough left to determine. The only thing which makes life endurable is the expectation that this week will practically finish up both heating agencies, and we shall then glide smoothly into the season of rains, holidays and legislative proceedings.

We trust that no reader of the RURAL will forget to vote next Tuesday, for such votes are needed to overcome the thousands of ill-considered, mercenary or vicious suffrages which will be cast. No one can tell how far-reaching the effects of even a single honest vote may prove.

It is announced that the great coal strike in Australia is over and that ships will be headed this way. Such a movement will bring us cheaper wheat charters and cheaper coal, both of which are things to be ardently wished for at this season of the year.

Who Will Get the Sugar Bounty?

A friend sends the following from the *Monache Tidings*, published at Porterville, Tulare county, and asks our opinion upon it:

The new tariff does away with the duty on foreign sugar and gives a bounty of two cents on the home manufactured. See how this works. The duty off sugar admits sugar free for Mr. Claus Spreckels. The bounty of two cents more than furnishes him with the beets to make sugar from in California. At the Watsonville refinery a short time ago, Mr. J. M. Moore of this county was told that $1600 worth of beets were used daily. He was also given the amount of sugar produced from the $1600 worth of beets. Figuring up the bounty on the sugar produced, he found it to be $1800—$200 more per day than the cost of the beets produced by the American farmer.

The point involved is important and probably cannot be fully determined without careful investigation. We are not prepared to state that the illustration with reference to the working of the bounty at Watsonville is correctly drawn. We are not familiar enough with the manufacture of beet sugar to affirm or deny the computations made by the writer. We print them subject to future revision if necessary.

There is, however, a general question involved which is of the greatest importance and which should be carefully considered. It is this: How can the beet-grower realize his share of the bounty? The bounty is not offered for the growth of beets. If the reader will refer to our issue of Oct. 11th, page 319, he will find the leading provisions of the Tariff law as relating to sugar production. We do not there find any plums for any one but the one who makes the sugar. The maple-sugar maker who draws the sap from his trees, boils it down and markets not less than 500 pounds of sugar in a season, is entitled to the bounty. The beet-grower or sorghum-grower could clearly also collect the bounty, provided they could themselves put forth over 500 pounds of sugar. The question then is whether a beet-grower whose yield of beets is sold to a sugar manufacturer is entitled to a share of the bounty, or whether the manufacturer is entitled to it all. It seems to us from the law that the manufacturer only can collect the bounty. It is, however, suggested that if growers of sugar beets take proper steps, they will be able to secure the greater part, if not all, of the bounty. One who holds this view says that if beet-growers would organize and secure indisputable assays in their own interest of the saccharine contents of their beets, the association could secure for each grower a proper pro rata share of the bounty awarded the manufacturer who works up the beets. We don't know how much force there is in such a claim or how the law might be interpreted by the courts if such a claim was made. That is an undetermined problem.

The question is then advanced, Will the bounty make manufacturers pay the growers any more money for the beets? Will Mr. Spreckels, for example, pay more for beets next year? We have seen no statement from him on the subject, and, in the absence of any, there is the common business inference to be drawn that Mr. Spreckels desires to make money and will not pay more for beets than he can secure a supply for; consequently, so long as he can secure all the beets he wants by growing them himself or buying them at old rates, he will turn the bounty to his own account. If the market price of sugar declines (as one side claims and the other denies), then it does not appear that Mr. Spreckels can do any better by collecting his bounty than he could before by selling his product at an advance equal to the bounty. There are, of course, several undetermined conditions liable to affect this aspect of the question.

However the doubtful features of the problem may be discussed, there is a way that a beet-grower can get his share of bounty, whatever that share may be. This way will be by co-operation. It may operate by refusing to sell beets to a manufacturer unless the growers are satisfied that the price represents their share of the bounty, or co-operation may enable beet-growers to combine their capital and material and establish sugaries of their own. This would seem to be in the line intended by the projectors of the existing law, and it remains to be seen how far such co-operation will be practicable or profitable. The series of articles now appearing from week to week in the RURAL PRESS is designed by the writer to throw light upon the subject of co-operative sugar factories, and we invite other contributions to the same end from those acquainted with the matters involved.

The Cause of It.

No doubt all who have been depressed and disgruntled by the unusual duration of hot, dry weather will be glad to know the reason why the peculiar phenomena exist and continue so long, and why we had a wet October last year and just the opposite this year. Lieut. Finley of the Signal Service, being interviewed by a city reporter gave the following interesting statement:

"It is true that the difference between the temperature of this month and that of October, 1889, is most marked. In the latter month there was not a single day when rain did not fall somewhere on the Pacific Coast.

"In October, 1889," said the lieutenant, "the rains which come from the Japan current moved eastward over British Columbia, carrying the rain center northward of this portion of the United States. They then moved farther south, carrying the area of precipitation into California. In October, 1890, these storms have moved eastward so far north that the rain which attended them has been confined to Oregon and Washington, and did not reach California.

"As to the north winds which for the past week have prevailed, bringing a heated spell, they are due entirely to the presence of an area of dry air and clear weather prevailing over Nevada, Utah and South Idaho, with a slight depression of the barometer just off the coast of Southern California. This area of dry weather is called on the charts 'high,' because the air is denser and heavier. The depression off the coast of California is called 'low,' because the air is moist and lighter. The north winds result from the movement of the clear, dry air of the 'high' to the warm, moist air of the 'low.' There is a gradiance between the two which causes the air to flow away from the place of the highest pressure to the lowest. The air in moving from the 'high' to the 'low' is obliged to pass over the heated sandy soils of Nevada, and by the time they reach California have absorbed an enormous quantity of heat. They therefore appear as scorching hot winds. The sun beats down from a cloudless sky on the desert regions of Nevada, and the earth becomes quickly heated to a high degree, so that the air as it passes over the ground takes up the heat of the soil and carries it onward."

At the time of the interview on Tuesday last, Lieut. Finley thought the same weather might prevail a couple of days longer at least. A rainstorm breaking loose from the Japan current seems to be our hope for relief, and we trust it will not be long delayed, though this weather has done well in bringing in the outstanding fruit in the best condition.

Mohair and the Tariff.

In a circular just received, Wm. Macnaughton's Sons of New York express their belief that the new tariff will be of service to the mohair producers. They say that the new tariff will practically add two cents more per pound to the cost of foreign mohair (much has heretofore come in under the 10c. duty), and in all probability create a more steady demand for the domestic clip. The increased duty on foreign mohair goods will curtail importations and give a larger market for those made here, naturally increasing the demand and consumption for domestic mohair among our mills. Prices are now on a very good level, and they will undoubtedly remain firm with an upward tendency. All mohair will sell quickly and well, but as is always the case, lots in the best condition will receive the most attention from buyers.

STATISTICS OF IRRIGATION.—The subject of irrigation has been made a matter of special investigation in the Division of Agriculture of the Eleventh Census. It is estimated that upward of two-fifths of the acreage of the United States need irrigation. The total number of acres now irrigated, together with the quantities and varieties of crops grown under the system, will be shown. The melting snows of the mountains and the rivers that heretofore ran free will more and more be utilized and led over the great plains, causing them to become fruitful and to afford happy homes for millions yet to come.

SERICULTURAL SPECIMENS.—The State Board of Trade has on exhibition two large glass cases containing some beautiful samples of cocoons from 30 counties of this State. They were forwarded by the Ladies' Silk Culture Society.

Sorosis Fruits.

One of the handsomest packages of California canned fruits is that bearing the legend "Sorosis Brand," and the source of the merchandise is the Sorosis Fruit Ranch of Mary R. Smith and Ida L. Calkins of Santa Clara. The can also bears such attractive announcements as "Selected Fruit Fresh from the Tree" and "Fully Ripe—Put Up at Home." This is just the kind of enterprise which has often been advocated in these columns, and we are glad to see it undertaken and put forward in such unique and acceptable style as the Sorosis ladies are doing it.

The picture upon the label represents a bevy of five beautiful young ladies regaling themselves at a table upon which are spread various kinds of fruits. On the pendent portion of the tablecloth nearest the spectator is delineated a map of California, the cloth being so arranged that its lower edge represents the well-known coast line of California, and back of that the valleys, rivers and mountain ranges are traced in delicate lines. The leading towns are also shown, and at its proper geographical position, the "Sorosis Fruit Ranch" is marked. It is a very commendable idea to locate the region whence the fruit comes in such unique fashion. The picture is a very pretty one in itself, and its fitness to the purpose intended is striking.

We learn by inquiry that the Sorosis Fruit Farm contains 200 acres planted to fruits of the choicest canning varieties. The cannery is conducted by ladies, and women only are employed. This is the first year of its operation, and 6000 cases of two dozen 2½-lb. cans each was the output. Each can is wrapped in fine tissue paper. This year's product found a quick market.

The undertaking of the Sorosis partners is suggestive in many ways. There can be no doubt but that ladies having the capital necessary and the ability to apply it in the growing and canning of such fruit will succeed. Of course lack of either capital or skill or business talent might prevent success, so we do not unqualifiedly urge such an undertaking upon all ladies who would like to turn their time to good account. Still the fact remains that such enterprises will produce our best canned fruit and will command prices considerably in advance of those secured for the bulk of the commercial pack of the State. If the fruit is well selected, well put up and given a style which, as in the case of the Sorosis brand, attracts by its beauty, it is almost sure to reward its producers and add to the fame of the State.

The Fruit-Growers' Convention.

Our fruit-growing readers should begin now to arrange their affairs so as to attend the convention, to be held about the middle of November, at Santa Cruz. It has been a year of novel experiences and not devoid of surprises, some very agreeable, some otherwise. There probably never has been a time in our recent history when a general convocation of fruit-growers and a free discussion of subjects affecting their interests can yield more valuable results than at present. For this reason we trust that there may be a general disposition to rally at the Santa Cruz meeting.

It will be the fourteenth convention called by the State Board.

The convention program is not yet formulated, although many of those from whom essays are expected are busy getting their ideas upon paper. Among others, J. H. Hale, the Connecticut horticulturist, who is here now collecting fruit-growing facts for the Census Bureau, will make an address. He is full of progressive ideas, gained from New England experience, and his suggestions will doubtless be of interest and value. The railroads and steamship lines will, as usual, grant special rates to all who attend the meeting, and the hotel managers of Santa Cruz have promised to scale their prices to an economical fruit producer's standard. Altogether, Secretary Lelong of the State Board feels confident the assembly will be one of pleasure and profit. The local Board of Trade has taken the matter of preparations in hand, and assures a warm greeting to all fruit-growers who may attend.

IRRIGATION TAX.—At a meeting of the Turlock irrigation district, 28th ult., the tax levy for the fiscal year was placed at $1.25 on $100 valuation.

TRACK AND FARM.

Intelligent Horse-Breeding.

EDITORS PRESS:—There is no business connected with the farm that requires the keen intelligence and cool judgment that horse breeding does. The American trotting horse has a history, but it is not within the leaves of one book nor of those of a hundred; hence the man who would know the history of the American trotting horse has a task before him.

Also, to be capable of competing in the markets, he must have good goods. The time was when the horse jockey was the exponent of pedigree and record. Such is not now the case. The trotting horse has a stud-book, called a register, and a year-book is published giving all the important records and all the gilt-edged produce of sires and dams.

But a few years since trotting-horse breeding was a haphazard business; it has now become a science. There are certain strains of blood that, when bred together, produce a certain trotter. To know these strains and to have the means to purchase them is like holding the magic wand. Many and many a failure is recorded by reason of lack of knowledge where means is abundant. Many have failed because they had not the means to *use* the best; many and many have failed because they would show their neighbor that he was on the wrong track. All desire to know the road to success, and in this business there are several, but they all have the same landmarks for guidance of those who have not been over the route. These landmarks are the record of performances by the representatives of the great families and their pedigrees, showing the collateral lines and branches as they run back to the third or fourth generation. There is no need to go farther; if it is good four generations back, you are on solid ground. If it is not good at that point, there is no use in going back farther.

To be capable of analyzing a pedigree without prejudice or favor—that is the point. First after seeing that the animal under consideration is reasonably good for the purpose required, look to the sire. He should be of a family of producing sires (and *his* dam should be of a family of producing dams) The dam should be also of a family of producing dams, and should be sired by a producer of a producing family by sire and dam also. Just as far back as you can fill those requirements, just so much surer you may rest content that you are on the right road.

Now comes the great problem: How to blend the different families of the American trotter. Nearly every great breeder has a hobby, and it has been created by his own experience; but he who by wise judgment foresees the lines that will make the best dams, and the lines that will make the best sires, will certainly win his share of success. The meeting of Hambletonian 10 with Clara by American Star produced Dexter, the king of his day; also Dictator, who has sired Jay-Eye-See 2:10, Phallas 2:13¾, and Director, who has sired Margaret S, 2:12½, at four years. American Star produced but four trotters with records better than 2:30, and left no son that has produced even four; but he left 35 daughters that produced 45 2:30 performers at the trotting gait and one pacer. Here we have an exemplification of the fact that there are families of dams as well as of sires. Hambletonian 10, mated with Dolly Spanker by Henry Clay 8, produced Geo. Wilkes, sire of 60 trotters and 6 pacers in 2:30 and better. Henry Clay 8 sired but three with records of 2:30 and better, and the dams of but seven with records of 2:30 and better, yet the son of one of those dams has sired 66 performers, 41 sires of performers and 19 dams of performers.

Though American Star is ahead of Geo. Wilkes as a sire of dams that are producers, he will undoubtedly be far in the rear when the final count is made up. Blue Bull is another remarkable sire, having 59 performers to his credit in 2:30 or better, and 20 dams of performers, with only 9 sires of performers, showing, though a great sire, he is breeding on in the female line stronger than in the male line.

Nutwood 600 (by Belmont 64, a grandson of Hambletonian 10), dam by Pilot Jr., is producing trotters, sires of trotters and dams of trotters, yet in his dam he goes to the thoroughbred that has not been a success at trotting.

A. W. Richmond, the sire of Columbine, the dam of Anteeo and Antevolo, has made a remarkable showing on the dam side of breeding, considering his opportunities, Columbine being the first dam of two entire sons with records below 2:20. The scattering of the Richmond mares by Mr. Hill's sale will make a stronger showing in that line as years roll on. There is already a filly by Director out of a Richmond that can go in the 2:20 list whenever called upon.

Many of the great breeders are believing that there are great sires, and sires of sires and also great sires of dams. The American Star cross through females was great, but in succeeding generations it has been excelled in the male line. The Clay cross has been great in producing males that have bred on in both lines as well as great speed, and do not overlook that extreme speed is far richer in results than medium speed. The records of sires and of dams show that there are two points to be considered: What line of dams and what line of sires are to be taken. You pay your money, take your choice; but if you choose without study, you are as liable to fail as to win. Don't forget that Nelson 2:10¾ is by a pacer; that Stamboul is a Union Clay and Hambletonian; Electioneer, Hambletonian 10 and Clay; Geo. Wilkes, Hambletonian 10 and Clay; Nutwood, Hambletonian and Pilot Jr. (sired by a pacer and thoroughbred); Guy Wilkes, Hambletonian and Mambrino Patchen—a great sire of trotters, sires and dams. Director is Hambletonian and Mambrino Chief—a great sire of sires, and of dams as well.

I trust that to those who think, it will become clear that the great success of some breeders is not by accident, as it will also that the great sires are not by accident either. Guy Wilkes at 11 years of age has 4, with records below 2:20 at 3 years old; also is the sire of Sable Wilkes, sire of Freedom, with a yearling record of 2:29½—distinctions that none others share. But there are no more of the old Clay family to breed to, and the Mambrino Patchens are all placed, except one has a long purse. But something will take their place, either of the younger of the same families or other blood. He who can discern whether it be the pacer, the one half thoroughbred, or the blending of the best producers of the sires and dams, or the sires in one instance and the dams in the other—he who is the best judge will be the greatest winner. PRO BONO PUBLICO.

FLORIST AND GARDENER.

A Pioneer Plant Sale.

EDITORS PRESS:—In the fall of 1853 I bought land in Alameda and moved from San Francisco in January, 1854. I commenced to grow flowering and ornamental plants and soon had quite a stock for those days; but I found there was no sale for them in Alameda. I arranged with Wainwright & Randall on Merchant street to have an auction sale. The little steamer that was running from San Francisco to Alameda was blown up soon after my moving over. I got the plants ready and hauled them to a sloop, put them in the hold and went with them to San Francisco. I had them hauled to the salesroom and advertised them three days. They attracted a great deal of attention. One lady would say to her escort, "Buy this for me," and another, 'Buy that for me," and frequently selecting the same plant. On the morning of the sale there was a large crowd. Gov. Wainwright was in his happiest mood, calling *Cinerarias* "Senoritas." The bidding was spirited. Everything went like hot cakes. Carnations brought from $2.50 to $5; one monthly tree carnation six feet high brought $10; *salvia splendens* from $2 50 to $5; roses from $2 to $7; a cactus *Jinkinsonii* grafted on the Opuntia or prickly pear, $30; a Camellia Japonica, $30; cinerarias from $1.50 to $2 50; chrysanthemums, $2.50; a well-trained rose geranium, $34. The sale netted me a handsome sum. I had an auction sale every week for several weeks with quite good results.

Oakland. JAMES HUTCHISON.

[This reminiscence is decidedly interesting. We should like to have other pioneers' recollections. They should be recorded for the benefit of coming horticultural historians.—EDS. PRESS]

The Victoria Regia in Bloom.

Many persons, loving rare and beautiful flowers, who have been able to reach the conservatory in Golden Gate Park at the right times within the past fortnight, have greatly enjoyed the privilege of seeing the great waterlily *Victoria Regia* in blossom. A lady who has watched it closely and lovingly, writes of it in the *Chronicle* this week:

The blossom of the Victoria appears one day and disappears the next. No sooner does it reach its hight than it begins to fade. The outer petals sink into the water nearly as fast as the center expands, so that unless the observer watches carefully it is difficult to realize the actual size of the flower, which is quite large. Indeed, one of the most wonderful characteristics of the blossom is the rapidity with which it blooms and fades. To use a common phrase, the beholder must literally "catch it on the fly" in order to appreciate it at all. The extreme delicacy of the flower is surprising when one considers the stoutness of the stems and the enormous size of the leaves. A bud generally lasts two days. It jumps suddenly above the water almost as fully formed the first day as it appears the second.

The big leaf develops very rapidly also. The reporter saw a young leaf jump up through the water, making a loud splash like a duck. When the leaf first appeared it looked like a shallow bowl with fluted edges. The next day it had spread out like a circular tray. The third day it had flattened and was nearly as large as an old leaf. The same reporter also saw the flower make a violent move forward, rippling the water as it did so.

The Walnut.

[Written for the RURAL PRESS by B. M LELONG, Secretary State Board of Horticulture.]

Budding the Walnut.

The walnut is budded very successfully by the following method: The bud is cut (as shown in Fig. 1) about one-half inch long. The cut is made deep into the wood, the object being to give the bud as much bark as possible. The wood in the bud is then partly removed; it is gouged out with the sharp point of the budding-knife. This is done to allow the inner bark of the bud to unite with the inner bark of the stock, which union would be prevented if the wood should be allowed to remain in the bud. After the wood in the bud has been partly removed (as shown in the illustration), the

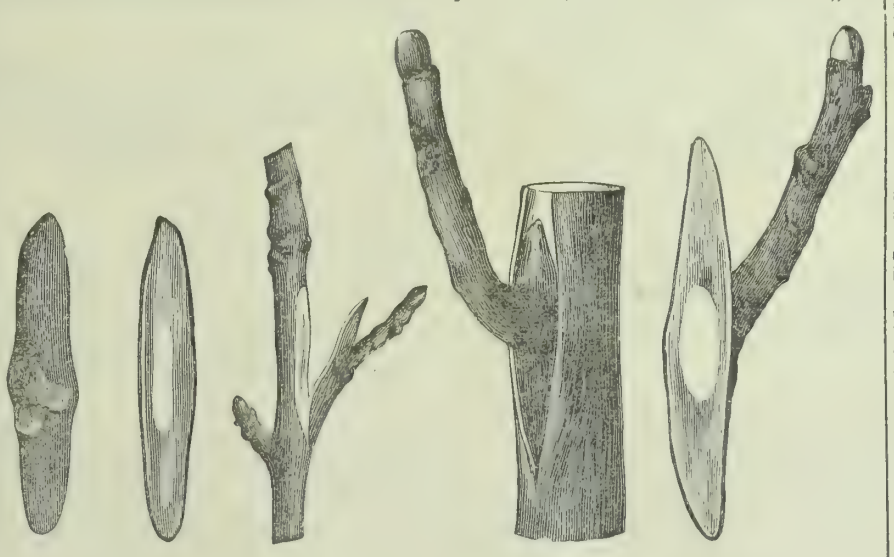

FIG. 1. FIG. 2. FIG 3. FIG. 4.

bud is inserted into the cut made in the stock, the same as ordinary budding is done. The bud must be tied tight with heavy budding twine. Three weeks after the bud has been inserted, the twine is removed and the bud allowed to lie dormant until spring. The walnut does not put forth until late in the spring, therefore the stocks are not cut back until then. As soon as the buds begin to swell, the stocks are cut back, and the bud allowed to grow. Great care must be exercised in not cutting the stocks so close to the bud as to endanger it. The buds are allowed to grow at will until they become hardy, then they are trained to the stock, the object in view being a straight tree. After the buds have made a year's growth, they can be transplanted into orchard form.

Grafting the Walnut.

Grafting walnuts is not as easily performed as budding. Great care must be exercised in the manner in which the operation be performed. The walnut cannot very well be grafted successfully by the ordinary method practiced on fruit trees. The reason is that the scions contain but very little wood, as the pith is very much larger than in other trees, and when the scion is cut (wedge-shape) very little wood is left to it, mostly bark, and if inserted cannot unite with the stock, not being held firmly in position. Side-grafting, however, can be accomplished with success. About 12 years ago I grafted many walnuts in this way very successfully, but it can only be performed in the spring, when the sap in the stock begins to rise; this is necessary, as the graft must be inserted in the same manner as a bud. The walnut does not put forth until quite late in the spring, therefore it is necessary that the scions be gathered before the trees start, and be prevented from starting by being kept in a cool place covered over with moist sand; in this way they can be kept until the stocks have made sufficient growth so as to facilitate grafting.

The most satisfactory method with me has been the "prong method" (original). In this method the prongs found at the extremity of the branches are used. Fig. 2 illustrates the scion, or prongs, used, and the method of cutting them from the branch, reduced in size for illustrating. The prong is cut as illustrated in Fig. 2, and the wood in the prong (graft) is removed with the sharp point of the budding knife, the same as in the method previously described, and as shown in Fig. 4.

The stock is then cut off with a sharp saw, and smoothed over with the knife and the graft inserted as shown in Fig. 3, and tied tight; no less than 18 ply twine should be used. The cuts are waxed over with grafting wax. After the grafts have started, they should be examined, and if the twine is found to begin to cut into the stock, it is untied and tied over again; this will prevent further injury. The object of allowing the twine to remain a longer time is to prevent the cut bark from opening by the action of the atmosphere and causing the grafts to die. I grafted, several years ago, many walnuts in this way with very good success. I also grafted the English (Madeira) walnut on the wild California walnut, found growing in the mountains, and on the black walnut, and the results were indeed very satisfactory. Many experiments have been conducted this year by growers, and with very satisfactory results, and especially by Mr. Fred. M. Buck of Vacaville, who at my suggestion, cut back last spring over 50 large black walnut trees, and into the new shoots he budded several varieties of walnut. Mr. Buck also grafted several trees in the spring by the above method, all of which he reports very successful.

220 Sutter St, S. F.

Nevada State Fair.

The Nevada State Fair, which took place at Reno the fourth week in September, proved the best they have ever held, and much praise is accorded to the managers. "The exhibition of live-stock," says the *Gazette and Stockman*, "is not so great as we would have liked to see, but it is very creditable indeed, everything taken into consideration. The severe winter last passed had its effect in nearly all branches of trade, and that the State Fair should not feel its blight could not be hoped for. The exhibits at the Pavilion prove conclusively that Nevada is by no means behind older and more pretentious States in her exhibits of cereals, fruit and all root vegetables, and goes to show what intelligent cultivation of the soil will do. If there was less attention paid to horse-racing and more to the products of the farm, dairy and live-stock departments, it would be still better; but that is a matter that will settle itself as soon as we become more populous and have a greater field to draw from."

Among the animals noticeable in the stock parade on the fourth day was T. G. Herman's beautiful Cleveland Bay stallion 'Commemoration" heading a family of three. M. Gulling was in line with his Cleveland Bay, "Philanthropy," and Wm. Wright with his English Shire, "Merrifield King." John Sparks led out a beautiful gray Percheron, the winner of the sweepstakes last year. A long string of brood mares and colts proved that the Silver State is not behind the times in poducing good horses.

J. N. Evans led the cattle with two Shorthorns, followed by Orville Sessions with four fine Holsteins and one Durham. M. Gulling took pride in showing his herd of Holsteins. Seymour Byrant showed four head of Durhams and one Galloway that will compare favorably with any in the land, J. Gault, with his herd of little Jerseys, attracted much attention. The cattle were followed by several carriage teams, roadsters and draft horses. Taking the parade as a whole, it was a decided success.

The poultry department showed many varieties of fowls, with some entries of ducks, geese and turkeys.

Pavilion Exhibits.

Mrs. Wm. Riley showed over 100 varieties of fruit; of pears, 18 varieties, among them, one little known in this State, the La Conte. Several of the specimens shown came from four-year-old trees in full bearing. A plate of flowering almond peaches were fine in appearance and are very rarely grown in this State. Strawberries, white and red, currants, blackberries, Silver, Petite and German prunes, and eight varieties of plums. A bottle of cider vinegar was only one of a thousand which might have been shown, as they have manufactured 200 gallons this year, and the few blocks of honey represent 2000 pounds ready for the market. Mr. Riley shows, as the result of an experiment, a few peanuts of good size, and he finds they yield abundantly.

Three varieties of grapes raised by M. Cohn on his Douglas county ranch, were Catawbas, Muscatels and Isabellas, on a slate hillside, and after the first year but little attention was paid to irrigation. The cuttings were set out three years ago by perforating the rocky soil with a crowbar.

Joseph Frey's exhibit was extensive. A fine collection of choice grapes was especially worthy of mention.

Some fine apples were to be seen from M. Steinberger's place in Long Valley.

Hon. Wm. Thompson had reason to be proud of the cornstalks in his collection, measuring 10 feet 10 inches in hight. He also had fifteen boxes of choice apples, three varieties of prunes, six of plums and four of pears.

The cheese from Theo. Winters' place constituted the "best and largest collection," and was noted as an indication of great things to come.

The bee interest was represented by E. A.

(*Continued on page 281.*)

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

ORCHARD NOTE.—Irvington, Oct. 25: Senator Fair has presented a valuable piece of property, near the old Mowry's Landing school, to a nephew of his, who will convert it into orchard.

Butte.

MIOCENE DITCH COMPLETED.—Oroville *Register*, Oct. 23: The Miocene ditch is completed. The work of laying the new pipe is well under way and is being put in place at the rate of 600 feet a day. All of it will be laid inside a month. Forty-three and a half miles of ditch have been fully repaired, while six miles of new pipe take the place of flumes. When all work upon the Golden Feather mine is done, the water from this great ditch will be brought across Feather river and used for irrigating purposes on the fruit lands south and east of Oroville.

Colusa.

THE CROP OUTLOOK.—Chico *Chronicle Record*, Oct. 27: I. R. Watkins made quite an extensive trip through Colusa county and Central and Southwestern Butte. In answer to the question as to what the crop prospect was for the coming year, he said that it was exceptionally fine. Throughout the sections named the wheat has nearly all been sown and the ground is in fine condition. The acreage has been increased over last year, and the outlook is very favorable to a much larger wheat crop for 1891 than the past season.

Fresno.

FRESNO RAISIN PACK.—Fresno *Republican*, Oct. 23: A careful investigation made by order of the Southern Pacific railroad, in order to ascertain the demand that would probably be made upon its shipping facilities, shows that at least 1000 carloads, or 1,000,000 boxes, will be shipped, and perhaps more. Actual shipments of nearly 650,000 boxes were made last year, while this season's crop will be very much larger, as the loss by rain has been slight by comparison with that of last season.

Kern.

IRRIGATION.—Delano, Oct. 26: The Poso irrigating district, embracing 39,000 acres in Northern Kern county, near this place, will start a force of 100 men and 200 stock this week on the construction of a canal 25 miles long, a large dam and a number of reservoirs. The district includes a very fertile tract of country. The work will be pushed to speedy completion, as improved machinery has been provided.

Lassen.

STRAWBERRIES IN THE SIERRAS.—Susanville *Advocate*, Oct. 23: We were shown some beautiful strawberries this week that were grown on Samuel Hoffman's place, part of a third crop, as rich and luscious as any we have seen this summer. Who cares about our being out of the citrus belt when we can raise strawberries in the open garden in November?

Los Angeles.

HOW AN ORCHARDIST MAKES MONEY.—Pomona *Progress*, Oct. 24: Col. Geo. E. Prentiss, an unusually successful fruit-grower, near Downey, has had a crop of English walnuts for four years from his 90 trees, and says he has never sold any crop for less than $920. He recently contracted to sell his crop of the walnuts for exactly $1050. He watches his trees as carefully as a merchant would his ledgers; he knows all about them:—in fact he makes a thorough business of fruit culture. The average income from each walnut tree on his place this season is $11.60. The crop was not a very large one, either. Then, too, the Colonel has 1000 Navel orange trees that have extraordinary care. His account-books prove that the annual crop from these trees has for four years sold for sums varying from $3290 to $4350. Last year he got the last-named price. His four acres of prune trees yielded him $975 last year, and $1,433 this year. Besides, there are three acres of alfalfa, small fruits, vegetables, the barn and the family residence.

Mendocino.

LARGE FRUIT-DRIER.—Ukiah *Express*, Oct. 23: J. D. Ball of Anderson valley is building an evaporator for fruit. The building is 20x40, finished with rustic; the drier is 8x16 and about eight feet high. It is divided into three chambers, with room for 30 trays to slide in like drawers, one above the other and 15 in a tier. The furnace is on the ground floor below, and the heated air passes through the fruit and by a hopper-shaped ventilator to the roof. The trays, 90 in number, are a frame with a bottom of galvanized wire netting and are 3x4. The capacity of the drier will be from over 1000 to 2500 pounds of green fruit per day. On the floor with the drying chambers there is sufficient room for the sulphur bath, the storage of the dried product, and for those who prepare the fruit for the drier. Mr. Ball will at once proceed to dry a large part of his own large crop of apples. The building of this fruit evaporator marks an era in the history of Anderson valley. It was long ago demonstrated that the valley was peculiarly fitted for fruit culture; but in the way of any great extension of the industry lies the cost of transportation. By the use of evaporators this difficulty is overcome. The 40 cents per 100 pounds of freight, which is an effectual bar to the shipment of fresh or canned fruit, is a small matter with evaporated fruit worth from 6 to 11 cents per pound and upward.

Monterey.

STEAM PLOWING AND BARLEY NOTES.—King City, Oct. 26: Messrs. Frisbie & Reed of King City have 4500 acres of their 9000 already plowed, the land being in good condition. They are using a steam plow. They sold 1500 tons of their crop of volunteer barley this year at $1 38½ in San Francisco. Farming paid them handsomely last year. Will it pay equally well the coming year? Those of us who were here in 1861-62, and remember the bountiful rain and succeeding floods, and then the drouth of long duration which followed, would hesitate to farm on a large scale this year.

Nevada.

FINE CORN.—Grass Valley *Tidings*, Oct. 24: B. F. Taylor of Rough and Ready has been testing some new kinds of corn, with very satisfactory results. He exhibited some samples at this office yesterday. One variety was Clark's Early Maslin. The ear shown had 24 rows and over 1000 kernels. The seed was planted about June 1st, after a crop of hay had been harvested from the same land. It matures in 90 days after planting. The other variety shown was Flour corn, which is very white, and, in addition to being an excellent corn for boiling, yields largely, one bushel making from 50 to 53 pounds of flour.

Santa Barbara.

GRAIN RECEIPTS.—Lompoc *Record*, Oct. 25: Over two thousand sacks of grain are being daily delivered at the Lompoc wharf. This has been kept up for several weeks and promises to continue for a week to come.

San Bernardino.

THE COMING ORANGE CROP.—Redlands *Citrograph*, Oct. 25: From all we can learn, the coming orange crop will be the largest ever grown in California. The seedling trees are heavily loaded, and the crop will be very fine in quality. The only fault seems to be that the oranges will run a trifle large in sizes. Budded fruit does not promise as heavy a crop in proportion as the seedlings, but there is a vastly larger area in bearing. The large plantings of 1886 and 1887 will also aid in swelling the total amount of the shipments. It is now altogether probable that the crop will amount to nearly or quite 3400 carloads, or 972,400 boxes.

Santa Clara.

VINES TO GIVE WAY TO TREES.—San Jose *Times*, Oct. 27: The last few days have held the fervent heat of midsummer, consequently the late grapes have gone up in sugar very rapidly—a fact that is very pleasing to the vineyardist, as this shortage in sugar has been taken advantage of to dock the grape-grower in prices. The majority of the vineyardists in the vicinity of Gubserville have at last come to the conclusion that the wisest course to pursue is to end the battle between themselves and the wineries by digging up their vines. This winter will see all the large vineyards ready for tree-planting. Fruit-raising for several years has been a very much more remunerative business than grape-growing. The dissatisfaction expressed by grapemen in regard to contracts demanded of them by the wineries is very great, and has culminated in this decision to remove their vines.

San Luis Obispo.

BEAN RECEIPTS.—Arroyo Grande *Herald*, Oct. 18: This has been a very lively week at the depot. The high price of beans has caused the farmers to rush them in, with the result that from 1500 to 2000 sacks daily are arriving at the depot, and notwithstanding the railroad is carting them off as rapidly as possible, the accumulation in the warehouse at closing time on Thursday evening was 15,000 sacks. We are informed that at Pismo beans are also coming in rapidly.

San Diego.

BETTER RAISIN REPORTS.—Escondido *Times*, Oct. 23: It now turns out that the loss of raisins will not be as great as was first supposed about fair-time. We have taken pains to make diligent inquiry concerning the matter, and find that the loss in this particular region will be about as follows: Twenty per cent total loss; 40 per cent slightly damaged; 40 per cent first-class raisins.

ORANGE AND STRAWBERRY PLANTING.—National City *Record*, Oct. 23: At Chula Vista, Elmer Flanders and Charles Johnson are transplanting 20,000 orange trees from the seed-beds, and planting strawberries quite extensively.

MELON PEARS FRUITED HERE.—San Diego, Oct. 25: A new fruit here is the pepino or melon pear, which has just been successfully fruited at Mrs. M. E. Blanchard's place, Twelfth and A streets. The pepino is a native of Guatemala, Central America. It is eaten the same as the peach.

SHIPMENT OF BEESWAX.—San Diego, Oct. 23: The largest single shipment of beeswax made from San Diego to the East was the three tons that E. Lovett sent off yesterday to New York with ten tons of honey. This is the twentieth car he has forwarded this season, and about 10 or 11 more are to follow. Beeswax is in demand in the East for manufacturing wax candles, for comb foundation to assist the bees, for glove-cleaning, etc.

HONEY YIELD.—*San Diegan*, Oct. 24: Inquiry among the commission merchants who have handled the bulk of the honey crop of this county elicited some interesting information. In quality, San Diego honey of 1889 maintains the high reputation gained in the past, being of good body, clear and white, and of delicious flavor. The quantity shipped and now in warehouses is given as follows:

	Pounds shipped.	In warehouse.
E. Lovett	679,800	1,000
Klauber & Levi	281,089	530
A. Wentscher	216,000	.....
J. B. Cowden	96,000	200
Harbison Grocery Co.	91,800	7,200
Lacey & Cofer	24,000	.....
Totals	1,388,689	8,930

While the figures show that 1,397,619 pounds of honey came into the hands of the commission merchants of this city, it is estimated that with the shipments made from points north the total product of the county exceeded 2,000,000 lb.

Shasta.

PRUNE AND FIG PLANTING.—Anderson *Enterprise*, Oct. 23: T. J. Geary, Democratic candidate for Congressman, owns 366 acres of the red plains land southeast of town, and will fence it all this winter and plant five acres of figs and five acres of prunes.

Solano.

FRUIT-GROWING IN NORTHERN SOLANO.—Dixon *Tribune*, Oct. 23: A large acreage will be set to fruit trees and vines in Northern Solano the coming season, especially on lands adjacent to Putah creek. The fruit belt is widening every year and promises ere many years to surround our town. There has existed a strong prejudice among wheat farmers on the subject of fruit-growing, but as they see the large profits made by their more progressive neighbors, they begin to realize their mistake. Several farmers in the immediate vicinity of Dixon have planted orchards and vineyards, more or less extensive, and in every event the results have been more than satisfactory, showing that the soil is perfectly adapted to the purpose.

Sonoma.

GRAPE-DRYING.—Healdsburg *Tribune*, Oct. 23: Cook & Langley's grape-drier at Litton Springs is being operated day and night by over 25 hands. Between 2500 and 3000 tons of grapes will be dried at that place this season. In about ten days work at this drier will be finished.

Sutter.

LATE BARLEY.—*Farmer*, Oct. 24: J. D. Phillips of Meridian is again in the field with his thrashing outfit, having thrashed, last week, barley for himself and 550 sacks on the farm of John Birks, and also on the farm of J. W. Howlett. Several others in that vicinity who had sown their barley late in the season are now having it thrashed. The yield is reported good.

Tehama.

TREE PLANTING.—Corning *Observer*: Already we have been informed of the following number of acres that are to be put in fruit trees and vines this season, but three times as much will be put in: Mr. Finnell will plant 60 acres of French prunes, in land near his dwelling house. John Finnell, Sr., will put out 200 or 300 acres in prunes and peaches. Simpson Finnell will plant 50 acres in fruit trees on his land near Tehama. G. Stone will add some more this season to what he planted last year. A. B. Altken will plant about ten acres in raisin grapes, completing the 40-acre tract he has near town. F. Houghton will plant 20 acres, and at least as much more each year after. Several other parties will plant this season, but not yet informed how much. H. C. Wilson intends to plant some hundreds of acres in his rich bottom-lands.

Tulare.

OUTDOOR WORK.—Visalia *Times*, Oct. 23: Farmers in this part of the valley are doing more "dry plowing" than is usual. Teams can be seen at work in all parts of the county to-day, plowing old and new land. It is this which is making an unprecedented demand for laborers at this season of the year. There are no idle men in our towns now, unless it is of the class who are looking for work and praying they may not find it. Then, too, a large acreage is being prepared for orchard and vineyard, and this requires men to clear land of trees and stumps, and handle the scrapers used for levelling the land.

INVESTING THEIR SAVINGS.—Visalia, Oct. 23: A number of the young men in this city are investing their savings in small tracts of land, which they purpose to cultivate to vines and trees. They are laying the foundation for an income in their old age. Only a few years hence the lands now selling at prices within the reach of every industrious young man will attain a price beyond their reach.

SEEDING GRAIN.—Visalia, Oct. 24: Most of the land in Sunflower valley, west of Tulare lake, will be seeded to grain the coming season. Already plows are turning the soil there, and people from all parts of the coast are flocking in to secure land by purchase or rent. The yield obtained last year has given the valley a wide reputation and advanced the price of property.

VOLUNTEER FIELDS OF GRAIN.—Visalia, Oct. 23: Grain that was shattered out on the ground during harvest, on many fields in the county, has taken root and sent forth spears that are now six inches high. Many fields are green with growing grain that shows as much life and vitality as that sown in the spring of the year.

PEAR NOTES.—Traver *Advocate*, Oct. 23: The pear crop has been extra good in the 76 country this year. The trees bear early and very prolific, and the fruit is large and tempting in appearance. Peddlers are in Traver every day now, selling pears that will average a pound apiece.

Ventura.

THE BEAN CROP.—Ventura *Free Press*, Oct. 24: From all present appearances—and it is a good time to judge—the bean output will be about half a crop; that is to say, of the 18,000 acres planted to beans in this county, the average yield will not exceed 600 or 700 pounds to the acre.

Yuba.

ENLARGING ORCHARDS.—Gridley *Herald*, Oct. 23: T. B. Hutchins, of Central House, is preparing to add 300 acres to his 100 acre orchard. He has already contracted for trees as follows: 13,000 peach, 25,000 pear, 4000 French prune, 1000 Silver prune, 2000 almond, and 1000 plum. The fruits are all of canning varieties, while the almonds are soft shell. Philip Hefner, of the same section, is arranging to increase his large orchard by the addition of 100 acres planted in peaches, prunes and pears, each especially selected for canning purposes. It is such improvements as these that insure the future development and prosperity of the vicinity.

IRRIGATION DITCH.—Marysville, Oct. 24: The capacity of the Brown's Valley ditch is about 9000 inches. When first arranging for the ditch they had planned to supply water for 45,000 acres of land, and the ditch as it is being constructed will at least furnish water for 80,000 acres.

NEVADA.

BEEF SHIPMENTS.—Reno, Oct. 23: Sparks & Tinnin shipped 20 cars of beef steers to Reno the other day to be fed for Grayson, Owen & Co., the Oakland butchers. They also shipped nine cars at the same time, which are being fed on the Meadows. From the present outlook there will be nearly as many cattle fed here this winter as last.

CROPS WITHOUT IRRIGATION.—Reno *Gazette*, Oct. 23: George Crum of Battle Mountain yesterday informed a *Gazette* reporter that he had clearly demonstrated that crops sown in the fall would mature and yield abundantly without irrigation. He said that he raised alfalfa on land without water, this summer, which grew rank and fully three feet high, and that a first-class second crop was gathered from the land. He sent the Board of Trade a sample of rye raised on land without water that was as fine as any one could wish to see; it was fully five feet tall. Mr. Crum stated that off the land that produced this sample a volunteer second crop came up and matured that would have produced at least ten bushels to the acre.

ALFILERIA OR PIN CLOVER.—*Silver State*: T. D. Parkinson, agent and manager of the Nevada Land and Cattle Company, sends to the *Silver State* two plants and some seeds of alfilleria or pin clover. One of the plants was irrigated, and the other, the larger of the two, grew upon dry soil without water. The stalks of some plants of clover grown upon dry soil attained a length of 30 inches. It resembles a vine and spreads over the ground, making a mat. It is almost a perpetual bloomer, flowering early in the season, and the specimens sent to this office, though covered with seed-pods, have many buds almost ready to bloom. The roots are long and extend downward into the soil, somewhat resembling alfalfa and indicating its adaptability to a climate in which summer rains are the exception to the rule. Mr. Parkinson thinks it an easy plant to propagate, as the pods are numerous and each pod contains several seeds. Though indigenous to California, it is very hardy, the freezing nights of two weeks ago not affecting it on the high lands on which the company's home ranch is situated. Last spring Mr. Parkinson was fortunate enough to secure ten pounds of the seed, and now, having learned the nature of the plant, he will give it a fair trial next season by sowing the seed on different kinds of soil. The value of alfilleria as a forage plant is well known. It is eaten with avidity by stock, and possibly it may grow on sagebrush land without irrigation.

ARIZONA.

FRUIT SECTION.—Yuma *Times*, Oct. 15: W. M. Ward, the nurseryman of Phœnix, says that in his opinion the valleys of this county possess all the capabilities for successful fruit-raising. Orange trees he thinks will flourish if they receive the right treatment. Deciduous fruits and grapes undoubtedly will succeed well. He thinks this is sure to be a great raisin-producing section in time, having the right climate to cure the grape. Figs will also do well. Mr. Ward is thoroughly of the belief that Arizona is bound to be a great fruit country in time. He is showing his faith by planting largely himself and encouraging others to do the same. With the questions of irrigation and transportation solved, the future of the fruit business will be assured. As to irrigation, he has great confidence in surface wells with water lifted by steam or wind power. Mr. Ward says large plantings of trees are being made around Phœnix, one man of his acquaintance intending to plant out 160 acres.

Nevada State Fair.

(*Concluded from page 379.*)

Moore, who showed a large case of extracted honey clear as crystal, some in the comb and some in crates ready for shipment, as fine in appearance as any ever seen.

The display of roses made by Mrs. Leitch, Reno, was a surprising one for the season. The exquisitely perfumed La France were the greater in number and size, then the Jacqueminot, Ocquette d'Alps, Catherine Mermet, La Phœnix, Niphetos, Douglas and the climber Alfred Carrier. A collection of Dahlias and China Asters completed this creditable showing. Mrs. A. H. Manning had the greatest variety of mixed flowers, and the largest specimens of dahlias and marigolds were in the collection next, and some fine nasturtiums, honeysuckles, Canterbury bells and guillardias, owned by Mr. Geisse.

First premium for the best and largest display made by any county, Washoe excepted, was awarded to Douglas county; second premium, $50, to Humboldt county.

Echoes from the District Fairs.

Rohnerville—9th District.

The eleventh annual fair of the 9th District Agricultural Association opened at Rohnerville, Sept. 22d, with a good attendance. The local *Herald* says: "We had thought that the display of vegetables last year could not be improved upon, but there are some features now in that line which excel any previous showing. ....The display of stock is indeed a credit to the county."

A representative of the Eureka *Times* who visited the fair reports the display of potatoes and vegetables "such as might be expected in Humboldt, *i. e.*, much ahead of anything that could be seen elsewhere, but not remarkable for us. Cereals were well represented. The display of peas was better than could be found anywhere outside of Humboldt.

"The fruit display was fine, especially that of apples, peaches and prunes. The apples from up Eel river were above the medium size, and all lacked somewhat in color; but there were some fine specimens from Camp Grant as well as from Lower Eel River valley. The Lawyer, Alexander, King of Tompkins County and Bellflower were there in force and made a decided impression. Peaches from Camp Grant, different sections of the Eel River section and from Trinity made a fine display. The dried fruit exhibit by Messrs. Barber and Campton we look upon as the most important of any at the fair. This exhibit consisted mainly of prunes and apples. Mr. Barber's fruit had been bleached in drying, while Mr. Campton's were unbleached. There were prunes of almost every size, color and quality, and all of them looked much more inviting than the imported article. There was a finer display of jellies and preserved fruits this year than were ever before exhibited in the county.

"Among novelties we noticed a sheaf of wheat and Alsike clover from the farm of Jas. Smith of Ferndale. The clover was sown April 20th just as the wheat was coming up. The sheaf was cut Aug. 24th, and the clover was in full bloom and as high as the grain—in fact, some stalks were four and five feet long, a phenomenal growth for the first year. The dairies of the county were not represented as they should have been. Instead of half a dozen exhibits of butter, there should have been ten times that number."

Among the prize-winners were a goodly number of Durham, Jersey and Alderney, Ayrshire, Holstein and Hereford, besides graded cattle. The entries of horses were numerous, especially in the all-work, draft and roadster classes. The premium sheep included Spanish Merinos, Shropshires and Cotswolds; the swine, Jersey Red, Essex, Berkshire and Poland China; and there was a considerable showing of poultry, embracing chickens of popular breeds as well as ducks, geese and turkeys.

The bicycle race, in which F. W. Fawcett tired out three competitors, left the fourth nearly half a mile behind and made his five miles in 19 minutes and 28 seconds, excited more interest than any other single event.

Visalia—15th District.

Of the fair for the 15th District, which took place at Visalia Oct. 7–11, the *Delta* remarks: As a race meet, the fair was a success; as an agricultural show, we are disappointed, and that disappointment is shared by all who attended.....The stock exhibits were not numerous, but the animals (horses, cattle and swine) entered for prizes were fine looking, and well worthy of exhibition. The display of farming machinery was meager.....The exhibits of fruit in Armory hall were excellent, but there was room for a number of large displays, if the right spirit had been evinced.....The attendance at the pavilion improved as the fair drew to a close, and on Saturday evening the crowd was quite large.

The Visalia fruit exhibit was splendid in quality and large in quantity. The following were the exhibitors: Visalia cheese factory, cheese; Jasper Harrell, watermelons; Mrs. A. J. Lafever, canned fruit, quinces and egg plants; C. A. Wilber, chestnuts hulled and in burr; Joseph Potter, pomegranates and quinces; J. B. Smith, a beet 30 inches in length, and five kinds of grapes; ——— Bliss, pomegranates; A. J. Lafever, Indian and Egyptian corn and squashes; Seth Smith, pears; J. Spier & Son, fruit and plants of various kinds.

J. P. Onstott of Yuba City had a number of bunches of Thompson's seedless grapes on exhibition, which attracted a great deal of attention. Jos. Patton of Farmersville exhibited quinces and pomegranates, and James Barton of Three Rivers, some fine apples. Chas. King & Co. of Hanford had a case of fine dried fruit. Erwin Bros. of Tulare exhibited two boxes of peaches. Samuel Halstead, who lives up the Kaweah, had a splendid display of mountain apples, comprising a number of varieties.

Mrs. John G. Knox's floral booth revealed a wealth of colors that fairly bewildered the strolling spectator. A basket depended from the top, in which were 15 varieties of dahlias. Potted plants, variegated bamboo grass and evergreens made a splendid background for the beautiful flowers in the fore.

From the *Times* notes for fair week we gather these:

Lucerne valley occupies two booths where are displayed fruits put up in jars, their form and color preserved by a solution of alum. The display would be a credit to any county or section of the State, and "California on Wheels" never carried anything surpassing it. The exhibitors in this department are: Hanford factory, cheese; N. W. Rafailovich, silkworms and cocoons; M. Meisenheimer, quinces; C. Railsback, pomegranates; N. W. Motheral, Late Free-stone peaches; J. H. Dopkins, large nectarines in jars; J. B. Newport, Orange Cling peaches; A. Leoni, Heath Cling peaches; Peter Van Valer, pears and apples in jars; John Sullivan, Solway peaches, quinces and French prunes; J hn Toner, Kelsey Japanese prunes; Edward Cordara, polished horseshoes; John Chambers, pomegranates and Japanese persimmons.

Joseph Spier & Son of the Visalia nursery have a most attractive display, using two booths neatly trimmed with vines, palms and numerous branches of the "States" persimmons full of their fruit. The interior of the booths has a circular stand, filled with flowering plants, intermixed with which are numerous jars of preserved fruit, jams and jellies. In front stands a young orange tree full of bloom and fruit. A bunch of Chinese cucumbers is a fruitful source of questions.

Josiah Gregg, who has an apiary in the southern limits of this city, occupies a booth with fine-looking honey.

Miller & Frasier, real estate dealers, have wheat, oats, barley, alfalfa seed, rye and corn, and egg-plants as large as a quart measure. There is a beautiful exhibit of gypsum from Kern county on the table, chestnuts and other products from Tulare. The gentlemen are entitled to the thanks of the whole community for the effort made to have a display that does credit to Tulare county.

Santa Cruz—14th District.

The Santa Cruz Fair opened at the pavilion Wednesday evening, Oct. 15th. The *Surf* reports that "the main floor is almost wholly devoted to the fruits that in themselves make a magnificent display. The visitor soon finds that the cereals and vegetables make, in their modest way, quite as fine a show as the grapes, apples and other fine fruits.

"The exhibit in the stock and poultry-yards is far in excess of any previous year. There are more horses and cattle, pigs and poultry than ever before, although some of the stock is not in the best condition. Martin Kirby alone has 11 coops of fowls, and there are many other creditable displays of poultry. All the pens and stalls provided for stock are taken, and eight more were being erected. The fine Jerseys of D. B. Woolf and Dr. Gordon and other exhibitors are supplemented this year with some very fine Holstein and Durham cattle."

Thursday evening Prof. W. H. Galbraith spoke for 20 minutes of the good accomplished by annual displays of agricultural, horticultural and viticultural products, praised the splendid exhibits, the energy and industry of the ladies, and waxed enthusiastic over the county's possibilities. The *Sentinel* remarks that the address was eloquent as well as to the point, and was received with much applause.

Hollister—San Benito County.

In addition to the brief notes on the Hollister fair given last week, we cull the following from local papers:

One of the most noticeable features of the pavilion was the floral exhibit under the direction of Miss Susie Moore and Mrs. R. P. Lathrop. The display of flowers for this season of the year was wonderful, and the ladies were the recipients of unbounded praise.

No prettier display is to be found than that of apples, peaches, pears, plums, dried and preserved fruits, jellies, grapes, etc., from the farm of Mrs. J. A. McCroskey.

The exhibit of fruit and vegetables under the direction of Mr. Winn, astonished and delighted all. The exhibit of grain prepared by Mr. B. F. Thomas was also pleasing.

Santa Ana—Orange County.

The new county of Orange held its first agricultural fair at Santa Ana, Oct. 7–10, with a creditable display of products and large entries of horses and live-stock.

The opening exercises at the Opera-house embraced remarks by S. Smith, president of the association, and S. M. Craddick, superintendent of the pavilion, an address by Prof. M. Manly, and music, vocal and instrumental.

The Olive Milling Co. (whose plant is at Olive Hights, seven miles northeast of Santa Ana), had a flour "palace" 12 stories high.

Adjoining the flour exhibit was an incubator in full blast, from the Santa Ana Incubator Co.

Smart & Collins displayed excellent dried prunes, figs, apricots, peaches, raisins, apples, grapes and nectarines. In green fruits they had lemons, quinces, apples of many varieties, oranges, etc., besides peanuts, potatoes, beans, onions and cabbages.

Four cases of butterflies, mounted by Bernhard Ziegler, were called "beautiful, unique and wonderful."

W. H. Smalley of Orange displayed about 60 varieties of wood, all but three or four of them native to Orange county, ingeniously manufactured into brackets, canes, napkin rings, etc.

The "Garden Grove Farmers' Club" showed farm products in vast variety—there were watermelons weighing nearly 100 pounds apiece; pumpkins, 200 pounds; corn of all sorts, simply superb; sunflower heads 15 inches across; fine great potatoes, both sweet and "Irish;" apples of almost every known variety, grapes, figs, lemons, canned fruits and dried, and all first class.

Next came Westminster's great display, including 25 varieties of apples, large and handsome, quinces, blackberries, squashes, onions, corn, melons, potatoes and pretty "peach" tomatoes.

San Juan had a fine little output of fruits, nuts and general farm products, chestnuts in the burr; bottles of preserved fruits put up by the new San Juan Canning Co. being noticeable features.

The collection of nursery stock, shrubs and flowers exhibited by Geo. W. Ford was one of the chief attractions.

Tustin made a great show of fruits, flowers and nuts.

Two young ladies from Buena Park, representing the condensed milk and coffee company of that place, were kept busy dispensing free samples; and there were mercantile exhibits, curios, pictures and specimens of needle-work in great variety and abundance.

The races drew well, the ladies' tournament proved especially attractive, and Miss Irene Savage of Whittier, the famed equestrienne, also gave a fine exhibition of fancy riding, for which the directors tendered her a vote of thanks. The showing of horses, cattle and poultry was quite large and creditable, and a few swine and Angoras were awarded premiums. The baby-show on Friday brought out about three dozen of the little darlings, and the fair (which closed that night) was "conceded to be a glorious success."

Lakeport—12th District.

The Eighth Annual Fair of the 12th District Agricultural Association began at Lakeport Sept. 23d. The pavilion was well filled with an excellent exhibition of grain, fruits, vegetables, paintings and fancy goods. The fruits were considered far above the average Lake county exhibits.

The show of horses was extensive, trotters, all-work animals and roadsters predominating, with a sprinkling of thoroughbreds, draft, carriage and saddle horses. Jacks, jennets and mules, Jerseys and Holsteins were represented, and there were some Bronze turkeys, Pekin ducks and Light Brahma fowls.

The fair was a success, so far as exhibits go, and was pronounced one of the best ever held in the district.

(*Continued on page 393.*)

A LEVEL HEAD.

The Advantage of Presence of Mind in an Emergency.

During the late strike on the New York Central railroad, the militia were ordered to be in readiness in case of a riot, but they were not called out.

In an interview, Gov. Hill said the troops were not to be called upon except in case of an emergency. The emergency had not arisen, therefore they would not be ordered out. He remarked that this was the first great strike with which he had had experience, and he did not propose to lose his head; the only point at which there had then been serious trouble was at Syracuse, and there a deputy-sheriff had lost his head and precipitated an encounter.

The strike continued several weeks, and there was riotous action at various points along the road, but the civil authorities were able to cope with it without calling on the militia.

The test of a man's real ability comes when an emergency arises which makes a hasty call on his good judgment and discretion. The man who retains his presence of mind, maintains his equipoise and exercises sound discretion at such critical junctures, is to be relied on and will be put to the front.

Men with level heads have the staying qualities which do not falter in the face of danger. Otis A. Cole, of Kinsman, O., June 10, 1890, writes: "In the fall of 1888 I was feeling very ill. I consulted a doctor and he said I had Bright's disease of the kidneys and that he would not stand in my shoes for the State of Ohio." But he did not lose courage or give up; he says: "I saw the testimonial of Mr. John Coleman, 100 Gregory St., New Haven, Conn., and I wrote to him. In due time I received an answer, stating that the testimonial that he gave was genuine and not overdrawn in any particular, I took a good many bottles of Warner's Safe Cure; have not taken any for one year."

Gov. Hill is accounted a very successful man; he is cool and calculating and belongs to the class that do not lose their heads when emergencies arise.

WANTED. A healthy lady, a worker, over 25, residing in a country town, to operate a branch for a wholesale house. Must be able to furnish a satisfactory voucher for goods consigned and moneys handled; also references for character, honesty and business ability. State business experience, if any. Address No. 8, 220 Sansome St., S. F.

AYER'S PILLS

Excel all others as a family medicine. They are suited to every constitution, old and young, and, being sugar-coated, are agreeable to take. Purely vegetable, they leave no ill effects, but strengthen and regulate the stomach, liver, and bowels, and restore every organ to its normal function. For use either at home or abroad, on land or sea, these Pills

Are the Best.

"Ayer's Pills have been used in my family for over thirty years. We find them an excellent medicine in fevers, eruptive diseases, and all bilious troubles, and seldom call a physician. They are almost the only pill used in our neighborhood."—Redmon C. Comly, Row Landing P. O., W. Feliciana Parish, La.

"I have been in this country eight years, and, during all this time, neither I, nor any member of my family have used any other kind of medicine than Ayer's Pills, but these we always keep at hand, and I should not know how to get along without them."—A. W. Soderberg, Lowell, Mass.

"I have used Ayer's Cathartic Pills as a

Family Medicine

for 35 years, and they have always given the utmost satisfaction."—James A. Thornton, Bloomington, Ind.

"Two boxes of Ayer's Pills cured me of severe headache, from which I was long a sufferer."—Emma Keyes, Hubbardstown, Mass.

Ayer's Pills,

Dr. J. C. AYER & CO., Lowell, Mass.

Sold by all Dealers in Medicine.

Improved Ranch

FOR SALE.

Artesian, Raisin and Fruit Lands.

Located seven miles southwest of Tulare City and three miles from Tokay Switch on the Southern Pacific Railroad. It is centrally located in the artesian belt of Tulare county, and has one flowing well, capable of irrigating 100 acres, the depth to the main flow being only 308 feet. The water is soft for washing, healthful to drink and contains no substance injurious to vegetation. A reservoir of one acre, surrounded with handsome trees, receives the water from the well. Several ditches carry it in different directions on to the land.

The whole 160 acres (quarter-section) is unusually level, is entirely enclosed with fencing, and cross-fences partition the land into several enclosures for pasturage purposes.

The improvements consist of a modern styled, two-story, hard finished house, containing seven rooms, with walled cellar, kitchen and porches additional, surrounded with elegant shade trees, etc.; a large barn, storehouse, blacksmith shop, windmill, sheds, stables, etc.

In front of the place is a row of about 40 well-grown elm and Carolina trees. There are eight acres of orchard and vineyard, mostly in bearing, 30 acres of alfalfa, several miles of ditches and 40 acres of land checked and leveled.

The soil is dark Tulare lake bottom land, very productive, grows all kinds of tropical and semi-tropical fruits, except apples, and is especially adapted to the growth of alfalfa and for stock range. Water of good quality is found at ten feet from the surface. There are three surface wells on the place.

The climate is as healthful as any part of the Sacramento or San Joaquin valleys. Adjoining lands are supplied with water for irrigation from Elk Bayou, a never-dry stream, lying one mile from these lands, and water can be had on the land from the same source.

The simple fact that abundance of artesian water can be had so cheaply on this land will soon make the water alone worth more than the land is now offered for.

The owner (not being a farmer) is determined to sell at the best price offered soon. The land is under cultivation, except necessary pastures. Terms easy.

Three hundred and twenty acres of improved land adjoining will also be sold cheap and on easy terms, in tracts of 40 acres or upward, to suit.

Also 160 acres just outside of Tulare City limits, surveyed out in five-acre lots. The whole will be sold for cash for much less than its real value if applied for soon.

Call on or address E. M. DEWEY, Porterville, or A. T. DEWEY, 220 Market Street, San Francisco.

BLISTER FOR HORSES.

WHAT TO USE.

For a blister to use on live-stock,

COMBAULT'S

CAUSTIC BALSAM

Has NO EQUAL. Why?

Because it is a perfectly **safe remedy** for any one to use. After applying as directed it needs no attention, **acts quickly** and is **effective**. Removes all bunches or enlargements and **guaranteed not to leave scar or blemish. Supersedes all cautery or firing.** Every bottle sold is warranted to give satisfaction. Price **$1.50** per bottle. Sold by all druggists, or sent by express, **charges paid**, with full directions for its use. Send for descriptive circulars. Address **LAWRENCE, WILLIAMS & CO., Cleveland, O.**

THE BEST FENCE YET!

Cheap, Durable, Portable and Safe.

THE SPALDING HUMANE WIRE FENCE is composed of eight No 12½ galvanized steel wires, woven into four cables of two wires each; interwoven every five feet is a corrugated iron stay or guard, and kept in place by the cables thereby holding the cables firmly in place, preventing them being pressed apart and letting stock through. The stay or guards are corrugated and an inch and three-quarters in width, making it impossible for horses to break fence, which is **a very essential point.** Write for circulars and prices. Address **BIRD-TURNBULL MFG. CO.,**

THE CELEBRATED

CHAPMAN-CLIMAX SPRAY PUMP

Is still ahead of all competitors, and is the most popular spraying machine in the market. The CLIMAX NO. 1, represented by this cut, is the cheapest reliable sprayer made, and its economy in the amount of wash required for a given amount of work will save its cost in a few days' operation.

IMPROVED CLIMAX NO. 2

Is a large double pump, made entirely of brass, and equipped complete with two lines of hose, four improved Pacific Cyclone Spray Tips, extensions, shut-off valves, etc. Guaranteed the safest, most satisfactory, and, in the end, the cheapest large spraying outfit in existence. Correspondence solicited. Address all communications to

Notes From The Fairs.

(*Continued from page 381.*)

Concord—23d District.

The Contra Costa Agricultural Association's annual fair opened at Concord Sept. 23d. The Martinez *Gazette* says in its issue for that week: Taken altogether, the exhibition is a good one and worthy of more extensive patronage. It is strong in horses, some of the stock on the ground being as fine as any county show can boast. The races have been of unusual interest, and were conducted in a manner to win general approbation. There is not a large display of cattle. The pavilion exhibition is unusually commended. The fruit display is exceptionally fine. Grapes from the vineyards of Glen Terry, from the Orinda Park vineyard of Gen. Wagner, from M. R. Barber and others, were generally admired. The wine interests were also well represented. A fine display of flowers from the gardens of Mr. Hall of Concord and others shed a halo of beauty and fragrance around. Of the department of needlework and fancy articles, there are only words of praise to be heard. In addition to paintings of decided merit by local artists, there was a fine view of Mt. Diablo by Norton Bush, and other pictures from the same brush. So far as the general features of the fair are concerned, it may be set down as a success. The most perfect order has been preserved throughout.

Yreka—10th District.

We learn from the Ashland, Or., *Tidings*, that the opening of the 10th District Fair, which was to have taken place Oct. 1st, was postponed a day on account of rain, and the 2d proved cold, windy and altogether uncomfortable. Yet the attendance at the track, two miles south of Yreka, was good and the racing spirited. The weather was fine after the first day and the attendance much larger than last year. The races were well contested and the general impression is that they were fairly won on the merit of the horses entered.

The pavilion was decorated with flags and bunting, and a gorgeous display of cut flowers and blooming plants. The large collection of fruit, ripened to a roseate tint, was one of the charming features. Dairy and farm products were abundant and of the same excellent quality that has always attracted attention. In domestic exhibits the variety and quality were a study for the most experienced housewife. The bread, cake, preserves, jellies, pickles, jams and canned fruit utterly precluded enumeration.

At the stock parade Saturday, it was gratifying to note much better stock on exhibition than last year. Some very fine Norman horses and horses of all work were in line. McDonough's fine mares, Susie H. and Georgia Woodthorp, with colts by their side, were in the trotting class. President Vance's $2000 carriage team, Effie V. and Little Mack, with a record of 2:55 in double harness, were driven round the track; and there were many others to whom the reporter could not give the mention to which they were evidently entitled. In cattle there were Holsteins, Herefords, Polled Angus, Galloways and Jerseys—a very fine display.

A Stump-Puller.

There is in operation at Judge Thos. P. Stoney's ranch in the Redwoods a newly-invented stump-puller which is said to be giving the most perfect satisfaction. Of course all stump-pullers are supposed to be worked in the winter season when the ground is soft, but this machine, known as the "California Stump-Puller," even now accomplishes the work with ease, trees two feet in diameter being taken out, roots and all, without any trouble. The machine is worked by horse-power, and, having a sweep of 15 feet, the power imparted to each horse is 36 times the ordinary strength of the animal, and by the aid of a block this power can be increased to 72 times the animal's strength. The machine is capable of pulling several hundred stumps in a single day, and at one setting will clear two acres. The work so far done has been simply experimental, but the Judge is so well pleased with the operation of the machine that he has purchased it, and expects during the coming winter to clear his entire place. Quite a number of persons have witnessed the machine at work and all pronounce it the most perfect that has yet been put upon the market.—*Napa Daily Journal.*

Garrett Fence Machine.

By an advertisement in another column our readers will see that an economical and improved method of constructing a farm or vineyard fence has been brought to the front and is entitled to public patronage in an eminent degree. The time has come when a substantial fence for many valuable properties is very necessary and in many cases is indispensable.

The Garrett fence is a simple and complete combination or mechanical device by which wire, pickets and posts are firmly bound together. The post-holes are dug by an improved spade that is worked in couples or single.

In our judgment the Garrett fence will supply a need long felt for a better and more humane method of building fences. The appliance by means of which this fence is constructed is light to handle and does its work in the most simple and substantial way. Whether pickets and posts are cheap or dear, it does its work economically and well, requiring only two men (or a man and a boy) to put up from 40 to 60 rods, of fence per day. The wire generally used is annealed steel wire, which costs from 11 to 25 cents per rod, varying with the number of cables. Any picket, old or new, made of split rails or old boards, will answer the purpose desired.

Those Shropshire Premiums.

After the RURAL had gone to press last week the following letter from the Secretary of the State Board of Agriculture came to hand:

EDITORS PRESS:—Mr. Andrew Smith received every *first* premium in the Shropshire class proper.

In the sweepstakes, Mr. J. H. Glide was awarded the premium for "best ram and five lambs," but this award was protested by Mr. Smith, under the rule requiring sheep to trace to recorded animals or the furnishing by exhibitor of equally satisfactory evidence as to purity of breeding. Upon this protest the committee have not made any report.

Mr. Andrew Smith received all the premiums offered by *Shropshire* Association for animals exhibited at the State Fair of California, 1890, given for registered Shropshires. EDWARD F. SMITH,
Sacramento, Cal., Oct. 22, 1890. Secretary.

The Certificate of the Shropshire Association.

Mr. Mortimer Levering, Secretary Shropshire Association, Lafayette, Ind.—SIR: This is to certify that Andrew Smith is entitled to the association award for the "best flock of registered Shropshires, viz.: Two shearling ewes, two ram lambs; two ewe lambs and a flock of five (5) lambs, the get of one ram, and bred by the exhibitor," he having made entry and received the necessary recommendation at the California State Fair of 1890. Very truly,
EDWIN F. SMITH, Sec'y.

Mr. Andrew Smith has also written us as follows:

EDITORS PRESS:—Referring to the Shropshire awards at the last State Fair at Sacramento, I wish to say that I made one entry in each class, and received every first premium. The directors proposed that each exhibitor name one judge, and the directors would name one (there were only two exhibitors), which proposition I accepted, and knew only one of the judges out of the three.

The sweepstakes prizes on sheep were reserved, the directors stating that they would make the awards themselves, and naming Thursday of the last week of the Fair as the time they would decide who were entitled to these prizes. This arrangement was entirely satisfactory to me, as I knew some of the directors to be large breeders who understand their business. They, however, failed to appear on Thursday. Friday I remained on the grounds all day and fully expected them to be on hand; still they did not come. Having to return home early Saturday morning, I made it my business to see several of the directors on Friday evening, when they pleaded pressure of business for their failure to attend to the matter earlier, and promised to give it their attention Saturday and award the premiums themselves. This was a sufficient guarantee to me that all would have fair treatment, and I left for home on the first train Saturday morning. What was my surprise when I learned, the following week, that on Saturday afternoon the directors made their appearance and finding considerable of a contest with the Merinos, as well as Shropshires, flinched from doing their duty, failed to make the awards and enforce their own rules without fear or favor, declined to act, and at that late hour selected from such material as could be found, parties who made the sweepstakes awards on Shropshires to which I have protested.

I have a flock of Shropshires which I imported direct from England. These with their produce, bred by me, every one of which is recorded in the American Shropshire Registry Association, I don't hesitate to enter against any thoroughbred Shropshires in the United States, but I do want competition worthy and entitled to enter in same classes with them.

When I left my stock on the fair-grounds they were under the control of the directors, and I expected to have fair treatment and protection. I ask no favors of directors or committees. I make my entries of sheep and swine with their record numbers, as recorded in respective herd-books, and the certificates are open for inspection by the committee. I ask no one to take my assertion that "the stock are pure blood or trace to stock that are eligible for record." The herd-books are for the protection of breeders and purchasers, and it is time something was done to prevent stock being exhibited for premiums, unless their certificates are produced.

The State Fair is intended to stimulate breeders to honorable competition and encourage the improvement of fine stock by awarding premiums to the *best of all kinds* and to *thoroughbreds only*, but a repetition of such treatment as I have received would soon have the opposite effect. Yours truly,
ANDREW SMITH.
218 California St., S. F., Oct. 29, 1890.

ARTESIAN WATER has been found on the Rickley place, about 1¼ miles west of Sheridan, Placer county. At a depth of 55 feet, while boring with a five-inch auger, a vein was struck and water came to the surface with a rush. The well will flow in the neighborhood of 20,000 gallons per day.

"Battle of Gettysburg."

The celebrated Panorama of the Battle of Gettysburg and Museum, corner Market and Tenth Streets, San Francisco, is a wonderful production. It has captured the entire State, doing a great deal of good. There is no better way of passing an hour or so, and in studying American history, than by visiting this Grand War Panorama. If any of our readers have not seen it, it will pay them well to do so.

Farnham's Patent Stovepipe Drum.

This is a device which is attached to stovepipes for the purpose of arresting sparks and saving fuel. It is made to fit on any stove and takes the place of the lowest joint of pipe. When the damper is turned on, no sparks will ascend the stovepipe, while much heat is thereby kept back.

In Colusa county, the home of the inventor, it is used extensively and has the highest indorsement from the leading citizens. Mr. Farnham wants agents everywhere. Address M. Farnham, Germantown, Colusa county, Cal.

Prizes at Mechanics' Fair.

Among the premiums awarded at the Mechanics' Fair, which closed in this city last Saturday evening, the following will be of special interest to RURAL readers:

Best display of agricultural implements, gold medal, Baker & Hamilton.

Best potato-digger, silver medal; best riding cultivator, bronze medal; best plow for general purposes, diploma, and best sulky plow, "the Gilpin," diploma, Deere Implement Co.

Best side-hill plow, diploma, R. J. Knapp.

Best fruit and orange grader, silver medal, and stump extractor, diploma, Mosher, Chandler & Co.

Best gang-plow, "Bradley," diploma; best mower, diploma, and best hay-stacker, diploma, Truman, Hooker & Co.

Best lawn-mower, diploma, Pacific Manufacturing Co.

Cream-separator, silver medal, and fruit-pitting machine, diploma, G. D. Sharpless.

The consciousness of having a remedy at hand for croup, pneumonia, sore throat, and sudden colds, is very consoling to a parent. With a bottle of Ayer's Cherry Pectoral in the house, one feels, in such cases, a sense of security nothing else can give.

BIG REDUCTION in prices of stock and rabbit-proof fence. See Judson Manufacturing Co. advertisement, page 387.

GOOD LAND TO RENT.

Terms Unequaled.

SEVEN ACRES OF BEARING ORCHARD, FOR CASH OR ON SHARES, SEVEN MILES FROM TULARE.

IMPROVED LAND.—160 acres within two miles of Tulare City; 160 acres seven miles from Tulare; 320 acres adjoining the last named.

FOR LOW CASH RENT, or Reasonable Share, the above will be let.

THE GARRETT FENCE MACHINE

—IS FOR CONSTRUCTING—

A New and Durable Fence

By weaving Pickets and Wire to Posts set in the field. It is not excelled by any other machine for Ease, Speed, and Perfect Work; 40 to 60 rods per day can be put up. The wire for a 3 or 5 (2) strand cable can be bought for from 11 to 25 cents per rod. The Garrett Fence is noted for simplicity of construction, durability of all its parts, perfect tension device, and great saving of labor and money in its construction. The machines are manufactured in Ohio, and thousands are now in use in the United States. The Fences made by them are the best, cheapest and most desirable Farm, Orchard and Vineyard Fences that can be made. The best galvanized annealed Steel Wire can be furnished at the lowest market price. The machine, with the Little Giant Post Hole Digger, Wire Stretcher and Wire Cutter, etc., complete, costs about $25, with a discount where we have no local agent. Two men (or man and boy) can dig the holes, weave the wire to the pickets and posts, and easily complete the construction of the fence. Send for circulars and testimonials. Address K. C. DUSSENBERG, 430 Fine Street, San Francisco, General Agent Pacific States.

THE

PACIFIC GAS OR GASOLINE ENGINE.

PATENTED JUNE 17, 1890—NOS. 430,504, 430,505, 430,506.
Also in Great Britain and other foreign countries.

Starts Instantly Without the Necessity of Boiler, Fire or Experienced Engineer.

The engine uses from 20 to 25 cubic feet of coal gas, or about one-eighth (⅛) of a gallon of gasoline per hour per horse-power. It can be used for pumping purposes, running printing presses, small factories, elevators, jewelers' lathes and polishers; dairymen's, agricultural, mining and wood-working machinery; well-boring and all other purposes requiring cheap and convenient power. Persons having but little space will find this the most suitable of all motors.

USE IN BOATS.—The Company make a specialty of ENGINES FOR SMALL BOATS AND LAUNCHES, and claim there is no engine in the market their superior for this purpose. Boats so fitted require no licensed engineer or pilot, as is required by law for all vessels propelled by steam power.

ELECTRIC LIGHTING.—The engines are PARTICULARLY ADAPTED, and cannot be equaled for operating small electric light plants, either arc or incandescent.

STATIONARY and MARINE ENGINES

From ¾ to 15 horse-power.

OVER 100 IN ACTUAL OPERATION.

READ THESE TESTIMONIALS.

ALAMEDA, April 8, 1890.

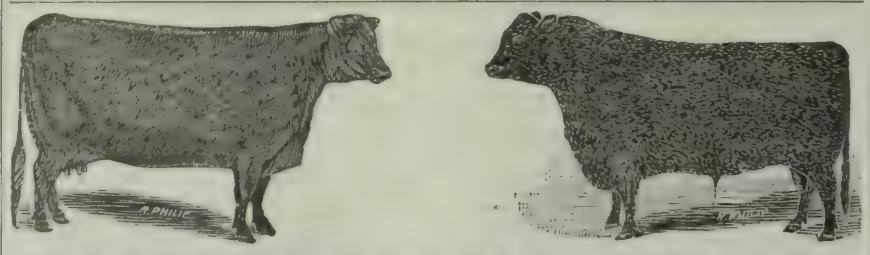
PACIFIC GAS ENGINE CO.—GENTLEMEN: Permit me to add my testimonial to the many you have received indorsing your engine. As you are aware, mine was a Regan engine which gave me considerable trouble. I had to remove the head and raise the tappet valve every time I wanted to start the engine. I sent you the engine; you removed all the Regan appliance except the cylinder and stand. You put in your appliances, head, sparking device, inlet valve, and, in fact, changed it to the Pacific Gas Engine, which now works splendidly. I have not had to remove the head for any cause since you made the change (over two months). It gives me no trouble; my boy, 14 years old, attends to it.

The change from the Regan to the Pacific is a decided improvement. I can also get a third more power since the change, and I cheerfully recommend your engine as being simple, effective, and cheap. Respectfully yours,

B. S. HILL, S. W. Cor. Encinal Ave. and Morton St.

MAYFIELD, March 26, 1890.

PACIFIC GAS ENGINE CO.—We have given your little 1-H. P. engine a splendid advertisement. A fire broke out at 2:30 o'clock this morning, in a tenement house on my premises. I started the engine, connected the hose, and by its use saved at least $3000 worth of my property. I saved my blacksmith shop, lying 12 feet from the burning building, my barn and my dwelling. Three times the fire started in these buildings, and I extinguished it every time. The engine never faltered, and threw water between 50 and 60 feet high. The whole town was astonished, and they acknowledged that I saved at least $20,000 worth of property.



A fire department is being organized here, and I think they will have one of the engines on a truck for fire purposes *They cannot be beaten*

Hoping that all of your customers will be as well pleased with the engine as I am, I remain, Yours truly,

JOS. P. PONCE.

S. F. Market Report

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Oct. 29, 1890.

General trade in farm products is restricted by light offerings of grains and lessening supplies of other stuff. The close, sultry weather is, as a rule, beneficial to fruit-driers. The money market is reported easy. Heavy receipts of gold from Australasia have created an easier feeling. In wheat the foreign and Eastern markets after receding are closing stronger. The following is to-day's cablegram:

LIVERPOOL, Oct. 29.—Wheat—Firmly held and higher. California spot lots, 7s 4d to 7s 7d; cargoes off coast, 38s; just shipped, 37s 9d; nearly due, 37s 9d; cargoes off coast and on passage, quiet but steady; Mark Lane wheat, firm; French country markets, tone is steady; weather in England, wet.

Foreign Grain Review.

LONDON, Oct. 27.—The *Mark Lane Express*, in its review of the British grain trade for the past week, says: There is an increased demand for English wheats. Sound samples are 3d dearer; foreign wheats recovered 6d. Flour was dull, heavy home supplies, together with large consignments of Californian, checking any tendency to rise. Corn and beans were rather dearer. Barley was firm. At today's market English wheat was dull; California and other American flours are in good demand and prices improved 6d.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.
Thursday	7s6½d	7s6¾d	7s7d	7s6¾d	7s6¾d	7s6½d
Friday	7s5½d	7s6¼d	7s6¼d	7s6d	7s5¾d	7s5½d
Saturday	7s5½d	7s6d	7s6d	7s6d	7s5½d	7s5¾d
Monday	7s5½d	7s6d	7s6d	7s6½d	7s6½d	7s6¾d
Tuesday	7s6¼d	7s6½d	7s7¼d	7s7¼d	7s7d	7s7d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	38s0d	37s9d	37s9d	Strong.
Friday	38s0d	37s8d	37s6d	Steady.
Saturday	38s0d	37s9d	37s9d	Quiet.
Monday	38s0d	37s9d	37s9d	Firm.
Tuesday	38s0d	37s8d	37s9d	Advancing.

Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

Day.	Oct.	Nov.	Dec.	Jan.	May.	June.
Thursday	107⅝	108½	109½	110⅝	112⅝	...
Friday	107½	107¼	108⅝	109¼	111½	...
Saturday	107½	107⅝	108¼	....	111⅝	...
Monday	106⅞	....	107⅞	110⅛	110⅛	...
Tuesday	108⅛	108½	109	109⅝	112	...

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

Day.	Oct	Dec.	May.	June.
Thursday	102½	104	108	...
Friday	101	102⅜	107¼	....
Saturday	100⅞	102⅝	107	....
Monday	100	102	106⅝	....
Tuesday	101½	103⅜	108¼	....

NEW YORK, Oct. 29.—Wheat—$1.04¾ for cash, $1.08¾ for November, $1.09¼@1.09⅜ for December, $1.10 for January, and $1.12¾@1.12½ for May.

CHICAGO, Oct. 29.—Wheat—$1.03⅜ for December and $1.08⅞ for May.

Visible Supply of Grain.

NEW YORK, Oct. 27.—The visible supply of wheat is 19,715,000 bushels, an increase of 1,107,000; Corn, 7,206,000, a decrease of 1,053,000; barley, 4,809,000, an increase of 331,100; oats, 4,123,000, a decrease of 199,000; rye, 639,000, an increase of 24,000.

Wool.

NEW YORK, Oct. 24.—*Bradstreet's* says: With the prices remaining firm, the sales of all grades of wool are fair, especially to the dress goods and worsted manufacturers. The market in Melbourne has just opened with every indication of high prices, and this is expected to stimulate the American market and strengthen values. The Australian clip is reported large and of unusually fine quality. Fine combing wools are the best selling wools in the market. Fine delaines and half bloods, unwashed, are scarce. A slight pressure on them will advance prices. The demand for Territory wools has weakened, but quotations remain unchanged. Increased activity in California wool was only temporary, and rapidly fell off the first part of the week. The uncertainty as to the way the Custom-house officials would interpret the "sorting" clause affected carpet wools, and as a consequence business in them has been light. The demand for Ohio and Michigan wools is strong, and everything that is offered is easily disposed of.

NEW YORK, Oct. 25.—Wool retains its recent improved tone and the stocks here are light. Long lines of fleeces are evidently yet wanted. Interior owners, particularly Ohio, ask prices above seaboard bids. There were sales in New York of 130,000 pounds. Spring and fall California, 458,000 pounds. Other domestic, largely Texas, and 314,000 pounds of foreign, mostly carpet grades, at private terms.

In Boston the wool market throughout was firm. Sales, 4,264,000 pounds, including 500,000 pounds foreign and 375,000 pounds spring California, at 17 @25c; fall, 16@19½c.

In Philadelphia there was a moderate trade and prices were well supported.

Miscellaneous.

NEW YORK, Oct. 27.—Local trading in hops in Boston was moderate; State was firm. The last figures of Pacific quote new at 38@42c, with rather a better classification given.

Raisins were in good supply for previous orders and present wants. Rain damage reports from the coast were not a stimulant nor purchasing factor. California Sultanas were quoted at 10c.

Prunes continue in the buyer's favor and good small are not plenty. Four sizes were quoted at 11½@12c. Some badly cured lots that have appeared cause a closer inspection than has been customary.

Dried apricots are steady at 17½c in sacks and 18@18½c in boxes. Unpeeled peaches, 16½@17½c were the full selling prices.

Local Markets.

BARLEY

	Buyer Season. H.	L.	Seller 1891. H.	L.	Buyer 1890. H.	L.

BAGS—The market is dull at 6¾c for May-June delivery.

BARLEY—The sample market has made another up move. When prices were below $1 per cental the RURAL PRESS predicted the advance, and those of our patrons who benefited by the advice are to be congratulated. In futures, trading on Call has been fairly active at slightly higher prices. The following are to-day's reported sales on Call:

Morning Session: Buyer 1890—100 tons, $1.50¾; 300, $1.50⅛. Buyer May—100 tons, $1.49; 200, $1.49½ ₩ ctl. Afternoon Session: Buyer 1890—200 tons, $1.50. Buyer season—600 tons, $1.55⅜; 100, $1.55¾. No. 1 Brewing, buyer season—200 tons, $1.61½ ₩ ctl.

BUTTER—The market for pickled is strong at higher prices. Some sales have been made at 25c. Fresh butter is easy; this is due to more new crop butter coming in, and owing to its reported poorer keeping quality is forced on the market.

CHEESE—The market shows a stronger tone, with a slight advance obtainable for the more choice grades.

EGGS — Heavy receipts of Eastern, with the quality fair to choice, cause a weaker tone, with some shading for the more choice Californian.

FLOUR—The market is steady, with a firmer tone reported.

WHEAT — The sample market, after shading off slightly, closes the week stronger, with buyers more anxious. In futures, trading has been only fair. The following are to-day's reported sales on Call:

Morning Session: Buyer 1890—600 tons, $1.36¾. Buyer season—200 tons, $1.45¾; 100, $1.45⅝. Buyer 1891—100 tons, $1.50½; 100, $1.50 ₩ ctl. Afternoon Session: Buyer 1890—200 tons, $1.36¾; 400, $1.36⅜. Buyer season—100 tons, $1.44⅞. November, season's storage paid— 100 tons, $1.36; 200, $1.36¼ ₩ ctl.

Market Information.

Cereals.

Mark Lane Express, Oct. 6, says: The extremely low rates at which steamers are bringing grain from New York and Odessa, and even from India, have a good deal to do with the existing depression of the foreign wheat market. An excellent authority on the cargo trade calls these rates "unhealthy," and there is little doubt that the profits of some of the big lines will fall to vanishing point if present freight charges are of long continuance. The matter unfortunately is one which lies largely beyond the control of persons interested in the corn trade, for the vessels which bring corn from distant foreign ports at nominal charges are enabled to do so principally by reason of the demand for English goods abroad, the inquiry for which depends often upon the most recondite causes, quite outside the range of agricultural interests. The total quantity of wheat and flour now in sight is 12,601,030 qrs., as compared with 10,754,027 qrs. a twelvemonth since. The excess is about half in stocks and half in grain afloat. London is computed to hold no more foreign wheat and less foreign flour than at midsummer, but Liverpool has raised its wheat stocks from 246,421 qrs. to 485,902 qrs., and a large increase is reported from Bristol, Gloucester and Dublin. Hull seems to have curiously low stocks, which with a good Indian and Russian trade appears particularly strange.

The local wheat market continues surprisingly stagnant, considering the dry weather and light stocks held in this State. The tonnage at this port under engagement has a carrying capacity of over 110,000 tons, while the quantity (flour reduced to wheat) exported to date this season is about equal to the like time in 1889. The coal strike in Australia is off, and consequently vessels there will soon be able to load coal for San Francisco. This has been the chief factor used by bears in depressing wheat. The decline in silver the past week, falling as low as $1.03 an ounce, has been against wheat. Farmers should by all means vote only for Congressmen in favor of free coinage of silver. With silver raised to a gold standard, then Indian and Russian wheat cannot compete so successfully against American wheat.

Barley has held strong, with still higher prices reached. The stock in the State is very light, while the consumption is quite large. The more orchards and vineyards, the more horses used, and consequently more barley fed. Black oats for seed have made quite a jump; other kinds are higher, but the advance is not so marked.

Notwithstanding oats are coming to hand quite freely, the demand is quite active, which keeps the market strong at full prices. Oregon is our chief source of supply.

Corn shows considerable strength. Receipts are fair. The higher prices asked for other feedstuff is largely in favor of corn and its product.

Rye is steady. Receipts are light, so is the demand.

Warehoused Grain

The Salinas *Index* says: Following is a statement of wheat and barley (tons) reported on hand in the Salinas valley warehouses Oct. 1, 1890:

Warehouse.	Wheat.	Barley.
Moss Landing	600	2,481
Castroville	71	171

March 1, 1890	16,844	18 241
Dec. 1, 1889	28,568	26,669
Oct. 1, 1889	37,068	30,508
June 1, 1889	3.064	19 427
March 4, 1889	8,825	23,795
Dec. 1, 1888	15,126	31,850

Feedstuff.

Ground feed is higher and strong at the advance. Continued dry weather necessitates more feeding, and as the supply grows smaller, particularly in barley, it is but natural that values tend up.

Hay continues to rule strong at full prices. Although quotations remain unchanged, yet there is a disposition to force buyers to pay slight advances for the more choice grades. The supply in the State is running short, and as the weather continues dry, fears are expressed in some quarters that there may be a famine before the next crop season opens. This we give without expressing an opinion; let each reader be his own judge.

Fruits.

As peaches and other tree fruits go out and consumers become surfeited with grapes, apples command more attention. There still are complaints of wormy and defective apples, and to effect sales low prices are still in order. Choice good-keeping apples are wanted, with an advance paid for some varieties. The hot weather is forcing all kinds of late fruits into rapid maturity. Strawberries are firm at a slight advance. Pears are slightly higher.

For next season oranges there is a good inquiry. Regarding crop prospects, see "Agricultural Notes."

The dried-fruit market shows a better tone. The "odds and ends" are about cleaned up and consequently buyers, to secure supplies, are compelled to pay full prices, with at times an advance. The large bulk of Chinese dried peaches has been placed, as have the outside parcels of dried prunes. Apricots, pitted plums, pears and nectarines are in light supply. The more choice packed figs are said to be meeting with better sales than last year. The pack this year is larger. Dried apples are doing slightly better.

Many early sellers of dried fruits on future delivery find that, to make deliveries of some kinds, they have to bid higher prices.

The weather has been extremely favorable for drying grapes. The market for the latter is firm at full prices. In fresh grapes, the market, after being glutted, is showing signs of recovery under lessened receipts. There is a better local and shipping demand for better keepers. The warm weather is favorable to the crop. It allows more sugaring for wine grapes. Raisins show continued activity under free inquiries from the East. Heavy shipments continue the order of the day. Receipts at this port have been quite free, as have been the exports by sea. The shipments to Australasia show a decided increase over those made in October, 1889. Choice to gilt-edged raisins are, if anything, fetching a slight advance. The shipments of "off" raisins in sacks to the East will be quite free, much of which will be of fair quality.

Vegetables.

Continued sultry weather is against gardening, consequently garden truck is growing scarcer.

Cabbage and root vegetables do not have the quick demand noted some time since; yet the general tenor of the market is to steady prices. The dry weather causes feed carrots to be more asked for.

Onions, while in lighter receipt, are firmly held at full prices. The demand continues fair.

The receipts of potatoes are very heavy, causing some shading in prices. Many dealers are well stocked and are only tempted into buying by concessions. Several large purchases are reported in the interior, which naturally are against this market.

Live-stock.

Nevada and Arizona continue to send us liberal supplies of beef cattle. The condition of those coming from Nevada is "A1" in every respect. The consumption is not as large as at this time in 1889. Mutton sheep are weaker under free offerings, Hogs continue to hold to full prices. The weather is against any extended packing. Fresh milch cows are wanted for dairies. The better prices for butter and cheese are the incentive for buying. Medium work horses are in buyer's favor; other kinds are unchanged.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4½@4¾c ₩ lb; dressed, 7@8c ₩ lb.; heavy, 4@4¾c ₩ lb.; dressed, 6½@7½c ₩ lb. Stock hogs, 3¼@3½c ₩ lb.

BEEF—Stall fed, 6¼@—c ₩ lb.; grass fed, extra, 6@—c ₩ lb.; first quality, 5¼@5¾c ₩ lb.; second quality 4¾@5c ₩ lb.; third quality, 4c@— ₩ lb.; bulls and thin cows, 2@3c ₩ lb.

VEAL—Small, 6@8c ₩ lb.; large, 4@6c.

MUTTON—Wethers, 7c ₩ lb.; ewes, 6½c ₩ lb.; lamb, spring, 8@9c.

Miscellaneous.

Poultry does not show any material change outside of turkeys, which are lower under fairly free receipts and a light demand.

The hot weather has been against game keeping, which has been against the market.

The receipts of beans have been quite free, as have shipments out of the State. The market does not show any material change.

Honey shows a fairly firm tone, as does beeswax.

Hops are held at higher quotations. Oregon and Washington are sending us more than they did last season.

Wool is without any material change. The grades suitable for luster goods find a quick market.

Exports by sea the past week aggregate as follows: Flour, bbls, Liverpool, 6300; Central America, 4232; Panama, 379; South America, 1548; Manilla, 1000. Wheat, ctls, Hull, 150,805; London, 7288; Cork, 127,442; Falmouth, 56,154; Central America, 1201. Barley, ctls, Hilo, 261; Liverpool, 6672; London, 11,620. Rolled barley, sks, Hilo, 1820. Beans, lbs, Victoria, 12,924; Boston, 55,158; Hilo, 9769; New York, 50,582; Central America, 9522; Panama, 1556. Corn, ctls, Central America, 952. Canned fruits, cs, Victoria, 551; Liverpool, 1205; Central America, 226; London, 8586. Champagne, cs, New York, 350. Mustard seed, lbs, New York, 27,127. Dried fruits, lbs, Mexico, 1162; Hilo, 300; New York, 2000; Victoria, 2800. Bran, sks, Hilo, 2030. Hay, bls, Hilo, 985. Raisins, bxs, Mexico, 243. Beeswax, lbs, Liverpool, 415. Brandy, gals, London, 197. Honey, cs, Liverpool, 631. Wine, gals, Mexico, 2379; New York, 60,000; Central America, 1535; London, 7711. Potatoes, sks, Mexico, 715.

From the *Commercial News* of Oct. 29th the following summary of tonnage movement is compiled:

	1890.	1889.
On the way to this port	242,415	213,230
On the way to neighboring ports	20,318	10,419
In port, disengaged	7,683	29,805
In port, engaged for wheat	66,968	74,143
Totals	337,384	327,597

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to Oct. 22, 1890, the following are the exports from this port: 1890. 1889.

Wheat, ctls	3,117,489	3,744,677
Flour, bbls	378,679	352,867
Barley	133,338	599,033

Dried Fruits, Etc.

The quotations given below are for average prices paid. Something very fancy fetch an advance on the highest quotations while poor sells slightly below the lowest quotations. Prices named, unless otherwise specified, are for fruit in sacks. Add for 50-lb. boxes ¼c per lb., and for 25-lb boxes ½c to 1c per lb.

No Stopping Him!

J. G. McC. writes: "I wish most sincerely that every rancher in this fair land of ours could but see the immense benefit that could be derived from a year's subscription to the RURAL PRESS, and to my notion a *year's* subscription means a *life* subscription—for who can take it a year and then stop?"

California Fruits East.

CHICAGO, Oct. 23.—Porter Bros. Co. sold to-day four cars of California fruit at the following prices: Quinces, $1.45 for full crates; Tokay grapes, $1.55@2.30 for full crates; Tokay grapes, 60c@1.05 for half crates; Rose de Peru grapes, $1.15@1.35 for full crates; Cornichon grapes, $2.10@2.15 for half crates.

CHICAGO, Oct. 24.—Porter Bros. Co. sold to-day four carloads of California fruit. Vicar pears brought $2@2.50. Winter Nelis, $2.15@2.40; Beurre Clairgeau, $3.10; quinces, $1.25; Tokay grapes, full crates, $1.80@2.15, one car in very bad order, $1@1.35; Cornichons, full crates, $2.05@2.20, half crates, $1.05; Emperor, full crates, $1.85@2.10; Cornichon, half crates, $1.45; Coe's Late Red plums, $4.

CHICAGO, Oct. 25.—Porter Bros. Co. sold to-day three carloads of California fruit at auction. Tokay grapes, full crates, brought $1.55@3.35; Cornichons, full crates, $2.30; Muscats, full crates, $1.25@1.85; Verdelle, full crates, $1.45@1.75; Coe's Late Red plums, half crates, $2.15.

NEW YORK, Oct. 25.—E. L. Goodsell auctioned five cars of California fruits at the following prices: Fancy Tokay grapes, double crates, $4.15@4.80, single crates, $2@2.20; choice Tokay, double crates, $2.35@3.10, single crates, $1.30@1.65; Muscat, double crates, $1.60@2 20; single crates, 60@95c; Ferrera, double crates, $1.85@3, single crates, 80c@$1.25; Cornichon, double crates, $2.70@4.20, single crates, $1.45@2.30; Emperor, double crates, $2.65@3, single crates, $1.30@1.35; Morocco, single crates, $1.90; quinces, $2.75; Fall pears, $1.75@3.10.

CHICAGO, Oct. 27.—Porter Bros. Co. sold at auction to-day five carloads of California fruits as follows: Muscat grapes, $1.25@2.20 per full crate; Tokay grapes, $1.30@3.05 per full crate, 80c@$1.30 per half crate; Emperor grapes, $1.15 per half crate; Coe's Late Red plums, $2.15 per half crate; Cornichon grapes, $2.20 per full crate.

NEW YORK, Oct. 27.—No canned fruits to hand. Thirty-three cars of fresh fruit were sold the past week, and although rainy, prices held up well. The auction ranges were: Winter Nelis pears, 85c@$3.75 per box, others, $1@4.60, including one car of Beurre Clairgeaus at $2 95@3.50. Peaches, 25c@$1.10; quinces, $1.50@3 25; Tokay grapes, double, $2.50@3.75; single, $1.10@2.65; Cornichon, $1.45@2.30, double, $3.30@4.20; Muscat, $1.35@2.25, single, 45c@$2.25; Morocco, $2.10, double, $1.90@4.40, others, 65c@$3.

CHICAGO, Oct. 28.—Porter Bros. sold to-day three carloads of California fruit. Peaches, $2.25; full crates Cornichon grapes, $2.25@2.35; Muscats, full crates, $1.40@2.15; Tokays, full crates, $1.95@2.25; Emperor, full crates, $2.20@2.35; half crates, $1.10@1.25.

NEW YORK, Oct. 28.—California apricots and plums crystallized in granulated sugar are meeting with good success in this market. The *Commercial Bulletin* notes that California raisin shipments are backward. The Fresno districts are relatively better than the other sections. Riverside is the most unsatisfactory. Local jobbers generally claim, however, to have enough raisins to supply the orders.

CHICAGO, Oct. 29.—The California dried fruit market is quiet. Raisins are of moderate sale and dried grapes are salable though quiet. Stocks are not large of any line. Muscatel raisins are bringing $1.80@2 ⅌ box; London Layers, $2.15@2.50; prunes, in boxes, according to grade, ranging at 10½@13c ⅌ lb; peaches, unpeeled, 18@20c; peeled, 30c; apricots, 16@18c for off goods, to 19@20c for choice. The demand for green fruits has not improved any; peaches are selling at $2@2.25 ⅌ box; Winter Nelis, $1.50@2 for small and $2.25@2 75 for choice; Vicar, $1.75@2; Easter Beurre, $2@2.50; Glout Morceau, $3.75@4; Muscat and Tokay grapes, hf crates, 75c@$1.25; Cornichons, $1@1.25.

CHICAGO, Oct. 29.—Porter Bros. sold two cars of California fruit to-day at the following prices: Grapes, Tokay, full crates, $2.10@2.60; Cornichon, $2.60@3.20; Muscat, $1.15@2; Emperor, $1.90; Coe's late red plums, hf crates, $2.35; Winter Nelis pears, $2.25; Bartlett, $3.40.

THE San Diego, Phœnix & Galveston R. R. has incorporated with a capital stock of $1,900,000 of which $190,000 has been subscribed. The immediate purpose of the company is to build a road to the Camul Cement Works, 25 miles east of San Diego, taking the route of the old Texas & Pacific R. R. under the Scott survey.

"One touch of Nature makes the whole world kin." Diseases common to the race compel the search for a common remedy. It is found in Ayer's Sarsaparilla, the reputation of which is world-wide, having largely superseded every other blood medicine in use.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

FOR WEEK ENDING OCT. 21, 1890.

438,761.—CABLE GRIP—J. W. Gentry, Oakland, Cal.

438,690.—SEWING MACHINE — M. Lachman, S. F.

438,752.—PIPE-COUPLING—E. Lawson, S. F.

439,082.—TOY TARGET—E. E. Lommatzsch, S. F.

439,083.—CHILD'S BED LOUNGE—A. Morris, S. F.

439,084.—WINE-COOLER—A. S. Morton, Suisun, Cal.

439,085.—RAILWAY CAR—C. W. M. Smith, S. F.

438,649.—RAZOR-STROP—G. Spiess, S. F.

438,784.—TELEPHONE—J. C. H. Stut, S. F.

The following brief list by telegraph for Oct. 28, will appear more complete on receipt of mail advices:

California—Henry S. Brink, Biggs, cultivator; James B. Burrell, Wrights, machine for cutting boards; Elswood Chaffey, Santa Monica, mechanism for transmitting power; Leopold Dahlstrom, assignee of one-half to R. Menzel, Santa Clara, valve mechanism for double-acting pump; James C. Gibson, S. F., clutch pulley; John J. Griffith, San Bernardino, burglar-alarm; Stephen C. Houghton, assignee of one-half to L. C. Branch, S. F., adjustable seat-back; Augustus A. Lamont, Santa Rosa, cuff-holder; Perham W. Rahl, S F., navigable air ship; D. F. Oliver, Oakland, assignee to Hooker & Co., S. F., vehicle seat; James E. Pellow, Sierra City, leaf-turner; Daniel W. Williams, Fortuna, shingle-shaping machine.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

SPUDS.—The Chicago *Farmers' Review* estimates the grand total of the potato crop of this country for 1890 at about 122 731,000 bushels, as against 233,701,000 in 1889, and 216,646,000 in 1888.

DEMOCRATIC STATE TICKET.

For Governor,
EDWARD B. POND of San Francisco.

For Lieutenant-Governor,
R. F. DEL VALLE of Los Angeles.

For Chief Justice,
JOHN A. STANLEY of Alameda.

For Associate Justices,
JACKSON HATCH of Santa Clara (Short Term).
JAMES V. COFFEY of San Francisco.
GEORGE H. SMITH of Los Angeles.

For Secretary of State,
W. C. HENDRICKS of Butte.

For Controller,
JOHN P. DUNN of San Francisco.

For Treasurer,
ADAM HEROLD of Placer.

For Attorney-General,
WALKER C. GRAVES of San Francisco.

For Surveyor-General,
STANLEY C. BOOM of Humboldt.

For Superintendent of Public Instruction,
H. C. HALL of San Mateo.

For Clerk of Supreme Court,
J. D. SPENCER of Stanislaus.

Second District—C. H. HASWELL, JR., of San Francisco.
Third District—LAWRENCE ARCHER of Santa Clara.

NOTICE.—"The polls must be opened at sunrise of the morning of the day of election, and must be kept open until five o'clock on the afternoon of the same day, when the polls shall be closed."—(Section 1160 Political Code, Statutes 1889, page 209.)

Political Announcements.

[Notices admitted in this department are not necessarily endorsed by the editors or publishers of this paper.]

We wish you to notice J. R. Hebbron's candidacy (elsewhere announced) for member of the State Board of Equalization in the Fourth District. As he has practiced farming in California for more than a generation, taking premiums season after season at the 7th Agricultural District Fair, and has been a member of Salinas Grange for 16 years, it seems that he should command the confidence and votes of his fellow-farmers, as one likely to do them justice in the office for which he is the Republican nominee.

Among the legislative candidates, Hon. D. A. Ostrom, the Democratic nominee for joint Senator for Sutter and Yuba counties, deserves special commendation. Mr. Ostrom has been tried and not found wanting. He is a farmer, a member of Wheatland Grange, and is thoroughly alive to the farming interests.

Among the important measures which he introduced in the last Legislature may be mentioned the Reassessment bill, the National Grange Appropriation bill, the Jute bill, the Australian Ballot bill, and others tending to better the condition of the farmer and to purify our Government.

Mr. Ostrom's record is unimpeachable, and he certainly deserves the support of the Patrons of Husbandry.

— FOR —
MEMBER OF STATE BOARD OF EQUALIZATION
—OF THE—
FOURTH DISTRICT.
J. R. HEBBRON,
SALINAS, - - CALIFORNIA.

— FOR —
JUDGE OF THE SUPERIOR COURT,
E. M. GIBSON,
OAKLAND, - - CALIFORNIA.

NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & CO., Publishers,
No. 220 Market St., S. F

POLISHED WOOD COMING INTO USE FOR ORNAMENTAL PURPOSES.—Wood brought to a mirror polish is coming into use for ornamental purposes in Germany, and has this advantage: that, unlike metal, it is not affected by moisture. The stuff is first treated with a bath of caustic alkali for two or three days, at a temperature between 164° and 197° F. Next comes a dip in hydrosulphate of calcium for from 24 to 36 hours, after which a concentrated solution of sulphur is added. After another soak in an acetate of lead solution, at 95° to 120° F., it is thoroughly dried and polished with lead, tin or zinc, as may be desired, when it resembles shining metal.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos, $1; 10 mos., $2; 15 mos., $3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL, ON YOUR PAPER.

For Sale.—Valuable land in Tulare county artesian belt. 160 acres, 1½ miles southwest of Tulare city; 480 acres, 7 miles southwest of Tulare, with large flowing artesian well, well-finished two-story horse, large barn, etc.; 160 acres, 2 miles southwest of the above; 480 acres 3 miles southwest of Pixley and about 4 from Alila. For sale by owner in lots to suit at low prices, low interest and very easy terms. For further information, address LAND OWNER, Box 2517, S. F., or A. T. The Whole Country Needs Fertilization

ADMONITION TO FARMERS!

GUAYMAS, MEXICO, September 9, 1890.

R. B. CUNNINGHAM, ESQ., Agent Mexican Phosphate and Sulphur Company—DEAR SIR: In answer to your inquiries as to the value of phosphates for worn-out lands, I will state that it is my opinion the lands of the older settled portions of California afford a good field for the use of phosphates. These lands have been cropped for years without any restoration of the chemical constituents necessary for an abundant crop. They therefore show plainly that they need assistance artificially to produce crops good in quantity and quality, let the crop be whatever it may.

Take, for instance, San Joaquin and Santa Clara valleys, and what do you see? Many crops that are so imperfect in quantity and quality that the eye at once detects the defect. The only relief that can be resorted to must be infused into the soil to replace the chemical properties that have been extracted by previous crops, and the writer is of the opinion that a liberal supply of phosphates will accomplish this.

The attention of the cultivators of the soil is sharply turned to rotation of crops, hoping thereby to get wealth out of their lands without fertilization. Some have turned their attention to beet cultivation in soil worn out by other crops. Beet or other seeds will not grow successfully unless the soil will nourish them.

This summer I saw several crops of beets on excessively cropped lands, the majority of which showed that there was something wanting to complete the plants to ample size and in quantity that should be expected of sugar beets under favorable circumstances. If a good crop is not obtained, there is deficiency in profit. It costs as much to cultivate soil deficient in chemical properties as it does if ample nutrition was in the soil. Under the former condition a deficient crop is certain, while under the latter condition he may reasonably expect an ample crop with profit.

Fields often are allowed to go to weeds, supposing thereby to enrich the soil. This is an uncertain method and not profitable. Your weeds have grown up and seeded: the dead stems can only add a limited addition to fertilize the soil, while the seeds of the same will cause much expense to exterminate them from the future crops. Besides, while thus only weeds as a crop, no profit was realized, while if a supply of phosphates had been applied to the soil, a profitable crop of beets or corn would be had. Besides, the weeds would have been exterminated during the cultivation of the said crop. I am, Sir, your obedient servant,

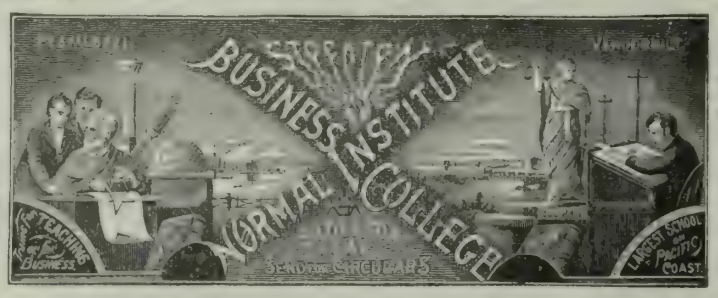
EDWARD PALMER, M. D.

THE MEXICAN PHOSPHATE AND SULPHUR CO.

Manufacture three grades of this Superior Fertilizer of the following analyses:

GUARANTEED ANALYSIS.	Brand [A] for Sugar Cane, Sugar Beets, Etc.	Brand [B] for Grain, Gardens, Lawns, etc.	Brand [C] for Fruits, Vineyards, Etc.
Phosphoric Acid	10 to 11 per cent.	15 per cent.	12 per cent.
Potash	9 to 10 "	2 "	5 to 6 "
Ammonia	3 to 4 "	2 "	3 to 4 "

And will sell in lots to suit.



PARTICULARS AND CIRCULARS MAY BE HAD OF THE UNDERSIGNED.

For the Season of 1890-91.

Having decided to re-establish the GENERAL NURSERY BUSINESS at Oakland, Cal., I have purchased the ENTIRE NURSERY STOCK grown by Mr. James Shinn at Niles, Cal., embracing a most complete assortment of unusually fine stock, grown without irrigation, that I am offering at reasonable prices.

All the Leading Varieties of APPLE, PEAR, CHERRY, PLUM, PRUNE, APRICOT, NECTARINE and ALMOND.
Fine Stock of ORANGES, LEMONS, OLIVES, NUT TREES and FIGS.
The Only Stock of PERSIAN WALNUTS (Kaghazi) on the Pacific Coast.
300,000 GRAPE VINES (Strong Roots). Small Fruits, Berry Bushes, Etc., Etc., in Large Quantities.
ORNAMENTAL and SHADE TREES, Roses, Standard Roses, Clematis, Trailing Vines, Plants, Etc., Etc., in Great Variety.

Packing Grounds at Niles, Cal., Unsurpassed Facilities for Shipping. Correspondence solicited.

TREES AND VINES

We are prepared to furnish the leading varieties of fruit trees and vines for planting season of 1890 and 1891. Our trees are grown in rich alluvial soil, entirely free from scale. An inspection of our stock is respectfully invited. Write for prices.

CHILES & GODFREY,
Davisville, Cal.

Arizona Everbearing Strawberry.

BY PLANTING QUITE A NUMBER OF THE LEADING varieties of Strawberry toge her for five years, I have produced a variety unlike any of the former. I have picked the fruit daily since April 20th to the present time, October 18th, and the vines are still full of bloom and berries. Roots are long and stand the drouth well. The berries are large, fine flavor and high color, and resemble the Jessie in shape somewhat. I am prepared to furnish them in small lots at $1.50 per doz., postpaid. R. E. FARRINGTON, General Nurseryman, Phœnix, Arizona.

— ALL METAL —

SPADING HARROW!

The Best Pulverizer in the World.

Cal State Library JI '90

JUST THE THING

— FOR WORKING —

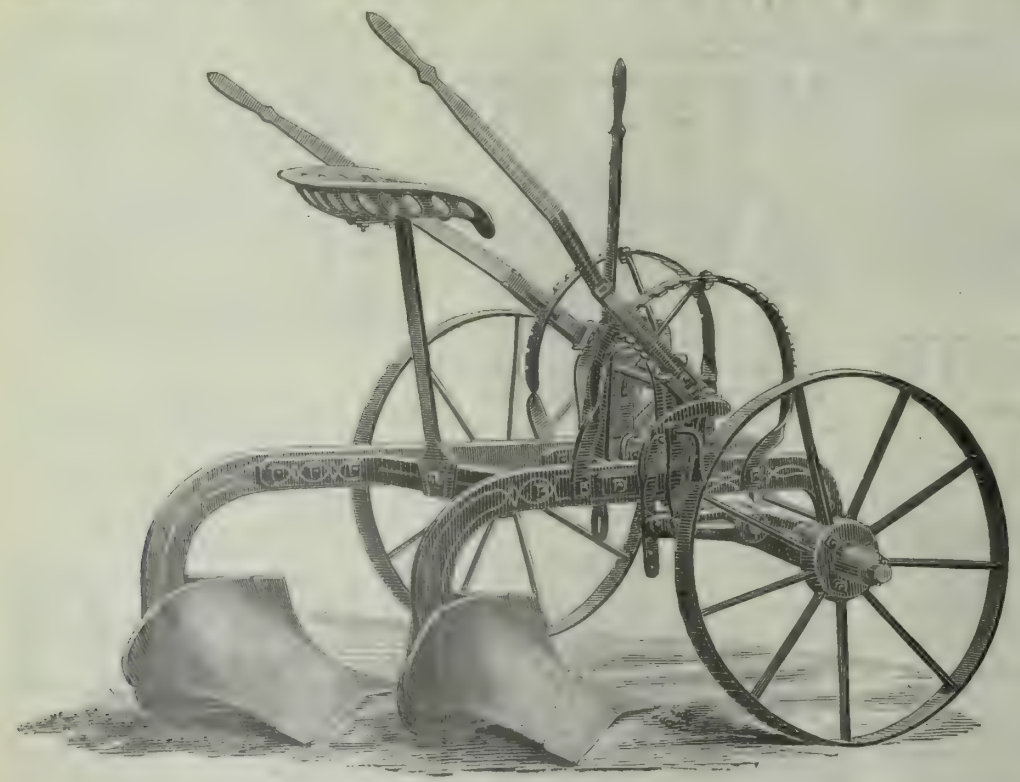
Summer Fallow Land.

Specially Adapted

— FOR —

ORCHARDS AND VINEYARDS.

FOR TWO HORSES. Works the soil about six feet wide. Angle of teeth adjustable to work the soil at desired depth. THIS HARROW is something entirely new. IT IS THE GRANDEST ACHIEVEMENT of its inventor, C. LA DOW, who is the recognized authority on Harrows, there being but few leading harrows at the present time not built under his patents. We have made exclusive arrangements for its sale and it can be obtained only through us or our agents.



THE NAME "SPADING" refers to its action on the soil. The action of each cutter is like that of a small spade, lifting and turning the soil from a depth of four to six inches, doing more perfect work than is possible with any other Harrow in the world. THE BLADES are made from spring steel, in operation vibrating and shaking off sticky soil. IT NEEDS NO SCRAPERS to clean the revolving cutters.

Considering the immense amount of labor done, the draft is very light, as the pulverized soil passes through the gangs of revolving cutters, being left smooth. THE GANGS are so arranged that the most uneven ground is thoroughly harrowed and left level. IT LEAVES NO FURROW or ridge; when the field is harrowed it is all left smooth. 10, 12 and 14-ft. sizes in stock. Send for circular.

FAIRLAWN 7277, BY NUTWOOD; DAM STREAMLET, BY ALMONT. OWNED BY JOHN W. WHITE, MT. STERLING, KY.

A Young Nutwood Stallion.

We give a portrait of a fine young trotting sire Fairlawn 7277, son of Nutwood, dam Streamlet by Almont. Nutwood is of course well known to RURAL readers, but he has this year added notably to his honors as a trotting sire, and now has not less than 42 in the 2:30 list.

Fairlawn's dam Streamlet by Almont, dam Old Sophy by Edwin Forrest, is a fine individual and a worthy representative of the great family to which she belongs. The blood of Fairlawn's sire and dam duplicates several of the greatest lines ever known. Through both sire and dam he gets a cross to Alexander's Abdallah, Mambrino Chief and Pilot, Jr. The Abdallah crosses come through his best sons, Belmont and Almont; the Mambrino Chief, through the dams of these great stallions, and the Pilot, Jr., through the dam of Maud S. and Kate, the granddam of Almont, who was also the great-granddam of Sultan.

Fairlawn is a bay horse, 16 hands high, strongly built at all points, and of handsome appearance, as is shown by the engraving. Being four years old, he has as yet no colts old enough to train, but they are a fine-looking lot and show excellent trotting action.

Spencer Stock Farm, the home of Fairlawn and property of Mr. John W. White of Mt. Sterling, Ky., is situated about three miles east of Mt. Sterling, near the Spencer turnpike. It consists of 465 acres of beautiful blue-grass land, and will be entirely devoted to trotting horses. Mr. White is as yet a young breeder, but is collecting a fine lot of trotting stock.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

From Humboldt County.

NUMBER IV.

EDITORS PRESS:—From Briceland we returned on the Garberville & Shelter Cove road to its junction with the Coast Thoroughfare at F. H. McKee's, where we spent the evening and were feasted on some very choice grapes of the Isabel variety, and thence proceeded northward through a lonely and almost uninhabited region for a distance of 22 miles to the Mattole valleys. After leaving the junction of roads at the summit above Shelter Cove, the Coast road follows, for a few miles along the summit of the range, through occasional groups of tan-bark oak and a magnificent view of the old ocean and the Shelter Cove ranch is afforded on one side, while upon the other is several thousand square miles of grand and picturesque mountain scenery, embracing large stock ranges and many thousand acres of heavily timbered lands. The scene suddenly changes as we reach the base of King's peak at Asa Harrow's cabin, and soon find ourselves winding around the eastern base of this grand old peak, which is one of the highest against which the Pacific ocean rolls, and is quite inaccessible from the beach side. Several hundred feet below us is a roaring mountain stream; here a cascade fringed with ferns dashes across the roadway, there a deer takes a hasty glance at our outfit and bounds away, and in many places a little variation from the track would precipitate horse, buggy and driver to the bottom of the stream below, which we ultimately cross on a well-constructed but somewhat ancient bridge and wend our way over the crookedest of crooked roads up the side to the summit of Wilder ridge, where we find a very desirable cattle range composed of a series of prairies with groups of tan-bark oak between, and extending down the eastern side of this ridge to the Mattole river is one of the finest bodies of tan-bark timber on this coast, and will at some future time be the site of an extracting plant, as it is only about 20 miles from this ridge to Shelter Cove and the lands nearer the coast are fast being denuded of bark. From Wilder ridge we descend into the Upper Mattole valley, finding the road equally as "curly" as at the other end of the ridge, and nightfall found us at ex Supervisor Hindley's.

The Upper Mattole valley contains about a dozen excellent farms which produce fruit of an unexcelled quality, and flour is manufactured from the wheat grown here, which is fully equal in quality to the leading brands of the State. Potatoes, vegetables, corn and all small grains yield abundantly, the surrounding hills afford excellent pasturage for stock, and there are several good sheep ranges near the valley. Twelve miles below is the Lower Mattole valley, and between are several fine farms of a greater or less acreage. At one of these farms (Mr. Shinn's) we found both black and English walnuts bearing abundantly, and at Mr. Shield's place we sampled apples that cannot be excelled either in flavor or size. Mr. Boyd has apples 16 inches in circumference, and Mr. Shinn produced peaches 13½ inches in circumference and of delicious flavor. About midway between the upper and lower valleys is Mr. M. R. Dudley's new roller flouring-mills which furnish the larger portion of the flour used in this vicinity. Mr. Dudley has a saw-mill also; both mills are run by water-power.

The town of Petrolia is situated in the lower valley in the midst of a prosperous dairying, farming and cattle-raising community. This valley also produces excellent fruits, grain, etc., and its pretentious buildings and well-kept fields denote thrift and industry.

Mr. Chas. Johnston has a field of corn fully equal to the corn-fields of the Mississippi valley. Some attention is paid to breeding fine horses, but cattle-raising seems to be the leading industry. Fruit-growing and farming, notwithstanding the excellence of such products, are not considered profitable, as the market is limited to the local demand, freight rates and distance being such that farmers are unable to ship their products, as they must be taken by wagons a distance of 30 miles before a shipping-point is reached. However, it is not unlikely that a chute or wharf will be constructed near Petrolia. It is said here that there is a good place of anchorage and a chance for an enterprising party to make a paying investment. Besides the large quantity of stock, dairy and farm products and general supplies from San Francisco, there is a large quantity of tan-bark which might be shipped by a chute at this place.

A company represented by Mr. Burris of Ventura has leased a large acreage of land and purposes to resume operations toward development of the petroleum deposits in this vicinity, and there can be no doubt that intelligent prospecting will result in a very satisfactory development, and in the event of success, Petrolia will become a flourishing business center. The town now boasts of about 100 inhabitants, two general merchandise stores, a hotel, blacksmith shop, livery and feed stable, a saloon, etc., and is connected by telegraph with Ferndale and has a daily mail to Ferndale and Eureka. This mail-route should be extended by the coast road to connect with the mail and stage route from Kinney, in Mendocino county, to Garberville, and form a continuous coast daily mail-route from Humboldt to San Francisco, which is quite a necessity, as people living on this route are from 15 to 20 miles from a postoffice. A post-office should be established at F. H. McKee's to accommodate the people of Shelter Cove and vicinity, as now their most convenient offices are at Briceland and Garberville, 20 and 28 miles distant. Mr. T. J. Newland, near Petrolia, has a pear tree of the Bartlett variety now loaded with pears, which is the third crop this season, two crops having fully matured, the quality being excellent. T. B. L.

Petrolia, Oct. 20, 1890.

Lake Tulare for a Water Park.

EDITORS PRESS:—In discussing the problems presented by Lake Tulare, it has been usually assumed that, because the water is alkaline and because it is shallow, therefore the best disposition to be made of the lake is to drain it and annihilate it; but I wish to present and urge a different solution.

A few years ago it was thought that the only use that could be made of our Big Trees was to cut them down. Now a wiser day is dawning, and it begins to be felt that possibly the next generation may like to have a peep at these things and that we really do not own this world but have only a temporary possession.

In the great valley of the Pacific Coast the combined San Joaquin and Sacramento, which will hereafter be the seat of a great population, there is nothing like a lake. Can there be too many attractions, too many sources of pleasure, varied recreation and healthful sport?

A trip through forest land affords pleasures peculiar to itself; so also with water. There is no substitute; sailing, rowing, fishing, swimming, each has its fascinations.

Tulare lake exercises a large influence on the climate of all the upper end of San Joaquin valley and it has an important part to play as a reservoir for the irrigating ditches taken and to be taken out below.

The lake should be preserved at a size of about 10 or 12 miles wide by 15 or 18 miles long. This can be reserved now without interfering with anybody, but after a few years claims of more or less force will hinder. The lake is quite shallow at the edge, and in order to make it accessible, and with a pleasant and permanent shore, it will be necessary for the State to take it in hand. Let the State Engineer lay out a shore line agreeably diversified with inlets, bays and capes. Let a dredger follow this line and throw up a levee—a moderate sized dredger kept constantly at work would in a few years make a lake which would be one of the many boasts of California. I venture to say that never was an equal opportunity offered to any landscape engineer such as created Central Park. Where can equal scene of beauty, winding shores, covered with grass and waving trees, sheltered coves filled with gayly-colored yachts and boats; the placid surface of the wide water, here and there broken by islands covered with trees, semi-tropic and temperate, here an isle of palms, here of oaks, there a picnic-ground of grass and umbrella tree, and so on.

The dredger would in a month build up a large island and deep water all around it. Of course it would take several seasons, for the mud must be allowed to solidify and then other mud thrown on top. The levee around the shore should be wide and solid and reserved as a magnificent driveway, wide, and bordered on both sides by fine shade and fruit trees. A strip of land three or four miles wide should be reserved all around the lake by the State, for a long time, say 25 or 30 years, till all these things are accomplished, renting the land meantime, perhaps. Then the sale would repay all outlay. The outlet should be deepened and guarded with a stone dam and gate, so as to afford means for draining off the alkaline water at proper times. By watching chances the water could be easily freshened. By draining the lake a certain amount of land could certainly be added to the area of production, but this same acreage of water is valuable for food fishes as well as for beauty and recreation.

Altogether the State cannot afford to lose this grand opportunity to create one of the most beautiful spots on the continent. It is easy, practicable, desirable, and in the end, costless. Let the farmers of the Upper San Joaquin work for it. Cities demand parks, but when have farmers ever before asked for a pleasure park or a pleasure lake? Let us *all* work for it as a new jewel in the crown of California. W. S. PROSSER.

Auburn, Oct. 30, '90

AN ARIZONA NATURAL BRIDGE.—There is said to be in the northern part of Gila county, Arizona, a natural bridge which spans Pine creek by a single arch of 200 feet, with walls on either side rising to a hight of 700 to 800 feet. The bridge is 600 feet wide and the thickness of the arch is 40 feet, rise not stated. The account says that the rock is limestone, worn very smooth by the action of water. One part near the corner of the arch is only 6 feet thick and is pierced by an opening.

HORSEFLESH AS FOOD.—It is said some 14,000 horses are annually consumed as food in the city of Paris. About one-half that number are consumed in Berlin and in Vienna each.

HORTICULTURE.

Prunes and Prune Curing.

EDITORS PRESS:—In your last issue I read with much surprise a long tirade from the pen of Leonard Coates, ostensibly on the Robe de Sergent prune, but in reality on "Gillet," who is yet to learn what he has done to so arouse the ire of the Napa horticulturist. It is true that I have taken quite a hand in the discussion of the prune question and the straightening up of our prune nomenclature, which is admitted by every one, Mr. Coates himself included, to be in a rather confused condition. But in discussing questions of that kind I do not believe in personalities, and I say that it is wrong to let one's passions subdue his own judgment. Six years ago, when this discussion was first started, Mr. Coates tried to choke me up for having had the audacity and bad taste to undertake the correction and straightening up of our prune nomenclature without having first asked permission from the State Horticultural Society (see Mr. Coates' communication in RURAL PRESS issue of Nov. 1, 1884). That, of course, didn't affect me a bit and I kept on my investigations of that prune question in my own quiet way. But as soon as I came to something definite about it, I did every time give the public the results of my patient researches. In this way I settled the question as to the identity of the Grosse and Petite Prune d'Agen, the Grosse Prune d'Agen having been ever since dropped off from all nurserymen's catalogues in California, that prune going now under the name of Hungarian.

Six years have elapsed since Mr. Coates claimed that the straightening up of the prune nomenclature did belong not to any private person or persons, but to the State Horticultural Society. Well, what has the latter society done toward solving that vexed question? I pause for a reply; and now when we are threatened by members of the said society to have a prune shown not to be the Robe de Sergent called by that name, and I rise to a question of privilege to be given a hearing before the society takes any action on the naming of that prune, the same Mr. Coates steps forward and for a second time tries to choke me up while endeavoring to save our prune nomenclature from being made more confused yet, and does not want to hear me unless I be present at what he is pleased to call "our" meeting, as if the society was the property of a dozen members around the Bay.

Now whether Mr. Coates likes it or not, I will, with your permission, through the columns of the PRESS, address myself to the members of the society in particular and the public in general, and show them why the name Robe de Sergent should not be given to a prune that is not the Robe de Sergent, and that that name be not sanctioned by the society itself.

This discussion about the wrong naming of the prune under consideration was not started by me at all, but by Dr. John A. Stewart of Santa Cruz—a well-informed gentleman, I must say, on all branches of horticulture. In the issue of the PRESS of Feb. 1, 1890, Dr. Stewart put the query to the public as follows: "What Robe de Sergent is this which Mr. Coates and some others are recommending to us just now? I don't know of any Robe de Sergent which is not d'Ente or Prune d'Agen; I did not know that there was another Robe de Sergent—a false one. I have not a word," added Dr. Stewart, "to say against this so-called Robe de Sergent except that it is not the Robe de Sergent and should no longer go abroad as such."

Was not that plain enough on the part of a man who had procured from Mr. Coates and fruited that very prune? But it is hard, it seems, to pound facts into the heads of some people.

Mr. Coates states that he never claimed that this prune of his had any analogy with the d'Ente or Petite prune. Well, we suppose he didn't; but what he obstinately refuses to admit is that Robe de Sergent, d'Ente, d'Agen, Datte, Petite and French prune are all synonyms—all meaning the same prune; consequently that it is wrong to name Robe de Sergent, a prune that has no analogy whatever, to use Mr. Coates' own words, with the true Robe de Sergent or d'Ente. As I have stated in former articles to the PRESS on the prune, the name Robe de Sergent was given to the prune called in Bordeaux d'Ente, and here, French prune, almost two centuries ago; and in its home, in the Valley of the Lot, that prune goes more under that very name, Robe de Sergent, than that of any of its other synonyms, as I could show from numerous letters from prune-growers of that district. Elsewhere in France, that prune goes as much under the names of d'Ente and d'Agen as under that of Robe de Sergent; but in Bordeaux, where the most of the prune crop is packed to be shipped away all over the world in millions of jars, canisters and boxes, no other name than that of d'Ente is used. To satisfy Mr. Coates and the other members of the Prune Nomenclature Committee as to the truth of my statement, I send you, with the present, half a dozen catalogues from leading nurseries in France.

On that from Agen, in the very prune district of the Lot, only two names are used, viz: "d'Ente or Robe de Sergent."

Jacquemet Bonnefont of Amonay has that prune in his catalogue as follows: "d'Agen (d'Ente, Datte Violette, Robe de Sergent)."

F. Jamin, in the northwest of France, mentions it on his catalogue as "d'Agen, d'Ente or Robe de Sergent."

The Doue nurseries, in the valley of the Loire, the home of that False Robe de Sergent, have it called on their catalogues "d'Agen or Robe de Sergent, the genuine kind." The words "the genuine kind" have been inserted in their catalogue but lately since they replaced their false type, that one generally propagated for years in the Loire district from Angers to Orleans by the true type from the Lot. The Doue nurseries admitted frankly that they had been propagating for years, like "everybody else in the Loire valley," the False Robe de Sergent for the true one.

I hope that these quotations from those catalogues of leading nurseries in France will satisfy every one that Robe de Sergent is a synonym of d'Ente, Datte Violette and d'Agen, called here Petite or French prune.

With Dr. Stewart, I say I have not a word precisely to say against this so-called Robe de Sergent except that it is not the Robe de Sergent and should no longer go abroad as such. It does not matter, either, whether that prune has been going for several years in the Santa Clara valley under that wrong name. Did not the Hungarian prune go for 25 years in California under the false name of Grosse d'Agen? How is it now with that prune? If Mr. Coates wishes to retain the words Robe de Sergent as a name to a prune that is not such, let him call it False Robe de Sergent, then we will know how we stand. Call it Loire Robe if you prefer, since it is only found in the valley of that name. In fact, give it *any name;* that is immaterial—but do not give it a name that already belongs to another kind, and a kind so extensively propagated here and in France.

In his communication, Mr. Coates states that "the vast valleys and plains of California did not all stand still while Mr. Gillet continued his very laudable researches." Who claimed that they did? I never claimed either that I knew it all myself, and never, in any manner, have I tried to monopolize knowledge on this prune question, though I believe that I have given to it more thought and more of my time than anybody else in California.

Speaking of the large horticultural establishment from which he obtained the prune under discussion, Mr. Coates says that that firm does an immense business in this country, and that the men that run it are as competent as myself in judging of the best varieties of prunes grown in their own country. I admit that, though I do not think that the amount of business done by a man gives precisely an idea of the amount of brains owned by him. If that firm in Orleans called Robe de Sergent that False Robe de Sergent, it does not tell much, I will say, in favor of their horticultural science.

Now here is another question about that prune. Mr. Coates says that it is no more a type of French or Petite d'Agen than Sonoma seedling apple is a type of Skinner's pippin. I claim that the prune is a parent, though a distant one, perhaps, of the French prune, as the stone conclusively shows. Look first at the stone of a prune or plum when trying to find out to what species it belongs. I have in my possession stones of the prune introduced by Mr. Coates, Mr. W. H. Aiken having sent to me specimens of the prune, a year or two ago, and it is like the stone of my False Robe de Sergent introduced from the same valley of the Loire by me, but not from the same place as Mr. Coates got his.

This discussion, adds Mr. Coates, is without profit. I guess Mr. Coates is mistaken, for anything that will throw light on a vexed question, and a question of much importance to prune-growers in this State, may turn out to be of great profit to all, even if its only result be to compel nurserymen, fruit-growers and packers to call things by their true names.

While having this prune question under discussion again, it would be well to call the attention of prune-growers and packers to the way they cure and pack that product, and not rely altogether on the protective tariff to find a market for their prunes at the East. I presume that most of your readers have read about as many as 20 carloads of prunes, sold for Eastern account, having been rejected; and 10 more carloads of Santa Clara prunes rejected, too, at the East, and *returned* to the shipper at San Jose. Would it not be well to ventilate that matter and find out what was the matter with those rejected prunes, so that such a thing wouldn't occur again, having tons of our prunes returned to us?

I have heretofore claimed that a large portion of our prune crop was not cured with enough care, and called attention of prune-growers to that fact. Much improvement has been going on these late years on the curing of prunes, it is true, but much has to be done yet. Many samples of cured prunes have been sent to me from all parts of the State, but I must say that the largest and finest ones came from San Luis Obispo (from Baron Schroeder's place), Calistoga, in Napa county, and Vacaville (Solano county). They all were, you may say, identical in all respects—same size, same color, same flavor; no difference whatever among them. They all made a very good sauce, but were too hard to be eaten out of hand. It showed me, too, that the prune area of the State is much larger than some people have any idea of, these three counties being so far apart. Now such prunes would never be returned from the East; they would be more

likely to be exported abroad than sent back. Let me tell our prune growers and packers, even if they call me rhapsodical for so doing, that they cannot bring too much care in the curing and packing of that fruit, if they want to have a ready sale for it and also enlarge the scope of the prune market. FELIX GILLET.

Nevada City, Cal. Oct 27, 1890.

Mr. Roeding's Experience with the Smyrna Fig.

F. Roeding of the Fancher Creek nursery sent W. C. West to Smyrna some three years ago to study the process of the Orientals in growing, curing and packing figs, and to procure, if possible, scions of the true Smyrna varieties. The mission was performed with considerable difficulty and at great expense, but the needed information was obtained, and cuttings of the trees were obtained. The cuttings were brought to Fresno county and planted at the Fancher Creek nursery, where they have since been carefully cultivated. Last year the trees formed fruit but it fell before maturity.

This year the trees again fruited. George C. Roeding, the manager of the nursery, by examination found that there were two varieties—the fruiting Smyrna fig and the wild Capri fig.

Mr. Roeding sought a method of transferring the fructifying powder. Taking some of the wild figs, he opened them, secured the pollen on the end of a toothpick and then introduced this implement as far as he could without injury to the fruit into some of the figs on a Smyrna tree, and then waited the results. Subsequent examination showed that every fig fertilized matured in the orthodox way they are said to do in Smyrna—shriveled up and fell from the tree—good, fully matured Smyrna figs, full of developed seed and richly flavored.

The figs on the tree which were not thus fertilized failed to mature. From this experiment it seems evident that the pollen producing wild figs and the *blastophaga* are necessary to produce figs of the Smyrna variety. Now, it remains for Mr. Roeding, he having secured the wild fig and the true Smyrna variety, to import the *blastophaga*, and California will be in shape to snatch from the dwellers in the Orient the profitable business of supplying the United States with dried figs. This factor to success is sure to be soon supplied—either by importation or by natural development.—*Fresno Expositor.*

THE VINEYARD.

Viticulture in the Sonoma District.

I. De Turk, President of the Viticultural Commissioners and Commissioner for the Sonoma District, has filed his annual report regarding viticulture in his district. The document is a remarkably complete one. It is as follows:

I beg leave to submit the following viticultural report for the Sonoma district as required by the blanks furnished by the State Board, together with other matters coming under my personal observation that may be of interest to the board.

The work of collecting the statistics for the new directory has been laborious and has taken considerable time, as every section has been visited and nearly every vineyard in the district has been visited.

Fully three-fourths of the vineyards of the district are located on the hills and mountainsides, which has made the labor of gathering statistics more arduous and difficult.

I have found in the district 925 vine-growers who cultivate five acres and upward. Of these 842 are located in Sonoma county.

The following statement shows the number of owners, acres in vines and product of each county:

SONOMA COUNTY.

No. of vine-growers, 5 acres or more	842
Total acreage in vines	22,683
" " " bearing vines	21,053
" amount of grapes in tons for '89	41,013

LAKE COUNTY.

No. of vine-growers, 5 acres and upward	48
Acreage in vines	1,061
" " bearing vines	1,008
Tons of grapes, product of 1889	2,148

MENDOCINO COUNTY.

No. of vine-growers, 5 acres or more	20
Acreage in vines	204
" " bearing vines	183
Tons of grapes, product of '89	343

MARIN COUNTY.

No. of vine-growers, 5 acres or more	15
Acreage in vines	502
" " bearing vines	441
Tons of grapes, product of '89	637
Total number of vineyards in district	925
" " " acres in vines in district	24,450
" " " " " bearing in district	22,685
" " tons, product of '89, in dist't	44,141

To the total acreage in vines for the district might be added at least 500 acres of small vineyards of less than five acres, planted merely for family use. This will increase the total acreage of the district to at least 25,000 acres in round numbers.

The total number of acres planted to table grapes exclusively is 485, the varieties being Muscat and Tokay.

From personal observation, and from conversation with the vineyardists and wine men of the district, I have obtained the following information on subjects pertaining to the grape and wine interests:

The great body of vines in the district are planted on rolling hills or on the mountain sides, exposure to the sun being observed in the location of the vineyard.

The soil upon which vines appear to produce the best quality of grapes, especially for wine purposes, is either a red gravel or clay or white volcanic ash in which there is more or less properties of iron. This character of soil is confined almost exclusively to the hill and mountain lands, hence the greater number of vineyards are located on the higher lands.

The valley lands produce a greater growth of vine and larger yield of berry, but at the expense of quality.

The product of the year 1889 has been somewhat difficult to arrive at, as many vineyardists lost a great part of their crop by the early rains, yet by a careful approximation the result of the report has been arrived at.

The vineyards all over the district are looking exceedingly well, and I find no failure except in the Sonoma valley. There the ravages of the phylloxera have decimated many vineyards, the pest slowly but surely creeping along the whole extent of the valley. So far no remedy against this insidious enemy of the vine has been discovered. The only recourse the vine man has is to replant with resistant vines and this is being generally done, although many vineyardists have become discouraged, dug up their vines and planted their grounds to other crops.

But little additional acreage has been set to vines in the past two years. Those planted will about equal the number torn out and killed by phylloxera.

In a few localities the effect of the low prices obtained for grapes last year is apparent, the vineyards having been neglected and not properly cultivated; the result is that a poor crop will be gathered on these lands.

The great body of vinelands and vineyards are to be found in Sonoma county. The counties of Marin and Mendocino, with a long fog belt extending inland 15 or 20 miles, leave but little land favorably situated for vine-growing. Late frosts prevent the realization of a crop of grapes in the valleys of Northern Lake and Mendocino counties.

The southern portion of Lake county is admirably situated for vine-growing, the climate and soil being all that could be required, yet the great distance to market and absence of transportation facilities has made vine-growing unprofitable, so far, in this section.

Many vineyardists contemplate setting out more of their lands or reset dead vines with the table varieties, Muscats, Tokays, etc., as they appear to be longer lived and resist the ravages of the phylloxera better than other vines. At the same time they command a better price in the markets.

But little loss has been sustained from mildew or sunburn the present season. What loss has been incurred from these causes is due to carelessness and injudicious pruning.

The grape crop of 1890 will average about that of 1889.

There are many thousands of acres of good vineyard lands, as yet unimproved, not only in Sonoma but in Lake and Mendocino counties. In the two counties last named the hill lands, where thermal qualifications are favorable, appear to be especially adapted to growing a good quality of the grape, the soil being almost wholly the red gravelly clay or volcanic ash, considered the best for the grape. At the same time these lands are as yet comparatively cheap.

The low prices obtained for grapes the past few years, as well as the stagnation ruling in the wine market, added to absence of transportation facilities, has kept these valuable vine lands from being improved. With a better market and more favorable conditions, these sections will become heavy vine-growing districts.

By far the largest variety of grape grown in the district is the Zinfandel, this being peculiarly the wine grape; the Golden Chasselas, Burger and Black Malvoisie come next; while some vineyardists affect a mixture of all the foreign varieties. At present the most of the wine-cellars of the district are empty or nearly so, the vintage having been shipped to market or stored.

A large amount of the present season's grape crop in the northern part of Sonoma and southern part of Lake counties, has been contracted to parties for drying purposes.

It has been impossible to obtain an estimate of the wine manufactured in the district during the past year, as the cellarmen have been inclined to be reticent on that point for fear the information might have an unfavorable effect on the wine market.

A considerable quantity of the wine product has been and is being manufactured into brandy.

In conclusion, I will say that I have used every endeavor to obtain a complete and exact report as required by the State Board, and nothing has been omitted that careful attention could accomplish. I. DE TURK.

Santa Rosa.

Almeria Grapes.

The famous Almeria grapes are now coming into market in large quantities. A recent letter from Almeria to the New York *Tribune* says that the quality has never been finer than it is this year. The truth of this statement is borne out by what have arrived already. The bunches have averaged large, the flavor is fine and sweet, and the appearance perfect. So far about 50,000 barrels have been disposed of and at good prices. These receipts are widely distributed, being sold by the jobbing houses throughout the United States, Manitoba, New Zealand, Cuba, and some being even sent to China and Japan. Last year there were 140,000 barrels sent to New York, which is the chief distributing market of the United States. It is probable that about 150,000 barrels will come here this season. The new tariff advanced the duty from about 29 cents per barrel to 60 cents per barrel. A cable received this week says that the estimate of the crop places it at about 500,000, last year's being 450,000. The same cable which brings this news says that shipments will finish from Almeria in October. Usually the last do not leave that port till November 15th. There are now on the way several steamers bringing a total supply of 60,000 barrels. One cargo is the largest ever loaded at Almeria for the United States. The steamer Pocasset left Almeria October 3d with a total cargo of 24,000 barrels, valued at about $120 000.—*Boston Cultivator.*

THE FIELD.

The Beet-Sugar Industry.

FOURTH PAPER.

Diffusion Process (Continued).

EDITORS PRESS:—Tank No. 4 is now filled and closed; the three times sweetened water is turned into No. 4; the twice sweetened water enters No. 3; the once sweetened water enters No. 2 and hot water enters No. 1. This process continues until the eleventh tank is filled and closed; then the ten times sweetened water is run off through the juice pipes into the measuring tank. The nine times sweetened water is passed to tank No. 10 and thence to tank No. 11; the eight times sweetened water into tank No. 9 and tank No. 10 and so on down to tank No. 2, which now receives hot water and becomes tank No. 1, while the first tank, which has been washed ten times, is discharged of its now exhausted pulp and becomes tank No. 12. From this point on there will be one tank full of juice sent to the measuring tank and one tank of exhausted pulp discharged. During this process the attendant must see that the proper temperature is maintained, which must not exceed 196° F.

The exhausted pulp as discharged from the tanks is either conveyed away from the factory into the field or is run through the drying press, which prepares it for cattle feed.

Composition of the Juice.

The juice of the beet rapidly undergoes a change which confers a dark-brown color. The composition of this liquor by diffusion is approximately as follows: Sugar, 16.5; potash and soda, 0.5; silica, lime and magnesi, 1.113; organic substances, 1.25; water, 81.637; total, 100 parts.

Defecation by Lime and Carbonic Acid Gas.

The impure juice as fast as it fills the measuring tank is now drawn off into the carbonating tanks to be treated until purified. The process adopted is termed double carbonation and has come almost universally in use, and is as follows: As soon as the first carbonating tank has been filled with juice from the measuring tank, milk of lime is added, the juice having first been heated to about 186° F. This temperature is maintained until the albuminous constituents coagulate and the lime and mineral salts unite, forming insoluble compounds with the various acids. As soon as this is accomplished, the excess of lime must be neutralized by the introduction of carbonic acid gas. As soon as the tests show that not more than two thousandths of lime remains, the gas should be shut off; turn on the steam until the temperature rises to 194° F. When this point has been reached, the steam should be turned off and the liquor be sent to the filter presses No. 1 by the pump.

Filter Presses.

These are heavy iron machines containing 30 open and 30 screen frames. The screen frames are covered with heavy sacking suitable for filtering the juice. When the machine is closed and ready for use, the liquor from the carbonating tank is pumped into the open frames and through the sack into the screen frame, where it finds an outlet through a faucet in the bottom of each screen frame. Into the open frame collects all solid matter, lime and all precipitates that have been formed. The partially clear juice is now run into the second carbonators, where it is again treated with lime and carbonic acid gas. It is now pumped from carbonators No. 2 to filter presses No. 2, where it is filtered the second time. The liquor is now run to No. 3 carbonators, where it is treated with carbonic acid gas alone, or when necessary with sulphuric acid gas, for the purpose of eliminating any remaining lime that may still be in the liquor and thence to filter press No. 3. The liquor should now be in almost a pure state, and the experienced eye of the manager can here detect the result of any imperfect operation.

The double carbonation process, simple in practice and easily applied in all cases, is now everywhere general in the beet-sugar industry, though a few adhere to Rousseau's plan. The purification of the juice is effected in two ways. The carbonic acid gas, in uniting with the lime in the midst of the juice, forms carbonate of lime, which on precipitating carries with it a large quantity of organic matter; in fact, the scums of the first carbonation are very dark. The supply of carbonic acid gas is stopped when its further action would redissolve the coloring matters. In the second carbonation the lime boiling destroys the matters which resist the first carbonation. The excess of lime is finally removed by carbonic acid gas or sulphuric acid gas. The carbonic acid gas is obtained from the limekiln. In this way the limekiln serves two purposes, one of burning the lime from which the milk of lime is made, and the other is to furnish carbonic acid gas with which to precipitate the lime as soon as it has served its purpose. The gas is drawn from the top of the limekiln by means of an air-pump, and on its way it is washed and purified by passing through the gas-washer, thence through the pump to the gas-receiver. Care must be taken that too much air is not admitted in and adulterate the gas. To prevent this, the gas should be frequently tested.

B. B. CHANDLER,
Alameda, Cal. Mechanical Engineer.

(To be Continued.)

Field Measuring by Wagon Wheel.

A Dakota correspondent of the *Country Gentleman* gives a record of his practice, which may be useful to some reader:

Having charge of over 4000 acres of land, of which about two-fifths are under plow, I am necessarily obliged each year to do considerable measuring for the different cultivators which are changing more or less annually.

I have a large scrap memorandum book which I always take with me when starting out to measure. My buggy wheel measures exactly 12½ feet in circumference. I tie a white rag on the outer end of a spoke, so I can readily count the wheel's revolutions, driving slowly where the ground is rough and on a trot where the ground is smooth. When another party is interested in my measuring, I take him in and let him do the counting *out loud* while I drive as straight as possible. I usually go through the middle of a piece of ground each way. If the land has irregular sides, I make it, or measure it, in two or more parcels. After getting the number of wheel revolutions, I note them down, as I finish each distance, *immediately* on a rough sketch of a diagram, put right on a leaf in the scrap book with date. Then come home and make the calculations by reducing the 12½ feet to rods, which is quickly and correctly done by multiplying the whole number of wheel revolutions in each distance by 25, then dividing by 33. Having the rods, then multiply lengths by breadths, and I have the square rods which, divided by 160, gives the acres.

HOW TO PILE HARDWOOD.—To know exactly how to pile hardwoods to secure quick results and prevent checks, stains and mold is more of a science, says the *Timberman*, than most people imagine. For instance, oak, ash, hickory and other tough woods must dry very slowly, and therefore when piled must be crossed with very thin sticks, placed closely together, in order to get it to dry as slowly as possible. The softwoods, like basswood, pine and poplar, dry more rapidly, and there is not so much danger of checking. No hardwood pile should be more than six or eight feet wide. The front part of the foundation should be at least two feet from the ground, the back about 18 inches. A space of at least two feet should be left between the piles. Begin the pile by leaving a space between each board, and continue to do so until the top is reached. Place the cross-sticks about four feet apart and directly over each other. Put the sap-boards with the sap down, and on the outside of the pile. Cross-sticks should never be more than three inches wide and thoroughly dry, and the front stick should be placed so as to project about an inch beyond the ends of the lumber. This allows just enough moisture to collect to prevent the stock drying too rapidly on the ends, or faster than other portions of the pile. When a pile is completed, the top should be covered in a substantial manner to protect the lumber from the rain and sun. This covering should project beyond each end of the pile and also over each side.

A MACHINE FOR LAND CLEARING has been devised, which, without the expenditure of great force, accomplishes a vast amount of work in a short space of time, and with a degree of thoroughness hitherto unattained by mechanism for such a purpose, this being due to the peculiar construction of the device, which is in the form of a capstan. Around the drum of the capstan a heavy cable winds, the other end being attached by means of a heavy chain to the object to be removed. This cable is 160 feet in length and by means of a block of special adaptation, any part of it can be hitched, as desired. The shaft which turns the drum is 15 feet in length, and is drawn with entire ease by one horse. Dividing the length of the shaft by half the diameter of the drum, five inches, it gives the multiplying power of the machine as 36, and by means of another block the power of the machine is increased to 72 times that of the horse which turns the shaft.

PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

The Grange as an Educator.

Of the many beauties of the Grange, there is none more worthy of mention than is its educating influence. It opens its doors alike to men and women, and extends a special invitation to the young. Many sons and daughters have not the opportunities of their more favored companions, and what education they get must be got at the district school or by the fireside. Whatever influence can be brought to bear, to encourage and strengthen them should be availed of. The Grange offers such assistance. Here the young can mingle with their elders, learn habits of precision, thoroughness and perseverance, and inculcate ideas of the nobility of their calling. The bashful, uncouth manners can in a great measure be overcome by simple association in the Grange hall. The passing through the official chairs of the Grange will give them a training which will prove invaluable in later life, for many of our legislators, Congressmen and other high officials have been promoted from the farmers' private ranks.

The Grange is not simply a listening exercise, but it is a place for work, a talking school where all are free to have their say upon all questions. Unlike in many other Orders, refinement and culture are not the criterions so much as true worth, and the staid farmer is as quick as his city brother to discover those qualities which stand the test of time and the vicissitudes of life. The true rule or aim of a Granger is to learn the higher cultivation of the soil, perfection in all farm work and operations, as well as the advancement of agriculture, and to furnish the safe foundation for a wise and happy people.

In the Grange experiences may be exchanged and debated, progress advanced and the mental caliber of the members enlarged. Here we carefully develop our highest gifts, and our best qualities will be brought to the surface and utilized for the benefit of the world. Every year the struggle for supremacy among men grows greater. It requires our best energies and capabilities to successfully cope with men schooled in the arts of self-aggrandizement and money-making. The farmer, the most free and independent of men, is being ground under the wheels of oppression because he does not assert his rights. Dark clouds are hanging upon the horizon of his prosperity. His more wily brethren sit like eagles watching their prey, ready to reap the results of his labor and grow fat upon his toil.

Why is this? Simply because he does not think. He must read, study and develop his mind. If knowledge is power, he must have it. Nature, with whom the farmer has to deal, will assist him much; but in order that he may best utilize her assistance he must understand her methods and work in harmony.

The tendency of our popular education is to create a dislike for agriculture and to lead the young to believe that the only place where their education can be of service is in the city—behind the counter or desk, or by following some pursuit where the profits may be large but the means questionable. This is all wrong, and every effort of the Grange and the home circle should be brought to bear to correct the error. Agriculture is the noblest pursuit which man can follow, and we should exert every effort to create a love and respect for the farm.

Stockton Grange.

In spite of the prevailing election excitement Stockton Grange held an interesting meeting last Saturday afternoon, Worthy Master McIntosh presiding. Quite a number of pioneer and leading members of the Grange were present; also Bros. Norton, Assistant Steward of the State Grange, Huffman, Sec'y of the San Joaquin Co. Pomona Grange, Dewey, Sec'y State Grange, Carlisle of Lodi, Sister Huffman, and a number of other visiting Patrons.

The subject of a visitation by Bro. J. H. Hale, Past Master of Connecticut State Grange, was considered, and it was finally voted to hold an open meeting at 1 o'clock in the Grange hall, on Thursday, Nov. 6th, to which all interested in agriculture, farming and horticulture were invited.

Among old pioneers and active members present were Sisters Overhiser, West, Ashley, Root, Beecher, Alling, Merrill, Fairchild, Myers, Bros. Ketchum, Root, Alling and others.

It was a pleasure to see the interest both the old and newer members took in the welfare of the Grange and the Order, and we shall soon look for a large increase in membership of this substantial old Grange.

A SPLENDID SPEAKER.—Past Master Hale of Connecticut is one of the most lively, entertaining and instructive of Grange speakers that has visited our coast. He has a good deal of information in regard to horticulture and other farming interests at his tongue's end, and that our farmers ought to know. Give him a hearty greeting wherever he goes, and when he speaks, use every effort to give him a large attendance.

Yuba City Grange.

Yuba City Grange met at 10 A. M. last Saturday. The first and second degrees were conferred on one young lady, after which the Grange adjourned to the adjoining banquet-room, where a bounteous repast was served. We have heard the praises of Southern California sung till lulled to sleep; of the hospitality of the people and the productiveness of the soil, but we have yet to see a more social, fraternal body than Yuba City Grange, or better fruits than those which loaded these banquet tables. If the principles of our Order are not sufficient attractions, certainly such influences which appeal to the inner man ought to have some effect in increasing the fraternity within our ranks.

After the repast was over, a pleasant program was rendered and we were then favored with a good old-fashioned Connecticut *Hale* storm. Bro. J. H. Hale was there, and we have never seen him in better humor, nor heard him speak more earnest, sensible and encouraging words.

He reviewed his travels during the last month over the Pacific States, and told of the royal reception and the earnestness and zeal he met on every hand. The Grange is one grand brotherhood, and "I am a Granger" is the "open sesame" to the hearts and homes of the tillers of the soil throughout the Union. The Grange has increased more in membership and strength during the last year than in the 12 preceding years. It has become recognized as a powerful factor in our Government. Politicians in the East are catering to the wishes of the Grange for fear the Grange will enter politics, and are willing to indorse whatever candidates that body may name. We must not forget, however, that offices are what we need so much as legislation, and still legislation is not all. It is the farmers themselves that must be improved. Nature has been too kind in the past. She has caused the rich fruits and grains to spring forth, and without care or attention to yield abundantly.

The times are changing. The acreage is but slowly increasing, while the population is doubling itself. Men in other vocations are combining against their fellow-men. Systematic training is everywhere the order of the day, but the farmer, unaccustomed to thoughtful investigation and experiment, is being pushed aside to make room for his brighter brethren.

If the farmer is oppressed and down-trodden, it is his own fault. He must give more attention to systematic, intelligent thought; he must apply himself closer; must discuss more, and must take more papers, for good agricultural papers are as necessary as good teams or good implements. The stock broker, the wheat speculator, and men in business are ever on the alert to learn, and work on strictly business principles. No bank or mercantile establishment could live at all if conducted in the loose, shiftless manner peculiar to the farmer.

The Grange is doing a good work in bettering the condition of the farmer. The best and most prosperous farmers are found within its ranks, and their influence is shed abroad to enlighten their fellow-workers and teach them that advancement can come only through intelligence. The time is coming when the farmer *must* understand his business, and why not learn now?

Let us pay more attention to the social features of the Grange. Our boys and girls are prone to leave the farm for the city, because there is more society there. Make the Grange more attractive; show that it stands head and shoulders above other Orders, because it combines business with fraternity. Let them see that the most perfect home is on the farm.

Bro. Hale then referred to his own humble home. No wealth was there; no beauty or grandeur but that of Nature's own, yet to him it was the loveliest spot on earth. It was home! Beneath the large elm tree was the green lawn, relieved here and there by beds of flowers. Nature's handiwork was everywhere visible, and no one could gaze upon the picture without feeling a reverence for the painter. The costly works of art which decorate the walls of millionaires cannot equal those found on the farm. The one is but an imitation, while the other is Nature herself.

Representatives were present from Wheatland, North Butte and March Granges, and all seemed to enjoy themselves thoroughly. Yuba City Grange will confer the third and fourth degrees upon a class the 15th.

Farmers' Institute.

The idea of Farm Institutes was thoroughly discussed at the recent meeting of the State Grange at Watsonville, and approved. At the meeting of the local Grange last Saturday, a committee was appointed to take the necessary steps to form a Farmers' Institute at Tulare.

The Institute is to be an open organization under the auspices of the Patrons of Husbandry, for the purpose of considering everything of interest in horticulture, viticulture and agriculture in general. It is proposed to form a lecture bureau and have lectures by the best talent procurable. In view of the increasing interest in vineyards and orchards in the neighborhood, and the need of instruction in everything relating thereto, the suggestion is certainly opportune. It is hoped that other organizations and individuals will assist in making successful so praiseworthy an undertaking.

We are not yet fully advised as to all that is contained in the project, but we presume it will be very much what we make it, and we can make it one of the most interesting associations ever formed in Tulare. We are awaiting advices from the State Secretary as to what we should do to start right.

Association is in the air and is feeling its way among the farmers with an interest and inspiration never felt so keenly before. This fact makes the farmer hopeful. The news comes from Georgia of the political success of the Alliance in that State there having elected 163 Alliance members of the next Legislature out of a joint ballot of 219. It is perhaps not the best policy for the Alliance to take a hand in direct politics and put up a ticket of their own, but circumstances may sometimes render such a course necessary. It was deemed advisable in Georgia, and the farmers won. It is time California farmers proved themselves a power. Let Tulare farmers set the example. But, to be successful, association is necessary, and the association need not be essentially political. Whatever is of interest to farmers in the conduct of their business, in the discovery of the best means to accomplish the best results in every department of farming, should be the study of the proposed Farmers' Institute.

Civilization is derived from a word meaning the city. The words pagan and heathen originally meant people in the country, dwellers on the heath, showing that the association of the city gave that polish which received the name of civilization, while the manners of the country, by its necessary isolation, were of course more of a rustic character, or pagan and heathenish. All this is changing. By association, farmers are being brightened, and as associations increase they will command the respect of the present civilization of the city, and put a stop to its laugh at "old hayseeds." Iron sharpeneth iron, so a man sharpeneth the countenance of his friend. So do not let farmers be afraid to meet as often as possible, for every meeting produces a good result, in sharpening our intellect and elevating our manhood.—*Tulare Register, Oct. 24.*

Harvest Feast at Waterloo.

Last Saturday evening, through the kindness of Sister Overhiser, we had the pleasure of attending Waterloo Grange. Meeting evenings, it is probably the most numerously attended Grange in the State, with the exception of Watsonville. A class of some ten brothers and sisters were well instructed in the third and fourth degrees by Worthy Master Keiver. Worthy Masters Shaw of Lodi and Williams of Woodbridge and the Secretary of the State Grange were among the well-cared-for visitors on the occasion.

We never saw more bountifully supplied Harvest Feast tables set in any of our old Granges, and tasteful floral decorations were not wanting. Everything about the meeting passed off in good order and in a manner that would have been creditable to veterans. There were about 200 Patrons and friends who partook of the Harvest Feast.

Past Master Overhiser, the fatherly founder of this remarkable Grange, arrived late in the evening from Tracy, where he had attended a small gathering of West San Joaquin Grange members during the day. His presence and services are highly appreciated by Waterloo Grange. Past Master O. has much cause to be proud of Waterloo Grange, which evidently holds him in good esteem. Nine out of ten of the Patrons of this Grange may be termed young people. They take a great interest in the work and perform their parts in remarkably good taste.

Our able and well-known sister, Mary Merrill of Stockton, often enlivens Waterloo by her presence and inspiring voice. She has an extra interest there, we found, in fact—Bro. Merrill being Secretary. His minutes were faultless and worthy of special commendation.

The Grange now numbers nearly 100 members, and there are hopes of making it 150 strong during the coming year.

We have never seen so young a Grange with so good a start and favorable prospects. We urge close co-operation on the part of its large membership. Stand so close together, brothers and sisters, that no disturbing element will ever enter your ranks, and we believe you will have the satisfaction of claiming the banner Grange for 1891.

Over 550 New and Revived Granges.

EDITORS PRESS:—During the Grange year which ended Sept. 30th, dispensations were issued for new Granges to the number of 377. These were distributed as follows:

California	7	New York	104
Connecticut	12	Ohio	30
Colorado	20	Oregon	10
Indiana	9	Pennsylvania	86
Illinois	26	Rhode Island	3
Michigan	1	Vermont	3
Maine	4	Washington	12
Massachusetts	11	West Virginia	1
Nebraska	21	Wisconsin	2
New Hampshire	13		
New Jersey	2	Total	377

Full returns are not yet in, but I estimate the number of reorganized Granges at over 175, which, with the 377 new Granges, adds about 550 to our list of working Granges. Faithfully yours, JOHN TRIMBLE.

Washington, D. C., Oct. 28th.

Enterprise Grange.

[By Past Master DANIEL FLINT.]

Pomona Grange, No. 2, invited itself to meet with Enterprise on Nov. 1st to exchange the common courtesies of life and indulge in a little social recreation.

Worthy Master Hayes, from Oregon, was at our house on his way to National Grange, and we urged him very hard to go with us to Yuba City on behalf of Enterprise Grange. On account of limited time and numerous engagements made, he thought it not practical to do so at this time, but on his return, if Sister Hayes is able to come to California, he says he may remain a short time with us, and if he can do us any good will be glad to do so.

Mrs. F. and myself express our regrets that we could not accept the cordial invitation of Bro. and Sister Ohleyer to be present at their meeting on Nov. 1st, enjoy their kind hospitality and participate in the enjoyable proceedings of Yuba City Grange. We hope not far in the future to make good our loss.

The country roads are very dusty and rough from want of rain to wet them down, and consequently the throats of man and beast soon become parched and dry. I saw a watering-trough at a mechanical establishment on which was painted in large letters: "Free water, but no beer." There was food for thought; there was a text for a sermon. My horses were for prohibition. They could not sympathize with me; so while they were taking in the cooling draughts I worked the pump-handle and went for the pure stuff at the bottom of the well. As I gazed into that tin cup and thought of the fond recollections of the past and saw the hopvines creeping up the gable end of the building, and just across the road a barley-field, I soliloquized thus: "So near and yet so far."

With a good deal of imagination and some self-denial, I emptied the cup where I thought it would do the least harm, and started off for more dust; and yet—

"The dust we tread shall change
Beneath the summer showers,
To golden grain or mellow fruit,
Or rainbow-tinted flowers."

Worthy Master La Rue of Sacramento Grange was invited to manage the gavel, and after the routine work a sister was instructed in the second degree.

As it frequently occurs on such occasions, I was called upon to act as pioneer or break the ice for others, thereby giving them a starting-point or chance for criticism. After I had made my talk, Bro. A. A. Krull said the subject for discussion to-day was, "What had the Grange done, and what could it best do to improve the condition of the farmer?" Bros. La Rue, Hull, Krull, Rich, Holmes, Simons, Plummer, Jackman, Davis, Wilson, Johnson, and others took part; while several of the sisters stated in an intelligent manner what the Grange had done and the work still before it.

Sister Jackman was in good spirits, and she had prepared and read a play upon the initials of the officers of Pomona Grange. I heard her say something about D. F., the Overseer, but have forgotten whether it was flattering or not. Sister, please send chromo with initials and words attached, so I can investigate.

Some of the brothers gave interesting accounts of shipping fruit, kind, quality and profits.

Bro. La Rue gave us his experience in selling grapes to winery, and also drying the same, cost, profit and methods.

The Pomona Grange is the very place to give and receive information on all farm subjects, and I am glad Bro. La Rue has set such a good example, and let us prepare ourselves to follow. Here is the place to learn of success and failure, and profit by such information.

I congratulate Enterprise Grange on having more young members than I have seen in any Grange for many a day.

What splendid opportunities spread out before them! Will they improve them while their observation is keen, memory retentive, characters plastic, and physical conditions perfect?

One of the gray heads whose pate is well covered said to me as he looked around among the fair young sisters, "I wish I was young again."

The young ladies gave us several pieces of music in a stirring manner, and the one that rang out with such an unselfish request was:

"As we go forth to labor,
And toil within the field,
God bless with us each neighbor
And give a glorious yield."

All ye who respect fat turkeys and love pumpkin pies, are invited to come to Enterprise Grange on Thanksgiving Day.

Temescal Grange.

At the meeting of Temescal Grange, Saturday, Nov. 1st, the sad news of the death of Dr. Strentzel, Master of Alhambra Grange, was announced and many feeling words of sorrow and sympathy were spoken by members. On motion a memorial committee was appointed by the Worthy Master consisting of Brothers J. G. Lemmon and A. T. Dewey and Sister Nettie Jones to present resolutions for action of the Grange at its next meeting.

FLORIST AND GARDENER.

The Los Angeles Chrysanthemum Fair.

[Written for the RURAL PRESS by CLARA S. BROWN.]

The Second Annual Chrysanthemum Fair opened at Los Angeles on Wednesday evening, Oct. 29th, continuing until Nov. 7th. It is under the auspices of the ladies connected with the Simpson M. E. Church, and the proceeds will be used to purchase a pipe organ for the church. The fair, however, is such a pleasurable education to the public that no denominational feeling is anywhere manifest.

The new Armory Hall, over the market on Broadway, is 90x150 feet in dimensions, with a gallery extending along two sides. This ample room is so completely filled with plants and booths that, if a display of curios had been made like that of last year, it would not have been possible to find a place for everything. The exhibit of chrysanthemums is far superior to that of the first fair, and it is much better arranged. Two Japanese gardeners have been employed in this city since last spring in bringing the "Queen of Autumn," or "Flower of Gold" (as it is called in Japan) to perfection of growth and bloom. Our local florists have taken unusual interest in the flower, and have many varieties on hand. In addition, the managers of the fair sent to all the Eastern breeders for their choicest specimens, and received from them all that they thought worth anything.

Judge Widney tells an amusing story of the anger and disgust shown by the Japanese gardeners when these Eastern plants arrived, each one carefully labeled with its American name. The labels were torn off and thrown in a heap, while the gardeners ejaculated "no good," "no good." They then set to work and applied to each plant its true native name, to which has been added the translation, so that a visitor to the fair may find on each tag both the Japanese and English version. This is an important change in nomenclature; probably nowhere in America are chrysanthemums to be seen so correctly classified as these.

As an illustration I will cite the famous Mrs. Alpheus Hardy. This magnificent white chrysanthemum was sent to Mrs. Hardy, a Boston lady, by a missionary friend of hers in Japan. She disposed of it to a florist, who sold it to another florist for $1500, and the possessors of the plant in two years made a profit of $50,000 from it. Its true name is said to be Mikado's Palace. Other specially fine varieties are the Mikado, Sunrise, Moon in the Window, Light of the Moon, Heavenly Beauty, Yellow River, Abundance, Prosperity, The Bridegroom, A Thousand Sparks, Eye of a Snake, Talons of an Eagle, Hand of a Devil, Firewindow, Anasoma (a city in Japan), Flying Crane, Beauty of Castlewood, Crystal and One Voice. There are about 7500 plants on exhibition, comprising 700 varieties.

The most striking floral design in the hall is a full-rigged ship, 20 feet long, sent in by the Redondo Beach Company. It stands in a sea of green mosses, bordered with out flowers. The rigging is entwined with smilax, the hull is decked with ivy and gorgeous blossoms, and the tall masts are covered with beautiful chrysanthemums, their colors tastefully blended. A silken cable moors the graceful vessel to the most resplendent wharf ever seen—a mass of brightest bloom. Along one side of the wharf extends a railway upon which stands a train of freight cars decorated with flowers and ivy. The whole forms a very good facsimile of what may be seen any day at Redondo, in more substantial material, and excites much admiration.

The Raymond Nursery Co. of Pasadena makes a large exhibit. The display of the Oriental nursery, Los Angeles, is also notable. The potted plants are arranged in rectangles and diamonds throughout the hall, crowded close in order that the throng of evening promenaders may have room to pass between the beds. A shelf along the base of the balcony railing is filled with the smaller plants in bloom. Along the front of the stage, terraces rise from the floor in which cut blossoms are massed in exquisite shading.

On the right of the stage is the Japanese booth, with roof of Nile green and white, hung with Chinese lanterns and furnished in Japanese style. One of the young lady attendants has lived in Japan. On the other side of the stage there is a two-story pagoda covered with evergreens. Lemonade, soda, candy, etc., are dispensed in pretty booths, and there is a tasteful booth devoted to the press, in charge of Mrs. Mary E. Hart, editor and proprietor of the *Pacific Monthly*. The Woman's Exchange has for sale a considerable amount of fancy-work.

At the opening, Mayor Hazard, members of the Council and Board of Education, Superior Court judges and other distinguished persons were present and addressed the audience. An orchestra provides music each afternoon and evening, and there is a varied program of readings, calisthenics, singing, etc. The attendance is not large through the day, but is excellent in the evening. At this writing, one cannot form an estimate of the cash that will be taken in, but the indications are that a handsome sum will be realized for the organ fund. The ladies serve hot refreshments every day from 12 to 2 o'clock, and a large ice-cream room is well patronized in the evening.

San Diego's Chrysanthemum Fair.

EDITORS PRESS:—Nature with her wealth of flowers, and women with hearts of pity and benevolence, co-operate to relieve the distresses of humanity in the most pleasing and effectual way. The noble women of San Diego are in no degree behind their sisters in older cities in their zeal and helpfulness. An incorporated association, known as the Flower Festival Association, composed of the cream of San Diego's women, gives two exhibits each year, in April and October; at the former, roses are the leading feature, and at the autumnal exhibit, chrysanthemums. The proceeds are equally divided between the Woman's Home, Woman's Exchange and Day Nursery.

The Chrysanthemum Fair just closed was a charming entertainment, though not as well attended as it should have been, owing to the nearness of election and nightly campaign meetings. The successful candidates, in view of detracting from the attendance, may be moved, in the flush of victory, to contribute handsomely to the fair treasury, for no worthier object could receive their recognition on assuming the duties of office. Do taxpayers and public officials realize the vast sums saved from the public funds by the incessant work of women? It might be a profitable subject for leisurely reflection.

On entering Loomis' hall, the attention was arrested by the charming effect of various booths of bamboo, furnished with Japanese chairs, matting, fans, tea service, ornaments and flowers, presided over by pretty young ladies in Japanese costumes; the artistic display of chrysanthemums of every color known to the flower; the flood of electric light revealing the minutest object, and the whole enlivened by music. It represented months of work, weeks of planning and days of arranging. Those who planned and worked months ago executed their plans, untiring, uncomplaining.

Two immense bouquets, presented to Col. and Mrs. Markham, grown at the Coronado gardens, too massive to be taken away and too beautiful to wither in a railway car, were placed on exhibition near the entrance. Directly in front was a semi-circular table covered with choice specimens. In the center of the hall, a Japanese pagoda divided into eight compartments, each peculiar in itself and presided over by ladies of the association. Chinese, Japanese, Mexican and Indian curiosities, potted plants, cut flowers, stationery and toys were fancifully arranged on the matted counters. At the rear of the building, two florists, Miss Kate Sessions and Mr. Bernard, had model displays of flowers and tropical plants, representing a practical arrangement of chrysanthemum beds.

Miss Sessions, formerly of Oakland, is a most untiring worker in her chosen field, and a constant inspiration to other young women who have a taste for floriculture. She has 140 varieties of chrysanthemums and is each year developing new ones. This year she has a dozen new seedlings from seed sent to a friend by a missionary at Japan. The finest, and by many considered one of the very prettiest of this large family, is named in honor of the donor, Nellie Allchin. It is very large and full and a deep pink color. Another choice bloomer, from the same lot, bears the name of Chula Vista.

Of course the ladies are happy in the possession of the Ada Spaulding, the elegant chrysanthemum that won the National prize at Indianapolis. Other beauties, old and new—Mrs. Alpheus Hardy, both white and lavender; Leopard, pink and white, spotted; Kioto, a vivid yellow and exquisite shape; Mrs. Wheeler, Crown Prince, E. G. Hill and Advance, are admirable representatives of the 210 varieties counted in making a tour of the exhibition hall. A collection of very fine potted plants, raised by Oakland Japanese, attracted merited attention. Surmounting this gorgeous display from the floral kingdom, in evergreen letters, was the appropriate legend, "Woman's Work for Woman." The fair was in session five days, was more satisfactorily arranged and conducted than any previous one, but at this writing the proceeds above expenses are not announced. The officers of the association are already making arrangements for a rose festival in April.

National City. FLORA M. KIMBALL.

STATISTICS OF IRRIGATION.—The subject of irrigation has been made a matter of special investigation in the Division of Agriculture of the Eleventh Census. It is estimated that upward of two-fifths of the acreage of the United States need irrigation. The total number of acres now irrigated, together with the quantities and varieties of crops grown under the system, will be shown. The melting snows of the mountains and the rivers that heretofore ran free will more and more be utilized and led over the great plains, causing them to become fruitful and to afford happy homes for millions yet to come.

SOUTHDOWN BREEDERS.—A meeting of the American Southdown Association will be held on Tuesday, Nov. 18, 1890, at 7:30 P. M., in the Sherman House, Chicago, Ill. As this meeting will occur during the second week of the American Fat-Stock Show, a full attendance is expected. To those who cannot attend, the usual invitation is given to present by letter to the secretary any suggestions they may have to make for the good of the association.—S. E. PRATHER, Sec'y, *Springfield, Ill.*

Notes on the Fairs.

Escondido—22d District.

The 22d District Agricultural Association's Fair, held at Escondido, Sept. 30th to Oct. 3d, presented, according to the *Union* correspondent, "the most complete and perfect exhibit of horticultural and agricultural products ever seen in the county" of San Diego.

The Cuyamaca Horticultural Society had by far the largest display. This district won the banner last year and intends to hold it against all comers. Chester Gunn of "Willow Glen" ranch, near Julian, showed the largest individual exhibit, with 15 varieties of apples, 7 of plums, 3 of peaches, 7 of pears and a large array of fruit in glasses, and won first premium for best displays of northern fruits, of apples and of prunes.

Maurice Riedy of Escondido was conceded to have the next best showing of northern fruits, including apples, Kelsey plums, white heart cling and Heath cling peaches and Muscat grapes, and was also awarded first prize for his display of dried fruit, the Escondido Canning and Packing Co. being second.

Even beside Cuyamaca's, Poway made no mean show, occupying the whole north side of the east wing with its many excellent exhibits. Elsinore, Escondido, Bear Valley and Twin Oaks were also among the districts that contributed largely.

In the long list of awards on special varieties of green fruit, O. S. Chapin of Poway (apples and pears), Mrs. A. Reed of Wynola (apples and prunes), James Duffy of Julian, Z. Quincy of Ballena and D. M. Breedlove of Bear Valley (peaches), are named with most frequency.

Major Merriam of Twin Oaks had a remarkable collection of green fruit, including apples, pears, peaches, figs, quinces of various kinds, and 42 varieties of grapes. He also had comb and extracted honey, squashes, etc.

Charles Calloway of Escondido showed Navel, Malta Blood and Mediterranean Sweet oranges and Eureka lemons.

Mrs. S. P. Abells of Escondido made a particularly fine display of fruit in glass, including apricots, grapes, pears, plums, peaches, nectarines, figs, quinces, cherries and blackberries; also, roses in bloom.

D. H. Smith of Agua Tibia "took the cake" on Vicar of Winkfield pears, bellflower apples, Lisbon lemons, Jap. persimmons, black figs, pecans, English walnuts and best 5 lbs. of raisins; though Mrs. C. C. Watson of Poway was adjudged to have the best display of raisins and best box of Sultanas.

As to grain and vegetables—the bare enumeration of awards for wheat, rye, barley, corn, beans, beets, potatoes, onions, cabbages, pumpkins, peppers, melons, tomatoes, etc., is too much for us. And then there was B. F. Dixon's "best collection of nursery stock," Mr. Betten's ornamental shrubbery, and premium citrus stock from the Sweetwater Nursery.

When it came to live-stock, there were 48 stalls of race-horses, with roadsters, draft and saddle horses, mules, Guernsey, Jersey and Holstein cattle, and a few choice ducks and chickens.

At the formal opening, on the second day, Pres. Steadman, after making a brief address, introduced J. N. Turrentine, who spoke at some length upon the prospects of the county and of the Escondido valley in particular, and bade all welcome to the fair. Afterward F. A. Kimball, Col. Jno. Kastle and Geo. N. Nolan spoke, the latter on the subject of sending an exhibit to Chicago, which proposition was received with favor.

One of the most attractive events of the week was the public drill of the Poway Equestrian Club, numbering 12 couple of young women and men under the leadership of Captain Thatcher, who were presented with a fine American flag from the citizens of Escondido.

Napa—25th District

The fair for the 25th Agricultural District, embracing the counties of Solano and Napa, was one of the earliest in this year's circuit, having come off at Napa Aug. 19th to 23d. Our matter relating to it, however, was mislaid; yet we prefer to print an account even at this late day, rather than allow so important an occurrence to go all unchronicled in the RURAL PRESS.

The weather was fine, and the attendance at the race-track was (according to the Napa *Register*) the largest ever present on an opening day. The entries of live-stock and poultry were uncommonly numerous, and the stock parade strung out to over a mile in length.

Among the chief prize-winners were the following:

M. C. Alexander, Napa—Poland-China sow, 6 mos old; do, boar.

S. Buford, Napa—Gentleman's roadster to harness.

F. L. Coombs, Napa—Standard stallion, 2 yrs old.

Capt. Drake, Vallejo—Mare general purposes, 3 yrs.

C. Edgar, Vallejo—Gelding to saddle.

T. B. Edington, Oakville, stallion roadster, 3 yrs old; stallion and five colts.

Wm. Emrie—Shorthorn bull, cow and calf; Jersey and Hereford cows; Emden geese, Pekin ducks, Bantam fowls.

Frisbie Bros. & Baily, Napa Junction—Polled Angus cattle.

Mrs. W. H. Gibbs, Yountville (special)—Jersey cow and twin calves; Jersey cow, 3 yrs old.

J. W. Grigsby, Napa—Best Holstein bull, 3 yrs; graded cow, 1 yr old; draft mare, 4 yrs or ov
Plymouth chicks; breeding pen Leghorn fowls.

R. G. Head—Best standard stallion, 1 yr old; best general-purpose mares, 3-yr-old and 1-yr-old; bronze turkeys; light Brahma, Cochin, Wyandotte, black Spanish, white, brown and black Leghorn chickens, and Rouen ducks.

B. C. Holly, Vallejo—Best standard mares, 2 yrs & 4 yrs or over; mare and colt; standard stallion, 3 yrs; thoro'bred mare, 4 yrs; suckling colt.

R. D. Hunt, Napa—Stallion general purposes, 3 yrs; carriage team to pole.

J. Jepsen, best standard mare, 3-yr.

F. W. Loeber, St. Helena—Standard stallion, 4 yrs or over; standard stallion and 5 colts.

J. M. Mansfield, Napa—General-purposes mare; mare and colt, and mare and 3 colts; Shorthorn cow, 1 yr old.

Mrs. A. McFarland, Napa — Roadster mare, 3 yrs old.

E. McLees, Vallejo—Roadster stallion, 2-yr-old; roadster mare and suckling colt.

D. McVicker, best stallion roadster and best gelding to buggy, carriage, saddle, etc.

Harry C. Melone, team of ponies to pole.

I. Metcalf, Napa—Pony to harness; roadster mare, 4 yrs old.

C. Oesch, St. Helena—Draft stallion general purposes, 2 yrs old.

C. Reams, Suisun—Standard stallion with 5 colts.

R. Reed, Napa, saddle pony.

Chas. Scott, Napa—Shorthorn cow; roadster draft stallion; draft mare and suckling colt; draft mare 3 yrs old; stallion and 5 colts.

P. Sheppa, Batavia—Poland China and Berkshire sows; Shropshire buck; Toulouse geese.

R. Farran, Calistoga—draft stallion 2 yrs old.

Mrs. Silas Skinner, Napa—Best standard mare and family; draft mare, 4 yrs or over; draft stallion, 1 yr old.

F. H. Smythe, Lake Co. (special), stallion roadster, 4 yrs.

Mrs. I. A. Starr, Vallejo—Holstein bulls, 2 yrs, & b. calf; cow, 3 yrs; heifer, under 1 yr; Jersey bull, 3 yrs; cow, 3 yrs, & Jersey heifer, under 1 yr; Poland China sow and 8 pigs; ewes & rams, Oxford.

J. Stephens, Napa—Brown Leghorn and Plymouth Rock fowls.

F. Varty, Napa—Draft filly, 2 yrs.

G. W. Watson, Napa Junction—Draft mare with 3 colts; Poland China boar.

Of the awards made for exhibits at the pavilion, the most interesting to farmers and fruit-growers were as follows:

C. C. Agie, special on peaches.

H. R. Borrette, best coll. fruit 1 orchard; sun-dried apples, peaches, plums, seeded plums, grapes, apricots, canned fruit.

E. C. Briggs, best butter (divided with McFarland).

H. W. Crabb, many premiums on wines, brandies and cordials.

M. L. Durbin, Suisun—Best single variety pears, single var. prunes, coll. oranges, exh. wine grapes 1 vineyard; best display agricultural products of Solano county.

T. H. Epley, best quinces, sun-dried fruit, sun-dried apples, prunes.

A. V. Evans, Atlas Peak—Best sack rye, sheaf barley, sheaf black oats, 10 ears of corn, corn on stalk, single var. apples, var. nectarines, rutabagas.

Wm. Imrie, best 2 sks. wheat, Chili club; best sheaf wheat.

Chas. Krug, St. Helena, several prizes for wines.

Mrs. A. McFarland, best butter (divided with Briggs).

Mrs. R. E. F. Moore, best onions, exh. apples, exh. pears, prunes, almonds, catsup, honey in comb, honey strained.

James Reames, Suisun, special on bitter almonds; 3 var. prunes; best var. apples.

J. N. Reynolds, 2d best coll. fruit from 1 orchard; exh. plums; exh. figs, White Smyrna; exh. melons banana-musk.

Paul Sheppa, exh. table grapes.

Johnny Stevens, coll. lemons.

Lilian Stockmon, Napa, Crawford peaches.

Mrs. J. M. Thompson, coll. potatoes; single potatoes.

G. W. Watson, sk. wheat; sk. barley.

Sorghum Syrup.

The production of sorghum syrup is evidently increasing in this State, and success is being attained with it in widely separated regions. We alluded recently to a good sample from Butte county, and now Mr. James Linforth shows us a sample sent him by B. L. Musseter of Chino, San Bernardino county, which is exceptionally of good color and flavor, and commends itself to all those who have a sweet tooth in their heads. Mr. Musseter has made over 200 gallons and may get out 600 or 800 gallons more if the cane and the weather hold favorable. He uses the Victor mill and Cooke evaporating pan, manufactured by the Blymyer Company, for which Mr. James Linforth is the agent.

A Young Man from Illinois.

Dewey & Co.—GENTS: Inclosed please find remittance for a year's subscription to the PACIFIC RURAL PRESS and a copy of "California Fruits and How to Grow Them."

I am a young man lately from Illinois and have come to help build up this wonderful State. I am located in one of the prettiest valleys of California. The PACIFIC RURAL PRESS is the best farmers' paper I have seen on this coast, and as good as I have seen anywhere. Yours truly, B. L. H.

THE OUTLAWED LOTTERY.—Attorney-General Miller has sent a circular letter to all the United States attorneys, calling attention to the new Lottery law, with a suggestion that they spare no effort in its enforcement. Similar instructions are sent to the United States Marshals.

A Dewdrop's Adventures.

[Written for the RURAL PRESS by DAGMAR MARIAGER.]

I was a dewdrop high within a cloud,
And I was beautiful, as well as proud;
I wished to fall upon a flow'r or tree,
But I was doomed to fall into the sea.

"Oh! oh!" I cried, when I this truth did spy,
"No dewdrop is more wretched than am I;
To do some good in life was my desire,
Yet here I fall, and shall at once expire.

"O my poor heart its hope did fondly cherish,
Not knowing we should all so quickly perish;
My hope is flown and lost, and I—oh, I
May grieve a moment only; then I die!"

Thus I wailed, while wav'ring, as I fell
Into my grave, the great wide ocean's swell;
And, falling low'r, the coast range did shrink back
In mockery, or in terror from my track.

A porpoise sporting 'mong the waves, I saw;
And I, in bitter jealousy and awe,
Gazed on the jewels that its tail did toss
In heedless gayety, my path across.

Then plump I fell amid the sparkling spray,
And with my plastic body then did play
The rocking brine, and gold and silver rain
Fell all around me on an open plain.

At first I looked up tearfully, in thought
That my existence to an end was brought;
But when I found that I was yet unharmed,
I looked again, and I was deeply charmed.

The panorama all around me lay
In verdant beauty, and with rich display
Of still and moving things, among the trees
And feath'ry plants that waved, as by a breeze.

While thus my eye was drinking in delight,
Another picture dawned upon my sight;
The roving natives of the briny deep,
I learn'd, were not 'mong coral caves asleep.

In a promiscuous circle, to astound
The oldest ocean diver to be found,
They gather'd 'round me, ask'd wherefrom I came;
What was my mission and what was my name.

'Tis true, theirs was the same aquatic speech
That all submarine pedagogues do teach
The young aspirants, in their many parts—
Gymnastic, pantomime, and other arts.

They gaped and star'd at me, and some did smile;
Some grinn'd and rolled their eyes, and all the while
Some gapes grew large and small, with a sublime
Solemnity, while all their fins kept time.

Thus while I slowly, very slowly sank,
I left the round, the horny, short and lank,
'Mong the menagerie high o'er my head,
And nearer drew unto the ocean's bed.

"O this is fairyland!" I cried with pleasure,
"Here's great variety, a mint of treasure—
Plants, flow'rs, and goblin things upon the sands;
All shapes and hues, and some with magic wands.

"In higher altitudes cannot be seen
A garden half so fair as this, I ween;
And I am glad I fell into the sea,
As I'm a dewdrop happy as can be."

An oyster's casket sat upon a rock;
In this I fell, and scarcely felt the shock;
And down I nestled for a sleep and rest,
In my exceeding soft and cosy nest.

And there I slept for weeks and months and years,
A dreamless sleep, shorn of all joys and fears—
A Rip Van Winkle from existence hurled,
To wake and live again within the world.

One day I 'woke, and I was in affright,
Feeling my casket torn away with might;
We moved and moved, and then a man, Tom Peck,
Cast us with others on a vessel's deck.

Just think how I was doubly horrified,
Finding my plastic body petrified—
A bluish, milky luster rich did furl
My form, as I had chang'd into a pearl.

I've suffer'd much in hardship since that day,
But now, at last, all horrors stand at bay,
Since Robert placed me on a finger white,
His and his lady's love to there unite.

Santa Barbara.

The Little Exile.

Poor little Maggie, with both elbows on the window-sill and her face held tight between her hands, looked out on a dreary picture before her, her heart within as cheerless as the world without. A November day was drawing to a close, and the leaden sky, which had looked so threatening since early morning, gave vent to its feelings as night was coming on by a real downpour. It brought none of the sweet, refreshing influence of a summer rain, which makes every leaf and blade of grass take on new beauty; it was simply desolation. The rain beat against the windows, and the wind blew just hard enough to snatch off the few remaining leaves from the bare branches of the old apple trees which stood close to the house. Maggie watched the little stream by the roadside, which was every moment growing larger and larger, and she followed, until they disappeared in the distance, the little twigs and dead leaves that were carried on by the swift current, wondering how they liked to sail away on a hap-hazard journey.

"Oh dear!" sighed the little girl, "why is everything so hard for me?" and her eyes filled as she thought of her dear mamma, who had left her only a few months ago and who could always bring sunlight into the dreariest day. A flood of memories swept over Maggie, almost bringing a sense of comfort with them. She thought of one May day, long passed, when these same apples trees were in blossom, and the soft spring air was full of sweet perfume, how lovingly her mother led her to the open window, saying: "See, Maggie, how these beautiful branches are reaching up to you, as if they were trying to take you and your whole little room right into their arms; but I shall not let them have you!" and Maggie remembered how her mother clasped her in her own arms with the merriest laugh and the brightest look in her dear eyes, as if nothing could rob her of her little daughter.

And then she recalled another scene, one of those last days when she sat quietly by her mother's side and held in her own warm little grasp the white, thin hand whose hold on life was so very feeble.

"Dear child," the mother said," you are now nearly twelve years old, and you must be your papa's brave little woman and a little mamma to Chubbie. Your papa has to work hard, and he gets very tired, but have everything bright for him when he comes from his work at night; and I know you will try to take good care of your little brother and be patient and kind to him always."

Maggie, at the time, could answer only by pressing more tightly the hand she clasped; but now she sobbed almost aloud, "O mamma, I will, I will!"

This being patient was a lesson that Maggie had not yet learned. She had loving impulses, but every-day self-denial was a path too hard and steep for her to tread. Sometimes it seemed more difficult for her to rise from a chair in which she was sitting comfortably than to do some act of self-sacrifice which her father justly praised as heroic.

Only that very day, as she sat alone and lonely in her own room, the door had opened and Chubbie's happy face had peeped in and the merry little voice had called out:

"O Maggie! *do* come and play stage coach wif me. You can be driver if you will."

Maggie did not feel like playing with him. She was not happy, and did not know the surest way to make herself so, and so she had answered rather pettishly:

"I don't want to play stage-coach. Run away now and shut the door."

"But Maggie," and all the sunshine was gone from his face, "I don't fink you're very kind. I fink you're mean. The next time you play wif me, I'll make the horses run away wif you, I will," and off had scampered the little fellow with a menacing scowl.

And now, only to deepen Maggie's gloom, all this was remembered, too, and she started to her feet and thought, "I will not think of myself any more; I will make Chubbie happy, if I can."

As if anticipating this sudden good resolution on Maggie's part, at this very moment the door opened again, and Chubbie called out:

"O Maggie! you must come and see my coach. I made it all myself," and then as he looked up at the somewhat tear-stained face, he added:

"Seems to me you look a little drizzly."

"Well, Chubbie," was the smiling reply, "I have been a little 'drizzly,' but I feel better now, so come and show me the coach;" and with a fervent kiss Maggie led her little brother downstairs.

Such a dear little boy he was! Although he was so small and fat for his five years that he hardly looked as old as that, his papa had yielded to his constant entreaties for "grown-up trousers" and had just bought him his first little suit of clothes. With his round, rosy face, his bright eyes and his radiant smile, which lighted up his whole face whenever he spoke, he looked like the happiest little Tom Thumb that could possibly be found.

As the two drew near to the library door, where the grand surprise was to be seen, Chubbie suddenly said:

"Now, Maggie, shut your eyes. Don't peek till I say one, two, free!"

"No, Chubbie, I won't peep; but don't let me bump into anything," said Maggie, as she closed her eyes tightly and cautiously extended her hand to protect herself from running against the door.

"Oh dear, it's just lovely, and you'll laugh yourself to pieces when you see it," cried Chubbie, with ringing voice, as he opened the library door and led his big sister into the room where his masterpiece stood.

"One, two, free!" called out the little voice tremulous with excitement, and Maggie looked. One glance of astonishment and then she exclaimed:

"Chubbie, you naughty, naughty boy! Oh, my new coat, and papa's hat, and those fans that came from South America, and all those books, and the *ink!* Oh, how could you be such a bad, bad boy!"

Maggie's voice shook with excitement as she gazed at the scene before her. Her father's library table was the foundation of the coach, and all the books and papers, which no one was allowed to touch, were pushed off on the floor, where they lay in the greatest confusion. On the table were perched two chairs, and on one of them sat the driver, which Chubbie had made himself by stuffing Maggie's new coat with a pillow, the sleeve of which had evidently been used to wipe up some ink which had been spilled in clearing the table. On the top of the pillow Chubbie had succeeded in balancing his papa's new silk hat, now all crushed out of shape. The two chairs, which were horses, were harnessed with his own reins, and the two beautiful peacock-feather fans, which had been a choice possession in the family for years, had been pinned on to the chairs for the horses' tails at the sacrifice of most of the feathers.

"Why, Maggie, don't you like it?" and some of the light died out of the upturned face. "*I* fink it is splendid. It's no matter 'bout papa's hat, for it wasn't a very strong one. I stood on it to get the fans and it all squashed."

"Like it!" exclaimed Maggie, with indignation. "You knew you were a naughty boy, and you deserve to be sent right out of town for doing so much mischief. I won't touch a thing until papa comes, but will just leave you to think of what you have done;" and with this outburst she turned and left the little culprit to his own thoughts.

Chubbie stood as if he were petrified for a moment, and then he broke out again, quite to himself:

"I fought Maggie would be pleased; but she is only a girl and doesn't know about coaches. I fink she is cross and mean," and the blue eyes flashed. "She said I ought to be druv out of town, and I'll just go and find some one to take care of me who likes horses wiz fezzer tails, and boys who can make real drivers."

Chubbie was determined, and with all his soul in the work he immediately made all his preparations to leave town. Out of the library and up to his own tiny room the little fat legs trotted, and then there came a pause for reflection.

"I must take some clothes to wear, for it may be a long travel out of dis big town;" and Chubbie took from his closet the stout nutting-bag which Maggie had made for him when they went nutting a few weeks before and which would now serve as a valise. Into this deep bag went the red jacket with brass buttons which Chubbie called his "soldier coat," his box of necktles and his little empty purse. Then followed his few treasured books, a broken whip, his old doll "Plato," which had been to him a confidential friend during most of his short life, a box of pebbles he had carefully collected and his tin soldiers. Chubbie gave the bag a good shake, and seeing that there was still room for something more, gave one last look over his possessions to see if anything important was left behind.

"O Billy! did you fink I *could* forget *you?*" he cried, as he saw his poor old battered horse standing in the corner as well as his three legs would allow him. "You're pretty big for me to carry, but I could never, never leave you here all alone;" and in an instant Billy's head was thrust in the bag, but alas! his body was too big to follow. Repeated jerks and pushing did no good, and the little master saw that his faithful old horse must stay behind.

"Never mind, Billy," and the fat little arms pressed the old horse close to his loving heart with great tenderness; "be a good horsie, and I'll come back to you some day when I'm a big man. I'm not good enough for dis house. I'm druv out of town; but we're good friends, Billy, aren't we?" and Chubbie pressed a farewell kiss on old Billy's head.

"I guess I have everyfing I need now," he added, and then he put on his new red cap and stout little overcoat. Just as he was ready to sling his pack over his back like a miniature Santa Claus, he spied some gloves of his father's on the table just outside of his door.

"P'raps I'd better wear dese," he said, as he drew them on his fat hands, leaving the fingers to hang in limp helplessness. "People might fink it queer just to see a little boy go out of town, but now I look like a big man!"

Softly down the stairs the little fellow crept, with his burden over his shoulder, and quietly opened the front door, and with good courage stepped forth into the fast gathering darkness of that bleak November day.

Maggie, in the meantime, had gone back to her room, her heart full of indignation toward Chubbie for being such a mischief maker.

"There is no use in trying to do anything with boys; they are too bad, and then, just as I was trying to make him happy, to have him act so!" were poor Maggie's incoherent thoughts. "Well, it will do him good to stay alone until papa comes home, and I will get a breath of air by going for the mail, even if it does rain."

Maggie glanced out of the window and convinced herself that it was not raining very hard; and then she made herself secure against the storm with heavy wraps and an umbrella, and started out to get the letters which she knew her papa would like to find, with his dressing-gown and slippers, when he came home tired that night. She had gone but a few steps before the chill of the evening air made her feel that she had not been wise to venture out from home when it was so bleak and dreary; but the thought that her father's route home from his business was not in the direction of the office, and that if she pressed on she would save his coming out later, gave her fresh courage to continue on her way. As the wind blew a little stronger, Maggie quickened her pace, and noticed that the rain was beginning to turn into snow.

There were not many people on the street in the little village at this hour. A few men hurried by, eagerly seeking the warmth of their own firesides; and more than once Maggie almost decided to turn back as she saw the deserted street now growing white under the fast-falling snow; but still on she went, hardly thinking of herself.

"Oh dear!" she exclaimed, shivering; "think of the poor people who have no shelter to-night! Think of the little children who will be cold!" and a vision of her naughty Chubbie rose before her mind, warm and safe in his own cheerful home.

"Dear little Chubbie," she thought; "perhaps he did not mean to be so naughty. Anyway, I was not one bit like mamma to him; and if she saw me, I know she is sorry I forgot my promise."

At this very moment, Maggie glanced across the street and saw through the gloom a tiny figure walking wearily along, carrying what seemed a heavy burden.

"Some poor little boy," she thought, "struggling to find his way home."

Her heart was touched, as she went on her way, and then all at once she stood still. That little trudging fellow suggested her own Chubbie so much that she exclaimed: "Oh, let me do for that child what I should want some one to do for my little brother if he were out to-night."

She turned back and flew across the street with outstretched hands, crying: "Come, little boy, and I will take you home. Who are you?"

Scarcely above a whisper a little voice answered, with a tone which pierced Maggie to the soul, "I'm Chubbie—I'm bad—I want my mamma." And right at her feet through sheer exhaustion fell little Chubbie, still clinging to his dearest treasures.

Poor Maggie bent over the little form with fast-beating heart and gathered her little brother in her arms, crying: "O Chubbie, forgive your sister! *Here* is Maggie to take you home."

That night, as Maggie stood beside the little bed where Chubbie was quietly sleeping, and thought how near she had come to losing her hold of that dimpled hand forever, she felt that at last she had learned a lesson which could never be forgotten. She bent over the tired little form and kissed his soft cheek and whispered—she hardly knew what, but it was something about "bless thy little lamb to-night."—*E. Linden in Independent.*

WHAT IS A GREENBACK?—A "greenback" is a statement engraved and printed in the similitude of a bank note that "the United States will pay to the bearer —— dollars." It bears on its face the engraved signatures of the register and treasurer of the United States, a memorandum that it is issued under the Act of March 3, 1863, and that it is a legal tender for —— dollars. A facsimile of the treasury seal is printed upon it in red ink, and by a separate impression. In an open space on the back is a statement that "this note is a legal tender at its face value for all debts, public or private, except duties on imports and interest on the public debt," with a note of the punishment denounced against its counterfeiting or alteration. Originally it bore a certificate of its right to be converted into bonds of the United States bearing interest at the rate of six per cent per annum. The right was withdrawn by Act of March 3, 1863, as to all notes not presented for exchange before the first day of June in that year. The greenback, then, is the naked promise of the United States to pay the bearer a certain number of dollars, unsecured except by the national credit, without date or time of payment, which, for all ordinary purposes, is money, equal to the gold and silver coins authorized by law.—*Harper's Bazar.*

"JIM" FISK'S MONUMENT.—In the cemetery of Brattleboro, Vt., located upon a hill overlooking the town, we came unexpectedly upon the monument of "Jim" Fisk, the financial hero of Black Friday. It is an imposing and beautiful structure of white granite from the quarries of Dummerston, a little way up the river, and was erected by his widow at a cost of nearly $200,000. It consists of a shaft mounted upon a square base at the four corners of which are life-size figures of Commerce, Finance, Banking and Railroading, all charmingly conceived and admirably executed. Esthetically considered, it is a rare and beautiful piece of work, but what a commentary upon the truthfulness of monumental fame!—*American Magazine.*

HE WANTED THE STATEMENT MODIFIED.—A thin, nervous-looking man stepped up to the pastor as the latter came down from the pulpit. "You have had a good deal to say this morning," he observed, "about a feller that killed a man named Abel." "Certainly," replied the pastor. "'The Sin of Cain' was the subject of my discourse." "I wish't you'd do me the favor, next Sunday," said the thin man in some excitement, "to tell the folks that the man you was talking about this morning ain't no relation to the Kane that keeps a livery stable down by the grist-mill. I don't want none of my friends to think that I had a hand in that killin'. That's all. Good day."—*Chicago Tribune.*

Let Her Follow Her Bent.

The end of woman is to marry and raise up a family. She starts out in this direction when she carries a doll in childhood. Your girl who leaves home and goes out for herself does so because she has failed to find the man she wants to marry. By and by she does find him, and when she does she drops everything and goes with him. She stops short in her music, her acting, her art, her literature, or whatever it is, because after all, her instinct tells her to marry, and she follows her instinct instead of her reason. A man can marry and go ahead in the particular pursuit or profession he has chosen, but the woman stops and subjects everything to the one duty of wifehood. That is the reason women do not succeed as well as men. They fall short.

Grant all this for the sake of argument. Admit that it is the general mission of woman to marry and raise up a family. But I am now writing about the exceptions. There are exceptions to all classes, all rules, all theories and all philosophies. Most women do marry young, and that is right. That is as far as most of them want to go. They are fitted for this sort of life, and have no desire nor fitness for another. But are you going to make one kind of a girl do this when it is a straitjacket and an abomination to her? In other words, is she to marry simply for the sake of marrying, "settle down" simply for the sake of settling down? Why not allow her to follow her natural bent as well as the young man? True, she may, as my objector says, find some man while herself following a successful career whom she will love and whom she will marry, thus cutting short a work that might otherwise have been rounded out and made complete. True, women are not as completely successful as men in the more independent pursuits of life.

But the point I wish to make clear and emphatic is that society and the woman herself, and the man she marries, and all directly or remotely concerned, are the better for her having done even something for herself, however little. I repeat that the self-reliant woman is a civilizer. The busy world is improved by her having been a participator therein. Her words are gentle and kind, and her presence is a restraint to the headlong impetuosity of men. Even though she may not remain long with us single, let us be thankful that she has come at all. If she falls in love and marries, even at the expense of an independent career, her life after all is not in vain. Her own views have been broadened, her sympathies have been deepened, her capacity for enjoyment made greater and her scope for usefulness widened. I say again and again, let the ambitious girl see what she can do for herself.—*Woman's Journal.*

A YOUNG MAN led a blushing damsel into the presence of Rev. Dr. Carpenter. "We want to be married," he said. "Are you Rev. Dr. Carpenter?" "Yes," replied the genial minister, "Carpenter and Joiner."

"YOU are a man after my own heart," said the watermelon to the purchaser.—*Terre Haute Express.*

A FELLOW thinking to appear smart, entered a store on Sixth avenue the other day and said to one of the saleslades: "Ever have any call for husbands here?" "Oh, yes, occasionally. Are you looking for a market?" "Yes," said Smarty. "All right. Step right up to the ten-cent counter."—*Siftings.*

"I'M afraid, Johnny," said the Sunday-school teacher rather severely, "that I will never meet you in heaven." "Why? What you been doin' now?"—*Ashland Press.*

YOUNG FOLKS' COLUMN.

Whistling for His Dinner.

The Terry boys lived in a substantial farmhouse in a picturesque valley on Long Island. The incidents which I am about to relate occurred in the times, a good many years ago, when deer were plenty in the swamps and forests of that part of the island.

Dan Terry, the second in age, was very fond of hunting, and the table of his widowed mother was supplied with the meat of beast and fowl he had, in his frequent expeditions, brought down with his trusty gun.

To kill a buck all by himself, and have the horns to keep as trophies and pleasant reminders of his valor against the time when the deer on Long Island should live only in story, was the wide-awake, active boy's greatest ambition.

His mother often said: "I don't know what will become of Dan, he is so reckless. He isn't afraid of anything, and every time he goes out of my sight I expect he will be brought home dead, as his father was from trying to rescue a wretched sailor out there among the rocks. It seems a pity, for he is as good a boy as ever lived."

"No one ever worries about me or praises me," said Fred, the oldest and the worker of the family. "I can go along and provide the whole house with all their grub for a month, and nothing will be said about it; but if Dan happens to shoot a squirrel his praises ring from Montauk to Riverhead."

One day, when he felt especially discouraged over his hard work and had started for the huge field of corn, he said: "Come on now, Dan. Leave your gun, tell Rob to throw away his pumpkin-vine flute, and both of you come right along and help me about harvesting."

The boys went cheerfully, for they were used to Fred's grumbling and his imperious ways. As they trudged along toward the fields, Rob, in the natural exuberance of his spirits, fell to whistling "Yankee Doodle" with great gusto.

"Do stop your whistling, Rob," said the older brother, presently, "Your racket is as incessant as that of the birds and frogs. Hurry up and let us get to work. You will never get your dinner by whistling."

"Oh, he may," said cheerful-hearted, hopeful Dan; "no one can tell. Oh, my sakes alive, there's his chance! Do you see that buck and doe out there on the edge of the corn-field? Put in now, Rob, and whistle your very best while I run for my gun. What in the world was I thinking about not to take it along with me."

Rob filled his lungs anew and began to whistle like a jubilant blackbird. Dan, crouching along a few steps at first until out of sight behind a thin strip of brush, ran like a hare for the house; and matter-of-fact, plodding Fred, who was not taken into account at all in this existing contingency, made his way as stealthily as an Indian in the shadow of the thick, tall corn, until he came suddenly in front of the handsome creatures who, with their graceful necks arched, large, shining eyes dilated, and one forefoot of each lifted in an expectant curve, were listening to the entrancing music as Rob trilled out at the top of his lungs his favorite roundelays.

The buck stared at Fred for an instant and then, as the shrewd boy had calculated, made a furious charge for him. Standing his ground firmly until the infuriated beast was close upon him, he jumped to one side like a flash, and, with the sinewy ability of a panther, seized him by his formidable horns.

The situation, indeed, was at this juncture a very perilous one; but, by a prodigious spring, helped in no small degree by the movement of the buck in vigorously throwing up his head, the brave boy placed himself astride the creature's broad back.

For a moment the outwitted animal stood motionless; and then, with a sudden curving leap, he plunged forward into the thick, woody swamp.

Fred's presence of mind did not desert him for an instant in this extremity. No sooner did the wonderful steed begin his long, sweeping strides for the thicket than, leaning forward, Fred drew his sharp sheath-knife that he had used for cutting corn and severed his jugular vein.

As a horse in battle when a minie-ball has pierced his brain, so the great, muscular creature made a tremendous lunge forward and fell, death ending his struggles in a few moments.

Fred found himself some paces in advance in a pool of slimy water. Presently, fishing himself out in a matter-of-fact way, and having become assured that the game was quite dead, he started for the house, arriving just after Rob, with great gulping sobs of affright, had reported that poor Fred had been tossed and mangled on the old buck's murderous antlers, and carried away lifeless into the almost impenetrable swamp, and that they should never see him again.

Dan had dropped his gun, and was sitting down on the stone hearth in the kitchen in hopeless terror; and Fred approached the open door just in time to hear his mother, between frantic outbursts of tears, extol his industry, patience and self-denial, together with a surprisingly long list of other virtues.

"Hallo!" he shouted, bursting into the kitchen: "cheer up. Rob has whistled up a dinner in good earnest to-day. Come out, boys, and help me dress the old fellow, and get the carcass home. Straighten out your faces, all of you. Don't you see, mother, I'm all right?"

"Of course you are all right, you dear, blessed boy," said Mrs. Terry, tears of joy now welling out of her mild blue eyes. "You always were, and you always are. I was in no wise worried at first about you being killed, I knew you were so level-headed and so sensible; but the boys made such an ado, and were so sure the old buck had given you your death-wounds, I was giving up just as you came in."

The shock from the supposed tragedy having passed off, the boys fell into pleasant badinage over the division of the honors pertaining to the remarkable capture.

"Had you kept quiet, Fred," said Dan, "I should have brought him down with my gun in good time."

"He liked my music first-rate," said Rob. "He stood as still as a stone chimney until Fred went for him."

"Oh, well," spoke up Fred, complacently, "you, Rob, you may have all the honor, Dan shall have the horns, mother and I the venison."

This story of Robert Terry whistling for his dinner has been handed down in the family and in the neighborhood to this day, and often repeated when one takes the credit of another's work.—*Methodist Protestant.*

GOOD HEALTH.

Cholera and Cataracts.

EDITORS PRESS:—I have an idea; something I frequently haven't got. I see in the newspapers that dreadest of all dread epidemics—the Asiatic Cholera—is heavy in the islands of Japan, and that it may come in a ship to California one of these days,

Now in the trough, or valley, of the Ohio river is the City of Wheeling, and in that city I was born (so I've been told), and also, I was reared to some degree of manhood in that place, and as it is of pious record that I have been upon this earth for about threescore years, it stands to reason that I must have seen something of the cholera; for that disease has been in these United States several times since I came, and it about always strikes hard upon the line of the Ohio river.

When I was a boy the disease swept my native city furiously, and since then it has hit it pretty hard again and again, but at none of these times, or, as I think, at any time, has this disease prevailed in Zanesville, Ohio, 87 miles west of Wheeling on the Muskingum river, a branch of the Ohio.

During a heavy attack of the epidemic in Wheeling a vigorous young physician of Zanesville volunteered and went to Wheeling to study the great destroyer, and having soon died there of the disease, his body was taken to Zanesville and buried, but there were no cases succeeding his funeral. I have often, while I resided in Zanesville for ten years subsequent to 1852, wondered and pondered why there was none of this disease there when it struck Wheeling again during the fifties. The soil about the two cities is similar, the products the same, the surface hilly, the people's habits and housings alike, the fuel bituminous coal for both, the "breed" of the people from a like stock, morals, religion, education, and amusements nearly related; the trees, rocks and climate are not different. What then is it which preserves Zanesville from cholera and punishes Wheeling? The Ohio river moves "on its clear winding way toward the sea" with steady, even, strong current as it glides past Wheeling, leaving no stagnant water; while the Muskingum tumbles and whirls over rocks and rapids as it gurgles onward passing the whole length of Zanesville.

I have an idea that the rapids in the river at Zanesville have something to do with her exemption from the rapid disease. That the *microbes, bacilli, whoodle bugs or what-ye-may-call'ems* cannot stand the racket and the roar of pure, fresh water in large quantity. Large quantity, because the Muskingum is a stream larger than the San Joaquin, and, except in spring flood, its water is clear as a diamond. I have no knowledge of how the Asiatic terror acts, if at all, around Niagara Falls or other rapids of water, but the PRESS can inquire about this matter and find out, and perhaps it may be that rapid rolling waters are remedial or preventive when the cholera comes around.

I am about satisfied that water has a great deal to do, not only with cholera, but with several other epidemic diseases. Water of any kind is a dangerous fluid, anyhow. I've sampled it several times.

If we find that waterfalls are efficacious as against the invasion, we have only to "flee unto the mountains" up stream, and squat.

Let us all hope and the pious pray that the pestilent plague may keep away. In the mean time—yours, J. W. GALLY.

Pajaro Valley, Oct. 22d.

TREATMENT WHEN FOREIGN BODIES ARE SWALLOWED.—Considering the frequency with which foreign bodies are swallowed, especially by children, the best treatment to employ in such cases should be generally known. A variety of such methods has been advocated, but just now the so-called "potato cure" appears to be the most popular. One physician not long ago reported that he had successfully applied it with the best results in three ca... One was that of a 6-year-old boy, who had swallowed a small weight; another, that of a girl, 9 years old, who had swallowed a nail; and the remaining one, that of a woman who had swallowed a set of teeth. He fed the patients for three days on nothing but potatoes.

DOMESTIC ECONOMY

Buttons and Button-holes.

[Written for the RURAL PRESS by M. M. S. P.]

I used to be greatly annoyed by finding, after each washday, so many garments minus the very necessary buttons. I often wonder how the little ones manage to lose so many. I suppose some came off during their progress through the wringer, although I always tried to fold the buttons inside.

Finally I learned a new way to sew them on strongly and securely. I doubled a strong thread, then, putting a large darning-needle between the button and the cloth, I sewed over and over that until there was a thick cord, round which I wrapped my thread after pulling out the darning-needle. It was almost too strong ever to come off. It was so durable that it was well worth the extra work.

My worst trouble was with the button-holes. There wasn't a week that I hadn't some worn or torn button-holes to mend. Often I could do nothing else than rip out the torn piece and lengthen the band, so I could make a new button hole. This was very irritating, and I usually lost my patience completely.

When I was married, my husband's mother taught me her way of making button-holes, and I have practiced it ever since with excellent results.

I would stitch firmly around the outline before cutting, and then work the button-hole over from four to six strands of thread held loosely twisted as I worked. The thread must all be of the same shade, and one can easily become used to holding it comfortably as she works.

After finishing the button-hole, stretch it a trifle with the points of the scissors and it is a handsome, strong button-hole with a firm little ridge outlining it, all the result of a few moments' work.

The cloth will often wear out first, and as the loop of twisted threads comes at the outer edge, it will not easily pull out; besides, it looks so nice.

In using stocking supporters, I cut off the brass arrangements that are usually slipped over a button on the waist, because they always out off the button in a few days. Then I make button-hole pieces of strong silesia and work the button-hole with very strong thread over coarse wrapping twine. They are not very ornamental, but wear a long time. If ever I have to replace the tape to which the stocking-catch is sewed, I use dark dress braid, doubled and sewed on the machine.

CARE OF MATTING.—In sweeping the pretty and economical straw matting that is growing to be very popular with housekeepers during warm weather, do not use a broom, for it will tear the strands in a short time. A long-handled bristle brush, such as is used for oil-cloth, is the nicest and will remove the dust best, for the soft bristles can go into crevices that a broom would miss. Always, when possible, brush the matting the lengthwise of the grain and the strands of straw will not wear and break as quickly as though brushed across. Some persons clean matting by sprinkling bran or coarse Indian meal over it; then with a long-handled mop, with cloth wrung out of clean, warm water rubbing the grain well all over the carpet, then leaving it until dry, when the grain is brushed off. This is claimed to be a thorough way of cleaning matting, but it is usual to simply wipe it off with a damp cloth, wet in salt and water, not wetting the matting much. For winter use, if a heavy layer of carpet lining is put under it, matting is a comfortable floor covering. With pretty rugs scattered over it, the room has a pleasant, homelike appearance that is very attractive. It is cheap, and if care is taken when putting it down that little cleavers, made especially for the purpose, are used instead of the ordinary carpet tacks, it can be easily taken up at any time when cleaning house, cleaned and put down.—*Carpet Trade Review.*

TO GET RID OF ANTS.—I took about half a saucer of molasses, and to this I added about a tablespoonful of Paris green; and having stirred well, placed one in the cellar-way and another down-cellar; and any time for a week or two, I don't remember just how long, if you went to those saucers, you would see the shelves nearly black with them coming and going. We left them there until there were no signs of any ants around them. We never found one dead ant, and it has been four years next month since I fed them on molasses and Paris green; yet, strange as it may seem, we never have seen one in the house since. I will say further that our house is an old one, and had been overrun with them for years. Care should be taken to keep all eatables out of the way. They disappeared from all parts of the house before they did around the saucers. This has been my experience with ants, and if they ever return, they will be fed the same as before.—*Maine Farmer.*

The Week.

As we write on Wednesday evening the election agony is over and the results somewhat in doubt. Enough, however, seems to be conceded on both sides to indicate that California and the Eastern States are pursuing different lines of thought and voting.

In California the State officers, the Legislature and the congressional representatives are largely Republican; at the East, something like a cyclone seems to have set in, which has blown a number of old Republican States over into the Democratic fold and has given the Democrats a large majority in Congress.

At the East there have been immense movements upon industrial lines, the agricultural population especially showing its dissatisfaction with prevailing policies on the tariff and other questions. California apparently approves the recent tariff legislation by giving the victory to the party upholding it.

It will take a little time to analyze and fully understand the significance of the results recorded on Tuesday, and fortunately the American people is so constituted that it will speedily turn all new manifestations of the popular will to its progress and prosperity. Herein lies the strength of the nation.

Terms Used in Call-Board Sales.

We have heard the objection that the wheat quotations of the RURAL were not given plain enough and were therefore not generally intelligible. Any one who feels discommoded by such objection should notice first that the descriptions of the course of the market are given in as plain English as our reporter is capable of and that the prices of "Grains, etc.," in the table headed "Domestic Produce" are in plain figures. These comments and these figures represent the true course of the market and by themselves alone will inform any reader on this subject. We presume it is in the condensed statement of transactions in the Call Board that some possibly may stumble over, but will probably find that most of those selling wheat in this market understand fully what the terms mean. More than that, we have explained them on previous occasions, which probably some may have overlooked. These terms are as follows:

"Buyer season" and "seller season"—"Buyer season" means that the purchaser can call for the delivery of the stuff at any time during the season, which runs from July 1st of one year to June 30th of the following year, but he must accept the stuff on the last date mentioned. "Seller season" means that the seller can deliver the stuff at any time within the specified season, but on the last day of the season must make delivery of it.

"Buyer year" and "seller year" assume exactly the same privileges and obligations as already described, except that the period closes on December 31st instead of June 30th.

Either buyer or seller can, in *lieu* of delivery of the actual produce, pay the difference between the contract price and the market price at the expiration of the period or at the time when "called" by the opposite party.

Of course these are the means by which "grain gambling" is carried on, and men may deal indefinitely without ever owning or delivering a pound of grain, but the same method is sometimes used in transactions in which the seller actually has the grain in the warehouse, and in other cases wheat is purchased and put in warehouse to meet maturing obligations, for in this way a man may buy wheat low to deliver when his contracts at a higher figure mature.

When the produce advances above the contract price, the buyer may call upon the seller to make his margin good, and when it declines below the contract price the seller may insist on delivery or call upon the buyer to cover his margin between the contract price and the price at which the stuff can be bought at the time.

We trust these remarks may aid those who perhaps are not called upon to acquaint themselves with such technical matters and who may think that terms constantly used by those in the trade are unintelligible.

The Fruit-Growers' Convention.

We trust readers will not forget the Fruit-Growers' Convention, to be held under the auspices of the State Board of Horticulture, at Santa Cruz, beginning at 10:30 on Tuesday, Nov. 18th, and continuing four days. It is especially requested that samples of fruits, either fresh or dried, be exhibited at this meeting. A card should be attached to all samples, giving name, etc., and stating briefly how processed. It is also requested that all those having new fruits and inventions of value to horticulturists will exhibit them at this meeting.

The Southern Pacific Railroad Co. will allow return tickets at reduced rates from all points on their lines to Santa Cruz, *provided* not less than 100 persons make the trip, and a receipt for the ticket purchased be taken at starting-point. Those intending to attend should apply to B. M. Lelong, Secretary State Board, 220 Sutter St., S. F., for blanks upon which to obtain receipts for tickets purchased.

We expect to present in our next issue some matters of especial interest to those who will visit Santa Cruz, and invite contributions to this end from all readers.

An Irrigation Inquiry.

We have received copies of a circular issued by R. J. Hinton, as special agent of the U. S. Department of Agriculture for the collection of information on irrigation. This branch of Government work, which promises to be of much value and importance, is provided for by the following clauses in the Deficiency law approved by the President Sept. 30, 1890:

Irrigation Investigations—To enable the Secretary of Agriculture to continue to complete his investigations for the purpose of determining the extent and availability for irrigation of the underflow and artesian waters within the region between the 97th degree of longitude and the eastern foothills of the Rocky mountains, and to collect and publish information as to the best methods of cultivating the soil by irrigation, $40,000. *Provided*, That no part of said sum shall be expended under this paragraph unless the entire investigation, collection and publication contemplated herein, including the report thereon, can be fully and finally completed and finished before July 1, 1891, without any additional expense, cost or charge being incurred.

To aid him in securing data for this report, Col. Hinton has prepared blank forms of questions with spaces for answers by those who will contribute the information desired. These questions cover the engineering features of the irrigation enterprises in all neighborhoods, the canals and ditches, reservoirs, dams and weirs, acreage irrigated and character of crops grown; the value of irrigated lands as compared with adjacent arid lands, etc. It is also designed to pay especial attention to irrigation by artesian wells, as well as to all appliances for raising and distributing water.

Col. Hinton has a wide acquaintance with such subjects, as his previous reports to the Government show. We hope our readers will volunteer their aid and apply for blanks for reports, if they do not receive them. All correspondence addressed "Artesian Wells Investigation," Dept. of Agr., Washington, D. C., will reach the spot. It will be a good thing for California to have her irrigation enterprises and their results publicly proclaimed.

Storm Tracks in October.

We alluded last week to Lieut. Finley's explanation of our dry October of 1890 as compared with the wet October of 1889, as due to the fact that storm tracks ranged so much farther north this year than last. Since then, Lieut. Finley has kindly sent us a pair of charts showing these storm tracks in each of the months specified. In October, 1889, these tracks ranged south all through Washington and Oregon, and one fell as far south as the northern counties of California, while this past October not a storm ventured to cross below Puget Sound. The result is as stated in last week's RURAL. Accompanying the charts to which we allude, is the following note:

The most striking feature for the weather for the month of October has been the marked deficiency in rainfall throughout the Pacific Coast States. The cause of this decrease in precipitation is due to a falling off in the number of storms which have entered the North Pacific Coast from the Japan current, and also, and more especially, to the fact that these storms have passed eastward at a higher altitude than in previous Octobers. In order to illustrate this very important fact, I have prepared a set of storm-track charts for October 1889 and 1890. A glance at these charts will show the relation between the extreme southerly position of the storm paths in October, 1889, and the extraordinary rainfall of that month; and the relation between the extreme northerly position of the storm paths and the marked deficiency of rainfall for October, 1890. The amount and distribution of rainfall dependent upon the latitude of the storms from the Japan current is one of the most important features of Pacific Coast weather and is worthy of the careful attention of the public.

So far as predictions go, then, it would seem very desirable to discern the course of these storms before they appear upon the coast, and this carries the inquiry out upon the bosom of the Pacific. How far extension in this direction is practicable remains to be seen.

DEATH OF DR. JOHN STRENTZEL.—With deep regret we announce the death of Dr. John Strentzel of Martinez, which occurred at the close of last week. His life was filled with so much of public interest that we do not attempt a hasty sketch of it, but postpone the theme for a later issue. The thousands who have known him will unite in feelings of bereavement and sorrow.

Pickling Olives.

Prof. Hilgard, Director of the University Experiment Station, has in contemplation a University Bulletin concerning the pickling of olives, in answer to a flood of inquiries he has received from California olive-growers. Preliminary thereto, Mr. L. Paparelli, who came from Italy last year to fill a position as one of Prof. Hilgard's assistants, has prepared the following statement concerning methods employed in pickling olives in his native country:

Many inquiries having been made in regard to the manner in which olives are pickled in Italy and France, I hereby give a brief statement on the subject and will give another more complete in a future article. For the purpose of pickling, the olives must be picked while green, namely, one month or six weeks before maturity; the latter of course is variable according to climate and variety cultivated.

The olives should be picked by hand, early in the morning or late in the evening. It is necessary to select the best fruit only, rejecting especially that which is spoiled or imperfect, and also to free it from leaves and stems.

All the modes of preparation can be reduced to two; one using a lye of greater or less strength, the other, pure water only. The lye treatment is as follows: The olives are placed in vats, where they are immersed in a solution of caustic soda (concentrated lye) of the strength of 6° B-aume, equivalent to about five ounces per gallon. After some hours, this solution is drawn off and replaced by soft water, which must be changed several times during three or four days, until it is completely clear. Then the olives are placed in kegs, with a brine consisting of one ounce of salt and 13 ounces of water for each pound of olives; or a gallon of brine containing 10 ounces of salt to 10 pounds of olives. The lye is also made with one part of quicklime and six parts of fresh wood-ashes, well sifted.

After having been in this lye six hours, the olives are taken out and placed in fresh water, where they will remain during eight days, being careful to renew the water every 24 hours. After this time the olives are placed in a brine of salt and water as stated above. In this manner they are preserved very well; they will be in a condition to be used in from one to two months, according to taste.

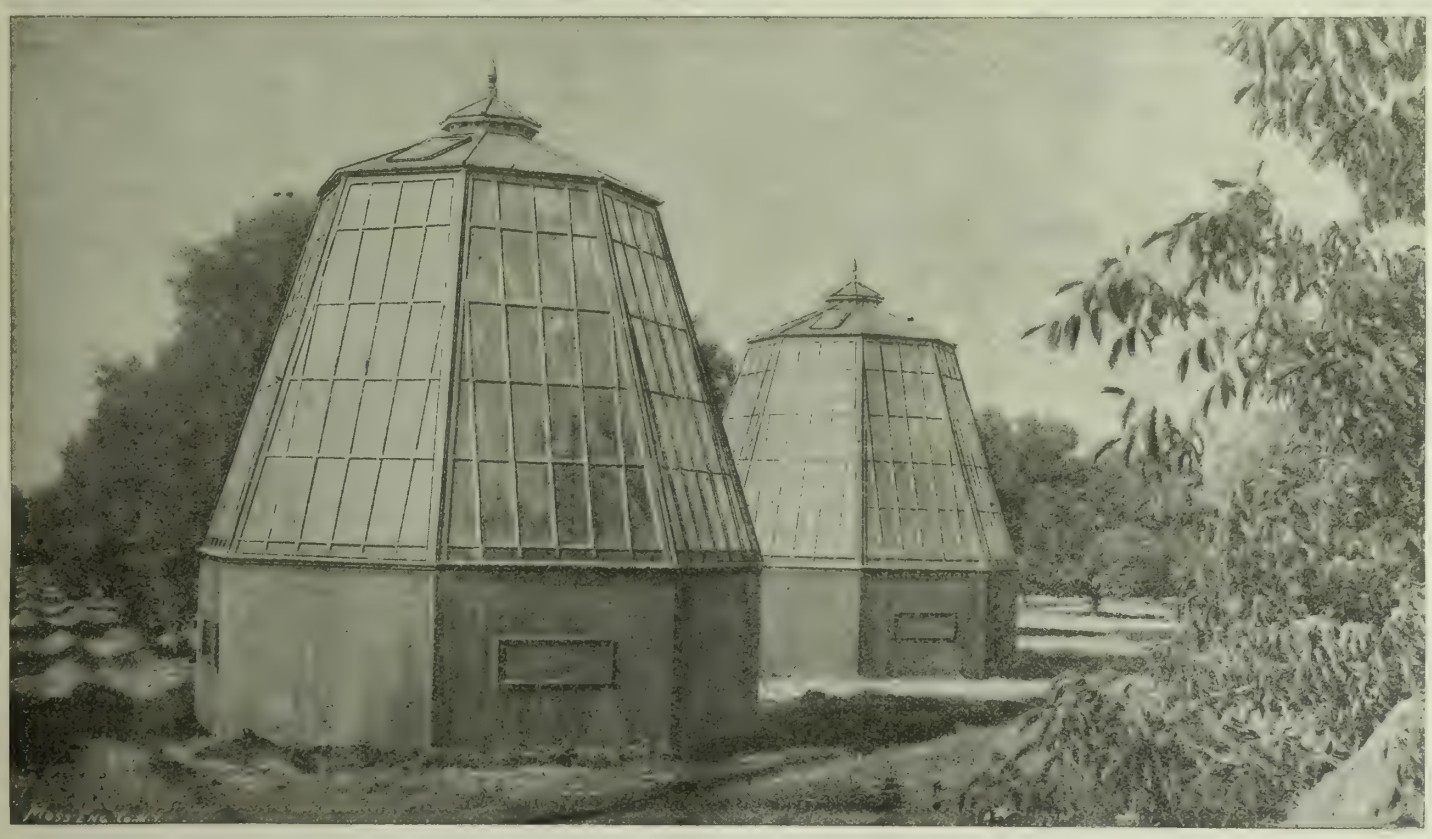
To preserve olives without lye, they are placed in a crock or wooden vat, in which they are submerged in pure water covered with lemon leaves and a grated frame placed above them to keep them submerged. The olives will remain one month in this liquid, which must be changed every 24 hours. After this the fruit is placed in vats; in the bottom a layer of salt, then a layer of olives, then salt again, and so on, the proportion being 12 pounds of salt to 100 pounds of olives. This being done, the olives remain in the vats 48 hours, and after that clean water is added and a layer of one inch of salt placed on the top. One month after this treatment they can be used. The olives can also be improved by placing aromatic herbs like fennel and pistachio, etc., among them after the first treatment.—L. PAPARELLI, *Berkeley*.

The University Bulletin by Prof. Hilgard will consider the subject of olive-pickling more broadly and will aim to aid, so far as possible, those who have reported to him difficulties in the way of satisfactory handling of the fruit.

CASH FOR THE COLLEGES.—On the 22d ult. the Secretary of the Interior signed certificates for the amount of $15,000 each, appropriated under an Act of Congress approved August 30, 1890, for the present year in aid of agricultural and mechanical colleges, to the following States: Indiana, Kansas, Ohio, New Jersey, Michigan, New York, Pennsylvania, Massachusetts, Delaware, Mississippi, Tennessee, Texas, Virginia, Colorado, Illinois, Maryland, Minnesota, Oregon, Wisconsin, New Hampshire, Alabama, Idaho, North Dakota and the Territory of New Mexico.

STILL FASTER TROTTING.—At Independence, Ia., Oct. 24, C. J. Hamlin's team Belle Hamlin and Justina were driven by their owner to beat the world's record of 2:15 made by them, and although the day was cold and rainy, they made the mile in 2:13¼. On the preceding day, at Cambridge, Indiana, the stallion Nelson trotted the fastest half-mile on record. First quarter, 0:32¼; second, 0:30¾, the fastest quarter on record, making the half in 1:03.

THE LEADING AGRICULTURAL COUNTIES.—We read in the *Register* of Middletown, Md., that according to the census of 1890, Lancaster county, Pa., stands first in value of agricultural produce; Champaign county, Ill., stands second, and Frederick county, Md., third. It is an interesting fact that Lancaster county also stood foremost of all the counties of the United States ten years ago.



ENTOMOLOGICAL.

Winter Protection for the Vedalia Cardinalis.

[Written by B. M. LELONG, Secretary State Board of Horticulture.]

The winter of 1889–90 was a very severe one upon the increase of parasitic and beneficial insects, as it rained almost continuously until spring. This was the vedalia's first winter in California, and grave doubts were entertained as to their living through it. In early spring (1890), it looked very much as if they had died out, as neither the larva nor the beetles could be found; but a few weeks of warm sunshine caused them to multiply, and our hopes were gratified by discovering thousands of the larvæ at the various places where they were put, with due precaution, late in autumn and before the wet weather had set in. From these places, all infested orchards throughout the State have been supplied with colonies.

The board, at its meetings Aug. 14, 1890, resolved unanimously to at once erect two glass houses, covering large orange trees, where the destructive cottony cushion scale (*Icerya purchasi*) can be thickly colonized, and at the approach of inclement weather place a few of the *Vedalia cardinalis* in one of the houses, reserving the other for later use should the first stake, and the risk of them dying out is too great to allow this to be again repeated. It is to prevent all possibilities of a failure that these precautions have been taken.

GLASS HOUSES AT SAN GABRIEL FOR THE PROTECTION OF VEDALIA CARDINALIS THROUGH THE WINTER.

become overstocked. In this manner the board hopes to preserve this wonderful insect to the fruit-growers of California.

This course was prompted by the experience of last winter. In the spring it was almost impossible to find a living specimen, and as the cottony cushion scale reappeared in a number of groves where it was supposed to have been exterminated, having passed through the winter under the ground at the collar of the tree, under a weed, or in some way secure from the attacks of the vedalia, at the approach of warm and congenial weather, the scales hatched and developed with such rapidity it created considerable alarm among orchardists.

The experience of the past few years was too fresh to again allow the scale to become established. The icerya is now very scarce, and the possibility of the vedalia passing through the winter months is now reduced to a minimum. The board has had erected at San Gabriel, Los Angeles county, two glass houses, a good idea of which can be had by reference to the accompanying photo engraving plate. They are at the orchard of Col. J. R. Dobbins, and are octagonal and so designed that they present a good surface to the sun, and are thereby warmer and more suitable for the propagation of both scales and ladybirds.

The dimensions are each 16 feet in diameter by 18 feet in elevation; every part is well fitted, and the ventilation protected by very fine brass-wire mesh, to guard against the entry of any ladybirds before the cold weather sets in, otherwise the scales would be destroyed by them early in the season; and also to prevent the ladybirds from escaping during the time they are being colonized for distribution in the spring.

Many are of the opinion that this most important foe to the baneful icerya "has come to stay," but there are no facts upon which to base such an opinion, beyond the fortunate results of the past winter, when they passed through it unprotected. There is too much at stake, and the risk of them dying out is too great to allow this to be again repeated. It is to prevent all possibilities of a failure that these precautions have been taken.

Scale-Eaters at the South.

EDITORS PRESS:—Your favor of the 27th inst. making inquiry about a ladybird that is reported as effectually destroying the black scale (*Lecanium oleæ*) in this end of the State is just received. I do not know of any kind of ladybird that is doing such a work as this. The Twice-stabbed ladybird (*Chilocorus bivulnerus*) preys upon these pests, and Pilate's ladybird (*Exochomus pilatei*) is reported to have similar habits; but neither of these two species are abundant enough to appreciably lessen the numbers of the *Lecanium* in question. A far more effectual agent in reducing the numbers of these pests is the Chaleid-fly (*Dilophogaster Californica*). I have frequently examined orange trees upon which fully 80 per cent of the *Lecanium oleæ* had been destroyed by this *Dilophogaster*. I have noticed that the rosin spray proves fatal to this useful insect, but, judging from analogy, the hydrocyanic-acid gas treatment does not. A few days ago I examined some orange trees that had been treated with this gas and was not able to find a single living *Lecanium hesperidum* upon these trees, although their dead bodies were there in large numbers. I inclosed in a box several of these dead scales, and a few days later a Chaleid-fly (*Coccophagus lecanii*) issued from one of them, the gas having killed the scale without at the same time destroying the parasite that infested it.—D. W. COQUILLETT, *Los Angeles.*

ELECTRICITY IN INSECTS.—M. Nicolas Wagner, by a series of experiments displayed before the Academy of Sciences, showed that electricity produced variation in the color of butterflies. His experiments were performed on *Venessa urtica*. He found that electric currents changed reds into orange and blacks into reds, and with a constant battery, a weak current produced spots varying in shape with the strength of the current. He further demonstrated that the colors naturally existing in the butterfly's wings were due to currents in that organ, the most powerful of which passes from the attachment of the wing outward along the middle nervure to the outer edge. In these experiments he used a galvanometer of 20,000 coils. The following are the conclusions he arrived at: 1. The existence of fixed electric currents in the wings of insects. 2. The possibility by means of electric currents to provoke a change in the shade and disposition of the coloring matter. 3. The possibility, by means of these currents, to produce a kind of atrophy and to change the shape of the wings. He concludes as follows: "With these facts as a basis, I propose to pursue my research on this subject."

THE POTATO BUG.—An amateur scientist student at Wakefield, Mass., planted a potato in a little soil at the top of a factory, 40 feet from the ground, to see if the potato beetle would find the plant. It has found it, and now the amateur wants to know whether the beetle is a bird or a fly.

THE National Bank circulation continues to decline at a rate exceeding $20,000,000 a year, reports *Bradstreet*.

THE VETERINARIAN.

Answers to Queries from Rural Readers.

EDITORS PRESS:—About a year ago, I observed a tumor or swelling on the side of the neck of a six-year-old mare, located in about the middle between head and shoulder and mane and throat. It is quite hard, about six inches in diameter and rises in the center, about one and one-half inches above the proper line. There is apparently no sensation in it. What caused it in the first place is a mystery, as there never was any visible injury. It does not seem to incommode the animal in the least, but as it seems to grow I would like to get some advice through the columns of the PRESS what to do in the matter to remove the growth without an operation, if possible, or to stop its further growth if the first cannot be done.—OLD SUBSCRIBER, *Sunol.*

I judge that the trouble is a white fibrous tumor. I would advise the insertion of a seton through the tumor and apply to the enlargement the ointment of the biniodide of mercury. If the animal is valuable, secure the services of a qualified veterinary surgeon.

Splenic Apoplexy.

EDITORS PRESS:—I have some sick cows and have lost seven head of them. The first symptom that I can see is that they commence to lick and gnaw at their hind legs and then they will rub the rump or the root of their tail, and lick at their sides; then they get down and will kick their feet together as though they would tear them off; they will have a hard chill and shiver and shake as if in a fit. They get weak in the small of the back and in their hind parts, and when you press on their flank it seems to give them relief. They don't live long; the longest that any of them have lived is three days and nights. Their noses are dry and their nostrils flap as though they were out of breath, and their sides the same way. They get their breath like an ox that is at work on a hot day. They run a little at the nose a kind of water, and when they get down they roll their eyes back all the time. Their dung is hard, as a general thing, and their water a yellowish-red color.

I opened one of them and I found the stomach which has those fine leaves in it full and hard and the gall was in a yellow slime all over one side of the liver. I have had all of the cow doctors in this part of the country and they all say they never saw anything like it before.—L. A. IRWIN, *Woodland.*

The cows are suffering from splenic apoplexy, which is the most frequent form of anthrax in cattle. It is due to *bacilli* in the blood, and they must have been some time multiplying in the system, and the attack is simply when the bacilli begin to manifest their effects. There are no curative means of any use. Prophylactic measures comprise those which I have frequently recommended for anthracoid cases in general. Employ a competent veterinary surgeon to investigate, and he will advise you what to do.

A. E. BUZARD, M. R. C. V. S. L.
11 Seventh St., S. F.

THE Chicago Government building, which cost $6,000,000 about 14 years ago, has been condemned as unsafe, and is to be abandoned. Mr. W. K. Bell, the Government superintendent of buildings, says that during the past 13 years the structure has settled from six to 18 inches, and has settled from ¼ to ½ inch in the past few days. The number of employes in and about the building is stated to be "about 3600."

THE ordinary sand filter will not destroy or filter out bacteria from water.

Work of the Department of Agriculture.

Valuable Charts.

So useful a purpose has been served by the Album of Agricultural Statistics of the United States, recently distributed by the Department of Agriculture, that, upon the basis of the same material, the Statistician has prepared a series of cartographic maps illustrating the distribution of area in corn, wheat and oats, the values of cattle in the several States, and the State distribution of rural population. These values are averaged for ten years, eliminating annual fluctuations, and give a much fairer result than the record of a single year. The maps illustrate the differentiation by States in five groups, each distinctively marked by mechanical drawing and separate tints. Being somewhat expensive, the edition is small, and its distribution will be restricted to Farmers' Institutes, Agricultural Colleges, Manual Training Schools and such other educational institutions as desire to teach rural economy. By the classes indicated, the charts may be obtained upon application to the Secretary of Agriculture, Washington, D. C.

Chestnuts for Market.

Samples of American chestnuts superior to those of foreign growth both in size and in flavor, have recently been received at the Department of Agriculture, affording a striking illustration of the results of culture and selection. By these means it is believed that the maturity of the chestnut likewise may be materially hastened. Reports received from various sections of the country indicate that the nut may be best prepared for market by being immersed in boiling water for about ten minutes as soon as gathered. Wormy nuts will float on the surface and may be removed; all eggs and larvæ of insects will be destroyed; and the condition of the meat of the nut will be so changed that it will not become flinty by further curing for winter use, and still be in no wise a "boiled chestnut." The nuts may be dried in the sun or in dry-houses after being placed in sacks in such quantities as to admit of their being spread to the thickness of about two inches, the sacks being frequently turned and shaken. Dried by this method, they remain quite tender, retain for a long time the qualities that make them desirable in the fall, and may be safely stored; but, of course, will not germinate. A bulletin on nut culture is being prepared by the Division of Pomology, and when published may be obtained by applying to the Secretary of Agriculture, Washington, D. C., or to the Division of Pomology, Department of Agriculture.

The Hollyhock Disease.

Number 2, Vol. VI, of the Journal of Mycology issued by the Division of Vegetable Pathology, United States Department of Agriculture, is now being distributed. Florists will find the publication of special interest, as it contains a full account of a new hollyhock disease and of successful experiments in its treatment. The disease appeared in several New York houses a few years ago and has proved a very serious pest, the loss this season in one establishment being over $3000. The knapsack sprayer mentioned in a previous number is described and illustrated. This machine has been found as effective as any of the more expensive pumps, and not being patented can be made at small expense. Other papers in the Journal discuss recent investigations concerning the smut fungi; a new and destructive disease of oats; copper soda and copper gypsum as remedies for grape mildew, etc. For the benefit of those who are specially interested, a reprint of the article on the hollyhock disease has been issued for special distribution, and may be obtained by applying to the Secretary of Agriculture, Washington, D. C., or to the Chief of the Division of Vegetable Pathology.

The Experiment Station Record.

The agricultural experiment stations of the country, over 50 in number, issue annually some 300 bulletins and reports of from 4 to 250 pages each. Very few people have access to all of these publications, and fewer still can afford the time required to note the character and results of the experiments they describe. Those who find it desirable to keep pace with the progress of agricultural experimentation will find a condensed record of all station work in the Experiment Station Record, issued by the United States Department of Agriculture. The October number is being distributed, and the November number also is practically ready.

PLANT FOOD.—A French agricultural experiment station reports that out of 575 plants the goat eats 449 and refuses 126; the sheep out of 518 plants eats 387 and refuses 141; the cow out of 494 plants eats 276 and refuses 218; the horse out of 474 plants eats 262 and refuses 212; while the pig out of 243 plants eats 72 and refuses 171.

Agricultural Notes.

CALIFORNIA.

Alameda.

Heavy Shipments of Farm Products.—Livermore *Herald*, Oct. 30: These are busy times at the railroad station here. Two of the leading products of the valley—hay and grain—are being shipped in large quantities. Three cars of dried grapes go East per day, to say nothing of those that go West. A large freightage of hay goes regularly every day, and last Sunday a special train of eight cars was made up and taken to the Bay.

Colusa.

Grasshopper Pest.—Orland *News*, Nov. 1: Grasshoppers are becoming very thick this fall, and it would be well for those having orchards to look out for them, as their bite is poisonous to fruit trees. A very little labor will rid an orchard of these pests should they begin to attack the trees, as they can be driven out the same as a band of animals, and when once out, one person can keep them herded away from quite a large orchard.

Agitating for a Raisin Drier.—Colusa *Sun*, Nov. 1: There are many fine vineyards in the vicinity of College City which bear profusely, and much of this season's second crop will go to waste because of proper facilities for curing. Uncle Billy Calmes is more fortunate than his neighbors in that he possesses a steam drier, hence will save most of his crop. Surveyor Brasfield told a *Sun* scribe it was the talk of the vineyardists in that locality of forming a stock company whose aim would be to erect an immense steam drier to insure the preservation of their grapes.

Fresno.

A Raisin Drier Consumed.—Fresno, Oct. 30: Last night the immense raisin drier of J. M. Sugh, who resides on the Malaga tract, between Orange and Cedar avenues, was consumed by fire. It was caused from the explosion of a coal-oil lamp. The drier has a capacity of about 900 trays, and the loss is not less than $1500. This is the thirteenth raisin drier which has been consumed by fire this season in Fresno county. The insurance companies refuse to take risks on them.

Dried-Fruit Shipments.—Fresno *Republican*, Oct. 30: Fresno continues to be one of the great shipping points of the Southern Pacific railroad, ranking high in outgoing and incoming business. The shipments of raisins and fruit from July 1st to October 25th, both inclusive, wholly products of this year, were as follows:

	Carloads.
Raisins	340
Dried grapes	120
Dried fruit	70
Green fruit	189
Total	719

The season's work of the vineyards and orchards thus exceeds that of last year, up to date, by 90 cars, with about half of the raisin and dried fruit crop yet to go forward and all of the wine, which last season amounted to 161 cars and will go much higher this year.

Second-Crop Raisins.—Selma *Irrigator*, Oct. 30: Quite a lot of second-crop raisins are out yet, and these sunny days are just the thing for them.

Los Angeles.

Orange-Growers Organized.—Pomona *Progress*, Oct. 30: The Ontario orange-growers have organized a protective union that bids fair to be a thorough success. The purpose of the union is to get better prices for the fruit of the members of the organization by negotiating with the shipper for the whole crop of the union at one time, and to find, by frequent meetings and discussions, the best methods of growing and marketing fruit.

Successful Orange Growing.—Pomona, Oct. 30: We notice that all of our most successful orange-growers do more or less fertilizing in their groves. All the Riverside orange-growers use fertilizers, and see what wonderful returns some of them get year after year!

Land Advancing.—Pomona, Oct. 30: There is a mighty good movement in all well-watered acreage property. We know of many pieces of land that could have been bought 30 per cent cheaper a year ago than now. Those who did buy can easily sell to-day and make a very good thing on their investment.

The Scale Pests.—Los Angeles *Express*, Oct. 30: The Los Angeles Co. Horticultural Commission, consisting of A. F. Kercheval, Geo. J. Mitchell and Jno. Burr, visited the orchards in the Vernon district on Thursday to observe the results of the experiments of the orange-growers to rid their trees of the red scale. With the exception of two or three growers, all have this season sprayed their trees with a resinous wash. Where this has not been done, the orchards look very bad, the trees rapidly decaying and bearing little or no fruit. The growers who have made the effort to relieve themselves of the pests show clean and beautiful trees, their branches loaded down so heavily with fruit that they have to be in most instances supported by props. The leaves of the sprayed trees also look vigorous. The contrast is in fact very marked between the neglected orchards and those that have received treatment.

Mendocino.

Rains and Outdoor Work.—Laytonville Cor. Ukiah *Dispatch and Democrat*, Oct. 31: We have had two good rains, and consequently Mother Earth is putting on her mantle of green and soon feed will be abundant. Some of the farmers are putting in their grain, and it is to be hoped that a large yield will be harvested next year, for hay can hardly be obtained here now and wheat is selling at two cents per pound.

Modoc.

Grain Yield.—Alturas *Modoc*, Oct. 30: The average yield of grain this year on the ranches around Eagle creek was over one hundred bushels to the acre. One gentleman, whose name we cannot just now recall, raised 2600 bushels on 23 acres of land.

Monterey.

Large Yield of Potatoes.—Salinas, Oct. 30: The enormous quantity of potatoes per acre raised on the Buena Vista ranch this year is almost incredible. Several of the parties who bought land there a little over a year ago, paying $100 per acre, have raised this year upon the same upward of 200 sacks per acre, and some as high as 300 sacks, and have sold them on the ground at $1 to $1.25 per sack.

Harvesting Sugar Beets.—Salinas *Index*, Oct. 30: About 150 men are employed in the work of harvesting sugar beets on the Molera tract. Six digging plows, drawn by two horses each, are constantly running, each of which has a crew of men who throw the uprooted beets into rows, after which the toppers follow up and prepare the beets for shipment. The knives used in topping are made on the farm by an old Frenchman, who says he served with Napoleon III, and the toppers use these knives so expertly that the growth above the surface is removed by one dextrous stroke with the knife. After the beets are topped, they are thrown into boxes holding about 75 pounds, and when full the topper calls "check," and the boss hands him a small copper check and chalks the box. The check, when presented to its redeemer, represents the earnings of the party passing in his checks. The price paid is 2½ cents a box. The ranch is provided with tramways constructed in sections so that they are portable and can be strung along at different points on the ranch where the harvesting force is at work. The cars are switched from the main line and run out on these tramways, so that when the beets are in the boxes, they only have to be hauled a short distance to the train. Trucks are on hand for hauling the filled boxes to the train on the portable tramway. They take about ten boxes at a load.

Orange.

Potato-Digging by Machine.—Santa Ana *Blade*, Oct. 30: Two potato-diggers are now on their way from the East to Orange county, to be used by parties near Westminster in gathering their winter crop of spuds, which will be very large all through that country. One of these machines will be operated with four horses and the other with one. It is claimed for the one-horse machine that it will throw out 400 sacks of potatoes a day. We are not informed as to the capacity of the larger digger. We understand that one thing that led to the procuring of these machines was that the men who have made a business of digging potatoes struck for a raise from 10 to 15 cents per sack for the work, and the owners of these fields have concluded it will be cheaper to buy the machines than to pay that price.

Santa Barbara.

Profits in Onions.—Lompoc *Record*, Oct. 25: I. M. Clark has given us the amount of produce and profits from 5¼ acres of onions grown on his farm the present year. Mr. Clark took from this land 1268 bags and boxes from which the net profits reached $1880. This is a net yield of $350 per acre. Mr. Clark cleared $1750 net off of seven acres of this same land planted to potatoes last year.

Apple Shipment.—Lompoc, Oct. 25: When it is known that 2700 boxes of apples left the wharf by the last steamer, some idea can be formed of the magnitude of the fruit industry in our colony. Every steamer leaving here for the past month has taken a thousand or more boxes, and there are a good many thousand boxes yet to be shipped.

Walnut Shipments.—Santa Barbara *Independent*, Nov. 1: Mr. Curtis of W. R. Strong Co. says: "I have just loaded three cars of English walnuts and sent them to New York over the Santa Fe route. Our firm has the sacks labeled 'Selected Santa Barbara Walnuts' and they go to the Eastern markets under that brand. We will probably have about 50 carloads this year, two-thirds of which will come from Santa Barbara and Ventura counties. The nuts this year are of fine quality and command good prices. Hon. Russell Heath has sold eight carloads to us this year."

San Diego.

A Productive Valley.—San Diego *Union*, Oct. 30: Tia Juana valley is furnishing much of the fruit brought to market this season. Loads of cantaloupes came up Friday, and H. Bloom's ranch furnished many boxes of red Spitzenberg apples.

Good Sale of Raisins.—El Cajon, Oct. 29: A. W. Gilbert & Bros. have just sold to New York parties 25 tons of raisins in the sweat-boxes at 7⅞ cents a pound delivered at their packing-house here. The raisins will be shipped to New York and put up in cartoon boxes for select retail trade.

Women Orchardists.—S. D. *Union*, Oct. 23: Dried figs of the Yellow Smyrna and White Ischia varieties were brought to market yesterday by Mrs. Rupp of Valley Center, whose ranch is near Escondido. She has prepared 1000 pounds in this way and packed them neatly in square boxes. Her process is to dip the fruit in a brine, which keeps out the insect so familiar to patrons of the imported fig of commerce. The fruit is intended as a sweetmeat, to be eaten without cooking, as it is tender and deliciously sweet. * * * Mrs. Reed commenced work in the Julian country 12 years ago on a homestead, $800 in debt and with six small children to support. She has supported and raised her family, paid her debts, improved her place and saved some money. This year her place will net her $2500. She has carried on general farming, but has given her attention mainly to miscellaneous fruits. She has now a large quantity of apples in the bin that would make an Ohioan or a "York Stater" grin all over.

Santa Cruz.

Sugar-Beet Delivery.—Watsonville *Pajaronian*, Oct. 30: But a few hundred tons of this valley's beet crop are undelivered, and it is expected that they will be in next week.

San Joaquin.

Irrigation Canal.—Stockton *Independent*, Oct. 29: Considerable work was done on the Woodbridge Canal and Irrigation Co.'s canal some time ago, but recently matters have been at a standstill. Now it is proposed to go ahead and complete the work that was so well begun. It is the expectation to have the water ready for delivery in time to irrigate the alfalfa crops next season. The water is taken out of the river at a point inside the town limits of Woodbridge, 150 yards south of the hotel. The levee is cut and a massive gateway constructed. The flume, as it may be called, is 60 feet long, 48 feet wide and 20 feet deep. It extends into the river for a few feet, and a large apron runs out into the water for a depth of 16 feet. The main canals the corporation contemplate to run cover a distance of 46 miles. The one to New Hope is 12 miles long, another to Brack's 9 miles, the third to the Five Mile house on the Sacramento lower road will be 11 miles, and the canal running to the Calaveras river, for which bids have been called, is 13 miles.

San Luis Obispo.

Turkey-Raising.—Simmler, Oct. 29: The grain business is not all that we are into here. I. R. Sweena was the first to try the market with turkeys, which many of our enterprising women have done a good business in. Ed Tomlin and S. D. Fairbanks went out with a load of fine large turkeys this week, of which there will be several hundred to go from this settlement this fall.

Shasta.

Cotton.—Editors Press:—Our country is attracting fruit-growers, and the more they investigate, the more I think they will like it. We have some cotton plants from the seed you sent us that stand nearly six feet and are still in blossom. I suppose a good many people (not well informed) in the other end of the State would imagine that we of the north are frozen up by this time, but the only way to convince all such is for them to come up and see for themselves.—A. P. Henning, *Cottonwood, Oct. 26th.*

Sonoma.

Chicken Cholera.—Petaluma, Oct. 30: Chicken cholera is playing havoc with poultry on some of the farms in this neighborhood. Several hundred fowls have died in a few nights. One farmer is reported to have lost over a thousand.

Ladybugs.—Cloverdale *Reveille*, Nov. 1: Ladybugs have invaded this valley from Cloverdale to Guerneville, from our personal knowledge, within the last three days. They came in uncounted thousands, and are feeding on the young leaves of the French prune, and being omniverous, they swarm on all kinds of flowers which they utterly destroy. Bahach does not seem to kill them, and we are trying sulphur.

Dairy Interests.—Sonoma *Index-Tribune*, Oct. 25: The dairy interests of Sonoma and vicinity are growing in importance every year. The feed on the Sonoma marshes, where our leading dairies are located, is peculiarly adapted to cheese and butter making, imparting a flavor to those products that is at once pleasing to the taste of connoisseurs. The cheeses of Sonoma dairies find a ready sale at highest market prices in San Francisco, whence they are exported in large numbers to Asiatic and South American ports. The dairies which have made the largest cheese and butter shipments this season are those of Chas. Filippini, M. Marti, Anton Kiser, S. A. Ringstrom, Harry Fisheer, Peter Kiser, Millar Bros., Ignatz Kiser, H. Rubke and Fred Neuenschwander. The latter alone has shipped since the first of last November 63,000 pounds of Limburg and Swiss cheese to San Francisco, and he is by no means the heaviest shipper among our Sonoma dairymen.

Sutter.

A Grape-Stemmer.—Yuba City *Independent*, Oct. 31: John Wilkie, who cultivates a vineyard just below town, has an ingenious method of stemming dried grapes. It consists first of an ordinary fan-mill, such as is used in cleaning wheat. On top of this is placed a wooden frame in which is suspended a circular receiver made of coarse wire netting, which tapers downward somewhat in the form of an inverted sugar loaf. Inside of this receiver is another similar shaped wire contrivance, made of smaller wire with smaller meshes, which revolves within the larger one, which is stationary. At a convenient hight from the ground there is a wooden hopper into which the grapes are dumped and from which they are carried up by ordinary elevator-cups and emptied into the receiver. By the revolution of the inner wire netting the grapes are separated from the stems and pass down into the hopper of the fan-mill, where they are cleaned of all coarse stems, dust and refuse grapes, and run into sacks. Horse-power is used to run the machinery.

Spraying Orange Trees.—Yuba City, Oct. 31: The work of spraying orange trees for the destruction of scale has commenced in Marysville. It is being done under the direction of the Horticultural Commission. We have heard of no movement to that end in Sutter county as yet, but the spraying the trees received last spring seems to have been very effective, and but few trees seem to be infested with scale. The matter should not be neglected, however, or the pest will increase rapidly.

Sutter-County Raisins.—Yuba City, Oct. 30: By far the largest sale of Sutter-county raisins ever made was consummated yesterday, B. C. Kelb of the Sutter Fruit Company selling to Loose, Kuhn & Laeger of Chicago five carloads, all grown and cured within five miles of this city. The purchasing agent pronounced them equal to the best grown in the State, and it is understood that they brought top prices.

Tulare.

Fruit Notes.—Traver *Advocate*, Oct. 30: Raisins in the sweat-boxes are still being received at the depot here for shipment to Fresno and other places. Many thousands of dollars have been distributed in Traver this summer for fruit, and it has given the fruit industry a great impetus. Many of our horticulturists are getting ready to enlarge their orchards and vineyards, and the area now devoted to fruit will be doubled the coming season. There is considerable inquiry for land in this vicinity now, and quite a number of sales have recently been made or are on the tapis.

Cheese Notes.—Visalia, Oct. 30: The cheese factory, under the efficient management of J. G. Cahoe, is rapidly coming into notice in San Francisco markets as a manufacturer of good cheese. The first shipment to San Francisco brought 12 cents per pound. The product for the next four months has been contracted for at 13¼ cents, which is top price for cheese.

Tree Planting.—Visalia *Delta*, Oct. 30: A large aggregate area of fruit trees and vines will be planted in the country south of Tule river to Deer creek and beyond to White river. Most of this is in small amounts, but the acreage will be increased each year until that also becomes one of the principal fruit districts of the county.

Yolo.

Raisin Crop.—Dixon *Tribune*, Nov. 1: The raisin crop is being rapidly harvested, and with a few weeks more of sunny weather our section will beat the record in that line.

Raisin Notes.—Blocks, Oct. 20: The raisin men are having good weather to save their second crop of raisins, which will be of excellent quality. It is thought that the picking of the second crop will be finished this week.

Fig Shipment.—Winters *Express*, Nov. 1: The first car of the season of dried (oxed) figs was shipped to-day, by Henry Craner, to Kansas City, Mo.

Yuba.

A Large Acreage to Be Sown to Wheat.—Marysville *Appeal*, Oct. 30: The busy season will soon be fairly opened for the farmers of Yuba and Sutter counties. Many are already preparing ground and sowing wheat. The most of the summer-fallowed ground has been sown, and the farmers are doing their best to get all the ground possible ready for fall sowing. John Kimball of Sutter county was seen yesterday in relation to this matter. He stated that there would be a great deal of wheat sown this year, and a great deal of it would be on summer-fallowed ground. Last spring it was too wet for the farmers to do much planting, and as soon as the ground dried sufficiently the plow was put at work and prepared the land to receive the grain this fall. Mr. Kimball stated that he had not sown yet, but would shortly. He is of the opinion that there will be more ground put into wheat this fall than there has been for years. There were a number of other farmers questioned by the reporter, and they all seemed of the same opinion in regard to the large acreage of wheat that would be put in this fall.

Foreign Competition on Our Own Soil.—There seems to be an inclination expressed by British manufacturers to remove their plants, or invest their capital in new ones, in this country, to offset the restrictions placed upon their American commerce by the new tariff law. As it is evident that the passage of this important Act will have a tendency to increase domestic manufactures, it is not remarkable that foreign capitalists are desirous of making heavy investments here. But alien capital and labor ought to be placed under such restrictions that the interests of American citizens engaged in production shall be protected against undue business rivalry on our own soil.

On Sept. 1st the total amount of money in the country, including the amount in the Treasury of the United States, was estimated at $2,082,568,924, and on Oct. 1st at $2,109,580,687, an increase of over $27,000,000 in one month.

POULTRY YARD.

Care of Pigeons.

"Homer" contributed to the *Cackler* awhile ago the following suggestions, which are now timely and fitting:

At this season the fancier looks for the result of the year's work. The molting season has about ended, and the markings of the fancy birds give to the eye of the skilled breeder keen pleasure at his successful matings, or deep regret at those which have turned out disappointing, and to many of these latter the lack of a pedigree book can be at once traced.

The Homing breeder looks little after the markings of his birds; the turn of a feather amounts to nothing with him; still, the trying season of the year is just past, and he views his sleek hard-feathered racers with the satisfaction of feeling that, owing to his care, the results he so carefully labored for months to obtain have been accomplished.

On the other side are the fanciers (though not truly so), who, as soon as the birds begin to look ragged, or the racing season is over, let their pets shift for themselves, making them stand all manner of neglect at a most critical period when greatest attention is necessary. The result is now plainly seen. His losses have been large, many of his best birds are gone, and he breeds from his poorer ones a still lower grade of stock, until in a short time he has little else than scrubs, and no doubt gives up the fancy in disgust. To which class of fanciers shall we belong? Certainly not to the latter, and if by ignorance we are this season classed among the unfortunate breeders, let us at once make up our minds to do better in the future. Let us at the beginning of next season take our birds in hand early, and bring them through their molt so that they will be a credit to us and not a source of regret.

Separating the Sexes.—We will first separate sexes, as no breeding must be allowed during molting time.

Ventilation.—Second, we will see that our house, though well ventilated, is without drafts. Cold wind blowing on birds at this season means almost certain death.

Water.—Next comes water. When molting, the birds give off a certain scurf from the skin, which fouls the bath and makes the water unfit for drinking, so that when we place the bath in the loft, which we do on sunny days only, we must change the water often and remove it soon as birds are done bathing, forcing them to drink from some vessel into which they can get their heads only.

Tonics.—A little Douglass mixture added to the drinking fountain is beneficial, as is also a little saffron; but only a little should be used, more as a prevention of ills than anything else.

Feed.—Now we come to the feed. Avoid cracked corn as you would poison. A little small round corn will do no harm, but if possible make Egyptian corn or good sound wheat the staple food, adding a little canary seed, and occasionally a little hemp seed. Stale bread soaked in water and well squashed out is relished, and is healthful if only given in such quantity as to be eaten up clean, and not lay and sour. A small quantity of flaxseed with the wheat has a good effect and should not be forgotten.

Salt Cat.—The lump of rock salt is good in its way, but generally belongs to the fancier, who keeps no pedigree-book, and who breeds haphazard in hopes of getting birds as good as their parents, but who looks upon improving his birds as something beyond him. A good salt cat is easily made, and is so much better than a lump of salt that no true fancier will use the latter. The salt cat I use, and which has given me entire satisfaction, is composed of five pounds clay, three pounds sharp gravel, three pounds pounded mortar, two pounds salt, one pound cummin seed, two or three good-sized lumps of asafœtida, and two or three handfuls of granulated bone and ground oyster-shells. Pound all up and mix thoroughly; then add water to make the whole into a stiff paste; mold in old flower-pots or other convenient forms, dry and keep out of the rain, giving the birds a cake of the cat as often as necessary. They will eat it greedily, and it is a great assistance to digestion, especially during the molting season, when the whole system of the bird seems to be out of gear, as it were.

Did Dr. Gally Feed Lousy Wheat?

EDITORS PRESS:—In regard to Dr. Gally's loss of chickens, I have waited several weeks hoping that some one from this vicinity would write who had himself lost chickens in a similar manner.

A dealer in this place purchased a lot of wheat which had been raised in the interior of this county, which on looking at was plump and good looking; but all who had bought of that lot of wheat lost largely of their chickens, at least six families in this neighborhood having suffered from this cause. One farmer brought home his sack in the evening, fed his chickens and found six dead under the roosts next morning, and so on through the list. On close inspection this grain was found to be infested with a *mite* of almost microscopical size and much the color of the grain.

On closely examining the dust in the bottom of the sack, it could be plainly seen by the naked eye. The grain was rendered harmless by being boiled or baked.

Much of the wheat raised in that section of country with this was said to be similarly infested. Is not Dr. Gally's loss from the same cause? MRS. H. STEWART.

Cayucos

SWINE YARD.

National Swine-Breeders' Association.

The ninth annual meeting of the National Swine-Breeders' Association will be held in the Sherman House, Chicago, Ill., at 2 P. M., Wednesday, Nov. 19, 1890. Notice is sent to every member, and also to many breeders who will doubtless become members when they think of the advantages to be derived from having a large and influential National Swine-Breeders' Association. Every swine-breeder in America is more or less concerned in the prosperity of the National Association. Its field of work includes every State and Territory of our country, and every reputable breeder and feeder of hogs within this area is welcome to membership. The association has in the past done much good in collecting and disseminating useful information, as shown by its annual publications. Still more may be accomplished by co-operating with the State, district and record associations in securing such legislation as the good of the swine-breeding industry may from time to time require.

The proper showing of swine at the fairs is a subject that might well be considered by the association. A well-arranged classification should be devised that will commend itself to the leading fair-association managers. The importance of a uniform classification of swine, as also of live-stock generally at the fairs, can hardly be overestimated.

The coming meeting will be in the second week of the American Fat-Stock Show. It will be the week also of the American Dairy Show, the American Poultry Show, and of many other meetings held in Chicago by live-stock breeders.

The increasing interest in live-stock affairs occasioned by preparations for the World's Fair in 1893 leads to the expectation of a large attendance on the 19th of November. A good program has been arranged. The proceedings will be of unusual interest and when published well worth reading by the members who cannot attend the meeting.

The constitution of the association provides that any reputable breeder or feeder of swine, or any State Swine-Breeders' or Swine Record Association may be admitted to membership by the payment of $1. The annual dues of members amount to $1 each. The names of new members, as well as of all renewals, will appear in the list published with the proceedings, giving breed or breeds kept by each member. PHIL M. SPRINGER,

Springfield, Ill. Secretary.

PECULIAR INFATUATION.

Different Methods of Following the Injunction "Love One Another."

Do men ever fall in love with each other?

Women do. Not long ago a young woman in New Jersey was married to a youthful laborer on her father's farm. Some time afterward it was discovered that the husband was a female; the young wife refused, however, though earnestly entreated by her friends, to give up her chosen consort. The strangest part of the discovery was the fact that the bride knew her husband was a woman before she was led to the altar.

If men do not exhibit this strange infatuation for one of their own sex, they at least oftentimes give evidence of the fact that they love one another. There are many instances on record where one man has given his life for another. There are many more instances where men have given life to another.

It is a proud possession—the knowledge that one has saved a precious human life. Meriden, Conn., is the home of such a happy man. John H. Preston of that city, July 11th, 1890, writes: "Five years ago I was taken very sick. I had several of the best doctors, and one and all called it a complication of diseases. I was sick four years, taking prescriptions prescribed by these same doctors, and I truthfully state I never expected to get any better. At this time I commenced to have the most terrible pains in my back. One day an old friend of mine, Mr. R. T. Cook of the firm of Curtis & Cook, advised me to try Warner's Safe Cure, as he had been troubled the same way and it had effected a cure for him. I bought six bottles, took the medicine as directed and am to-day a well man. I am sure no one ever had a worse case of kidney and liver trouble than I had. Before this I was always against proprietary medicines, but not now, oh, no."

Friendship expresses itself in very peculiar ways sometimes; but the true friend is the friend in need.

"Battle of Gettysburg."

The celebrated Panorama of the Battle of Gettysburg and Museum, corner Market and Tenth Streets, San Francisco, is a wonderful production. It has captured the entire State, doing a great deal of good. There is no better way of passing an hour or so, and in studying American history, than by visiting this Grand War Panorama. If any of our readers have not seen it, it will pay them well to do so.

Good News!

No one, who is willing to adopt the right course, need be long afflicted with boils, carbuncles, pimples, or other cutaneous eruptions. These are the results of Nature's efforts to expel poisonous and effete matter from the blood, and show plainly that the system is ridding itself through the skin of impurities which it was the legitimate work of the liver and kidneys to remove. To restore these organs to their proper functions, Ayer's Sarsaparilla is the medicine required. That no other blood-purifier can compare with it, thousands testify who have gained

Freedom

from the tyranny of depraved blood by the use of this medicine.

"For nine years I was afflicted with a skin disease that did not yield to any remedy until a friend advised me to try Ayer's Sarsaparilla. With the use of this medicine the complaint disappeared. It is my belief that no other blood medicine could have effected so rapid and complete a cure."—Andres D. Garcia, C. Victoria, Tamaulipas, Mexico.

"My face, for years, was covered with pimples and humors, for which I could find no remedy till I began to take Ayer's Sarsaparilla. Three bottles of this great blood medicine effected a thorough cure. I confidently recommend it to all suffering from similar troubles."—M. Parker, Concord, Vt.

Ayer's Sarsaparilla,

THE GARRETT FENCE MACHINE

—IS FOR CONSTRUCTING—

A New and Durable Fence

By weaving Pickets and Wire to Posts set in the field. It is not excelled by any other machine for Ease, Speed, and Perfect Work; 40 to 60 rods per day can be put up. The wire for a 3 or 5 (2) strand cable can be bought for from 11 to 25 cents per rod. The Garrett Fence is noted for simplicity of construction, durability of all its parts, perfect tension device, and great saving of labor and money in its construction. The machines are manufactured in Ohio, and thousands are now in use in the United States. The Fences made by them are the best, cheapest and most desirable Farm, Orchard and Vineyard Fences that can be made. The best galvanized annealed Steel Wire can be furnished at the lowest market price. The machine, with the Little Giant Post Hole Digger, Wire Stretcher and Wire Cutter, etc., complete, costs about $25, with a discount where we have no local agent. Two men (or man and boy) can dig the holes, weave the wire to the pickets and posts, and easily complete the construction of the fence. Send for circulars and testimonials. Address K. C. DUSSENBERG, 430 Pine Street, San Francisco, General Agent Pacific States.

LAND

WORTH LOOKING AFTER

—AND—

Likely to Double in Price Soon.

FINE VINEYARD
CHOICE FRUIT
RARE RAISIN
AND ALFALFA **LAND**

EXAMINE THIS RARE CHANCE.

A well-cultivated farm of 160 acres, inclosed with miles of fencing and cross fencing, with first-class improvements, 7-room, two-story, hard-finished house, nearly new, large barn, blacksmith shop, milk house, grain house and other outbuildings; 7 acres of bearing orchard; 20 acres of alfalfa; large flowing artesian well of splendid water, and first-class surface wells of water; pleasantly located 7 miles from Tulare City; is offered for sale rating less than ½ cost for improvements by the owner, who is engaged in other business. The land is offered for $20 to $25 per acre, on easy terms. The readers of this journal are assured that this chance is worth looking after. Parties in San Francisco who know the property can be referred to. Some adjoining land can be secured at favorable rates if desired.

For sale in sub-divisions of 40 acres or more if desired. Address E. M. DEWEY, Porterville, or A. T. DEWEY, 220 Market St., S. F.

MATTHIAS GRAY CO., 206 & 208 Post St

Pacific Gas or Gasoline Engines.

Among the growing industries of this coast, no other, perhaps, has taken such rapid strides during the past year as the manufacture of gas engines. Although these engines have been in use in this vicinity but a very short time comparatively, they are now widely recognized for many purposes as the most convenient, economical and safest power.
